MORE THAN 2,200,000 CIRCULATION

ILLUSTRATION BY WALTER JACK DUNCAN

Why are Jews Like That?

By LEWIS BROWNE

WE WERE trying to make the twelve-forty-five out of the Pennsylvania Station, and we were finding the going difficult. The pavements of Seventh Avenue were crowded, impenetrable, and only by walking along the gutters could we possibly make any headway. For it was the lunch-hour, and all the thousands of workers in New York's "cloak-and-suit belt" were out on the street for an airing. They were ill-clad and noisy; and they showed little disposition to get out of our way when we begged them to let us through. They stood there on the pavement in large coagulate masses, shouting to each other in strident argument and gesticulating with vehemence. Many shouted in Yiddish, and almost all the rest used an English quite obviously Yiddish in intonation. And my friend, who was very hot and angry from long shoving through the horde, turned to me as we hurried along and suddenly demanded:

"Say, Browne: why are Jews like that?"

I could not answer him at once. A prod in the ribs from some unseen elbow had at that precise instant taken the wind out of me. But when, a moment later, I could again command my breathing, I yelled back: "Because we can't help it!"

I had neither wind nor time for more than that. Besides, Seventh Avenue during the noon-hour crush seemed to me no place for a sociological disquisition. So I pushed on with all my might, hacking a trail through that human forest with out-thrust elbows and lowered head. And by the time we had at last reached the station—just a minute too late, of course—we had both completely forgotten the question. All we could think of was the two-hour wait before the next train departed for our destination.

But during the week-end I got my chance to elaborate my abrupt answer to his question. It had not been prejudice that had moved my friend to shout that question to me; at least, not *conscious* prejudice. He is a man of intelligence and breeding, and anti-Semitism is as foreign to him as any other form of vulgar bigotry. Rather it had been bewilderment, exasperated wonder, that had moved him. He had been amazed, perhaps a trifle appalled, at the strangeness, the peculiarity, of that mob. It had not been at all like the mob out of a silk factory in Passaic, or out of a smelter in Butte, or out of a cotton mill in Rome, Georgia. And its strangeness had lain in far more than its Yiddish speech and appearance.

AS MY friend made clear to me when we recalled the question a day or two later: "I wasn't thinking of their language or their beards. Those things, I realize, are superficial, and I suppose they'll be gone entirely in a generation. Nor was I thinking of their manners, either. They, too, will change in a little while. Those fellows, or at least their children, will soon enough learn that in this country—though Heaven alone knows why!—it is considered bad form to talk out loud and use gestures. No, it wasn't their manners that bewildered me, but their manner." My friend paused a moment, and then, fearing I had not caught his meaning, he explained: "There was a queer light in their eyes, and a sort of tenseness in their bodies; *that* was what made me put my question to you. For

you, too, show those characteristics to a degree; and so does almost every other Jew I know. You are all somehow different from the rest of us. And I'd like to know why." . . .

I spent most of that week-end trying to tell him why; and because many thousands of other intelligent Gentiles must have posed my friend's question, the editor of this magazine has asked me to answer it in this article.

Now, to begin with, we must keep well in mind my friend's distinction between manners and manner. I've never been able to get much exercised about manners. They are pleasant things, but not of real importance, for they can never be judged by universal standards. They can never be either good or bad, right or wrong; they can only be different. For instance, wielding a soup-spoon with a backhand stroke is in no wise more virtuous, nor even more elegant, than wielding it with the locally less fashionable—though universally more adventurous—fronthand stroke. So there is no need to defend the Jews against the charge that they have bad manners. In the first place, the Jews, as a people, haven't any manners at all. By that, I mean, of course, that there is no such thing as a Jewish code of etiquette which all Israelites accept and try to live up to. Each Jew gets his manners from his environment; so that if he is from Russia he drinks tea out of a glass, and if from England he eats fish with a knife. Consequently, it is absurd to speak of "Jewish manners," either good, bad, or indifferent.

It is true that many Jews in America still retain the East-European manners they brought with them from their homelands. But they will not retain them long; and certainly their children will not inherit them. For those manners are no more inherent in Jews than a rolling gait is inherent in a people whose ancestors were for a while seafarers. Indeed, with immigration practically at a standstill, a swift doom seems inevitable, not merely for such foreign manners, but also for all the rest of those striking exoticisms which some people imagine to be characteristically Jewish. More and more of the Yiddish newspapers are introducing English supplements; and fewer and fewer become the Jews who retain their long beards. Within another two generations, Yiddish accents and long beards will probably be as rare even in an East-Side synagogue as they are now in the Cathedral of St. John the Divine.

THAT does not necessarily mean that we Jews will be improving; we shall be simply changing. And we have always been changing in that fashion, modifying our mannerisms to suit each new environment. Our way of altering our names is a point in instance. When we lived in a civilization predominantly Greek, we no longer gave our children good Hebrew names like Jochanan, Joshua, or Miriam, but Greek names, like John, Jesus, and Mary. In Spain the name Solomon was changed to the more fashionable Salvador, in France to Sulpice, in Germany to Siegfried, and in America to Seymour. Often we have gone to quite absurd lengths, adopting names belonging even to our worst enemies. Isidore is a good example of this. Originally the name was pagan, being derived from the Greek *Isis doron*, meaning "Gift of Isis." Then it became popular in the early Christian church, and one of the great church fathers, a Bishop of Seville—and incidentally one of the bitterest detractors of the Jews—was called Isidore. But after he died, the name was taken up by the Jews, and with such a vengeance that by now it has become almost exclusively Jewish!

And we have been no less prone to change our surnames. Wascerwitz in Warsaw becomes Wasserman in Berlin, Waterman in London, and De La Fontaine in Hollywood. Ambari in ancient Palestine was translated literally to Bernstein in Germany, corrupted to Burstein in Poland, re-spelled Brownstone in England, and finally shortened to Browne. . . .

Our easy willingness to drop our ghetto names is, I know, a little puzzling to most Gentiles. The trait seems to smack of cowardice and ignobility. But you must realize that we Jews did not choose most of those ghetto names in the first place. Goldberg, Rosenthal, Greenbaum—these names and their like were literally forced upon our forebears only a couple of centuries ago in Central Europe. We used to be reviled then because we persisted in clinging to our Hebrew patronymics, and edicts were issued to compel us to take surnames similar to those of our neighbors. So now that we are free to choose for ourselves, we feel no compunction about throwing over those names. They sound as foreign to us as they do to you, for our ears have become attuned to a new language. Therefore, we change them freely, even as we have throughout the past changed speech and costume and every other of our manners and customs.

But one thing, it must be admitted, we have not changed and that is what my friend called our manner. One cannot easily define that Jewish manner; but neither can one easily deny its reality. It is the one fundamental thing about us that marks us as peculiar, the one quality that most distinguishes us from our neighbors. Were we lacking that distinctive air, were we an ordinary folk, we would not earn one tithe the publicity we get. For, after all, we Jews are exceedingly few in numbers

Digitized by Google
Original from
UNIVERSITY OF IOWA

generously estimated, we make up less than three quarters of one per cent of the population of the world. There are almost as many inhabitants in Burma alone as there are Jews on all five continents! Yet see how much talk there is about us continually: How many songs are sung, lies told, jokes cracked, sermons preached, and articles written about us year after year in almost every land on earth. And it has been that way for two thousand years or more. Though never mighty in size, we have always cast a mighty shadow. The patent reason for it is that we are a peculiar lot; we are *different*.

PHOTOGRAPH BY V. LAVIOSA, N. Y.

Lewis Browne, Jewish scholar, author of "This Believing World," "The Graphic Bible," "Stranger Than Fiction," "The Story of the Jews," and other books, was born in London thirty-one years ago. He came to America in 1912, and for a time was a rabbi in Waterbury, Connecticut, and in the Free Synagogue at Newark, New Jersey. Several years ago he resigned the rabbinate to devote himself to writing

NOW, this peculiarity in us is not biological. We Jews are in no sense a "pure" race differing in blood from all the other peoples of the earth. On the contrary, we are ethnically a very mixed lot. The Bible tells repeatedly how foreign strains were introduced into the Hebraic blood-stream. It reveals that even the glorious King David, he who was elected to be ancestor of the very Messiah-to-come, was himself descended from a Gentile woman named Ruth. It is clear that intermarriage between the ancient Hebrews and their neighbors was common all through Bible times, and that intermating was even commoner. For during most of those centuries the Hebrews were a subject nation, and their daughters were continually at the mercy of foreign troops. It is impossible to believe that the millions of soldiers in the triumphant armies of Philistia, Assyria, Scythia, Egypt, Aramea, Babylon, Persia, Greece, and Rome, who during a thousand years repeatedly committed murder and arson in Palestine, did not sometimes indulge also in rapine. And therefore it is impossible to deny that at least a little—more probably a great deal—of the blood of each of those conquering races found its way into the veins of the Jews.

And the degree of such admixture must have increased immeasurably once we were driven from our own land and scattered across the face of the earth. For then, no matter where we fled, whether to Nubia or Italy, to Bactria or Gaul, we found ourselves invariably an alien handful in the midst of a native horde. As a result, we invariably took on the physical characteristics of the races with which we were brought into contact. In Spain we began to look like Spaniards, and in Russia like Slavs. That is why we show such inordinate physical variety today. It is only a legend that we all look alike. In Abyssinia there exists to this day a group of authentic Jews, the Falashas, who are quite as black as the Negroes surrounding them. In China as late as the last century there still existed a settlement of Jews who were yellow-skinned and almond-eyed. Only a few months ago I received a letter from a brown-skinned Israelite in India, who sought permission to translate my book on Jewish history into the dialect which is the mother tongue of a clan of Hindu Jews there. Obviously, therefore, the distinguishing quality in the Jew is not racial.

Nor is it religious either, for many of the most famous (and most notorious) of Jews do not even remotely conform to Judaism. Indeed, the Jews whose names most readily occur to the Gentile—such as Otto Kahn, Leon Trotzky, Justice Brandeis, Emma Goldman, Sigmund Freud, the Rothschilds, Walter Damrosch, Albert Einstein, Charles Levine, Bernard Baruch—these are for the most part persons either indifferent or hostile to the synagogue. For that matter, it is difficult to recall a single world-famous Jew in the history of recent generations who was a devout follower of the religion of Moses. Almost all of them—for instance, Spinoza, Heinrich Heine, Karl Marx, Disraeli, Mendelssohn-Bartholdy, Dreyfus, Steinmetz, Zangwill—were either nominal Christians or avowed free-thinkers. Yet without exception they were reviled by their enemies and recognized by their friends as Jews. So, obviously, it is not primarily our religion that marks us off from the rest of mankind.

Nor is it nationality. Once we were indeed a nation, and the Zionists among us are hopeful of some day making the Jews a nation again. But at the present moment we are so scattered geographically and divided politically that we no more form a nation than do the vegetarians or the mathematicians of the world. We have no land which we can call really our own—for Palestine is still inhabited chiefly by Arabs and governed by Britishers. We have no one mother tongue nor distinctive costume, no single political loyalty nor unified national enthusiasm. In Germany we are the most loyal of Germans, and in America the most loyal of Americans. Had I the space I could cite endless lengths of official statistics to prove how the Jew has contributed considerably more than his share to the armies, the honor rolls, and the casualty lists of all the nations in all the wars of recent decades. Or, had I the inclination, I might expatiate on the fact that there is not a single civilized nation in the world today wherein there are not Jews serving with exemplary faithfulness in governmental positions of trust and power.

NO, THE one common denominator among us Jews that distinguishes us everywhere and always is not something biological, theological, nor political, but *psychological*. We Jews have a peculiar manner of reacting to the world, a manner bred in us so long, and still today so stimulated by the people around us, that we cannot possibly slough it off. And at the root of that manner is the inescapable feeling that you Gentiles still consider us "outsiders."

I know there are many Jews who will not admit they have this feeling. Many do most vehemently deny they have the slightest trace of anything like a "Jewish consciousness." But the very vehemence of their denial seems to give them away. They may go to the farthest extremes in their effort to identify themselves with the Gentile majority, straightening their noses, intermarrying, joining the church, and even contributing funds to anti-Semitic "patriotic" societies—but nevertheless they are not able to shake off that tenacious psychology. Always they remain sensitive; always they retain at (*Continued on page 104*)

THE Bishop Murder Case was the strangest, the most fantastic, ever to be recorded in the criminal annals of New York. Faced with the problem of two murders, no conceivable motive, and almost no clues, Markham (District Attorney) practically turned the case over to Philo Vance. But here was a mystery that completely baffled even Vance, that eccentric young gentleman of fashion and leisure with a genius for unraveling just such apparently unsolvable problems as this. The center of everything was the Dillard house on Seventy-fifth Street just off Riverside Drive. Here Professor Dillard, retired mathematician, lived with Belle Dillard, his niece, and Sigurd Arnesson, also a professor of mathematics, and adopted son to Dillard. Here occurred the first murder. Joseph Cochrane Robin was found dead one morning in the archery practice range Belle had fitted up in the courtyard of the house; the hunting arrow through his heart was from a rack of arrows in the basement clubroom; no one had been with him down there except young Sperling, his rival in archery and for Belle's favor. Sperling had disappeared, and this note had been found in the mail box:

Joseph Cochrane Robin is dead.
Who killed Cock Robin?
Sperling means Sparrow.

It was signed "The Bishop."

Sperling had been arrested and had confessed the murder—and nine days later John E. Sprigg was found dead on Riverside Drive with a bullet hole in his head. This was followed by a note in the same typing as the first one, and quoting the nursery rhyme about Johnny Sprig. Again it was signed "The Bishop."

Sperling was now eliminated, and there was apparently no one else with any possible motive. Sprigg was a favorite student of Arnesson's at Columbia, and known to all the persons involved. An obscure mathematical formula, in the same typing as the notes, was found under his body. This formula was known to Dillard, to Arnesson, and also to Adolph Drukker and John Pardee. Drukker was a hunchback and mathematical genius—a friend of the Dillards, as was his mother, "Lady Mae." Their house was on Seventy-sixth Street, and its rear overlooked the Dillard yard. Pardee, who lived across from the Dillards on Seventy-fifth Street, was also a friend of the household, a chess enthusiast, and something of an amateur mathematician. The only other persons that could possibly be involved in the tragedy were Pyne, the Dillard butler, and Beedle, their cook.

So matters stood when Vance and Van Dine (his secretary) went with Markham and Heath—the police sergeant in charge of the case—to question Mrs. Drukker. They found her in a state of terrible excitement, and finally wrung from her the cause. At midnight, the night before, she had been awakened by a fumbling at the knob of her door, and heard something fall on the floor and footsteps go down the hall and through the house. She had opened the door, and there at her feet lay a small chessman—ebony black. It was the bishop!

Drukker stepped up to look on, but

XIII

IN THE BISHOP'S SHADOW

(*Tuesday, April 12th; 11 a. m.*)

VANCE took the bishop from Mrs. Drukker and slipped it into his coat pocket.

"It would be dangerous, madam," he said, with impressive solemnity, "if what happened here last night became known. Should the person who played this joke on you find out that you had informed the police, other attempts to frighten you might be made. Therefore, not one word of what you have told us must pass your lips."

"May I not even tell Adolph?" the woman asked distractedly.

"No one! You must maintain a complete silence, even in the presence of your son."

I could not understand Vance's emphasis on this point; but before many days had passed it was all too clear to me. The reason for his advice was revealed

Pardee requested him to offer no advice

Murder Case

NEW MYSTERY SERIAL

H. M. STOOPS

with tragic force; and I realized that even at the time of Mrs. Drukker's disclosure his penetrating mind had worked out an uncannily accurate ratiocination, and foreseen certain possibilities unsuspected by the rest of us.

We took our leave a few moments later, and descended the rear stairs. The staircase made a sharp turn to the right at a landing eight or ten steps below the second floor, and led into a small, dark passageway with two doors—one on the left, opening into the kitchen, and another, diagonally opposite, giving on the screen porch. We stepped out immediately to the porch, and stood without a word, trying to shake off the atmosphere cast about us by Mrs. Drukker's terrifying experience.

Markham was the first to speak.

"Do you believe, Vance, that the person who brought that chessman here last night is the killer of Robin and Sprigg?"

"There can be no doubt of it. The purpose of his midnight visit is hideously clear. It fits perfectly with what has already come to light."

"It strikes me merely as a ruthless practical joke," Markham rejoined, "the act of a drunken fiend."

Vance shook his head.

"It's the only thing in this whole nightmare that doesn't qualify as a piece of insane humor. It was a deadly serious excursion. The devil himself is never so solemn as when covering his tracks. Our particular devil's hand had been forced, and he made a bold play. 'Pon my soul, I almost prefer his jovial mood to the one that prompted him to break in here last night. However, we now have something definite to go on."

Heath, impatient of all theorizing, quickly picked up this last remark.

"And what might that be, sir?"

"*Imprimis*, we may assume that our chess-playing troubadour was thoroughly familiar with the plan of this house. The night light in the upper hall may have cast its gleam down the rear stairs as far as the landing, but the rest of the way must have been in darkness. Moreover, the arrangement of the rear of the house is somewhat complicated. Therefore, unless he knew the layout he couldn't have found his way about noiselessly in the dark. Obviously, too, the visitor knew in which room Mrs. Drukker slept. Also, he must have known what

Mrs. Menzel

time Drukker turned in last night, for he wouldn't have chanced making his call unless he had felt sure that the coast was clear."

"That don't help us much," grumbled Heath. "We've been going on the theory right along that the murderer was wise to everything connected with these two houses."

"True. But one may be fairly intimate with a family and still not know at what hour each of its members retires on a certain night, or just how to effect a surreptitious entry to the house. Furthermore, Sergeant, our midnight caller was someone who knew that Mrs. Drukker was in the habit of leaving her door unlocked at night; for he had every intention of entering her room. His object wasn't merely to leave his little memento outside and then depart. The silent, stealthy way he tried the knob proves that."

"He may simply have wanted to waken Mrs. Drukker so she would find it at once," suggested Markham.

"Then why did he turn the knob so carefully—as if trying *not* to waken anyone? A rattling of the knob, or a soft tapping, or even throwing the chessman against the door, would have answered that purpose much better. . . . No, Markham; he had a far more sinister object in mind; but when he found himself thwarted by the locked door and heard Mrs. Drukker's cry of fright, he placed the bishop where she would find it, and fled."

"Still and all, sir," argued Heath, "anyone mighta known she left her door unlocked at night; and anyone coulda learned the lay of the house so's to find their way around in the dark."

"But who, Sergeant, had a key to the rear door? And who could have used it at midnight last night?"

"The door mighta been left unlocked," countered Heath; "and when we check up on the alibis of everybody we may get a lead."

Vance sighed.

"You'll probably find two or three people without any alibi at all. And if last night's visit here was planned, a convincing alibi may have been prepared. We're not dealing with a simpleton, Sergeant. We're playing a game to the death with a subtle and resourceful murderer, who can think as quickly as we can, and who has had a long training in the subtleties of logic. . . ."

AS IF on a sudden impulse he turned and passed indoors, motioning us to follow. He went straight to the kitchen, where the German woman who had admitted us earlier sat stolidly by a table preparing the midday meal. She rose as we entered and backed away from us. Vance, puzzled by her demeanor, studied her for several moments without speaking. Then his eyes drifted to the table, where a large eggplant had been halved lengthwise and scooped out.

"Ah!" he exclaimed, glancing at the contents of the various dishes standing about. "*Aubergines à la Turque*, what? An excellent dish. But I'd mince the mutton a bit finer, if I were you. And not too much cheese: it detracts from the sauce *espagnole* which I see you're preparing." He looked up with a smile. "What's your name, by the bye?"

His manner astonished the woman greatly, but it also had the effect of alleviating her fears.

"Menzel," she answered in a dull voice. "Grete Menzel."

At the suggestion of Vance, Heath set a man under the willow trees to watch the Drukker house, with instructions to break in at the first scream or call

"And how long have you been with the Drukkers?"

"Going on twenty-five years."

"A long time," Vance commented musingly. "Tell me: why were you frightened when we called here this morning?"

The woman became sullen, and her large hands closed tightly.

"I wasn't frightened. But Mr. Drukker was busy——"

"You thought perhaps we had come to arrest him," Vance broke in.

Her eyes dilated; but she made no answer.

"What time did Mr. Drukker rise yesterday morning?" Vance went on.

"I told you . . . nine o'clock—like always."

"What time did Mr. Drukker rise?" The insistent, detached quality of his voice was far more ominous than any dramatic intonation could have been.

"I told you——"

"*Die Wahrheit, Frau Menzel! Um wie viel Uhr ist er aufgestanden?*"

THE psychological effect of this repetition of the question in German was instantaneous. The woman's hands went to her face, and a stifled cry, like a trapped animal's, escaped her.

"I don't—know," she groaned. "I called him at half past eight, but he didn't answer, and I tried the door. . . . It wasn't locked and—*Du lieber Gott!*—he was gone."

"When did you next see him?" asked Vance quietly.

"At nine. I went upstairs again to tell him breakfast was ready. He was in the study—at his desk—working like mad, and all excited. He told me to go away."

"Did he come down to breakfast?"

"*Ja—ja.* He came down—half an hour later."

The woman leaned heavily against the drain-board of the sink, and Vance drew up a chair for her.

"Sit down, Mrs. Menzel," he said kindly. When she had obeyed, he asked: "Why did you tell me this morning that Mr. Drukker rose at nine?"

"I had to—I was told to." Her resistance was gone, and she breathed heavily, like a person exhausted. "When Mrs. Drukker came back from Miss Dillard's yesterday afternoon she told me that if anyone asked me that question about Mr. Drukker I was to say 'nine o'clock.' She made me swear I'd say it. . . ." Her voice trailed off, and her eyes took on a glassy stare. "I was afraid to say anything else."

Vance still seemed puzzled. After several deep inhalations on his cigarette he remarked:

"There's nothing in what you've told us to affect you this way. It's not unnatural that a morbid woman like Mrs. Drukker should have taken such a fantastic measure to protect her son from possible suspicion, when a murder had been committed in the neighborhood. You've surely been with her long enough to realize how she might exaggerate every remote possibility where her son is concerned. In fact, I'm surprised you take it so seriously. . . . Have you any other reason to connect Mr. Drukker with this crime?"

"No—no!" The woman shook her head distractedly.

Vance strolled to the rear window, frowning. Suddenly he swung about. He had become stern and implacable.

"Where were you, Mrs. Menzel, the morning Mr. Robin was killed?"

An astounding change came over the woman. Her face paled; her lips trembled and she clenched her hands with a spasmodic gesture. She tried to take her staring eyes from

Digitized by Google Original from UNIVERSITY OF IOWA

Vance, but some quality in his gaze held her.

"Where were you, Mrs. Menzel?" The question was repeated sharply.

"I was—here——" she began, then stopped abruptly and cast an agitated glance at Heath, who was watching her fixedly.

"You were in the kitchen?"

She nodded. The power of speech seemed to have deserted her.

"And you saw Mr. Drukker return from the Dillards'?"

Again she nodded.

"Exactly," said Vance. "And he came in the rear way, by the screen porch, and went upstairs. . . . And he didn't know that you saw him through the kitchen door. . . . And later he inquired regarding your whereabouts at that hour. . . . And when you told him you had been in the kitchen he warned you to keep silent about it. . . . And then you learned of Mr. Robin's death a few minutes before you saw him enter here. . . . And yesterday, when Mrs. Drukker told you to say he had not risen until nine, and you heard that someone else had been killed near here, you became suspicious and frightened. . . . That's correct, is it not, Mrs. Menzel?"

THE woman was sobbing audibly in her apron. There was no need for her to reply, for it was obvious that Vance had guessed the truth. Heath took his cigar from his mouth and glared at her ferociously.

"So! You were holding out on me," he bellowed, thrusting forward his jaw. "You lied to me when I questioned you the other day. Obstructing justice, were you?"

She gave Vance a look of frightened appeal.

"Mrs. Menzel, Sergeant," he said, "had no intention of obstructing justice. And now that she has told us the truth, I think we may overlook her perfectly natural deception in the matter." Then before Heath had time to reply he turned to the woman and asked in a matter-of-fact tone: "Do you lock the door leading to the screen porch every night?"

"*Ja*—every night." She spoke listlessly: the reaction from her fright had left her apathetic.

"You are sure you locked it last night?"

"At half past nine—when I went to bed—like I always do."

Vance stepped across the little passageway and inspected the lock.

"It's a snap-lock," he observed, on returning. "Who has a key to the door?"

"I have a key. And Mrs. Drukker—she has one too."

"You're sure no one else has a key?"

"No one except Miss Dillard."

"Miss Dillard?" Vance's voice was suddenly resonant with interest. "Why should she have one?"

"She's had it for years. She's like a member of the family—over here two and three times a day. When I go out I lock the back door; and her having a key saves Mrs. Drukker the trouble of coming down and letting her in."

"Quite natural," Vance murmured. Then: "We sha'n't bother you any more, Mrs. Menzel." He strolled out on the little rear porch.

When the door had been closed behind us he pointed to the screen door that opened into the yard.

"You'll note that this wire mesh has been forced away from the frame, permitting one to reach inside and turn the latch. Either Mrs. Drukker's key or Miss Dillard's—probably the latter—was used to open the door of the house."

Heath nodded: this tangible aspect of the case appealed to him.

But Markham was not paying attention. He stood in the background smoking with angry detachment. Presently he turned resolutely and was about to reënter the house when Vance caught his arm.

"No—no, Markham! That would be abominable technique. Curb your ire. You're so dashed impulsive, don't y' know."

"But, damn it, Vance!" Markham shook off the other's hand. "Drukker lied to us about going out the Dillard gate before Robin's murder—"

"I was rather mean to Sigurd for bringing me home so early, and as we entered the hall I asked him spitefully what time it was"

"Of course he did. I've suspected all along that the account he gave us of his movements that morning was a bit fanciful. But it's useless to go upstairs now and hector him about it. He'll simply say that the cook was mistaken."

Markham was unconvinced.

"But what about yesterday morning? I want to know where he was when the cook called him at half past eight. Why should Mrs. Drukker be so anxious to have us believe he was asleep?"

"She, too, probably went to his room and saw that he was gone. Then, when she heard of Sprigg's death, her febrile imagination became overheated, and she proceeded to invest him with an alibi. But you're only inviting trouble when you plan to chivy him about the discrepancies in his tale."

"I'm not so sure." Markham spoke with significative gravity. "I may be inviting a solution to this hideous business."

Vance did not reply at once. He stood gazing down at the quivering shadows cast on the lawn by the willow trees. At length he said in a low voice:

"We can't afford to take that chance. If what you're thinking should prove to be true, and you should reveal the information you've just received, the little man who was here last night might prowl about the upper hall again. And this time he might not be content to leave his chessman *outside the door!*"

A look of horror came into Markham's eyes.

"You think I might be jeopardizing the cook's safety if I used her evidence against him at this time?"

"The terrible thing about this affair is that, until we know the truth, we face danger at every turn." Vance's voice was

Digitized by Google Original from UNIVERSITY OF IOWA

heavy with discouragement. "We can't risk exposing anyone. . . ."

The door leading to the porch opened and Drukker appeared on the threshold, his little eyes blinking in the sunlight. His gaze came to rest on Markham, and a crafty, repulsive smile contorted his mouth.

"I trust I am not disturbing you," he apologized, with a menacing squint; "but the cook has just informed me that she told you she saw me enter here by the rear door on the morning of Mr. Robin's unfortunate death."

"Oh, my aunt!" murmured Vance, turning away and busying himself with the selection of a fresh cigarette. "That tears it."

Drukker shot him an inquisitive look, and drew himself up with a kind of cynical fortitude.

"And what about it, Mr. Drukker?" demanded Markham.

"I merely desired to assure you," the man replied, "that the cook is in error. She has obviously confused the date—you see, I come and go so often by this rear door. On the morning of Mr. Robin's death, as I explained to you, I left the range by the Seventy-fifth Street gate and, after a brief walk in the park, returned home by the front way. I have convinced Grete that she is mistaken."

Vance had been listening to him closely. Now he turned and met the other's smile with a look of bland ingenuousness.

"DID you convince her with a chessman, by any chance?"

Drukker jerked his head forward and sucked in a rasping breath. His twisted frame became taut; the muscles about his eyes and mouth began to twitch; and the ligaments of his neck stood out like whipcord. For a moment I thought he was going to lose his self-control; but with a great effort he steadied himself.

"I don't understand you, sir." There was the vibrancy of an intense anger in his words. "What has a chessman to do with it?"

"Chessmen have various names," suggested Vance softly.

"Are *you* telling *me* about chess?" A venomous contempt marked Drukker's manner, but he managed to grin. "Various names, certainly. There's the king and queen, the rook, the knight——" He broke off. "*The bishop!* . . ." He laid his head against the casement of the door and began to cackle mirthlessly. "So! That's what you mean? *The bishop!* . . . You're a lot of imbecile children playing a nonsense game."

"We have excellent reason to believe," said Vance, with impressive calmness, "that the game is being played by someone else—with the chess bishop as the principal symbol."

Drukker sobered.

"Don't take my mother's vagaries too seriously," he admonished. "Her imagination often plays tricks on her."

"Ah! And why do you mention your mother in this connection?"

"You've just been talking to her, haven't you? And your comments, I must say, sound very much like some of her harmless hallucinations."

"On the other hand," Vance rejoined mildly, "your mother may have perfectly good grounds for her beliefs."

Drukker's eyes narrowed, and he looked swiftly at Markham.

"Rot!"

"Ah, well," sighed Vance, "we shan't debate the point." Then in an altered tone he added: "It might help us though, Mr. Drukker, if we knew where you were between eight and nine yesterday morning."

The man opened his mouth slightly as if to speak, but quickly his lips closed again, and he stood staring calculatingly at Vance. At length he answered in a high-pitched insistent voice:

"I was working—in my study—from six o'clock until half past nine." He paused, but evidently felt that further explanation was desirable. "For several months I've been working on a modification of the ether-string theory to account for the interference of light, which the quantum theory is unable to explain. Dillard told me I couldn't do it;"—a fanatical light came into his eyes—"but I awoke early yesterday morning with certain factors of the problem clarified; and I got up and went to my study. . . ."

"So that's where you were." Vance spoke carelessly. "It's of no great importance. Sorry we discommoded you today." He beckoned with his head to Markham, and moved toward the screen door. As we stepped upon the range he turned back and, smiling, said almost dulcetly: "Mrs. Menzel is under our protection. It would pain us deeply if anything should happen to her."

Drukker looked after us with a sort of hypnotized fascination.

The moment we were out of hearing, Vance moved to Heath's side.

"Sergeant," he said in a troubled voice, "that forthright German *Hausfrau* may have put her head unwittingly in a noose. And—my word!—I'm afraid. You'd better have a good man watch the Drukker house tonight—from the rear, under those willow trees. And tell him to break in at the first scream or call. . . . I'll sleep better if I know there's a plain-clothes angel guarding Frau Menzel's slumbers."

"I get you, sir." Heath's face was grim. "There won't be no chess players worrying her tonight."

XIV

A GAME OF CHESS

(*Tuesday, April 12th; 11:30 a. m.*)

AS WE walked slowly toward the Dillard house it was decided that immediate inquiries should be made regarding the whereabouts the night before of every person connected in any way with this gruesome drama.

"We must be careful, however, to drop no hint of what befell Mrs. Drukker," warned Vance. "Our midnight bishop-bearer did not intend that we should learn of his call. He believed that the poor lady would be too frightened to tell us."

"I'm inclined to think," objected Markham, "that you're attaching too much importance to the episode."

"Oh, my dear fellow!" Vance stopped short and put both hands on the other's shoulders. "You're much too effete—that's your great shortcomin'. You don't feel—you are no child of nature. The poetry of your soul has run to prose. Now I, on the other hand, give my imagination full sway; and I tell you that the leaving of that bishop at Mrs. Drukker's door was no Hallowe'en prank, but the desperate act of a desperate man. It was meant as a warning."

"You think she knows something?"

"I think she saw Robin's body placed on the range. And I think she saw something else—something she would give her life not to have seen."

IN SILENCE we moved on. It was our intention to pass through the wall gate into Seventy-fifth Street and present ourselves at the Dillards' front door; but as we passed the archery-room the basement door opened, and Belle Dillard confronted us anxiously.

"I saw you coming down the range," she said, with troubled eagerness, addressing her words to Markham. "For over an hour I've been waiting to get in touch with you—'phoning your office. . . ." Her manner became agitated. "Something strange has happened. Oh, it may not mean anything . . . but when I came through the archery-room here this morning, intending to call on Lady Mae, some impulse made me go to the tool chest again and look in the drawer—it seemed so—so queer that the little revolver should have been stolen. . . . And there it lay—in plain sight—beside the other pistol!" She caught her breath. "Mr. Markham, someone returned it to the drawer last night!"

This information acted electrically on Heath.

"Did you touch it?" he asked excitedly.

"Why—no. . . ."

He brushed past her unceremoniously and, going to the tool chest, yanked open the drawer. There, beside the larger automatic that we had seen the day before, lay a small pearl-handled .32. The Sergeant's eyes glistened as he ran his pencil through the trigger guard and lifted it gingerly. He held it to the light and sniffed at the end of the barrel.

"One empty chamber," he announced, with satisfaction. "And it's been shot off recently. . . . This oughta get us somewheres." He wrapped the revolver tenderly in a handkerchief and placed it in his coat pocket. "I'll get Dubois busy on this for fingerprints; and I'll have Cap Hagedorn* check up on the bullets."

"Really now, Sergeant," said Vance banteringly, "do you imagine that the gentleman we're looking for would wipe a bow and arrow clean, and then leave his digital monogram on a revolver?"

"I haven't got your imagination, Mr. Vance," returned Heath surlily. "So I'm going ahead doing the things that oughta be done."

"You're quite right." Vance smiled with good-natured admiration at the other's dogged thoroughness. "Forgive me for trying to damp your zeal."

He turned to Belle Dillard.

"We came here primarily to see the professor and Mr. Arnesson. But there's also a matter we'd (*Continued on page 69*)

*Captain Hagedorn was the firearms expert of the New York Police Department. It was he who, in the Benson murder case, gave Vance the data with which to establish the height of the murderer; and who made the examination of the three bullets fired from the old Smith and Wesson revolver in the Greene murder case.

Walter Johannes Damrosch, who hopes, by means of the radio, to make America the most musical nation. He is one of the greatest orchestra leaders in the world

OUR fundamental aim in education used to be the Three R's—Readin', 'Ritin', and 'Rithmetic. Now we have a new ideal. It is the Three C's—Character, Culture, and Citizenship. For achieving that ideal just think of the possibilities of radio. At least, this is the dream—the establishment of a great University of the Air which will bring the culture of the world and of the age to our people as vividly and perfectly as radio now brings a prize fight, a political convention, or a world series.

I remember when I was a boy a picture which used to be shown to us in order to make us understand how soft our educational pathway was. It was a picture of Abraham Lincoln as a youth, sprawled out on the floor on his stomach, his elbows on the hard boards and his chin resting in his palms as, by the flickering glow of the hearth log, he pored over his humble study in a wilderness cabin on the frontier. He had few books—not selected either, but just stray volumes which had chanced his way and from which he dug out laboriously the first precious, meager morsels of learning. Well, think of Abraham Lincoln on one of our 1929 farms. And then imagine a great radio school—a vast university with twenty-five million pupils and with the masters of every branch of learning on its faculty. A little radio set in one corner of the farmhouse, and the plow boy of 1929 has the world at his feet. There is no farm today outside the range of the broadcaster. And there are already a million and a half of these farms which own radio sets.

Let me give you a picture—not an imaginary one, but one drawn from real life. Imagine a little schoolhouse. It is the modern equivalent of the little red schoolhouse where for generations we have nursed those famous Three R's. The children are all gathered in one room. It is the music hour in that school—an hour set apart for musical instruction. Speaking to the class is the instructor. He is a tall, impressive, distinguished-looking man of about sixty-five—and though this is a remote little prairie schoolhouse, this master is beyond doubt a musician of note. He is giving instruction as part of a course. He sits at a piano and illustrates with chords and harmonies and little phrases of music the piece which is about to be played. He tells the children this piece is called "The Entrance of the Little Fauns." It is by Pierné. This is a piece well known to musicians but not heard of very much out on the prairie, or even in the big cities, for that matter. The instructor tells the class all about it.

"The little fauns are f-a-u-n-s not f-a-w-n-s," he explains. "They were little creatures very much loved by the old Greeks many thousands of years ago. They were quite human, save that they had goats' ears and goats' hoofs."

THE children are enthralled as this story unfolds.

"These little creatures represented nature. They could not live in four walls. They must be out in the open, under the trees, by the lake, rejoicing in the freedom and beauty of life. Now, this piece of music represents the entrance of a troop of little fauns led by an old satyr. The old satyr has with him his Panpipes. These Panpipes were supposed to have been invented by a god named Pan. They were formed of a series of little hollow tubes. And Pan taught a shepherd, Marius, to play on them. I will show you how they sound."

The instructor then calls up a man with a small instrument in his hand. And we now perceive that though this is a very small schoolhouse, the instructor has with him an orchestra of at least sixty pieces.

"These little Panpipes sound like our piccolo," continues the teacher. "This gentleman will play a few notes on the piccolo to show you how it sounds."

Then the musician twitters away on the piccolo for a few seconds, much to the delight of the pupils.

"Now, in this piece you will hear the little fauns come marching in, tramping merrily across the rustling leaves, and every now and then you will hear the old satyr blow on his Panpipes. He is teaching the little fauns how to play on them. There is one phrase in this piece of music which is carried by an instrument called the oboe. I want you to hear how it sounds and so I am going to ask the oboe player to play that little strain."

Whereupon the oboe player obliges.

"Now, the principal air—what we call the theme—of (*Continued on page 100*)

EGBERT

Illustrated by HERBERT PAUS

POOR little Mr. Spotts sat half lost in the huge leather chair his wife had bought for him, a defeated man. He raised his hand from the chair arm and let it fall in the hopeless gesture of a beaten man. In the family conference his thin voice had been lost in the unanimous noise of the others. All had been deaf to his appeals and arguments, and the factory that had been the pride of the Spotts family for three generations was doomed. He felt like a worm that has been stepped on.

For four hours he had listened to the objections and refusals of his three sons-in-law and his four daughters and his wife, and they had been solidly against him. The reports and plans and estimates he had so carefully prepared they had pushed aside as unimportant.

"That's all very well," Ed Torrance had said. "Figures can prove anything. The fact is that the factory has swallowed up all you had."

"And who wears suspenders now?" May had interjected. "Look at the men in this room—all belts."

"I wear suspenders," Mr. Spotts had said humbly.

Someone laughed; Egbert Spotts *would* wear suspenders, the laugh said.

"To say nothing of the unpleasantness, Father, of having everyone say 'Oh, yes; the suspender man's daughter,'" Emma had said. "I think it would be ridiculous to put all that money into the factory when all the boys say it will be throwing it away. We don't need more money. We have plenty, all of us."

"Except me," said Egbert Spotts. "This house and the factory is all—"

"And this house is entirely too big for us, Bert," said Mrs. Spotts. "It is an elephant, and I've said so often enough. I say, sell it. Sell the factory. I'm sure our daughters—"

"Of course!" cried Letty. "We'd be only too glad to have you live with us—turn and turn about. They can go to you, May, until we get back from Europe—"

"To Emma first," May said. "We're going on that Alaska trip, you know."

"I'll be glad to have Father and Mother a while—when Norbert and I get back from Canada," Emma said. "Really, Father, you and Mother will never want for anything as long as we live."

"With two hundred thousand dollars—" Mr. Spotts said.

"No; I think we're quite decided," said Herndon Wight. "We don't care to go into it at all."

"ONLY a hundred thousand, then," begged Mr. Spotts. "With one hundred thousand dollars—or fifty thousand, to put in the new webbing machines. The new Spotts suspender—"

"I think we have decided not to put in anything, Father," Ed Torrance said. "I think we don't care to continue the factory. May, do you know it is after midnight? Are you ready to go up?"

When he was alone with his wife after the others had gone up Mr. Spotts was too dispirited to say anything more, but she said a great deal. He hardly listened, for he had heard her say practically the same things many times. Mrs. Spotts was a queenly woman, and Mr. Spotts had the greatest admiration for her; but she did seem to consider that he was almost less than nothing—and he wished she wouldn't.

"And don't sit here moping all night," she ended. "You'll have to lock up; the servants were all in bed long ago. Why don't you answer me? Well, you needn't blame me, Egbert Spotts! You've no one to blame but yourself. If you were half a man," she said, growing angry at his silence, "you'd not have let the factory get the best of you. If you were half a man, the boys wouldn't be afraid to let you have money. But you know, yourself, Egbert Spotts, that you can't even buy yourself a necktie without coming to me for advice about it. Well, good night!"

"Good night!" said Mr. Spotts listlessly, and he was alone.

He sat in the big chair, so much too big for him that he was like a sparrow in an eagle's nest, and for one moment—just long enough to let two tears form in his eyes—he was sorry for himself; then he began to think. He thought about Egbert Spotts, a subject on which he had not thought for many years.

The factory, established by his grandfather and made great by his father, had come to this sad crisis under his rule, and he knew why now. In 1916, when he had felt that a national advertising campaign would lift the Spotts suspender to greater heights than ever before, he had let Jane persuade him against the large expenditure. Lacking that publicity, the new Super-flex suspender had found no public and the money put into the new machine had been wasted.

"I LISTENED to Jane," he told himself; "Jane wouldn't listen to me."

But he had never reproached Jane. He never reproached anyone; it was not his custom to reproach anyone. He had been, he saw now, a meek man all his life.

"Perhaps," he thought, "it was because Mother named me Egbert."

His mother, having named him Egbert, called him Bert, but the boys had gleefully called him Eggy and Eggy Spot, as if he had been something untidily spilled on a shirt front. In England, he thought now, he might have been called Good Egg, which was an inspiriting name. A Good Egg might have stood up for his rights but there were too many insulting chang

THE FIRST

BY *Ellis Parker Butler*

The story of the Suspender King who took a hitch in his own galluses

All had been deaf to his appeals and arguments, and the factory that had been the pride of the Spotts family for three generations was doomed

to be rung on Eggy—Chicken Eggy, Rotten Eggy. As a boy he had cringed under these names as under missiles thrown.

Jane had, of course, chosen him in marriage because he was meek. She would. His daughters—even Celia talked back to him as if he were supremely unimportant. Sell the factory! Sell the house! Give up the only two places where he had even a semblance of independence! "We can't have Father now, we're going to Europe; you take him, Emma." . . . "Take him yourself; we're going to Canada." . . . "Oh, let him go to a boarding house; what's the difference? He's only Eggy Spot!"

"It's too late now for me to change all that," thought Mr. Spotts. "I've let it be that way too long."

He thought of going to bed, but he was afraid Jane might be awake still, and Jane would talk. He would sit another hour, he thought, and he put out his hand for a book. It touched a biggish book which he opened at random.

"A TACITURN boy, small, shy, and lonely—" Mr. Spotts read, and thought, "Taciturn—that's silent. Small, shy, and lonely—I was that."

He looked at the title on the back of the book, interested to know who was small, shy, and lonely, and he saw the name "Napoleon." In another minute he was lost in the pages of the book. At times he turned a dozen pages at once, skipping forward and backward, and for ten minutes he read steadily, every line and every word. "Since my marriage, people fancy the lion is asleep. They will soon learn whether I am asleep." "Vive l'Empereur!" . . . "After all, what does it matter whether I am criticized? I will show them that I do not care." . . . "Wherever I may be I command—" . . . "First of all, we shall take the ships, empty the arsenal, carry off the big guns, and close the banks; we shall also keep Corfu and Ancona." . . . "Make me no more proposals; I will be your 'awgiver."

As the great deeds of the great little man leaped before his eyes one after another, Mr. Spotts breathed hard. He read the address to the Army of Italy, and thumped his fist on the arm of his chair.

"That's how to talk it!" he exclaimed. "*He* wasn't afraid; he let them have it straight. That's what's been the matter with me—never wanted to hurt their feelings. I've been too good to Jane. I've been too gentle with the whole lot of them. This Napoleon, he was the boy! He wouldn't stand any nonsense!"

Mr. Spotts got out of his chair and stood frowning. He threw out his chest and crossed his arms on it. He went into the hall and got his meek felt hat.

"Egbert!" called Mrs. Spotts from above.

"Go to sleep!" Egbert Spotts told her.

He went into the library and drew his hat firmly on his head crossways. He stood on a hassock so that he might see himself in the mirror over the fireplace, and looked into his own eyes coldly and fearlessly. By gracious, he had forgotten he had a chin like that! He folded his arms again and glared. He did not look anything like Napoleon, but, on the other hand, he did not look anything like the meek Egbert Spotts he had come to believe he was. He stepped down from the hassock and walked to the library table, drawing pens and paper toward him. With his hat still crushed on his head he wrote:

Family! For three generations the Spotts suspender has held up the trousers of the nation. Grant, Lee, Webster, Cleveland, Harding, Wilson—the great names of the glorious past—wore suspenders. Today the vast populations of China and Turkey begin to wear pants. Where a hundred suspenders were needed yesterday a thousand will be needed tomorrow.

HE PAUSED to dip his pen in the ink, and wrote:

Family, I will lead you into the most profitable markets of the world. There you will find wealth, yielding amazing returns. There you will reap dividends, income, and honor. Family, will you be wanting in spirit?

He hesitated as he was about to sign this with the word "Papa" and, instead, scrawled "Spotts" across the bottom of the sheet, and then went to pin it to the breakfast-room curtain. He returned to the library and wrote his second proclamation:

Wife! I am the head of the family. For three generations the name of Spotts has meant suspenders; when you married a Spotts you married a suspender factory. You are still married to one. Mother of the family, the generations look down upon you; the time has come when you must make the glorious decision: will you remain the wife of a suspender maker or accept desertion?

After considering the word "desertion" a moment Mr. Spotts decided that it was

In another minute he was lost in the pages of the book

not a good word. A Napoleon would not desert anything, and he changed the word to "consequences." Jane would have to accept the consequences if she did not choose to be a suspender maker's wife. He wrote:

> The glorious Spotts suspender sequence must not be terminated by my generation. If we cannot make suspenders we must sell them. Wife, will you have a Spotts peddling suspenders on the street?

He signed this "Spotts," and after he had read another chapter or two in the life of Napoleon he went upstairs and pinned it to the door of Jane's room, which was also his room; but he did not go in and go to bed. His campaign had begun, and he was willing to suffer the rigors of a campaign. Wrapping himself in an overcoat he lay down on a couch and slept on the field of battle. . . . He was still wearing the hat.

THE next morning when Jane and the family came down Mr. Spotts was gone. Herndon Wight, who had been the first up, had taken Mr. Spotts's manifesto from the breakfast-room curtain, had put it in his pocket and did not bring it forth until Mrs. Spotts came down. Then he took her aside, his face very serious indeed.

"I wish you would read this, Mother," he said. "I found it pinned to the curtain yonder, and it worries me. Do you think—have you seen anything in Mr. Spotts's behavior recently, except this idea of his that we ought to put a lot of money into the factory, that would lead you to think he was—"

"Crazy?" supplied Mrs. Spotts. "Herndon, read this; I found it pinned to my door this morning. I never knew Egbert to act like this before. Why, Herndon," she added, when she had read Mr. Spotts's proclamation to the family, "Egbert must be out of his mind!"

"We had better let the others know," her son-in-law said. "I'm afraid this is serious, Mother. Where is he?"

"I don't know," said Mrs. Spotts. "He didn't sleep in our room; it's the first time he hasn't since we were married."

"Where did he sleep then?" Herndon asked. "Do you think he has gone? You don't think he would do any harm to himself?"

"Oh, I don't know!" exclaimed Mrs. Spotts, more distressed over Egbert than she had ever been in her life. "I don't know what to think. His letter is so rough, and he has always been so—gentle. I'm afraid, Herndon! Let's see what the others say."

At first Ed Torrance was inclined to laugh at the whole affair, and Norbert Blane did not seem to take it any too seriously; but Celia—Mr. Spotts's youngest daughter and the only unmarried one—burst into unexpected angry defense of her father.

"That's just like you all," she cried. "As soon as you get married, you get stupid and don't care for anyone but yourselves. I don't wonder Father was driven crazy; you treated him as if he was a worm. Laughing at him! Saying nobody wore suspenders. I'll have you know that some perfectly fine people wear suspenders! The very finest man I know wears them."

"She means that Tommy Carter she thinks she's engaged to," said May. "I suppose it's collegiate!"

"NEVER you mind what it is," Celia retorted. "And he's not the only one who wears them. Poor Father! Just because he wants to support one of the old American institutions, you all have to rag him till he's half out of his mind. *I* don't care if they call me the Suspender King's daughter. I'd rather be called that than be called the Suspender Peddler's daughter. I don't think it would hurt you to let him have a few dollars. You know mighty well that if Grandfather hadn't left the money to May and Emma and Letty you'd all be living off Father. And Grandfather made it in suspenders, I'll remind you!"

"The question is," said Herndon Wight, "where your father is. I hope there is no question of suicide. Who saw him last? Was he depressed?"

"Dreadfully," said Mrs. Spotts. "Oh, if I had only made him come to bed! I let

Digitized by Google
Original from UNIVERSITY OF IOWA

him stay down, and I've always made him come to bed."

"It would be nice, wouldn't it," said Celia, "if our father went and ended his life, and all the papers said it was because his own daughters and their husbands wouldn't let him have a little money to help a factory Lafayette visited? Nice, wouldn't it, when the factory has a letter from a King of England thanking it for a pair of braces, and one from Andrew Jackson accepting 'aforesaid pair of galluses'!"

"It wasn't so much the money," said Ed Torrance.

"And are you all going to sit here and let Father do something awful?" demanded Celia. "I'm not. I'm going to telephone the police."

"Celia! Come back here! If there's anything of that sort we'll have a private detective agency take charge," said Emma.

MRS. SPOTTS had begun to weep gently, dabbing at her eyes with her handkerchief, but Celia was not to be stopped. Her hand was upon the telephone when the instrument's bell rang.

"It's for Mother," she said and handed the receiver to Mrs. Spotts.

"It's a telegram," said Mrs. Spotts. "Herndon, will you take it down? Yes, please do," she said to the operator, and repeated this:

Wife! Family! Napoleon, wishing a male heir, divorced Josephine. The Spotts suspender dynasty fails as the cowardly sons-in-law repudiate the suspender, for three generations the glory of the Spottses. Duty and honor call upon me to perpetuate the Spotts glory, now about to burst into new splendor with the Improved Triple-Elastic Webbing. Reno and Paris call me. Napoleon had his Marie Louise, who gave him the King of Rome; Spotts will make safe the suspender dynasty.

This was signed "Spotts."

"He's not dead," said Celia.

"But he wouldn't do such a thing!" cried Mrs. Spotts. "At our age, after we have been married all these years and years! Celia, the telephone is ringing again."

"It's another telegram," Celia said. "Will you write it down, Herndon? This one begins 'Family'—"

"Family! Napoleon had his Elba, but he had his glorious hundred days; Spotts had his sons-in-law, but he has his tomorrow. The great metropolis grants the honors the family refuses, and awards Egbert the First peddler's license number one one six eight two seven. Courage!"

"The operator says he can't just make out the signature," Celia said. "It is 'Egbert' but there's something after it—'l' or 'I', or something."

Mrs. Spotts groaned.

"It's a Roman 'one,'" she said. "Celia, your poor father is crazy. He thinks he's a Napoleon."

"He wouldn't be joking, would he?" asked Norbert Blane. "He never did joke."

"Never! Never!" said Mrs. Spotts, who was tearful again. "Not since we were married. There was a time—"

"You can believe me," said Celia, "this is no joke. It won't be a joke for you, Mother, to have Father get a Paris divorce and marry some flapper. It won't be much of a joke for you, May, and Emma, and Letty, to have Father's picture in all the tabloids—Suspender Peddler, Once Man of Wealth, Weds Mere Child. I suppose he'll have a pushcart!"

"More likely," said Emma, "he will have one of those suitcase things hung from his neck by straps, with suspenders hanging down all around. 'Get your suspenders here, gents; get your suspenders here!'"

"I don't believe he will do it at all," said Letty. "I think he is just bluffing us. He wouldn't have the nerve."

Again the telephone bell jingled, and Mrs. Spotts instinctively put her hands over her ears. Herndon picked up his pencil.

"Answer it, Celia," May said.

"Answer it yourself," Celia said. "You needn't think you can all order me around the way you've ordered Father about."

"Another Napoleon in the family, a female one," said Emma, rather too sneeringly.

"Yes; and she's not ashamed of it, if you want to know it," retorted Celia. "I may not be any Napoleon, but I have enough independence not to be beholden to you girls for my bread and butter and silk stockings. Father is not the only one who can peddle suspenders."

"Celia!" wailed Mrs. Spotts. "You wouldn't!"

"Wouldn't I? 'Sub Deb Jars Kin—' Well, answer the 'phone, why don't someone?"

Ed Torrance answered it.

"YES, this is the home of Mr. Egbert Spotts," he said in reply to the question asked. "Item of interest? . . . No, I don't know any item of interest. One moment, if you please." He placed his hand over the mouthpiece. "It is a reporter for the 'Daily Tabloid'," he said. "What do you suppose that means?"

"Father must be up to something else," said May bitterly. "Some more of his Napoleon nonsense, no doubt. Don't tell that reporter a thing, Ed."

"I won't," Ed promised, and he uncovered the mouthpiece. "I'll tell you, old man," he said to the reporter, "there's no news here that we know of. We couldn't give it out if there was; Mr. Spotts is the head of the family; you'll have to get any news from him."

"But that's it," said the reporter. "Mr. Spotts is right here at my side. He told me to call you up. He said there might be an item for me."

"Just a minute," Ed Torrance begged, and again he covered the mouthpiece and turned to the family. "He's right there himself, Mr. Spotts (*Continued on page 99*)

He slept on the field of battle

What Happened to

A Man *Who* Worked

As if He Owned His EMPLOYER'S BUSINESS

By JOHN B. KENNEDY

NOT many moments in American business could equal for drama those in which a brief announcement was made three years ago by George Eastman. Before the Board of Directors of the Kodak Company, Mr. Eastman arose to declare that the time had come for him to resign as active head of the greatest corporation of its kind in the world. He had a successor, he went on to say, the secret of whose identity was already known to some who sat about that board table.

Silence. All eyes were fixed upon George Eastman. He opened his broad, masterful mouth and spoke a name—the name of a man not present.

On a ship in the Mediterranean William G. Stuber was leaning on a taffrail photographing Gibraltar when a wireless operator brought him the news that he had been made president of the Eastman Kodak Company.

When Stuber returned to Rochester, his first act was to express gratitude to Eastman—his employer for thirty years. Then he faced a mob of reporters who scribbled notes about this iron-gray man of sixty—a man with a firm, almost ascetic, face, like that of a well-groomed lion.

"I'm too busy to talk, gentlemen," he said abruptly. "It's late."

That was at 8:05 A. M. Two minutes later, the new president was at a flat-topped desk in a room on the sixteenth floor of the Kodak Building. When the mob of reporters persisted in questioning and picturing this newly-revealed magnate of American industry, he sent out a biography briefer than a night letter and plunged forthwith into a conference with the European sales manager.

This characteristic action is a clue to the reason why George Eastman, on reaching the traditional threescore and ten, had no hesitation in nominating Stuber to step into his presidential shoes.

William G. Stuber, President of the Eastman Kodak Company

"Somebody," Eastman explains, "has attributed to Mr. Stuber the maxim that to succeed in any business a man should act as if he owned the business. That does not quite describe William Stuber's attitude toward his job. He always *worked* as if he owned our business."

Thus his first gesture as president was not, in fact, a gesture at all; no reception, no speeches, no display—just punctual and smooth continuance of his job.

THIS devotion to the daily task, plus intelligence and initiative that raises personal industry from the level of a grind, "made" Stuber with Eastman. It had "made" Stuber years before he knew Eastman, not in the sense of making his fortune, but in the more important sense of forming his character. And, curiously enough, the work he did before Eastman knew him—the work that led Eastman to seek him out—is still a hobby he pursues with a persistence that amounts to passion.

William George Stuber was more than thirty years old when he accepted the call that took him from his native Louisville to Rochester. At that age, in those days, young men who were wise men had usually established themselves in careers. Indeed, in these more mercurial times, the man in his thirties who is not also in his life work is rather up against it to find work that will last him for life.

STUBER had a profitable business and an interesting career, but an ambition that transcended both. His ambition was to make the perfect photographic emulsion, and he dedicated his energies to that goal with the constant zeal of a knight of legend seeking the Holy Grail. It led him eventually to headship of the concern that has made a world-wide business of perfect photography.

"My father," he tol me in his quick, clipped manner of speech—a voice touched with an aggressivenes strange to a gentle mouth and a high, studious forehead—"was a native of Alsace wh came to this country at a very early ag He was one of the first photographers t follow his trade in old Kentucky. Durin the Civil War, he was attached to variou regiments as a sort of official cameraman the photographs of those days being pra tically what we know as the tintype."

Stuber's earliest memories are of Louisville attic in which he spent hou posing for his father and diverting hims by sorting hundreds of faded pictures fighting men of all ranks, gauging th importance by an arbitrary standard the length of their whiskers. In tho days, photography that worked was mo of a novelty than aërial joy-riding is no Union Army men and Southern order

Digitized by Google

319325

pictures prodigally without paying for them punctually, for slow wages and sudden death frequently interfered. Result: Stuber, senior, was left poorer after the war than before it. And he had never been embarrassed by wealth.

Indeed, his sole assets, besides rent paid in advance for a miniature gallery with a cracked skylight, were a wet-plate camera and the urge to provide for two husky young sons and a daughter. This explains young William's remorse and consternation when, one prankful morning at the height of the Christmastide rush, he bumped into his father's camera and ruefully surveyed the pieces.

He expected a severe trouncing. Instead, his father made him sit down and watch the slow and painstaking repair of the broken picture box—romping and feeding being sternly suspended until the job was finished.

"Now," said Stuber, senior, "you know the damage one careless act can cause."

This object lesson in patience, combined with an inheritance of that virtue, has borne fruit as the guiding theme in Stuber's life work. Born and bred in his avocation, the circumstance of his father's premature death obliged him to follow the only trade he was acquainted with. In his teens, he was an accomplished tintype man. At county fair time, he invested in a stand to make likenesses of local dandies and their ladies. Profits, of course, were small: but the work was an unpremeditated source of advertising.

HE RECEIVED evidence of this after a particularly rainy spring when the photography trade in Louisville was about as lively as a well-regulated cemetery. Seated reading in the studio back of his frame house, a studio that was no more than a lean-to shack, a young man, in the pie hat and bell-bottom trousers popular in that generation, entered inquiringly.

"This is the fifth photograph shop I've been to," he explained. "I want to locate the man who made this."

He displayed, a little hesitantly, a copperish tintype in which Stuber detected the young man's features in proximity to the fairer face of a young woman. He admitted his handiwork to the visitor. The picture had been made at the last fall fair but one.

"It's the only tintype I ever had made that didn't fade before snowfall," the visitor explained. He added: "I'm going to marry that girl and she wants you to come and make a picture at the wedding."

The young man left with Stuber's promise, and he gave Stuber something more valuable than an assignment. He had confirmed a discovery for the photographer. During the years he had been struggling for a footing in his trade, Stuber had been absorbed in a problem just as immediate and exciting to him as that of obtaining a livelihood for himself and the family dependent on him—the problem of an effective and dependable photographic emulsion. That, he knew, was the touchstone of photographic success, more basic than skill in placing light and arranging posture; the element of science without which photography could not hope to become an art.

During long nights, he had experimented with varying strengths and quantities of silver (*Continued on page 116*)

If You Ask Me:

You Can't Afford to Spare *your* Spare Time

A LITTLE while ago the newspapers told of a man who refused a million dollars as payment for an invention which he had evolved and perfected "in his spare time."

He had put in a full day's work, year after year, on his regular job. Then, when the evening called other workers to loaf or to play, he settled down eagerly to hours of grindingly hard toil, on his invention. That was his way of resting.

The newspaper accounts could have spared space by omitting those words, "in his spare time." They could have been taken for granted. Of course, the invention was perfected "in his spare time." Most of the world's great men have achieved their true life work, not in the course of their needful daily occupations, but—in their spare time. Think it over, and you will see how true it is.

A tired-out rail-splitter crouched over his tattered books, by candlelight or by fireglow, at the day's end; preparing for his future, instead of snoring or skylarking like his co-laborers. Those laborers are forgotten. Lincoln is not. He cut out his path to later immortality—in his spare time.

An overworked and underpaid telegraph clerk stole hours from sleep or from play, at night; trying to crystallize into realities certain fantastic dreams in which he had faith. Today the whole world is benefiting by what Edison did—in his spare time.

A down-at-heel instructor in an obscure college varied the drudgery he hated by spending his evenings and his holidays in tinkering on a queer device of his, at which his fellow teachers laughed. I don't recall the names of any of those teachers. Neither do you. But we have not forgotten who invented the telephone—in his spare time.

Then there was a case which came under my own close observation and which is not mere history nor hearsay: the case of a woman—a clergyman's wife—who tackled the following none-too-easy job:

She had six children; and not only brought them up, but took sole charge of their education until they were nine or ten years old. Also, she was an inspired housekeeper, conducting the management of her large home and doing much entertaining. In addition to this, she was supremely active in church work and in missions; and was in fact the ideal helpmeet for her ever-busy clergyman husband.

She had the further handicap of years of ill health. But she performed her million duties brilliantly; shirking none of them.

That is a fairly large daily job, I think. Yet, "in her spare time" she was able to win fame as a novelist and household writer, under the pen name of "Marion Harland." (She was, incidentally, my mother.)

The list could be stretched out to infinity. It could be made to include nearly every successful writer, for instance. For almost all these writers mastered their chosen profession while they were slaving all day and every day at other forms of livelihood. They qualified for success and for fame—in their spare time.

The man who says: "I'd do such-and-such a big thing, if only I had time!" would do nothing great if he had all the time on the calendar. There always is time—spare time—at the disposal of every human who has the energy to use it.

Three Lives *in* One *and* Always Ahead *of his* Time

That, briefly, sums up DAVID STARR JORDAN, Grand Old Man of Science and Education, and Crusader for peace when peace was unfashionable

By FRANK J. TAYLOR

DAVID STARR JORDAN has wrung more out of life, has done more good for more people, and is happier at the sunset of his days, than anyone else I have ever known.

I don't mean to say that he has reached all his goals, or even come near them, for I happen to know that he has spent much of his time on the losing side of great questions, and that some of his most cherished dreams have not come true. But although often in the minority, he has always been respected by thinking people, and though bitterly opposed, he was usually found to be right in the end.

"If the matter is important," he said, "and you are sure of your ground, never fear to be in the minority. The world turns aside to let any man pass who knows where he is going."

For more than half a century David Starr Jordan has crusaded for the truth, and his door has ever been open to anyone with a problem of life for solution. He is retired now with the title of Chancellor Emeritus of Stanford University, but the career of this grand old man has been an unusually full one. His outstanding achievements are the building of two great educational institutions, the University of Indiana and Stanford University. He has won distinction in the field of science as a foremost authority on fishes; and his crusade for world peace was climaxed by winning the Raphael Herman prize of $25,000 for the most practical peace plan.

So varied indeed are his major interests as to comprise three distinct and practically complete existences. He has succeeded in wringing three men's work out of one man's days. And even now, when he is nearing fourscore years of age, he is still searching ravenously for the truth.

"I have enjoyed my three more or less separate and independent lives," he told me, "and now I find that I have not merely one life to finish but all three of them. That complicates matters," he added with a smile, "and is the only objection I know to leading a triple life.

"The first life I have lived is that of the naturalist and explorer—a life I lived for the love of it. The second is the life of an educator, which covers my activities as a teacher and university president. This life also I have lived for the love of it. My third life is the life of a minor prophet of Democracy, a life I have lived from a sense of duty. I refer in this to the various crusades I have supported.

"All of these lives have been more or less complete, for I gave to them all that there was in me to give. I need scarcely tell you, I suppose, that they have kept my days more than full. But if I had my years to live over, I would choose all three of these lives to live again. They constitute my final choice of an ideal existence."

In addition to this, I happened to know that Dr. Jordan had composed verse and written children's fiction, yet he did not include the career of an author among the "lives" he had chosen, for the reason that writing was a hobby with him and not work.

"The poems were written mostly to my wife," he explained, naïvely, "and the stories were written for my children. I wrote when I had anything to say and spoke when I thought I had a message." But in each of the three lives he mentioned he has attained eminence.

NOT long ago it was my privilege to return to Stanford, where I had been a student, after a number of years and visit with Dr. Jordan. He resigned the helm of the University ten years ago, after piloting the new institution through its birth and its infancy and through two near catastrophes.

He wanted to finish his studies, and so he retired to a quiet little office in Jordan Hall, which they named in his honor in recognition of his achievements in science. I expected to find him taking life easily at seventy-seven years of age. Instead, I found him keeping office hours and busily engaged at a great roll-top desk. (*Continued on page 122*)

My Creed of Living

"I HAVE lived three separate lives, one occasionally predominating but never to the exclusion of the others," says Dr. Jordan. "To make this possible, I have always tried to use all my available time and energy. I never played any but athletic games. I did not play cards, not because I thought them wicked, but because cards seemed a waste of time. I always found time for baseball or for botanizing over the country. I never used tobacco nor alcoholics—tobacco because I couldn't afford to take the reduction in efficiency which, in my case, the use of tobacco entailed, alcohol for more profound reasons.

"I have managed to accomplish a good deal by avoiding the waste of time. Yet I never studied at night, because it weakens the eyes and makes one less capable in the daytime. That made it necessary for me to read and write rapidly. I sometimes read at a glance a full page in English or French.

"While eagerness is one of my strongest characteristics, it is a part of my plan never to get excited. I don't think anyone ever saw me excited outwardly. Understand, all this was not a preconceived plan on my part. I merely took my problems as they arose and made the best of them, but if I had tried to evolve a plan for living, it probably would have been the same."

David Starr Jordan

DR. JORDAN is one of America's most famous private citizens. He has fought long and bravely for peace among nations; he has for fifty years been a distinguished educator; and he is credited with having studied, classified, and named more fishes than any other man. An amazing career which, though it has now been running for seventy-seven years, is still going strong! He is now chancellor emeritus of Stanford University, an institution which he guided from its inception until ten years ago. A native of Gainesville, New York, Dr. Jordan moved West with the pioneers. He first attracted wide attention as an educator when he liberalized the University of Indiana.

Honoré Willsie Morrow

HONORÉ WILLSIE MORROW is distinguished as an editor, novelist, and short-story writer. She was born in Iowa and has spent a great deal of time in the West, which is the scene of most of her early novels. Among the best known of these are "Heart of the Desert," "Still Jim," "The Forbidden Trail," and "The Enchanted Canyon." For the past fifteen years, Mrs. Morrow has made her home in New York City. From 1914 to 1919, she was editor of "The Delineator." In recent years she has been making an intensive study of the life of Lincoln. The great Emancipator is the central figure in her latest two books, "Forever Free" and "With Malice Toward None." Mrs. Morrow is now concentrating on the study of Jefferson Davis.

The Strangest Adventure a Woman Ever Had

By HONORÉ WILLSIE MORROW

ONE winter's morning when I was about twelve years old my mother wakened me before daylight. She told me to dress quickly and take the lantern and ask one of the neighbors to ride into town for the doctor. My baby sister was having a bad attack of the croup.

I was afraid of the dark but more afraid of sickness. We'd had a long siege of it. Mother could still scarcely crawl about after typhoid and we children had just finished with diphtheria. My father was away on business. This call from my mother was part and parcel of the loneliness, fears, and responsibilities that I was learning were life's essentials and I went shivering into the strange, cold dawn.

A blizzard delayed the doctor; delayed him too long! And that night I had my first meeting with sorrow when a neighbor, after helping my exhausted mother to bed, showed me how to keep a cloth wet with diluted baking soda over the little face which death in an hour's time had turned to marble.

It was, I suppose, this precocious vigil which has made me ever since then overconscious of death in life. Or, perhaps I was born a coward. At any rate, it seems to me I always felt a menace in life's kindest moments that was not shared by my contemporaries and that didn't make living any easier for me. For many years this early and poignant loss was a vivid and painful memory. But as I grew up and met with other griefs and not a few joys, its outlines became tenderly blurred for me and I was able to recall that night deliberately and to find a sort of beauty in the picture of the older child keeping the death watch over the younger.

But I never became less of a coward. I merely gained sufficient self-control to write myself down in my own estimation as a person of secret fears and to struggle to forget that fact. To laugh life off; that was the great idea. And I set about doing so.

It was not until I'd been laughing it off for many years that I realized that most of the people I knew were doing the same thing. It was astonishing and disconcerting. I always had comforted myself with the promise that some day I'd find someone with a fine, brave philosophy who'd give me enduring courage. And here I was discovering that after events have manhandled any of us enough the pretty, petty illusions that drape the hard contours of existence disappear and we learn that the basic facts of life are hard and bitter. It was a shock to me to discover that the fear of death and the passionate desire to ignore that fear are common to the whole human family.

UNTIL a few years ago I brooded a great deal over this discovery and over the whole agonizing mystery of life. Then came an event that changed my attitude of mind completely. The change was brought about indirectly by death once more striking in my family as casually as one crushes a fly. I was as horrified as an untried, undisciplined child and for weeks ran about like a rat in a tub in an effort to get my thoughts away from this the most recent of my tragedies. It was impossible to do so in New York where the thing had happened. And I began to dream of the one spot on earth where I recalled having felt complete serenity. This was the desert just below the Death Valley country. My mind fixed on this spot with feverish persistence.

I had no right to go there nor anywhere else. My duty lay clearly in New York. And yet so persistent was the dream and the desire that I finally cast aside every other consideration and fled to this land of haunting beauty.

There was nothing vague about my desire. I wanted to be just where I put myself: alone in the desert near the Mohave Indian village, north of the town of Needles. My lone tent lay about a quarter of a mile from the Colorado River, with its gray-green fringe of arrow weed. To the east, beyond the brown river, lifted the purple and gold of the Black Mesas. Above these towered the Blue Ridge Mountains, and beyond these lay Arizona. For the rest, golden wastes of sand and utter quiet save for the distant rush of waters. Surely, I told myself, if serenity were to be found, it was here.

FOR a few weeks, I thought I'd solved my problem. I tramped endless miles. I wrote several short stories. I slept pretty well, although I didn't like to be alone at night. And then one burning July morning as I brushed the sand from my typewriter and tied a handkerchief under my chin to keep the sweat from dropping on the paper, a sound drifted to me from the Indian village that shattered my serenity like a stone on thin glass. It was the death chant. Iretaba, the only son of Kemah, the chief, had been very ill with tuberculosis. This, then, was notice of his death to the world at large and to the Great Spirit in particular.

"Iretaba! Iretaba! Iretaba! Great Spirit, hear! Iretaba!"

It was evident that I had not run far enough away.

I set my teeth and pounded at the gritty keys. The wind during the spring had been balmy but as summer advanced it rose each day to ferocious dimensions and bent to its perpetual task of remodeling the face of the desert. The Colorado, now at the height of its summer flood, tore at its banks like a Niagara. But hour after hour the voice of human grief in the village yonder shrilled above both wind and river.

At two o'clock, the mercury said 110° but the wind was dropping. At four, the mercury had dropped five degrees. At

six, the wind was stilled, the thermometer was at 100°, and I opened the tent flap. A drift of sand nearly a foot high lay across the entrance. Already it was marked by the tiny handprints of lizards and horned toads. I kicked clear the passage and made my way to the cook shelter. Would they never stop it?—"Iretaba! Iretaba! Iretaba! Great Spirit, Iretaba!"

I cooked my supper of pancakes and bacon, and cleared up. It was seven o'clock. I asked myself if I were always going to be a coward, and with sudden ferocity walked out of the shelter toward the Mohave village. I would go and observe how the Mohave handled death!

THERE was no one to be seen in the village, at first. I moved along the river bank to a point where the hungry waters had made a deep undercut. Here had been scooped out a shallow grave on which had been laid, cradle fashion, a heap of piñon logs salvaged from the Colorado. The cradle was packed deep with greasewood. Just as the sun sank behind the western mesa, the medicine man emerged from his adobe shaking his rattle. Kemah followed. The old chief's arms were filled with parcels. After him came four other old men naked save for breech clouts, their long hair unbound to the waist. They carried a pole from which hung, hammock fashion, a red and black Navajo blanket. In this lay young Iretaba. Following the body, marched a long line of men, women, and children, winding along the trail to the piñon cradle, scarlet tomakwich shawls rippling, long black hair blowing, faces contorted with weeping as they sang the chant.

They laid Iretaba in his fragrant bed and heaped him over with more greasewood and logs. The chant ceased while the medicine man dropped his rattle and set a match to the pyre. A thin black line of smoke etched itself against the pink afterglow. The mighty frogs that follow the floods burst into their night chorus and against this and the sonorous rush of the Colorado, the Mohaves continued to call the attention of the Almighty to their loss.

"Great Spirit, Iretaba!"

The dusk deepened and the flames brightened. A great moon sailed over the river. A group of Mohave girls danced slowly back and forth before the pyre, begging the Great Spirit to make them fruitful, for their tribe was disappearing. Iretaba's women folk slashed off their hair and cast it to the flames. His father opened up parcels and threw on the flames long streamers of gay silk and followed these with clothing, books, a wardrobe trunk, an armload of Navajo blankets, and a photograph. It was past midnight before the fire had died to a sunken bed of coals. The chanting ceased with the flames and at last the tribe stood waiting.

They had not long to wait. During the ceremonies, the river had continued its work with relentless force, and a moment after the last note of the chant had receded, the bank before the pyre trembled and stirred and a wide crack appeared in the sand. Then, with a long-drawn sough, a slice of the desert bearing Iretaba's ashes slipped into the Colorado and the black waters closed above it. Immediately, old Kemah waded waist deep into the stream and with one last cry of "Iretaba!" cast into the angry current a bow and arrow, symbols of the boy's maturity.

As the weeping old man waded ashore, I turned campward. I'd had all I could stand.

BACK in my tent I couldn't sleep; so I lighted a candle and looked for something to read. A day or so before, a trader in Needles had insisted on lending me a copy of the diary of Padre Garcés, after whom the local railway hotel had been named. I felt no interest in the book, but now in desperation I opened it.

In a moment I was absorbed, and more than absorbed. I had not gone through half a dozen pages before a new set of ideas was flooding my brain and I realized that I was on the trail not only of a missionary but of a fascinating suggestion. I did not lay the book down till I had finished it.

Garcés was a monk, and in the years 1775-6 he made a long, solitary trip among the desert Indians, during which he kept the diary I was reading. The journal gave a minute account of his trails, with compass readings and watering spots so accurately set down that the trader had told me he had once retraced the monk's entire trip.

BUT there was more than mere geography in the diary. It presented a remarkable picture of a human being. Garcés was about thirty-five, a lean, brown Spaniard whom the Indians often took for one of themselves. He traveled light, carrying on his burro only a banner of the Blessed Virgin and shells for presents to the Indians. He wore only a black gown, having given his undergarments to the begging red men. Thus equipped, he traversed countries that no other white man would have tried to cross with a regiment.

Only one who has struggled for existence in the desert can appreciate the degree of hardship and suffering he underwent. No one not familiar with the savagery of the warfare that existed among those early tribes can appreciate the sheer bravery of the man. And only those who, like myself, had shuddered at the thought of death can seize with understanding on the reason he gave for taking the journey. And that brings me to the meat of Garcés' importance to me.

He didn't call his experience a journey. He called it an "*entrada*," which was a word used by the old *conquistadores* to describe their descent on the Indians when they were going to make either subjects or converts of them. Garcés said he was making an *entrada* for the sake of the Indians, but that more than that, h

"Why you all time worry is because you stay so far away from your brothers. You come back to desert, live like Injuns live, then you believe like Injuns believe and you not worry"

was making what he styled an *entrada of the soul;* that his reason for going was because he knew death to be as good for the soul as life.

I stared at the tent canvas undulating in the night wind. What did he mean? What did the *entrada* hold for him? Had my coming to the desert also been an *entrada?* I shook my head at that. My attitude had been too passive. Garcés had not sat still while the elements roughed him, as I had. Forever on the move was Garcés. His was a high courage I couldn't hope to imitate. Courage! That supreme solace for human suffering!

How had Garcés found it? Could I, too, find it if I went over his trail? Not to conquer Indian souls of course, but my own. A sudden and powerful impulse swept over me. Why not take Garcés' trail and try to find what he had found—that death is as good for the soul as life?

I FOUND myself breathing hard. Good heavens, it had required almost more courage than I possessed to abide alone in this tent, close set through it was to the friendly Mohave village. It was hardly to be believed that I dared to spend a dozen nights alone on Garcés' solitary trail. And as I acknowledged this to myself, disgust sickened me. I wiped the sweat from my face and shivered.

"A weakling—all nerves and conversation!" I sneered at myself. "Let me tell you one hard truth, my good woman. It's highly probable that this urge you feel to take Garcés' trail, if yielded to, would prove to you finally whether or not you have even physical courage. Though you got nothing spiritual from it, wouldn't it restore a little of your self-respect if you found you possessed a tiny portion of Garcés' bodily nerve? But, of course, you'll invent some excuse—the idea is chimerical—absurd—"

"I certainly will not invent anything," I shouted suddenly. "I'll take Garcés' dare no matter how like a fool it may make me look!"

I mulled and muttered over this for some time but finally fell asleep. When I woke, with the sun hot on my tent, however, my resolution was clear-cut and I began to plan details. I'd get me a burro and, armed with a compass and Garcés' diary, I'd give myself to Garcés' trail to work upon.

FOR weeks, a stray burro had been coming to eat my meager table scraps. He probably had belonged to some prospector who had gone broke in the mountains to the north. The lonely little beast would be glad to have me take him on. After breakfast, I made up my pack. Two gunny sacks held my commissary. It consisted of a slab or two of bacon, oatmeal, coffee, evaporated milk, canned tomatoes, and a few potatoes, a coffeepot and skillet, a two-gallon canteen, two blankets, and a change of underwear. I wore a flannel shirt, riding breeches, and high laced boots, the last not alone against sand and thorns, but against the rattlers. They change their skins in July and strike at any sound without warning.

John, the burro, made not the slightest objection when I tied the two sacks across his back and jerked on the lead rope. Perhaps the *entrada* furnishes the normal mode of life for a donkey!

All day we worked along the sandy trail, northward toward Fort Mohave; dull going and very hot and wearying. Made camp that night within hearing of a rancho, with apologies to my pride. I was too tired to cross the river where I would find Garcés' kind of solitude. It was mosquito-ridden work sleeping in the arrow weed along the river, and the first night on the ground is always one of torment. But I was short of sleep and almost exhausted, so I closed my eyes at twilight and knew nothing more till dawn. A mild triumph, that! I told myself, as I hobbled about getting breakfast.

We crossed the river at sunup and, watching the compass and Garcés' diary, worked southest seeking his pass over the mesa and through the range which now loomed above us. But I made hard work of finding it, searching for hours without result. About four o'clock, as I squatted on a rock heap and gazed bleakly down at the distant Colorado, a squaw came along the trail I'd just left and stopped in front of me. She was a heavy, dull-featured woman wearing the inevitable red tomakwich cape or shawl. After she had stared her fill she suddenly began to shiver.

"Heap cold! White squaw give 'em Molly shirt!" pointing at my gray flannel standby.

"It's hotter than fury and you know it!" I retorted. "But I tell you what I will do. I'll give you my red necktie if you'll show me the old Mohave-Hualapai Pass I know must be near here."

She shook her bobbed head. "No sabez," she muttered. But she sat down near me, nevertheless.

I pulled off my tie and dangled it from my fingers.

"How much grub?" demanded Molly.

"I've only a little, but I can give you some potatoes," I replied.

She grunted. There was a long silence. Then Molly rose clumsily to her feet. She obviously was not far from motherhood.

"You fool heeko (white)!" she said, and scrambled up beside me to point over the rock heap on which I was squatting. "Pass go there."

I followed her finger. Sure enough, there was a wide draw leading upward. It was not an easy prospect, for the floor was half choked with broken rock and well grown with cholla cactus. No wonder it had long since been deserted. I wasn't keen about the look of it, but if the padre could, I could! I gave Molly the tie and half a dozen of my precious potatoes, took John's lead rope, and began my scramble.

I HAD thought from Garcés' diary that I could make the crossing before dark. There was a spring, he said, just before the descent was made on the east side into the Sacramento wash in Arizona. But Garcés, characteristically, made no note of the extraordinary roughness of the going. Perhaps it hadn't seemed rough to him. But dusk caught John and me sweating in a cactus-grown crack in the ranges with black walls scarcely a rod apart and only the evening star high above to keep alive our faith in the existence of (*Continued on page 80*)

He saw one of the other fellows holding her fur coat for her . . . a coat that cost more than he earned in a month

ELISABETH SANXAY HOLDING'S

charming love story

A Dinner Date

THE office was on the fifteenth floor, and young Cowan, standing at the window, could see stretched out below him in the dark something like a land of faëry. The towering buildings where lights glittered might have been castled crags; across the black waters of the bay the ferries swam, like squat jeweled dragons; in the dark sky a thousand multi-colored lights flashed silently.

And all this stirred him terribly. He stood there looking out, a fiercely rebellious prisoner, his hands in his empty pockets.

"Makes me sick!" he said to himself.

"Cowan!" said Mr. Prout.

"Sir?"

"Here's your dinner money, Cowan."

"Thank you, sir," said Cowan, and pocketed the dollar. One dollar. . . .

She was getting ready to go home. He saw one of the other fellows holding her fur coat for her. He had seen fur coats like that in shop windows and had found out what they cost; more than he earned in a month. And her white gloves and her smart little green purse, and her silk stockings and gleaming patent-leather shoes; all her air of delicate and fastidious luxury!

"Lord! She's wonderful!" he thought, staring at her with a sort of miserable delight.

Then he caught her eye, and he saw the color rise in her cheeks until they flamed, and she smiled at him, not a fastidious and luxurious smile, but shy and uncertain. He *knew* she never smiled that way for anyone else.

HE STROLLED over to her, stood beside her, looked down into her dark, delicate little face with a cool smile, as if he were indulgently amused by the pretty little thing. But he didn't feel like that.

He could have dropped on one knee before her and let her lay her hand on his bent head; he could have kissed her gleaming little shoe, and offered her all he had, and all his future. She was such a kind, gentle, friendly girl; not only lovely and dazzling, but kind.

Only, all he had wasn't enough, wasn't a tenth of enough. He had taken her out to lunch once, and it had cost him seven dollars. For a lunch and the taxi. She had been so nice about it, so happy; she had told him she had had a "wonderful time." But of course she must be used to that sort of thing; she had sat at the table like a little princess, gay and gracious, and all the time he had talked to her he had been making secret calculations. Rent and food and clothes . . .

"It'll be years before I have enough," he had thought.

He was twenty-four now, and he couldn't wait years. And she wouldn't, of course. Look at that other fellow. . . And there must be dozens of them, all ready to offer her everything.

"Have you got to stay late, Mr. Cowan?" she asked.

"Yes," he said, still smiling at her

Digitized by Google
Original from
UNIVERSITY OF IOWA

Then his amused, indulgent smile vanished; his mouth grew tense, his blue eyes looked at her with dogged despair. Just for that instant all his heart was in his face, and she read it. Her eyes fell, she turned away her head, so that he saw her clear profile.

"Come on, Marie!" called one of the girls from the doorway.

She was going, to heaven knows what sort of gay and expensive evening, while he would be left behind here, forgotten.

"I'm sorry," he said, and fancied that he spoke casually. "I'd wanted to ask you—if you wouldn't come out to dinner with me tonight; but now, of course—"

HE, WITH one dollar in his pocket! Well, it was true enough that he had wanted to ask her.

"Oh, come on, Marie!" called the other girl.

But she lingered.

"How late will you be?" she asked, almost in a whisper.

"Oh, about eight," he answered.

"That's not too late, is it?"

His face grew white.

"N-not for me!" he said, valiantly.

"If you'll ring me up when you've finished, I can meet you somewhere."

"All right! I'll do that!" said young Cowan, and wrote down her telephone number.

Then she went, and in the doorway looked back over her shoulder, the loveliest look, her eyes a little misty.

"One dollar!" said young Cowan to himself. "What can I *do?*"

He went back to the window, saw again that land of faëry. Everything lay there below him: theaters, restaurants, superb cars, delicate food, music, dancing—and he had one dollar in his pocket.

"She wanted to come," he thought. "Really wanted to. . . . If I'd only saved my money. If I'd only worked harder. I could have studied in the evenings. I needn't have bought that other suit. If I'd known—"

His hands clenched in his empty pockets.

"Cowan, better go out and get your dinner," said Mr. Prout.

Cowan spun round on his heel and looked at the manager. A tranquil, gray-haired man in spectacles, Mr. Prout was, but not so mild as he looked.

"See here, sir," said young Cowan. "I—I've paid up all that advance I got last month."

"Yes," said Mr. Prout, serenely, "so you have."

He sat with a green shade over his eyes, bending over his desk.

"I—" said young Cowan. "See here, sir! If you'd let me have another twenty-five?"

"See me about it tomorrow morning, Cowan." Mr. Prout's reply sounded final.

"I mean—now, sir."

"Cash has gone to the bank, Cowan."

"Can you lend it to me, sir?"

Mr. Prout pushed up his eye shade and looked at Cowan.

"That's a rather peculiar request, Cowan."

"I know," said Cowan, doggedly. "But if you would . . . I need it . . . like the dickens, sir."

"This time of night, Cowan?"

"Yes," said Cowan.

"Ha!" said Mr. Prout, musingly. "Flyin' high, Cowan." And began to whistle, staring at the ceiling.

"It's . . . urgent private business, sir!" cried young Cowan.

"Urgent, eh?" said Mr. Prout, and was silent for a time. "Well," he said at last; "I happen to have it, and I'll lend it to you."

"Thank you, sir!" said Cowan, and his voice was not quite steady.

Cowan went out and gulped down two cups of black coffee and hurried back to the office, and worked better than ever he had worked before. The time went by extraordinarily fast.

"All right!" said Mr. Prout. "I guess that will do for tonight."

"Good night, sir," said young Cowan. "And thank you again."

AS HE went out of the office, his knees felt a little weak, as if he had escaped some great peril.

"Darned nice of Prout," he thought. "If he hadn't—!"

But he had, and young Cowan had twenty-five dollars in his pocket.

"I'm not going to ring her up and tell her to meet me," he thought. "I'll stop for her, and we'll take a taxi."

He found her address in the office address book; it was pretty far up-town, but he had got away a little earlier than he had expected. The subway train was almost empty; he sat with his long legs stretched out before him, and an odd look on his keen young face.

"I'd do just about anything," he thought, "for her."

The most fantastic and desperate ideas ran through his head. Could he manage to make some money on Wall

"I'll have to go!" he said, hastily. "I—I just came—to explain that I—I can't ask you to dinner tonight"

Digitized by Google Original from UNIVERSITY OF IOWA

Street? Other fellows did. A lucky break—easy money—quick money—

"Because I love her," he said to himself. "It's the real thing. I—I didn't know it would ever be like this. . . . So that I'd give . . . my soul for her. I love her so. And I haven't anything to give her!"

IN a queer mood young Cowan was, a dangerous mood. Like so many other fellows in that city that night, terribly stirred by that tinsel faëry land, filled with honest young passion, generously and pitifully eager to give to the beloved woman all that empty glitter.

"I've *got* to make money—quick!" he thought. And he couldn't well have thought anything worse.

He was surprised by the house she lived in; he thought he must be mistaken. She, to live here, in this dingy old apartment-house, in this dingy side street. Such a setting, for *her!*

He stood there looking out, a fiercely rebellious prisoner, his hands in his empty pockets

But her name was under one of the bells. He rang, and waited. The latch did not click, but he found the door unlocked, and in he went. He began to mount the dimly lighted stone stairs, one flight, two flights; then he heard her voice, up above, and he stopped.

"If you'll just wait!" he heard her say.

"Nope!" said a man's surly voice. "I bin waitin'—long enough."

"But just till tomorrow!"

"Nope!" said the man.

Cowan went quietly up a few more steps, hot with anger at the man who dared to speak to her like that.

"Just till tomorrow!" he heard her say, in a desperate little voice. "I have a dinner date tonight!"

"Nope!" said the man. "I can't."

"All right! Then t-take it!" she cried, with a sob.

As Cowan started up the last flight he met that man coming down, with a fur coat over his arm.

"It's her coat!" said Cowan to himself.

The man went past him, down the stairs.

"Her coat!" thought Cowan. "She was crying."

He turned and ran down after the man.

"See here!" he said, in a low, furious voice. "What are you doing?"

"What am I doin'?" said the man. "Mindin' my own business."

"That coat—" said Cowan.

"That coat ain't paid for," said the man.

"How much?"

"Twenty-five dollars owin' on that coat," said the man. "Five weeks due."

"Here's your money," said Cowan.

The man went on down the stairs and Cowan stood on the landing, with the coat over his arm. And one dollar in his pocket. He tried to decide what to do.

"And what can I tell her?" he thought. "She'll be angry. . . . If I could only leave this blame' coat somewhere for her, and clear out. I can't see her—now."

"Mr. Cowan!"

He had to see her now. She was leaning over the banisters on the top floor, looking down at him, her little dark face very serious.

"I didn't know you were coming here!" she said. "You told me you'd telephone. I—" She stopped short as she caught sight of the coat. "Mr. Cowan!"

HE MADE up his mind that he was going to lie recklessly. He went on up until he stood beside her.

"I met a fellow on the stairs," he said. "He asked me if I'd bring the coat up to you. Said he'd . . . see you about it later."

She looked him straight in the face.

"Mr. Cowan!" she said again, and her voice was frigid.

"I'll have to go!" he said hastily. "I—I just came—to explain that I—I can't ask you to dinner tonight. I'm awfully sorry, but—the thing is—I—I can't."

He held out the coat to her, but she made no move to take it. So he hung it over the banisters, and with a strained and miserable smile turned to go.

"See you tomorrow," he said.

"Mr. Cowan! Please come back! I want to speak to you!"

"I'm in a hurry," said Cowan.

But he came. She pushed open the door behind her, and he followed her into a bare little room, not a stick of furniture in it, a bright light overhead shining down upon her little dark head.

"What's she doing here?" he thought. "In this place, without any furniture! And her coat. Poor little kid! What's happened to her?"

But he could not say one word to comfort her, could only stand staring at the floor in mute anguish.

"Mr. Cowan!" she said, "my coat—"

"The fellow told me—"

"No, he didn't," said she, looking steadily at him. "You had no right to do that."

"I'm sorry," said he, curtly; "I beg your pardon."

"But anyhow you've got your coat," he thought. "I've *done* something for you, anyhow."

"YOU see," said she, with that little air of dignity he so loved, "Auntie's been sick and . . . our expenses increased . . . and I couldn't pay for . . . things . . . for a while. But I'd have managed, later on. I always do. I'm not—dishonest."

"I know you're not!" he cried. "I know you're—" He stopped abruptly. "I'll have to be stepping along now. . . . I just wanted to explain that I couldn't go out to dinner with you tonight. Because—"

To save his life he could invent no plausible reason. So he fell silent, and she too said nothing.

"Well," she said, at last, "I'm sorry."

He thought then that he had mortally offended her.

"It's not that I don't want to!" he said. "I—I never wanted anything so much. Only I'm—just a darn fool, flat broke. I've never tried to save up. I'm going to try, though. I'm—"

"Then that makes everything m-much worse!" she cried. "You had no right—Just *think* how . . . it makes me feel!"

She was crying now, and he could not bear it.

"I know!" he said. "I'm so sorry. I can't tell you. Only—if you knew— If I could just offer you—everything. If you knew how I felt—about you—you wouldn't mind."

"I do mind!" she said. "It wasn't . . . fair!"

"I know!" said Cowan, and again had turned away, when she called him.

"Mr. Cowan!"

She was drying her eyes with a small handkerchief, but her air was quite composed.

"Mr. Cowan, won't you come in and have dinner with Auntie and me?"

"Come in? You don't live here then."

"Oh, no! We live in the next flat. I just ran in here to talk to that man. I didn't want poor Auntie to be disturbed. This is an empty flat, to let."

"To let?" Cowan repeated mechanically.

"Yes," she said. "It's cunning, isn't it?"

"Cunning?" he (*Continued on page 119*)

Making Friends With LUCK

By IRVING BACHELLER

THOMAS A. EDISON and I were sitting in his smoking-room upstairs after dinner. I was looking at the animated portrait of a boy with a bundle of newspapers under his arm, hanging on the wall.

"That's me," he said. "I used to be a newsboy. By and by I rose to the dignity of news agent on a train which ran between Saginaw and Detroit. My last trip was as unexpected as a pair of twins. It's quite a story—and goes to show what queer happenings control our destiny or assist us to turn the tide of our affairs into other channels.

"Coming down from Saginaw one day I was passing through the smoking car with an armful of newspapers. A man stopped me. He was a Southerner, well dressed, standing collar, string tie, sparkler in his shirt front, big black hat on his head. A long cigar tilted upward from the corner of his mouth. A negro sat beside him.

"'BOY, what ye got there?' he asked.

"'Newspapers,' I answered.

"'How many?'

"'Thirty-four.'

"'Chuck 'em out o' the window,' he commanded.

"I hesitated.

"'Chuck 'em out o' the window,' he repeated. 'I'm able to pay for 'em.'

"Taking him at his word, I flung them through an open window.

"He lazily turned to the negro at his side, as if the vulgar details of business were beneath him, saying in a lordly tone: 'Nicodemus, settle with the boy.'

"The colored man paid me. I returned to my trunk. I had never sold my papers with so little effort. I thought that I would try him again. I returned to the smoking car with a load of magazines that staggered me. It was enough to give a horse the heaves. I left none behind.

"My customer saw me coming.

"'Hello, boy, what ye got there?' he demanded.

"'Magazines.'

"'How many?'

"I told him.

"'Chuck 'em out o' the window.'

"It was a bull market. I unloaded. For the first time my stock was moving fast. I think that half a mile of the right of way was paved with literature.

"'Nicodemus, settle with the boy,' my whimsical Southern friend commanded, as I returned empty-handed to his seat.

"I understood the situation. My customer evidently was having a few days of princely relaxation. Like many men of that time, on pleasure bent, he was playing the part of a lavish Roman emperor. His little hobby was the creation of astonishment. I decided that if I had been chosen by fate to assist him to ride his hobby, far be it from me to lag behind.

"I hurried back to my trunk. It was half full of novels: 'The Gun Maker of Moscow,' 'The Hidden Hand,' 'Beldemonio,' 'The Indian Slayer,' 'Ten Nights in a Barroom,' and a stock of Beadle's dime novels in yellow paper covers. Some of them showed signs of wear. The brakeman helped me stack them in my arms. It was almost a wagon-load. I was in the midst of an adventure as thrilling as any in the books I carried. I toiled into the smoking car with my burden, wondering if my streak of luck would hold.

"AGAIN the familiar words: 'Hello, boy, what ye got there?'

"'Novels,' I answered.

"'How many?'

"Having counted them I gave the number.

"Again the welcome order: 'Chuck 'em out o' the window.'

"Gladly I chucked 'em. For a minute the air was full of mystery and bloody murder. Every tramp on that railroad must have become a walking library, and I'm sure that the section boss acquired a surprising familiarity with literature.

"Once more I heard the princely command: 'Nicodemus, settle with the boy.'

"My bill was paid in full.

"I returned to an empty trunk. I closed and locked (*Continued on page 132*)

Good Luck *Picks Its* Pals

"I HAVE found that good luck is a wise chooser of its companions," says Mr. Bacheller. "It prefers to run with the man who sees his way clearly and is prepared to act quickly when approaching decisive moments. Luck is no laggard nor waster of time.

"Then, too, it is always on the lookout for the fellow who has a conscience, and sense enough to obey it. This, however, does not wholly satisfy the fickle goddess. The young man must be eager to find his place and generous in the work it demands.

"Every human being has a number of lucky breaks scattered through his life. Some people never recognize them. Others recognize them vaguely. The really lucky man is the one who knows good fortune when he sees it and then pushes it to the limit."

PHOTOGRAPH BY H. SIEWERT, FLA.

Irving Bacheller, through his books and his personality, has won a high place in the affection of America. He is the author of "Eben Holden," "Silas Strong," "A Man for the Ages," "In the Days of Poor Richard," "Father Abraham," and other novels

ADVENTURES

Now and then he meets a crook, but most of his trouble is caused by extravagant or careless persons

By EARL CHAPIN MAY

DURING the busiest hour of a big store's special sale a small, dark, quietly dressed customer selected a pair of bargain gloves. After searching perfunctorily through his pockets, he said apologetically to the clerk, "Sorry, but as I have no money with me I'll have to ask you to cash my check. I'll make it in round figures so I'll get some change. The cashier will know me, as I have a charge account."

The clerk took the check that was proffered him, saying "I'll get your change," as with check and gloves he disappeared behind a row of shelves. Thus concealed, he spoke into a house telephone to the credit manager.

"A customer whom I do not know just gave me a check on the firm for $20, signed 'Tony Barreto,' in payment for a $1.95 sale," said the clerk. "Shall I take it to the accommodation cashier on this floor or send it up to you?"

As the credit manager received this message on one 'phone he talked through another to a stocky, decisive individual who immediately went into action when he heard, "There's another Tony Barreto check at the glove counter, main floor." To the clerk the credit manager said, "Hold check, gloves, and customer."

A moment later the store detective approached the small, dark man who wanted change. "There seems to be some sort of error," the detective remarked deferentially. "Do you mind going with me to the credit manager?"

The customer was incensed instantly. "I'm in a hurry. Who are you?" he demanded.

"Oh, I'm just an employee of the store," said the detective. "The credit manager wants to meet you. Maybe there's some mix-up in the books. Anyhow, you and he can talk it over and clear it up."

Carrying the gloves and check and convoying the indignant customer, the detective entered the nearest elevator and presently appeared at a long oak desk behind which sat a suave young man.

"Please have a chair," the latter said, addressing the irate arrival and at the same time motioning the detective to wait outside.

"What is the reason for this outrage?" the customer demanded acidly.

"There seems to be some doubt about identity and I wanted you to help me clear it up," the credit manager replied. "You see, some weeks ago someone gave us one of your checks and it came back marked 'forgery.' I thought you might give us a hint as to who passed that forged check. For you, of course, are Tony Barreto."

"Of course," the dark one replied, producing a pass book on a bank. "See my name there? And here's my check book, and two letters addressed to me."

He held these exhibits where the credit manager could see them, but when the latter reached for them the dark one said, "Now are you satisfied?" and stuffed the evidence into his pocket.

"Looks as if you are Tony Barreto," admitted his inquisitor. "But who do you think forged that other check?"

"That's what puzzles me; I spotted the forgery right away."

"Are you familiar with forgeries?"

AT THIS chance shot from the credit manager, the dark one began to pale and beads of perspiration appeared on his brow. He blustered and glared, at the implied accusation. "Anyone can tell his own signature," he declared.

"Even when it's traced on transparent paper?" This time the erstwhile suave credit manager was leaning across the table, a long finger pointed toward the man. "Why did you try that bad check trick on us again?"

At the end of a tense moment the man cringed and began to whine. "I'm caught. I did it," he muttered thickly. "But, mister, you'll let me off this time? There's three state's prison sentences now against me. You know that under the Baumes law I'll go up for life this time. And I got a wife and two young children. Just tell that flatfoot out there you've made a mistake. Won't you, just this time?"

The credit manager had his turn at mental anguish. It is no pleasure to send a fellow being to a long life behind prison walls. The amount involved was only twenty dollars. It would be easy to tell the house detective that they had the wrong man. Then he shook his head sadly. "Sorry. I can't do it," he answered. "You'll have to go with the detective." And when the check passer had passed from view the credit manager resumed the examination of a sheaf of papers having to do with past due, slow pay, and suspended charge accounts.

WHEN Justin H. Edgerton described this incident twenty-four hours afte it occurred, he added, rather grimly "When I reached this office today tha check passer's police record was on m desk and one line especially appealed t me. 'He always shoots his way out c tight places,' the record read.

"That doesn't mean I was in danger but it illustrates some of the situation which face a credit manager. The book and files of James McCreery & Company by whom I am employed, and of the Associated Retail Credit Men of New York City, Inc., of which I am a past presiden show that ninety-eight per cent of reta charge customers are honest, althoug many of them are negligent in paying bill

"But in spite of this high percentage honesty a retail credit manager has sinecure. His job is to protect you ar other honest customers from dishones and negligence. I am responsible for tv hundred thousand charge accounts. T unreliable two per cent of these, plus t criminals who prey on retail credit stor *could* be a menace to all credit custome if the credit department wasn't watchi them. If my department relaxed vigilance, the store's losses would increa consumer cost of merchandise.

"A small proportion of our credit c

Justin H. Edgerton is head of the credit department of James McCreery & Company of New York. He is a former president of the Associated Retail Credit Men of the same city

tomers abuse the privileges granted them and we have methods of correcting such abuse. But because credit is essential to our commercial scheme and there are many million charge accounts, a number of individuals try to beat the credit game, generally by using names in good standing on our books.

"That forger, who for once did not shoot his way out of a tight place, had filched the pass book, check book, and letters belonging to Tony Barreto (which is not his real name) from an apartment house mail box. Stealing mail from such places by bent wire or similar devices is not a novelty.

"And once in possession of Barreto's pass book and signature, it was an easy matter for him to trace that signature on another check or checks. His greatest error was in offering us a second check when he must have known the first one had come back to us.

"But check passers are rather rare with us. Most of those who try to get something for nothing at our store use the names of bona fide charge customers, but do not run afoul of banking laws.

"These minor crooks get hold of the names of our charge accounts in various ways. The most common is to overhear a customer say: 'Charge it, please. My name is Mrs. So-and-so.' The crook makes a mental or written note of the name and address which are usually given to the sales person by such a customer. Then he or she goes to another part of the store at once, or on a later date, and has purchases charged to that name but either takes the merchandise along or has it delivered to some 'new' address. The 'take with' method is the easiest.

"ONE of our most interesting cases started with a telephone message purporting to be from Mrs. Cortabilt to the effect that her maid would call that afternoon to take with her a certain sable coat which Mrs. Cortabilt had seen, fancied, and decided to become the owner of. 'My maid is short, slender, and blonde,' the message said. 'She will be dressed in black and the second finger of her right hand will be bandaged, as she cut it accidentally yesterday.'

"Mrs. Cortabilt had been our good customer many years. She had ordered merchandise of lesser value in that way more than once. Ordinarily, we would have delivered that sable coat to her maid without question. But something in the message—possibly its detail—prompted our department to telephone to Mrs. Cortabilt. The result was that when the blonde maid appeared, in black, with the second finger of her right hand bandaged and displayed convincingly, she was arrested by our store detective and is still paying the penalty of her attempted larceny. Mrs. Cortabilt had not ordered any coat delivered via her maid, and the blonde adventuress was unknown to the Cortabilt household.

"Not long ago a sweet young thing who by all the signs and (*Continued on page 120*)

On *the* Road *to* JERICHO'S

PERSIS, Jim Rogers's wife, rested one hand on the gatepost and stood looking down the trail toward Pine City. Somehow, watching the big cottonwoods near the creek bank and hearing the doves mourn down yonder in the shadows, always made her think. Well, it was surely quiet enough to think . . . there on the ranch, with Jim away riding most of the time. . . .

She thought she loved Jim, all right. She hoped she did. They had been married three years now, and even though she guessed she loved him, those three years had been pretty terrible. They had been as arid as Montana in August, when the grass was burned with a white sun and the grasshoppers buzzed up in an animated spray as high as the horse's head as you rode along. Jim always swore at grasshoppers—said they ruined grazing.

Persis had a funny proud feeling about Jim. Everybody asked Jim about things: when to cut alfalfa; how he reckoned the third crop would be; what he thought of cottonseed meal for winter feed—did it really make cattle blind sometimes? You could tell by the way they came to Jim for advice that they thought a lot of him.

Well, maybe that was what made her love him; that is, maybe it helped some. But she wished he would really *converse* with her sometimes, instead of just telling her what he had done during the day, or what he had planned for tomorrow. Talking about todays and tomorrows seemed to narrow life down to barb wire, white-faced Herefords, grazi grasshoppers, and weather.

TWO evenings ago she and Jim walked along the edge of the riper alfalfa in front of the ranch house. Jus now, it was sunset time. She could the purple blossoms, and little dark gr leaves, and they seemed wonderful th in the twilight—millions and million them. She had said, "Jim, isn't the falfa beautiful? Don't you think Jim?" And Jim had said, "Yeah; ought to get a good third crop this ye

Jim had spoken about a thing of bea as a crop—a *crop!* "Oh, Jim," she said, "don't you feel a little pang w you see something beautiful like th

It was when her thoughts touched upon the "important business" that fear stole upon her. Persis could still see the tenseness of the men's faces as they rode away

A *story by* EDMUND WARE

Illustrated by W. H. D. KOERNER

like that alfalfa growing there?" Jim had put his arm around her then; but he had spoiled it by saying, "Well, I reckon it's mostly for women to feel that way. A man has to *do* things."

It hurt—Jim's saying that—because it confirmed everlastingly her fear that he looked upon her, even *down* upon her, as just a woman. She couldn't be much use to a man, or a man's affairs. She was out of it.

Just a woman, Persis thought, just a woman who stood the smell of burning flesh and hair at branding time; who listened to the bawling of hurt calves until it rang and rang and rang; who cooked and washed for the round-up crew—men who made noises while they ate, yet never spoke at mealtimes. She had done that for Jim, her husband. Wasn't that helping? Wasn't it?

Persis, resting one hand on the gatepost, stood looking down the trail toward Pine City, and deep in her throat she felt the hurt of loneliness. She wanted Jim to know that she counted . . . she wanted to *show* him that she did. She bit down hard on her lower lip . . . there was no one around to see.

WHERE the trail gleamed like a yellow band down the west side of Rimrock Ridge she saw a frolicking speck of dust. At last someone was coming from Pine City with the mail. Probably it was Jim . . . he had said something about going to town.

But it was not Jim. It was Rob Jericho. She could tell it was Rob when he got to the ford at the foot of the ridge, because no one but Rob Jericho would ride spurring across the Bear Creek ford just to see the water splash silver all around him. He was singing, too—singing sort of wildly she thought.

SHE followed his approach, watching his features take shape as his pony brought him nearer and nearer. First his face was a tan spot with nothing but dots for eyes and nose and mouth. Then, all at once, she could actually see the features—his thin straight nose, his sensitive mouth, his eyes, looking all around at the cottonwoods and the sky line, then right toward her. She could hear the creak of his riding gear and the breathing of his horse. Littlest details began to show. Then Rob drew rein.

"Well, hello, Mis' Rogers," he said. "I've got some letters for you here—two of them."

"Thank you," she said; and when Rob handed her the letters she noticed that he used his left hand, letting the bridle reins drop across the saddle horn. And she noticed a little blood on the sleeve of his gray shirt.

"You've got something the matter with your arm," she said, looking up at him.

"Yes." He dismounted, and the reins trailed down from the bridle. "Barbed wire," he added.

"I don't believe you. I don't believe it was barbed wire at all."

"Well, I didn't figure you would," he said. "Say, I saw Jim in town and he gave me these letters for you, and he said, 'Tell Persis I've got to stay in town. Tell her,' Jim said, 'that she can ride over to the Jenkinses for the night.'"

Persis frowned a little when she heard about Jim's staying in Pine City. Still, he had done it once or twice before—stayed on account of the Cattlemen's Association, or on account of a cattle buyer—at least it was cattle something. Jim did a sickish lot of things because of cattle.

These thoughts went through her mind quickly, like the sudden blinking on and off of a light. Then she looked again at Rob, and at the spot on his sleeve. "Rob, you'd better let me fix that up for you."

"Oh, never mind," he said, with a queer half-smile; "you don't want to go and ruin the red in my 'red badge of courage,' do you?"

Persis's eyes opened wide. "You think I don't know that means a wound," she said. "You think I never read about 'The

Digitized by Google

UNIVERSITY OF IOWA

Red Badge of Courage,' don't you, Rob?"

Rob shrugged. He seemed a little paler.

Persis was vaguely irritated to think that he—the sensitive, courteous, singing Rob Jericho—believed he had said something she could not understand. Yet she knew she had responded to something in him.

He stood motionless beside his grazing horse, staring intently, seriously, at the distant peaks. She watched him for a moment, then looked out over the alfalfa, which trembled in the twilight where the faint breeze touched. "Rob," she said suddenly, "look out there a minute. Look at the alfalfa. Don't you think it's beautiful, Rob?"

He looked. "Yes," he said, "I surely think it is. It looks cool and—and—well, just what you said."

ROB, about to ride on to his tiny homestead five miles farther up Bear Creek, reached for the trailing bridle reins. He was going to turn away, going to ride on. Persis didn't want him to. She wanted him to say some more things in his young, intense voice.

"Rob, tell me: Do things, I mean like trees and rocks and clouds, ever remind you of people? You know, animals sometimes look like human beings. Do things, ever?"

"Why, sure. Sometimes when I'm riding in the night the trees seem to look like different people. Why, I've got a tree for you, Mis' Rogers. Honest I have!"

It was nice to know that—to know that Rob thought about her . . . had a tree that reminded him of her when he saw it, riding by it in the night. She guessed Jim never had many thoughts like that.

Pointing toward a gloomy pinnacle—a sinister specter in the gathering dusk, she said, "See that? That's a cruel, dreadful-looking peak. That's always reminded me of someone. It reminds me of that man Shag Slade. You know him, Rob?"

He gave a little gasp. "Yes," he said, "I know him!" He turned toward his horse, about to depart. But he stopped and added, "If you want me to, I'll ride over to the Jenkinses with you, Mis' Rogers?"

Then she remembered that Jim had stayed in Pine City and that she would be left alone. Well, maybe she would punish Jim a little by not going over to the Jenkinses at all—by staying alone at the ranch. Jim would be sorry about that; and there would be his punishment.

Rob said, "I'll go catch up your horse for you. I'll go—" There was a queer break in his voice. It sounded weak and indistinct. "Say—I'll—catch—" His voice died out and in the dusk she saw him stagger a little. She heard his hand striking against the leather of his saddle as he reached for its support.

"Why—why, Rob! What's the matter, Rob?"

He had slipped to the ground. The horse snorted and moved away quickly. A new kind of loneliness spread over her. It was dark now, and there was a great silence where there had been a voice. She stood for a few seconds, searching through the darkness. She knelt beside him. She was afraid. . . .

Somehow she carried and dragged Rob into the bunk house. She let him slide onto a bunk. Somewhere was an oil lamp. She fumbled about in the dark, found and lighted it, placed it on the window sill.

She watched Rob as he stood motionless beside his grazing horse. He was staring intently, seriously, at the distant peaks

In Rob's pocket she found a knife. She cut away his sleeve. A wound bled in his forearm. "Red badge," she thought, and knew Rob had been shot. She did not dare wonder how.

At length, when the wound was bound, she sat in an old chair near him, watching his face in the lamplight. Once he opened his eyes and looked up at her, strangely. "You'd better go to sleep now, Rob."

He smiled. "Well, yes—thanks," and his lids fluttered down again. He reached out his hand the way a little child reaches out to touch an older person. Persis guessed it would be hard for people to understand how she felt then, if they should see her that way with Rob Jericho. She didn't care much, but it made her shiver to imagine eyes looking in. She felt ashamed of that, and so, after he had gone to sleep, she leaned down and kissed his mouth. She looked at him for a long time. He was helpless—he, Rob Jericho. But she had helped. He was like—well—he was like a little boy.

Under the floor a cricket was making some sounds, and outside there was a katydid, and from the creek bank a disturbed dove mourned. A breeze came and stirred the leaves; the steady stars looked at her from across ten billion miles.

After a while she tiptoed from the cabin, found Rob's horse grazing, munching away at the damp grass. She led him to the corral, unsaddled him, and turned him in. Then she came back to watch.

SHE knew it was a long time later, because the rectangular patch of moonlight on the bunk house had traveled clear across the room, until it began to glow on an old saddle and some riding gear in a corner; it was then that a sound from the doorway made her feel insecure.

She turned very slowly, afraid to turn, yet desperately wanting to. A tall man leaned against the casing log, looking at her. He made a commanding motion for her to come nearer, and she arose quietly and went toward him. The man was Shag Slade.

After a moment she said, softly, "What do you want here? Why have you come here, anyway?"

He stared. "Well, I've been watching you in here for a spell now. I don't expect you'd want your husband to know about your setting i here alone with youn Jericho? I don't figur you'd want him t know anything abou it, would you?"

She knew the though that was in his min But she did not know why he should sp on her—just in order to tell her that had, and then taunt her. She almo wished she could kill him for the expre sion that was on his face.

"DON'T you talk like that," she sai "Don't you look like that. Y don't know what you're about." S spoke intensely, with a swift motion her hands. Then, quite calmly, she we on: "I don't suppose it would be any u for me to tell you why I'm here. I do know that I want to tell you. I don't wa you here at all. I don't have to expla to you, or anyone else, what I do."

Slade's eyes seemed to grin as he stare "Well, I reckon you wouldn't like people to know about your being h this way, would you now? You would want me to go and tell people about would you?"

She thought suddenly of Rob and of h she had felt as she watched him, and h little anyone could ever know of emotions. What was the use of trying explain anything?

She looked hard at Slade, and witho caring what the words might mean to hi she shrugged her shoulders and sa "No! I don't want a soul to know abo it—least of all you!"

"Huh!" Slade grunted. "Well, didn't think you would want anyone know it—but you better remember tha do!" He made as if to leave, mov slightly.

"Go away from here—go on!" Pe cried, feeling at his move to depart a r of hot, dangerous blood. "You have got yourself anything by coming her not a thing!"

"Oh, I don't know!" Slade frown turned away, and was gone, as silently a shadow.

She could not believe he had ever b there. Everything was exactly as bef he had come—the cricket under the ca floor, the dove mourning now and th and inside the shadows made by the lar light. Everything was just the same, yet there was a throb of fear and disg

She leaned against the door cas looked out with big, staring eyes into

UNIVERSITY OF IOWA

night. She felt the hopelessness of misunderstanding and ignorance, and a strange intimacy with events which seemed to hang fire, ready to swoop down when she was least ready to meet them. If she were a man she supposed she would know why these things had happened to her—why Rob had been shot, why Shag Slade had spied on her.

She tiptoed across the room, looked down at Rob, still sleeping, turned the lamp low, and walked up the little path to the ranch house. She stepped into the dark bedroom. Only once did she feel the absence of Jim. It was when finally she had gone to bed, and lay looking at the dull gray patch of the window. She missed Jim's long, tired sigh and the nearness of his arm beside her. "I wish," she thought, "that I could show Jim that I count—that I'm *not* 'just a woman'—" She gave a tight, low sob of loneliness.

NEXT morning when she awoke it was raining. She heard the dying mutter of remote thunder.

It seemed very late, as if she had slept half the morning through. But the alarm clock on the dresser said five minutes of eight. Well, that was pretty late for ranch folks to get up; but she remembered that she had been up almost all night. . . . And suddenly she wondered about Rob.

After she had finished dressing she went to the kitchen, kindled a fire in the stove, and put on the big coffeepot. Then she walked down the path to the bunk house. No answer came to her knock. He must still be sleeping, she thought, and stepped noiselessly inside.

The bunk was empty. The lamp stood just as it had the night before, on the window sill, and held underneath it by one corner was a piece of paper—a note from Rob.

"Thanks, Mrs. Rogers," the note read. "You needn't worry about me. The red badge isn't so red as to make you any worry. I guess I must have acted pretty foolish.—Rob Jericho."

She was sorry he had gone away; she had wanted to be responsible for him a little longer. But she knew he would not want that. Probably he had waked up feeling ashamed of himself for fainting. Probably it would have embarrassed him to see her in the morning after she had helped him in his weakness. She smiled and thought, "Rob's a boy; and he'd want to seem strong; he'd want to seem invulnerable—"

She went to the corral out back of the bunk house and saw that his horse was gone. "Well, I guess he'll be all right. I *hope* he'll be all right."

The rain ceased gradually as the morning wore away. She began to expect Jim's return from Pine City. Quite often she went to the door to watch for him, and at length she saw two riders. Neither of the riders was her husband. She recognized old Dan Kendall, and another man she thought was Pete Sisson, who worked at the stage station at Pine City. They rode up, and she hailed them. "Hello, Mr. Kendall. How are you? You didn't see my Jim, did you?"

Old Dan drew rein. "Yes, ma'am," he said. "He'll be along d'rectly."

"Don't you want to stop in for dinner? It's nearly time."

The two men seemed anxious to ride on. Persis felt an ugly little alarm, for no reason except that the men seemed too steadily bound for some place—or some thing.

"No—no, thanks; I reckon we better be goin'," said Old Dan, moving his bridle reins.

"Yes'm, we gotta be movin' on," said Pete Sisson.

"Well, good-by, Mis' Rogers." Old Dan touched his hat, and the two rode on up the Bear Creek trail.

SHE wondered why Old Dan was not more cordial. She thought it strange that they should depart so nervously and so quickly. With her eye she followed them around the bend in the trail, then she turned again to watch the yellow ribbon of the road to the eastward, where she had first seen them. Pretty soon two more riders appeared, and close behind them a third and a fourth. One of them was Jim—she could tell by his horse and by the way he rode. There were a hundred little gestures that distinguished him to her.

Jim carried his head at a new, stern angle; the muscles in his face were taut, just as had been Dan Kendall's and Sisson's; his mouth was almost grim, she thought; and his eyes looked straight ahead. She noticed that some of the riders carried rifles in long holsters under their stirrup fenders.

Jim halted in front of her. "I can't stop now," he said. "I got to be goin' on up the creek a piece."

There were things she wanted desperately to tell him; but his tone repulsed her. Something in his manner choked back all her glad response at seeing him.

"Where are you going?" she asked in a low voice. "What are you going to do?"

"We got to go up the creek a piece," he repeated. "We got some work up there we've got to get done." The men looked at Jim and at each other, nodding. One man mumbled something.

"We'll be back pretty soon," Jim said, and moved his feet deeper into his stirrups.

"Jim," she said, trying to keep her voice low, "Jim, won't you listen to me a minute? There's something I want to tell you."

Jim's face was hard, and a trifle pale. He looked steadily down at Persis. "I reckon it'll have (*Continued on page 102*)

Close Calls

An interview with CHARLES A. SIRINGO daring adventurer in the old Wild West

By NEIL M. CLARK

Charles A. Siringo, the "Charlie Cowboy" of romantic fame, lived joyfully and daringly all of his days. He knew the famous bad men of the old days, and the famous sheriffs and marshals. Mr. Siringo died just before this magazine went to press, and soon after having given to Mr. Clark the thrilling interview that is printed here

DOWN in the State University at Austin, Texas, they have dedicated six bronze tablets to men representing the forces which went into the building of that state; on one of the six is inscribed simply: "Charlie Cowboy."

Those who know the literature of the cowboy's West need no introduction to "Charlie Cowboy," or, to give him his full name, Charles A. Siringo. The very name is synonymous with every vivid phase of the old West that is now history: buffalo-hunting, cow-punching, Indian fighting, the Chisholm Trail, broncho-busting, Billy the Kid, No-Man's-Land, John Wesley Hardin, sheep and cattle wars, rustling, sharpshooting, prairie fires, stampedes. Few lived as fully and daringly as Charles Siringo the varied life of those colorful days; few went so far afield and knew so many of the men, both good and bad, whose names are indelibly symbols of their generation and place; and none, probably, has told so well, out of a wealth of first-hand experience, the thrilling and romantic story as it really happened.

Siringo was born in 1855 in Matagorda County, in the extreme southern part of Texas. At the age of twelve he hired out as a cowboy at ten dollars a month, to rope and brand the maverick mustangs and long-horned cattle which then abounded in that country. Moving to Illinois with his mother a year later, he was thrown on his own at the age of fourteen, and for a couple of years wandered far, free, and lonely, earning his board and bed in various ways: by work on a farm, as a bell boy in a St. Louis hotel, as a roustabout on river boats to and from New Orleans; and once, after sleeping out on bales of cotton and going hungry a couple of days, he even took a turn at going to school, exchanging hand work for head work for a spell.

IN 1871 he returned to Matagorda and the life of a puncher. Here he soon became a full-fledged son of the range. He broke wild ponies at two dollars and a half a head, skinned dead cattle and sold the hides, registered his own brand and ran a few cattle under it. In 1876 he made his first trip with a herd up the famous Chisholm Trail. He held many jobs in the following years, as drifting, care-free punchers often did, and won a reputation as a dead-center shot with rifle or six-gun. At the age of twenty-two he began working for David T. Beals, owner of the huge LX Ranch near Amarillo, and advanced in responsibility until he was one of the company's most trusted men. He quit cow-punching finally to become a merchant in Caldwell, Kansas, prospering for a couple of years.

In 1886, however, he sold his store and moved to Chicago to go into a similar line of business there. But after a brief experience with city merchandising, which convinced him that the saddle was where he really shone, he joined the Pinkertons, became a cowboy detective, and for twenty years and more participated in scores of famous and thrilling Western man-hunts involving rustlers, bank and train robbers, mine thieves, dynamiters, and murderers, putting his neck in jeopardy a thousand times, and playing parts, in order to acquire the needed facts, ranging from hobo to broncho-buster, to pretended outlaw, and to wealthy mine or ranch owner.

In this many-sided experience, the total amount of formal education that Charlie Siringo found it possible to squeeze in would be equal to perhaps three or four months in a modern grade school. He learned to read and write and figure—that was about all. But he found life itself a grand schoolmaster, and nature had made him a willing pupil, with a seeing eye and a yarn-spinning tongue. So, though scarcely knowing the first principles of composition, he sat down and wrote in the eighties, in the intervals of keeping store in Caldwell, a book about his own experiences. "Fifteen years on the Hurricane Deck of a Spanish Pony," he called it; and it became, and remains, one of the classics of cowboy literature. Over a million copies were sold before the copyright period expired, and it would be difficult to say how many more have been sold since. He has not written *many* books, but, as Will Rogers wrote him about his latest, "Riata and Spurs":

"Why, if you lived to be a thousand years old you couldn't write a bad book about the cowboys—the stuff they did might be bad, but you could tell it so well it would almost sound respectable."

A small man, weighing barely a hundred and thirty pounds, but wire-tough, brown of face, and keen of eye, with humor still invincible in spite of his seventy-two years, and a mind razor-sharp for accuracy and pertinent detail, Charlie Siringo is found today by his friends—and there is a host of them!—in his "Den" at Venice, California, convenient to Hollywood and his special cronies, Bill Hart, Will Rogers, and many more.

"CLOSE calls," said Charlie to me when I broached the story of his experiences to him, "I've had hundreds of 'em. Once I had to hunt my hole when a mob had the amiable intention of burning me at the stake. Several times, too, men were hired to kill me. And they came pretty near succeeding—too near for my comfort.

"But few of the bad men," he went on, "were really as bad as they're painted. Their deeds were exaggerated by rumor. I found them good fellows at heart, but simply hadn't learnt to control their impulses, and after getting into one desperate scrape, they went from bad

worse on false trails hoping to save their skins.

"It was while I was still in my teens and was shipping cattle with Mr. Wiley Kuykendall in southern Texas that a stranger one day rode into camp. Mr. Kuykendall, who knew him, introduced him by some fictitious name and he spent the night. We found him a well-spoken chap. Next day he mounted his pony and rode on.

"'Boys,' said Mr. Kuykendall, after he had gone, 'Do you know who that is? That's John Wesley Hardin.'

"No bad man's name in that day was better known or more generally feared. First and last, Hardin killed thirty-four men. And how did he get his start on the outlaw trail? By an impulsive crime that probably nine out of ten men of spirit would have committed under similar circumstances.

"Hardin was a young man of good blood in post-war New Orleans, when Northern politicians of the 'carpet-bagger' stripe were running things with a high hand. These political scamps put in, as supposed guardians of peace and the law, men—even negroes—who were least qualified and most irritating to the people. Becoming involved in a fracas with one of these policemen, Hardin made his first killing. He realized that justice would not be tempered with mercy under the existing régime, so he fled. Most of his later killings were the result of his effort to make good his escape and to prevent people from capturing him for the sake of the big price on his head.

"Hardin was a fairly true type of the Western bad man, and he was the only one, I suppose, who ever made Wild Bill Hickok put up his guns. Wild Bill was the fast-shooting and fearless officer who kept the peace in Abilene, the famous cow town, and John Wesley Hardin, in the course of his travels, came to Abilene. He entered a saloon with a friend; this friend got into a ruckus with one of Hickok's deputies. Hardin intervened, took the officer's guns, kicked him out and said:

"'Tell your long-haired boss'—meaning Hickok—'that if he comes around I'll treat *him* the same way.'

"THE message, of course, was not long delayed in delivery. Knowing that to enter the saloon could only mean a shooting, Wild Bill waited for his man outside. Presently Hardin came out, alone, bound for another saloon. Hickok covered him, and told him to withdraw his guns from the holsters, being very careful to make no false move, and to hand them over, butt ends first.

"Now, though Wild Bill was not aware of it at the time, John Wesley Hardin was the man who invented the trick, devised for just such emergencies, of flipping the guns over, business end to the front, just as the officer was about to take them. So, when Wild Bill momentarily lowered his own guns to seize Hardin's, he suddenly found himself gazing into twin muzzles of death. Admiration, rather than fear, was the famous marshal's reaction to this display.

"'You are the bravest boy I ever saw,' he said.

"Wild Bill was carrying a printed circular in his pocket at that very moment, offering twenty-five thousand dollars for the apprehension of Hardin. But he promptly forgot it.

"'Put up your guns,' he said; 'you and I are friends. You can stay in Abilene as long as you please. Keep the peace, and I will not molest you.'

"So the famous outlaw and the famous marshal became friends. Wild Bill kept his word.

"Hardin's end, however, was typical of the fate of most of the men I knew who persistently defied the law and the sanctity of human life. He was captured later and sentenced to the penitentiary. While serving his time, he studied law. Being pardoned eventually, he went to El Paso to practice. But one day a gunman with an old grudge fired a bullet into the back of his head and killed him. No doubt the murderer thought he would never be bothered for killing so notorious a person as Hardin; but he was held for trial. However, before the trial came off, he in turn was shot and killed. So it went, with most of the wanton gunmen."

Mr. Siringo, without self-excuses, harked back to an incident occurring in Bat Masterson's saloon and dance hall in Dodge City, in order to show how impulsive action, if the result had been only slightly different, might have lent a conspicuously different shade to his own career.

"The typical (*Continued on page 129*)

Taking *My Own* Medicine

By MARY B. MULLETT

AUTHOR'S NOTE: Not long ago, the Editors of this magazine said to me: "See here! You have written scores of stories of other people's lives. Take a dose of the same medicine and write the story of your own life."

When I protested that I didn't want personal publicity, they reminded me that a good many others don't want it—but are willing to make an exception of this magazine.

That was true; and I knew the reason. The personal stories printed here are not intended to boost anybody's vanity, but to help other men and women.

I had to admit that people write to me and ask me to tell them "something about" myself. Young folks especially want to know whether I have had to struggle for what they are pleased to call my "success."

Well, whatever you want to call it, I did have to struggle for it! And perhaps the story of *any* struggle is worth telling, so here goes.

I WAS born in the little town of Vevay, Indiana; but we moved from there when I was only four years old and I have but one vivid memory of that part of my life.

In interviewing other people, I like to discover what childhood incidents they most quickly and sharply recall. For these remembered incidents furnish a key to character. Almost invariably, they reveal some trait which is destined to reappear, later on, as a powerful directing influence.

Applying this in my own case, here is the first incident which I recall:

One day—it must have been before I was four years old—I climbed over the railing of a second-story porch and tried to walk along the projecting ledge outside.

Tried—and failed! I ignominiously fell off; and but for a mass of vines, which I clutched in my descent, my story might have ended then and there.

Thanks to those vines, I wasn't hurt—except in my feelings. I was terrified and humiliated. But especially humiliated! I can remember to this day how I wanted to escape the fuss that followed.

Above everything else, I hated to have *other people know* that I had literally and figuratively "fallen down." Even then, mortification was a terribly bitter pill to me.

During the next few years, I had two other narrow escapes: We had moved to Clinton, Iowa, then a Western sawmill town; and one day, when I was six years old, I attempted to "walk the logs" in a great raft tied up at the bank of the Mississippi River.

The logs rolled in the water and I fell through; but by some incredible good luck I managed to scramble up and out to the shore.

This time, too, I was frightened. But I was spared my worst dread—humiliation. No one had seen me! So I found a secluded spot, stayed out of sight until my clothes were dry, and kept the experience to myself.

Still another time, trying to do a foolhardy thing, I fell into the river and almost drowned. But again I had the, to me, great luck of not being seen and of being able, therefore, to keep my failure a secret.

These three experiences are the only ones, in my early childhood, that I vividly remember. I think they are important; not because they very nearly ended my life but because they foreshadowed how I was going to *live* my life.

For I have always been trying to do things which—at least when I began trying to do them—were beyond my powers. I never have accomplished all that I have wanted to accomplish. I never shall! There will always be some new "porch railing" to be climbed, some new "raft" to be walked.

In other words, there will always be some new test to be met! Some new and exciting thing to be attempted! And so long as that continues to be true, Life will not cease to be interesting.

Then there is the other phase of those childhood experiences: my dread of being humiliated. This sensitiveness to the opinion of others was a weakness which hampered me, just as it hampers so many people.

FOR years I was always shrinking under imaginary slights; trying to be like other people, for fear of being considered "queer." That was the only fear that played any part in my life, the fear of what other people would think of me.

It is one of the commonest of all human handicaps. I hate to admit that I have had it. It is a wretched piece of baggage with which to start the journey through life. But if I can help anyone else to get rid of it, I'm willing to confess that I carried it along with me for a good many years, and that it made me waste a lot of time.

Do you ever wonder what you would have been like if your father and mother had been different? I often do.

My own father and mother *lived* what they tried to teach their two children; my sister and myself. To have so consistent an example of absolute integrity would be of incalculable worth to any child; I never can sufficiently express my debt of gratitude to them.

My father was a "natural-born" scientist, an indefatigable searcher for the relation between cause and effect. It was he that taught me to ask the *why* of everything; to want to know and to understand things.

Both my father and my mother judged people by the *essentials of character:* such things as honesty, kindness, uprightness; by what people were—not by how much money they had or how much show they could make.

OUR family was, even in a socia sense, among the "best people" in our town; but we never hac much money. My father had been a poor country boy on a New York farm. He had worked hi way at school; and the little h then earned cost a lot of effort

As a result, he always had a instinctive feeling that mone must necessarily come hard. H couldn't bring himself to "charg good prices." So, although w were not poverty-stricken, w certainly were poor.

Looking back now, I can s that we two children were alwa taught ambition. But it was n the ambition to *get*, but to achieve! Ar to achieve by developing whatev abilities we possessed.

For example, we were expected to well in school. It wasn't anything th was discussed. It was simply accepted a foregone conclusion. I can rememb other children who talked of school as if were a penance; of study as if it we drudgery imposed on them by force. H my own parents managed it I don't kno but, to us, school was a privilege and stu was a pleasure.

And here, I believe, is an interesti thing. I hadn't thought of it until happened, the other day, to be talki with the Editor of this magazine.

"Where," he said, "did you get y feeling about work?"

"What feeling?" I asked.

"Well," he explained, "in at least h the articles you write, there is some re ence to the joy and satisfaction of worl

"I don't do it deliberately," I repli "if I put it there, it is because I find i so many of the people I interview."

"Yes," he said; "but isn't it also beca you have the same feeling yourself? seem to find a keen pleasure in workin

That set me to thinking; and I've c to the conclusion that this story mus an acknowledgment of the debt I ow work!

It goes back, partly at least, to the I owe my parents. From their examp learned that I could get a certain plea and satisfaction out of *any* task—prov I took an interest (*Continued on page*

Mary B. Mullett

MARY B. MULLETT is one of the best-known woman journalists in this country. As a girl in her teens she did newspaper work in Chicago, later coming to New York where, for a number of years, she was a special feature writer for the New York "Sun," the "Times," and various newspaper syndicates. Shortly after John M. Siddall became Editor of *The American Magazine*, in 1915, he discovered Miss Mullett's genius for writing about people from the inside out. Ever since, she has been a brilliant and steady contributor to this and various other magazines. Miss Mullett was born in Vevay, Ind., but grew up in Clinton, Ia.

These Children Mind Their Mother

By ARCHIBALD RUTLEDGE

ILLUSTRATED BY CHARLES LIVINGSTON BULL

IT WAS late in the afternoon of a hot July day, and I should have been anywhere but on the sultry borders of that broom sedge field, more than a mile from the plantation house. For some time I had been trying to make accurate observations on a flock of young wild turkeys that ranged the pinelands and the sparkleberry thickets adjacent to this beautiful waste field.

I was perched in a small live oak, "spying out the land," when a gray fox passed almost beneath me, paused at an old rail fence, put his forefeet up on a rail just like a hesitating dog or cat, and then insinuated himself between two rails. He entered the sedge field, but his behavior made me think that he meant merely to skulk along its borders. Indeed, several times during the next few minutes I caught a gleam of his tawny coat and a glimpse of his sharply intellectual face as it momentarily peered over the grass-tops. His presence and his manner boded ill for the half-grown turkeys that were now not far off.

Indeed, I still had my eye on the Master of Stealth when I heard the turkeys coming. As they trooped rather drowsily to roost, they shuffled the dead leaves under the big oaks and the hollies; and the old mother kept calling them softly but with an imperious note of wild wariness. She knew the probable fate of a straggler at such a time and in such a place.

Looking into the broom sedge I could see the fox literally peeping through the grass-stems and apparently edging himself toward the fence, which he now probably regretted having crossed. The young turkeys were a hard lot to manage. They found grasshoppers so plentiful that obedience to their mother's warning to keep on coming was a difficult task. One young gobbler was especially enterprising. The grasshopper for which he had suddenly formed an attachment flew over the rail fence beyond which the fox was crouching. The turkey essayed to follow his prize. The mother called warningly. The fox slipped forward through the grass, his eyes gleaming. It was his chance to cut one of these birds out of the flock and pounce upon it ere it could take warning or wing.

The situation looked pretty critical to me. But in a moment the aspect of the whole affair changed. The young turkey heard his mother calling; he hesitated for an instant; in another moment he had abandoned his private adventure and was safe within the family fold. The fox, frustrated by the obedience of the young bird, crept through the fence. But the old mother saw him, gave the alarm, and the whole flock scattered in the air, alighting on the limbs of oaks and hollies and pines. There they settled for the night, far out of the reach of any marauder prowling on the ground beneath.

Wild children know how to obey!

I AM told that over the entrances to certain encampments the American Marines have erected a sign which reads something like this: "If you don't listen, you'll get killed." Terse enough and significant surely. But this warning did not originate with the Marines. It is really the life code of wild things. With them to obey is to live, and to disobey is to die.

Almost daily, wild creatures are called upon to make life-and-death choices; and they usually choose with celerity and wisdom. Reason and natural laws go hand in hand; and to violate a law of nature is always to defy reason. It is only because of perverse pride that we humans sometimes imagine obedience to law a proof of the loss of our liberty.

I WELL remember an experience in a valley in southern Pennsylvania. I was ten long mountain-miles from any human habitation, and it was just about sundown. I was driving a car, but it was a rattletrap thing whose mortal race was about run. Its cylinders missed oftener than not. Its gait had a certain abandoned lightness that was neither grace nor health but rather a dizzy agility. At last my debilitated coffee-grinder snickered, sneezed, and was silent. "Her heart heaved but once, then forever was still."

As I have not the gift of fiddling with an engine until it starts again, I knew that I should have to wait until the late mail-car came along, at nine o'clock at night Hours on that desolate road! What was I to do? At first, I was troubled, impatient, anxious. But this mood quickly passed. Twilight was dawning; and as I walked down the deserted road, I began to feel that waiting would have its compensations.

The lonely oriel-windows of the west were resplendent. About the silent hills there was the mystery of Nature's peace, the charm of her quietness. I had a sense of the beauty of it all; of the perfection of its law and order. Some people speak of Nature and (*Continued on page 139*)

All Arted Uppe

By DON MARQUIS

Illustrated by THOMAS FOGARTY

MOTORING through New England not long ago I saw a painted signboard attached to a rough pine shed on which appeared the legend:

YE OLDE HOTTE DOGGE SHOPPE

Nobody could mean this seriously, even in a country that has gone and got itself all arted up; that seems to get itself increasingly arted up as the years go by. It could be nothing but satire, conscious satire. I decided to investigate.

I took a chance, and stopped my antique motor car—a chance, because it is always a gamble when I stop this Horseless Carriage as to who is going to get it started again, and when. As I approached the pine pavilion I was greeted by an aroma of sizzling frankfurter which disbursed its richness on the summer air. And behind the plank counter sat the proprietor, reading Bryce's "American Commonwealth," which need not, after all, surprise anyone who is acquainted with the rural New Englander.

"I'll have a hotty doggy," I said, pronouncing it phonetically, as lettered upon his sign, and with the hope that by so doing I might get a conversation started with him.

BUT you cannot always get conversations started that easily with the native New Englander. This man gave me one level glance from the steady gray eyes set in his weathered face, and then allowed his attention to drift back to his book. Still looking at the page, he reached out with his right hand, took a fork, removed a frankfurter from the iron griddle, inserted it expertly within a split roll, and handed it to me.

"Mustard," he said, motioning towards a bottle of it, and still not looking up.

I understood that I was dismissed, until the moment arrived when I should pay him; and I felt sure that he would make the change with his eyes still upon his book.

I persevered, trying a direct attack th time. "Your spelling," I said, "is peculiar

He gave me another glance which i dicated that he was beginning to find m a bore.

"See here," I said, "you must have p that sign up in order to attract attentio You didn't make a private joke of it—p it inside your shack where you could gr at it yourself, but nobody else could see You've invited attention and commen now don't act as if I were impertine when I speak of it."

HE LAID his book aside, and frank studied me. I suppose he reflect that he would never see me again, a therefore he could talk—a little—in p fect safety. It was highly improbable th I would ever marry into his family. T chances were all against my ever settli in that locality and becoming one of l neighbors. In short, no verbal ind cretions he might commit now wou arise to plague his after life. He looked the New York license plate on my car, a felt still safer. He burst into comparati loquacity:

"Did you come past an old mill abo five miles back?"

I had. I grinned at the recollection. had been turned into Ye Olde Gift Shop The ancient and honorable nether sto which had surely earned a better f through more than a century of faith service, had been taken from its place a set up outside the door, and the sign w painted upon that stone, if you c imagine it—Ye Olde Gift Shoppe. I do know why it was "gift" instead of "gift The hot dog man almost grinned hims as he saw my grin.

"A mile farther on," he said, "y passed Ye Olde Waffle Shoppe."

"I did," I said.

"And about three miles farther o he continued, "you're going to come t big frame house that sets back about f yards from the road, under some c trees. It's been made into another o

hoppy, and they try to give the impression that the place used to be a roadside tavern. It never was. But it's all arted up. Woman from Indiana comes down here and runs the place every summer. She brings an old man with her, a kind of feeble old fellow. He don't do anything but sit around all summer and do his best to look like a retired sea captain.

"The theory of the thing is that he's an old New England skipper. But he isn't. They just throw him in for ornament and decoration. What he is, really, is a retired Indiana farmhand. The only salt water he ever came into contact with was what he gargled out of a glass to help his tonsillitis.

"There's people livin' right in this very town," he went on, using the word "town" in the New England way to indicate an entire town hip, "who think I'm a little bit off mentally on account of that sign—Ye Olde Hotte Dogge Shoppe. They don't see that it is just sarcasm. And I don't bother to explain that it's just my protest against the way the whole country's getting all arted up."

I don't get around much myself—I mean, even when I am engaged in the placid and deliberate progress which I call a motor trip, I don't get around much. The Horseless Carriage to which I have referred was built in the days before breathless speed was the ideal of the manufacturer, and nothing has happened to it in a great many years to make it want to go any faster. The attitude of this vehicle is that it is doing me a great favor when it goes at all and that I should not be too particular as to how fast it goes or in what direction.

It has been suggested by some of my friends that I might find it advantageous to put sails on it; others have asked me why I did not give it to some museum dedicated to an exhibition of the History of Transportation, with a neat card attached explaining that it is the Missing Link in vehicles and was found among the bones of several Neanderthal men. And a deliberate attempt has been made by certain parties to hurt my feelings by naming it Archy the Wheeled Cockroach. I have never thought of it as a cockroach, in spite of its color and gait, because I have never been personally acquainted with a cockroach that had adenoids. And my car has adenoids. All you have to do is to listen to its breathing to be certain of that. So, as I say, I don't get about much.

BUT wherever Ye Old Horseless Carriage does take me, coasting solemnly down the slopes and panting laboriously up the hills again, I find that the country is just as the Hotte Dogge man described it, all arted up. Or, if you please, Arted Uppe.

I took the long count of seventeen one day in Illinois (*Continued on page 125*)

For young lovers, warm moonlight is the best, but in the sixties there seems to be nothing that can touch a kitchen range

ONE Out of Every SEVEN

Dot undertakes to beat the law of averages

By FANNIE KILBOURNE

Illustrated by T. K. HANNA

I'M REALLY not nearly so strong on matchmaking as Will insists that I am. He says I can't see a single he and a single she without trying to maneuver them into the holy bonds of matrimony. As a matter of fact, when I invited Scott's Uncle John to take his meals with us for two weeks, I was glad to be doing what I could for Scott and Corinne. But it really never occurred to me then that things were in anything like so dangerous a way between them.

I don't know of anything that gives you much more of a turn than to realize for the first time that the law of averages can work right in your own crowd. It never seems as though statistics can have anything to do with people you went to school with.

When Miss Waters—who, being both a dressmaker and society reporter for the "Monitor," usually gets hold of any gossip the instant it happens, if not before—hinted to Dulcie and me that there was anything seriously wrong between Scott and Corinne, we just thought she'd gone crazy with the heat. Why, they had two children and had gone with our bunch ever since we all went to the old Bee Street Primary School! I helped Corinne dress for her wedding, and Will and Howard Merton tied white streamers on the car that took them to the station.

"Just the same," Miss Waters insisted, "they may be the one couple in seven. Statistics prove that one marriage every seven ends in divorce. It's th of averages."

As I say, we brushed the sugg aside as being a crazy notion; but knew only too well how many of Waters's crazy notions have proved true. I suppose it did set us to no things that we might not have n otherwise. If it hadn't been for her h said that, I might not have take account of the first sign I saw, b thinking it didn't seem at all like C to be talking that way.

Scott's Uncle John had come t with them, so they needed an extr room and Will was showing the Custer place, which was for sale bargain. I just happened to be

Corinne went from room to room, looking at everything with lackluster eyes. Finally Scott asked her what she thought about it. She shrugged her shoulders and said:

"Not one of the curtains in the other place will fit one of these windows." Her voice had a queer little disagreeable edge to it which was so different from her regular tone that I looked at her in surprise, just in time to catch her look at her husband. That look was even less like Corinne than her voice. "Not that you'd mind about that," she said; "I suppose you think it's fun for me to go through life making new curtains every year."

I imagine that if Miss Waters's gloomy talk about statistics hadn't been in my mind, I'd just have thought it natural enough that even easy-going Corinne was getting tired of moving, at last.

In the six years that she and Scott had been married, they had lived in six different houses. The first had been a tiny bungalow that Corinne's father had given them for a wedding present. Scott had traded his old motorcycle for some of the windows in a house that was being torn down and built a sun parlor on the side of the bungalow. Then he had set out a lot of shrubs and made cute little flagstone walks and, what with one thing and another, improved the place so much that they sold it for a thousand dollars more than Corinne's father had paid for it.

THAT was the start. After that, the Forrests lived in a house just long enough to improve it and sell it at a profit. We girls all declared we didn't see how Corinne stood it, moving every year; but she didn't seem to mind a bit. She'd known Scott most of her life and knew he was a born trader, long before she married him.

Even when we were kids, and all trading stamps and marbles, Scott used to be specially good at it. And when we got into our teens and the rest of us dropped it, Scott kept right on. He was always trading a camera for two wrecks of bicycles; then taking the bicycles apart and getting enough good parts between them to make one good one. Then trading that for a lawn mower and selling the lawn mower to Mr. Dunwoodie for enough to get the kind of camera he had wanted in the first place.

When he and Corinne got married, she used to tease the life out of him about his trading.

"Why, one time," she declared, "he bought me a lot of bulbs for a perennial border, and when I had three quarters of them planted he had a chance to trade them and some other things for a bird bath, and didn't he make me dig up the bulbs and give them back?"

And she laughed and laughed, as though she thought it was just a good joke.

Another time, he traded her sewing machine when she was in the very middle of making curtains. But she didn't mind that either. As she said, she just laid the curtains away and then finished them up the next week on an electric machine, which she hadn't thought she could afford for years. Goodness only knew how Scott got it, she giggled. She only hoped it was honestly.

When their second baby came, Will pretended to be surprised to find Jimmie, the three-year-old, still there.

"I thought of course Scott had traded Jimmie in for this year's model," he said.

But all the kidding was good-natured because there was nothing mean or tricky about Scott's trading. He was a little more foresighted than most people, that was all. Or, just more ingenious about seeing how things could be made use of. Of course, before his Uncle John came, he had always used this in his business too.

He was a second cousin or something of old Mrs. Wallie Blake and managed her estate, getting a salary and commissions. He didn't make such an awful lot because, though she owned three or four farms and several business blocks in Dawson, Montrose, and Verblen, almost everything was tied up in leases. But as fast as a lease ran out Scott would figure out a way she could make more out of the place. In time, when more of the leases ran out, managing the estate wouldn't be a bad job.

And in the meantime, whatever house Scott and Corinne happened to be living in that year was a regular headquarters for our crowd. It was always the one house where there never was a reason why you couldn't push back the rugs and dance. Scott, just managing an estate, didn't have to keep business hours like the rest of our husbands, so they could sleep late in the morning if they wanted and we never felt guilty if we stayed late. Their babies seemed to be always healthy, and Corinne had trained them to keep quiet in the morning and to sleep through murder at night, so we had some gorgeous noisy times there.

THE Forrests couldn't afford to spend much money, but that never mattered.

"Listen," Corinne would say, "if you all want to come over for supper, I'll make Hungarian goulash."

Then Dulcie would go home and get the cake she'd planned on having for their supper at home, I'd bring our potato salad and rolls, Rosie Merton would bring a pot of soup and a jar of piccalilli, and we'd have the grandest party in the world at no expense to anybody.

When the Forrests moved the fifth time, Howard Merton said:

"I expect, if I only live to a ripe old age, to have eaten Corinne's Hungarian goulash in every dining-room in Montrose."

Corinne laughed, of course. She seemed to be always laughing those days. There was something so happy-go-lucky about her. And she and Scott had always seemed so pleased with each other and so happy together that they were the last couple in town I'd have picked as likely to have any trouble.

I shouldn't have given much thought to

When the Forrests moved the fifth time, Howard Merton said, "I expect to eat Corinne's Hungarian goulash in every dining-room in Montrose"

the one little sign I had noticed, myself, if it hadn't been for Miss Waters's law of averages and the fact that everybody else was noticing the same sort of things. When Scott traded an old tractor that he'd picked up in another trade for a second-hand electric refrigerator, Corinne didn't seem pleased at all.

"Oh, it would be very nice to have the refrigerator," she said listlessly; "but I won't have it long enough to decide which shelf to keep the butter on. Scott will trade it for a fine acre out in Oregon, or one of the old street cars they're scrapping, or some other handy thing to have around the house."

And there was a queer, sharp bitterness in her tone that was as different as could be from her old joking, secretly proud voice.

It seemed a particular shame because, as Mother Horton said, right now was when the Forrests had everything to live for. Scott's Uncle John had done a really wonderful thing for them. He had a few thousand dollars that he had saved during his life, and he had bought Scott a partnership in the Morley coal and ice concern.

Scott hadn't wanted him to do it. It is a terrible responsibility to have an old man put his savings into you, so to speak. But, as Mr. Perkins said, Scott was his only living kin and he wanted to see him getting started right. He felt that it was a shame for a young man to be working for somebody else, when he might be getting into business for himself. And he never felt that Scott's job with Mrs. Wallie Blake was a real job at all.

So he took his own money and bought a partnership for Scott. Everybody said how wonderful it was for Scott. They had new signs painted. Instead of T. L. Morley, Coal and Ice, it was Morley and Forrest, Coal and Ice.

BEING in business for yourself does give you a little different standing in a town like Montrose. They asked Scott to pass the plate in the Water Street Church, and as he would be making more money—with coal and ice, of course, not passing the plate—and they needed a bedroom for Uncle John, Scott bought the Custer place. It was in the block with our new house and was quite a little bigger and nicer than any of the houses the Forrests had lived in before. And Corinne got herself some pretty new clothes.

Oh, take it altogether, everything looked wonderfully promising for Scott and Corinne. It seemed the silliest time in the world for them to begin getting on each other's nerves. And yet that is what they were certainly doing. Nothing that either one of them did seemed to suit the other.

Corinne got a real boyish bob, hair combed straight back, leaving her ears all out in the open, so to speak. It was extreme but very becoming. I happened to be with them when Scott saw it first, and you could see he thought it was cute. He laughed and told that joke: "Who was the gentleman I seen you with last week?" "That wasn't no gentleman, that was my wife."

But their Uncle John thought it was awful.

"Crowing hens are going against nature," he kept saying. "A woman ought to look womanly."

And by the very next day Scott himself had lost his taste for his wife's hair-cut. He kept making jokes about it, but not like the first one. It's queer how two jokes can sound almost alike, and yet one be good-natured and the other mean. Scott and Corinne had always joked each other a lot, but the jokes had always been funny, loving ones. Now every one had a little hidden sting to it. The kind of joke that the oftener you recall it the less you like it.

EVEN worse than the joking, they actually began to complain about each other to other people. Corinne told me confidentially that Scott was so unappreciative.

"I dry-cleaned and pressed every one of his neckties the other day—it took me all morning—and he didn't even thank me. Was just cross because I'd thrown away a ragged one that, it seems, he was particularly attached to. I'm sure I don't know how I could have been expected to know that. And he really is unappreciative; not only to me, either. Why," she lowered her voice, "he doesn't even seem to appreciate what Uncle John did for us. He doesn't say anything to Uncle John, of course, but he keeps complaining to me that coal and ice is a dull business."

And Scott complained to Will that Corinne didn't have any discipline with the children.

"Why, even Uncle John has noticed it," Scott said. "They call her by her first name, and when she tells them to do something they wait till they get good and ready to do it."

I suppose when any couple get to putting their minds on each other's faults, they can find plenty of them. Certainly Scott and Corinne could. And did, as the weeks and months went on. Most of the faults were true enough, I guess; but it did seem funny that, after having lived together for six years, they were just beginning to notice them. One that Corinne found in Scott seemed just funny when she first mentioned it.

"I don't see how we're ever going to get ahead any in the world," she said. "Scott's so lazy and impractical."

When I repeated that to Will, he just whooped.

"Lazy! Why, he's at something every waking minute. How does Corinne get that way? And practical—well, whatever else can be said against Scott, he's always been practical."

It seemed, though, once our attention had been called to it, that there was some truth in Corinne's remark. Scott seemed to be changing. He had stopped doing all the kind of things he had used to, like building that sun parlor on their first bungalow. And, someway, his ideas for turning an honest penny seemed all to have changed into ways of making a hundred million dollars.

These ways, naturally, required something rather difficult at the very beginning, like changing the course of the Gulf Stream. By the time Scott had one of these deals all figured out, he would be in such a glow of pleasure in his own powers that expecting him to come down to figuring out how to make a hundred dollars on a wooded acre was like asking a captain of finance to go back to peddling papers.

Nobody knew, of course, just how things were really going with the Forrests, but each week there were more outside signs that all was not well. People began to joke about it. And all the time, of course, Miss Waters going on about how every seventh marriage ends in divorce, and how the seventh year has been proved by statistics to be the most dangerous. The number seven certainly seems to be a hard one on marriage.

I might never have known any more if I hadn't happened to be putting some string beans in cold pack and had run out of rubbers for my jars. It was so far down to the store, and Corinne being right in the block, I ran over to see if she had any in the house.

Her children were playing house on the front porch and they said Corinne was in the kitchen, so I went around to the back door. She was sitting on the porch steps and didn't hear me as I turned the corner. She had been fixing some white mosquito netting for the door of the children's tent and it was billowed all about her. I stopped short for a few seconds and stood staring at her. Of course it was just an illusion, due to the white mosquito netting, but suddenly I saw her in a floating veil and a wreath of orange blossoms.

CORINNE hasn't any mother or sisters, so Rosie Merton and I had helped her dress for her wedding. I could feel it all again, the faint, goose-fleshy moments in the upstairs hall while we waited for the first notes of the Wedding March, to give Corinne the signal to start slowly down. We had been laughing and joking excitedly all the time she was dressing, but suddenly we had stopped, listened. The preliminary music died away, there was a rustling, waiting hush below. The smell of orange blossoms, the white mist of the veil, Corinne's hand on mine, trembling a little, cold as ice.

Her hand tightening tensely.

"Oh, wish us good luck, Dot," she whispered breathlessly. "Wish us good luck!"

Suddenly, out of the waiting stillness below:

"Here comes the bride—here comes the bride—"

My own hands were as cold and shaky as Corinne's as she started slowly down the stairs. I could hardly keep them steady enough to straighten her veil as it floated behind her. Through the living-room arch and a blur of tears, I saw Scott standing, straight and solemn, waiting for her.

Oh, it isn't funny when a married couple gets to bickering and fighting—in spite of all the vaudeville jokes in the world. It isn't funny! Not when you can remember them loving each other and in all soberness and honesty taking those vows: "for richer, for poorer—for better, for worse—in sickness and in health—and forsaking all others—so long as ye both shall live—." Standing there, the two of them, chancing all the hazards of the world, together—oh, it isn't funny!

Suddenly, Corinne felt me there and looked up. I snatched myself back to the present, asked her about the jar rubbers I dropped down on the back step beside her, and we chatted about cold packing and Howard Merton's new office, and Dulcie's new sports suit, as though such

Frankie Kirsted always is a pest but it was especially unfortunate that he should have broken Mr. Perkins's watch

things were important. And all the time we were talking and laughing, I felt as though we were joking beside the crib of a sick baby, so sick it might never get well.

As Corinne got up to see if she had any rubbers, she said casually that Scott was taking a vacation next week. I asked where they were going, and she said she wasn't. She couldn't get away.

"Wouldn't Beth take the children for you, as she did last year?" I asked. Beth is Corinne's sister.

"Oh, I imagine so," Corinne said. "But we can't leave Uncle John."

"Couldn't he stay in the house alone," I asked, "for just two weeks?"

"How would he get his meals? He can't cook a stitch. And he hates restaurants."

"Let him come and eat with us," I said promptly. "It's just a step, and it wouldn't be a bit of bother. I have to get three hearty meals a day for Will and the twins anyway."

OF COURSE Corinne demurred for a while, but I could see she was crazy to go. Scott came home for dinner while we were still talking about it, and he seemed just as keen to have her. Finally, she agreed. It really seemed as though things couldn't be absolutely hopeless between them when they were both still crazy to go off on a vacation together.

They started off the next Saturday afternoon. Mr. Perkins, of course, was coming to our house for supper, and I had asked Corinne what he specially liked. It seemed that his favorite dish was fried eggplant, which Will specially hates, and his next favorite was coleslaw which, while it's all right enough, I have always regarded as among nature's lesser gifts to man. But I had made up my mind to do this right, so I had them both.

In spite of my good intentions, the supper was not a pronounced success. For one thing, I got home too late. In the dull season, Will usually takes Saturday afternoon off, and we had taken the children and driven to Dawson. On the way back, we had two punctures. As Will said, it was lucky I'd worn my knickers, because I helped him a lot in changing the tires; but even so, it was later than I'd planned when we got home. In fact, Uncle John was already there, sitting on the porch and looking at his watch.

It made me rather nervous, and the second I get nervous the twins begin to act like all possessed. I gave them their supper on the kitchen table while I was getting ours, and they were naughty as could be. Jack wouldn't eat his bread and milk and Jill cried all through hers, because she wanted to keep on riding. By the time I finally got them to bed and the three of us down to our supper, I was fairly twittering.

UNCLE JOHN thought the eggplant and coleslaw were delicious and praised them highly. I'd forgotten to ask Corinne what he liked for dessert and had, unfortunately, hit on fruit salad. He didn't say anything, but he didn't eat his; which made me very uncomfortable. When I got up to clear the table afterward he noticed my knickers and began to joke about crowing hens. Will joined in, just to be polite, he insisted afterward. I didn't mind Uncle John, but, considering the way I'd worked over changing those tires, it made me mad for Will to pretend he'd rather I'd had on frilly pink georgette.

"Have considerable trouble with your children, don't you?" Uncle John asked sympathetically.

"Oh, no," I denied, "they're perfectly healthy and really awfully good. The way they were carrying on tonight was very unusual."

"Yeah?" said Uncle John. And there was a certain (*Continued on page 112*)

Thousands of Happy Youngsters in his Air Castles

By
WILLIAM S.
DUTTON

IN THE Bible is written a promise which men have been reading and pondering for centuries:

"Commit thy way unto the Lord: trust also in him, and he shall bring it to pass."

Forty-odd years ago, in Bangor, Maine, a man read that promise and decided upon a strange and a daring experiment. For one year, under conditions laid down by himself, he would deliberately make a test of the promise! He would make a test of God!

Since boyhood it had been his dream to found a home for needy parentless boys. His whole life had been directed toward that end, but he had got nowhere. At thirty-three years of age, he was without money and without influence among those who had money. His earnings were only eight hundred dollars a year, barely enough to provide for his own small family.

"It was in an hour of discouragement and doubt that I read that promise in the psalms of David," this man, George W. Hinckley, told me. "Then and there I decided to commit my way unto the Lord, and trust him to 'bring to pass' that thing which was in my heart.

"I resolved to take into my home, to live among my own children, the neediest derelict of a boy I had ever seen in the state. Toward the support of this boy I decided to devote one tenth of my salary, which was the maximum that I personally was able to give. And realizing that this one tenth could not possibly clothe, feed, shelter, and educate a boy for one year, I told myself:

"'I will say nothing of what I am doing; I will ask no person in this world for a single penny, but if I receive anything over my salary from any source—cash or anything that might be converted into cash—I will regard it as given for the support of the boy. Then, at the end of the year, if I have adequately supported the boy and have a nucleus of one hundred dollars left over, I will accept it as a sign from God that I shall go on to fulfill my dream of a home for many needy boys.'"

We were seated, Mr. Hinckley and I, on the porch of a little summer camp facing the Kennebec River, at Hinckley, Maine. Up the river came the happy shouts of boys who "played Indian" in a canoe. From the depths of the great pine grove, in which the camp was almost buried, floated boyish laughter. It was a happy and a most beautiful spot.

Across the river, opposite us, New England cottages snuggled white against the green of lawn and trees and shrubbery. A little stone chapel reared its tower toward the blue; I could see the white façade of a Carnegie library, a museum, a school, and the tall clock tower which marked this settlement's headquarters. There, over the lazy Kennebec, was a bit of a town, and a famous town. It was populated by boys and girls.

THE man beside me had founded that town and called it Good Will—the Good Will Homes and Schools. He had begun with a farm of a few acres, a cow that wouldn't milk, three homeless boys, and fifty dollars. Since then Good Will had sent more than two thousand young men and women into the world to take their parts, and take them nobly; its few acres had grown to more than two thousand; its few old buildings had multiplied into forty fine structures; its three homeless boys had come to number two hundred and thirty-five boys and girls; and their original capital of fifty dollars had become a permanent endowment of more than eight hundred thousand dollars.

"What," I asked Mr. Hinckley, "is the story of this place? How did it begin? What has kept it going, growing, and ever growing?"

I emphasized the third inquiry. Good Will seemed to have started on nothing, and to have thrived on it! The place was merely the realization of a poor man's dream. It had had no state or county or municipal support. It belonged to no church, no society, no foundation. One man, a poor man, had conceived and built it, and had carried it on. Mr. Hinckley was still, to the best of my knowledge, a poor man.

THEN he told me of the promise, of his vow, of that needy boy—of that test made, forty-odd years ago, of God.

"And you did this thing?" I asked.

"I went through with it literally," he replied. "I found the boy six miles outside of Bangor, in need of clothes, hungry, friendless, and destitute. I took him into my home, though I hadn't the slightest notion from where the means to support him for a year would come. But the means came. They came from the most unexpected sources, a thousand sources.

"My work at that time was with the American Sunday School Union. It was my duty to go into the remote parts of the state to organize Sunday schools, and that took me far off the beaten ways among people who mostly were poor. It was the poor folks of the villages and crossroads and lumber woods of Maine who helped me provide for the boy and to begin what you see here at Good Will.

"For instance, after a Sunday school was organized, I was required to take a collection. These collections were small and no part of them belonged to me. People gave what they could for the work that it might go on elsewhere—a dollar was a large contribution. But often, as I was leaving the place, a woman would stop me. It was winter and a cold one.

"'Mr. Hinckley, I knitted these mittens for you,' the woman would say. 'Would you take them as a present for yourself.'

"Sometimes the gift would be two or three pairs of mittens, or several pairs of thick knitted stockings, or a muffler such as they used to knit on the farms, or a pair or two of woolen 'wrist warmers.' I couldn't possibly wear them all and

have lived

The administration building at Good Will Farm

George W. Hinckley founded and runs the famous Good Will Farm, which has sheltered, guided, and taught more than 2,000 homeless boys and girls

act, none of them was mine according to my covenant; they belonged to the boy. C. White, who was a dealer in knitted oods in Bangor, agreed to buy these gifts rom me at the usual price then—twenty-ive cents a pair. This money I put aside nto what I called the Boys' Fund.

AGAIN, one evening a party of seven girls who were members of a Sunday chool class I had organized, drove in to Bangor from Kenduskeag, and before idding me 'Good night' they left a purse f a little more than seven dollars for my ersonal use. It was added to the Fund.

"Thus gifts of various kinds came to me, most of them from people who could ive but little. Regardless of what the ift was—a bushel of potatoes, a can of reserves, a bag of hickory nuts, or a slice f ham—I credited its value to the Fund, ut told nobody what I was doing.

"At the end of one year I had cared for he boy and in the Bangor Savings Bank he Fund had a surplus, not of one hun-red dollars, but of a little more than two undred. It was the sign for which I had sked, a double meeting of the test, and y last doubt left me, never to return. Next day, for the first time, I made public nnouncement of my plan to found this chool.

"You ask what has kept it going," said Mr. Hinckley. "I can only tell you what as happened. I have talked about Good Will and written about it, but I have never asked anybody for money, by letter or by word, nor has any agent of mine. And yet every dollar that we have had, every acre and every building that we own, has been given to us. Our gifts have come in, year after year, from all parts of the country. Thousands of these gifts have been less than one dollar.

"The only exception to this is the rule that when a boy or a girl has a relative who can and wishes to contribute to his support, this help is welcomed. However, many have no such relatives. Few can contribute more than a small fraction of the cost. At this moment we are in need of many things, some of them urgent, a high-school building, for instance. I don't know from where the money for them will come, but I do know that it will come as surely as I know there will be a dawn tomorrow. It has been so from the beginning—at the proper time the means to carry on have been at hand."

Whereupon this tall, spare, kindly-eyed man who had grown old in the service of youth and who, clad as he was in rough corduroys and a flannel shirt, looked more like a woodsman than a schoolmaster, related to me one of the most remarkable stories I had ever heard; while on the river below and in the pine grove, laughing boys "played Indian."

"There has always been a wide streak of sentiment in me," he began. "I can't bear to see anything hurt. Other folks' troubles have always had an annoying way of making themselves my own troubles. An act of injustice will upset me for days.

"My father was a poor man, a farmer in the summer and a carpenter and joiner in winter. We lived in Guilford, Connecticut (where I was born seventy-five years ago), and I attended the local school. There was another boy in the school who was the only son of a widow—a bright, lively, likable boy whom, secretly, I admired. He was so much brighter than I was, so much bolder, and he was a handsome boy. Myself, I was dull, shy, and far from handsome.

"THIS boy's mother had to earn their living by working in the homes of neighbors. As was customary, she obtained her noonday meal at the home where she worked. On such days she would get breakfast for herself and her boy, then lock the door of the house, and my schoolmate would have to go dinnerless and without food until evening, when his mother returned home and prepared supper.

"One week this happened three days in succession. On the third day, in the afternoon, the boy was caught behind the foundry with his hand in a workman's dinner pail in the act of helping himself to the remnants of the man's dinner. What followed wouldn't be allowed now: he was

sentenced to the State Reform School until he should be twenty-one years old.

"I was only a boy myself, but my heart was hurt; my blood boiled at this injustice. My schoolmate wasn't a bad boy, simply a hungry and neglected boy. Young as I was, I demanded, 'Why hadn't somebody taken an interest in that boy *before* he had been driven to steal food to eat?'

"THE thing grew on me, the injustice of it. I told myself, with all the vehemence and sincerity of boyhood, that when *I* became a man and had money I would build a house—I would build houses—and whenever I heard of any boy who was hungry or needed a helping hand, I would give him a home in my houses, and a chance.

"The idea was fanciful, of course, 'boy stuff' you might call it, but gradually it became a fixed dream of mine. Other youngsters might dream of becoming pirates, or engine drivers, or chiefs of police, but I was never happier than when building air castles which were homes for boys who had no homes.

"Then, at fifteen, I became a pupil in the Guilford Institute. One day a 'new boy' appeared on the campus, and while every 'new boy' was a subject of general attention, this one commanded an attention that was open-mouthed. He had red hair, blue eyes, and freckles; he wore a butternut-brown jacket with big brass buttons, a cherry-red necktie, navy blue short trousers, and black stockings. It was a striking combination.

"'Who is he?' was my question.

"Someone said that he was Ben Mason, a boy who had been sent by the New Haven Orphan Asylum to live on a farm near our town. I was speechless. Here was the first genuine flesh-and-blood orphan I had ever seen. I knew boys who had no father and boys who had no mother, but Ben was the first motherless and fatherless boy of my experience, outside of books.

"At the first opportunity I told Ben Mason my name, gave him my hand, and we became chums. We played together, dreamed together in the shade by the creek, read books together. Ben told me all about the 'asylum,' confided to me his troubles, his heartaches. Perhaps some of these were imaginary, I don't know. They were very real to me, and now my air castles kept me awake nights.

"One evening Ben and I were walking together. Things had gone wrong that day with him. He was talking of 'running away,' of 'carving a place' for himself in the world—what boy has not talked of 'running away' when things have gone wrong? And suddenly Ben burst into tears and said:

"'If I had a place in the world to lay my head, I wouldn't stay where they've put me another night.'

"I felt as badly as Ben. The lump in my throat almost choked me. 'Ben, don't say that again,' I said. 'Father's house is small, but I think there's room enough for both of us in it; but if there isn't, I'm older than you and will take care of myself, so you can have my place.'

"Next morning, while I was working away in our potato field, a familiar voice called to me. There at the edge of the field was Ben, smiling and waving.

"'George,' he said, 'I've come to stay.'

"And he had.

"I took him in to my mother—hard-worked, over-worked Mother, who never complained; and suddenly it occurred to me that I had done a very thoughtless thing in offering Ben a home with us. There were five of us children already. Ben made one more for Mother to cook for, one more for Father to feed and clothe.

"BUT, oddly, neither Mother nor Father uttered a protest. Ben was made welcome in our small house. Another plate was set for him beside mine at the table; he shared my bed at night; and for a year or more the two of us were inseparable.

"But I saw this couldn't last always. The house was too tiny for all of us, the burden upon my parents too heavy. We weren't both needed there anyway; and so one day I talked with Father and arranged that I should go and that Ben should stay in my place. You see, he was several years younger than I, not old enough yet to earn his own way. Thus he became the first of the hundreds of boys I've tried to help."

"What became of him?" I asked.

"He became a successful lawyer in New York State," said Mr. Hinckley. "Upon the founding of Good Will, he wrote me that he regarded himself as the first of my Good Will boys. Some years after this I was returning home on the train. It happened that I had talked of Ben the night before, and that morning my thoughts were full of him. The news agent passed my seat and I bought a New York paper, still thinking of the old boyhood days with Ben.

"And on the front page of the newspaper I read a headline I will never forget. It said simply, 'DIED A VICTOR.' Below it, the news item related how Benjamin B. Mason, a lawyer of Keeseville, New York, had plead a case at court in Plattsburg on the previous day, and when he learned that he had won, he had stepped to the telephone and told his wife, 'I'm a victor. I'll be home in the morning.' And then he had gone to his hotel room, laid down on the bed, and died."

MR. HINCKLEY was seventeen when he left home to make a place for Ben. He went to Meriden and got work in a factory. It was his ambition, he told me, to save enough money to enter Yale University.

"By now I realized that to found a home for boys such as I had in mind, I needed either wealth or friends who possessed it. I had neither, but it was my thought that if I could qualify as a minister I might preach of my project and so interest people in it. The ministry seemed the likeliest road to my goal."

But Hinckley had been working only three months when he got bad news from home. The barn had burned and his father needed his help to rebuild it. He quit his factory job to return to Guilford. What little he had managed to save and his labor for the next five months went toward rebuilding the barn.

Then he got a position at Kingston, Rhode Island, teaching school. The winter passed and spring came again, and once more he had laid aside a little money. And again came bad news from home: his father was down with pneumonia. The savings, as before, were wiped out by the needs at home, and for another spring and summer Hinckley had to work the farm in Guilford.

"I was becoming discouraged," he confessed, "and impatient. I had worked almost two years and still was without a penny. Friends had gone into business and were doing well. I asked, 'Why should I waste my life upon a dream? Isn't

nough for me to work for happiness and omfort for myself?'

"In this spirit I went back to Rhode sland and found work in a store at Allenon, and for two months things went wimmingly. I reorganized the display of tock, managed to dispose of merchandise which had been on the shelves for years, nd I studied business methods, resolved o make business my career.

"My chance came unexpectedly. My employer offered me a partnership. He even offered to arrange it so that I could borrow the money to buy a share of the business, this money to be repaid out of my share of the earnings. And at the same time, from an altogether different source, came another offer.

"AT KINGSTON I had interested myself in the church and Sunday school and had been active in organizing boys. While teaching school, my room had been open always to the boys in my classes, and at every opportunity I had talked to boys. Though I had been reared as a Congregationalist, upon coming to Rhode Island I had affiliated myself with the Baptist church, because that was the church available. Previous to this, too, I had been a Methodist. It has always been the church itself and not its denomination which has concerned me. From its very beginning, Good Will has been strictly undenominational and it always will be. People of all creeds have been among its donors.

"However, in Rhode Island I was active in the Baptist church and it seems that my work had gained some attention. At any rate, at the same time that my employer offered me a partnership and a career in business, the Baptists offered me a chance to become a minister.

"Alone, in my room, I fought it out. If I entered business I possibly could become a wealthy man in time, but whoever heard of a Baptist preacher getting rich! I was thinking seriously of getting married. Was it fair for me to accept a preacher's meager pay when I could earn several times as much in business? The Yankee in me said, 'Stick to the store or be a fool!' but in my heart were thoughts of Ben Mason and of that boy in the reform school—and my heart won. I resigned at the store. Not many months later I was married, earning a preacher's pay of $525 a year, and wearing new ruts in the dirt road between my two charges—one at Bloomfield, Connecticut, and the other at West Hartford, sixteen miles apart.

"Eventually, after a number of years of preaching, my unabated interest in boys led to the American Sunday School Union offering me the post of a home missionary in a territory of my own choosing. I picked Maine, which is how I came to Bangor."

"And during these years you were able to interest nobody in your plan for a boys' home?" I asked.

"As I see it now," Mr. Hinckley answered, "it was right that I shouldn't interest anybody. I, myself, was unprepared to carry out the work. While I thought that I was failing, I really was laying the necessary foundation for later success. It is often that way with failure, or what seems to be failure. You must dig *down* first and construct the cellar before you build your house on its walls.

"My first plans were vague. I wanted to help needy boys, but really didn't know how to help them. It was not until I had a boy of my own to rear and think about that I began to see clearly and to formulate definite, practical ideas.

"The so-called 'homes' of that time were conducted as institutions. Children were herded into dormitories, ate in common dining halls, and every time they passed through the front gate the name over it reminded them that they were homeless and set apart as objects of charity. My first definite decision was this: that nothing in the name or conduct of my proposed home would suggest charity, orphanhood, or destitution, and to the fullest extent possible it would *be* a home in fact.

"SLOWLY grew the cottage idea, for I had nothing other than my own ideas to go on. We would begin, I decided, with one cottage—and put my sister in charge of it. When the family in this cottage became too large for it, we would open a second cottage and put in charge of it, as matron, a capable, understanding woman who had reared boys of her own. Each cottage would be independent of the other; it would have its own kitchen, its own dining-room, and its own wood-box, and it would do its own trading at the store just as any independent home does anywhere in the land. The chores would be done by the boys, just as they would have to do the chores under their own parental roof; they would have to mow the grass, help wash the dishes, weed the garden, fetch in the wood. And there would be, too, a swimming hole in a nearby stream, open woods and fields and fishin', and skating in winter, hikes, snow fights—freedom for every boy. Our home would be in the country, a farm.

"As my plan grew in mind during those years when I seemed to be failing, I decided that above all my boys would be taught to live. For instance, we would teach organized sports such as football, baseball, ice hockey, running, but we would also teach them to know the woods, the flowers, the birds, the streams and hills. A boy learns football and baseball in school, but forgets them once school is behind him; but teach him to fish, to walk, to camp, teach him love of the out-of-doors, and he will have habits of recreation that will last him a lifetime. I wanted my boys, as men, to know how to work, but I also wanted them to know how to keep on playing. (*Continued on page 110*)

The Trail Eater

A story of Love and the Reckless Hardihood of Youth

By BARRETT WILLOUGHBY

Illustrated by GEORGE GIGUÈRE

TO THOSE who have once known its ways, Nome beckons irresistibly. Each winter it draws its men back from the ranges. With senses clean and sharp from a summer in the open, they come eager and thrilling to the inexplicable lure of the ugly Alaskan town. So Kerry Wayne, one blue November night, came home from his prospecting in the hills, in time to attend the supper with which the Malamute Racing Club opened the dog-training season.

He found interest at fever heat in the great central event of the Alaskan winter—the Sweepstakes Trail—in which, the year before, Kerry had been the only club member to race his own dogs. And he found something else—lovely Barbee Neilan, daughter of Nome's newspaper editor, come home to stay after the completion of her schooling in the States. Before the supper was over Kerry had lost his heart to Barbee and begun to worry about Rance Herrington of the Gray Wolf Mine, his friend and the richest man in Nome. Rance was flirting with Dr. Kramer's wife, Kitty; he was showing the effects of soft living and heavy drinking; and he was evidently hand in glove with Luce Barton, shrewdest and most unprincipled lawyer in the town.

Kerry was disturbed. Three years before, he and Rance had come on the same steamer to Nome and "bached it" together until Kerry had found himself doomed to a year's exile in the hills because of his lungs. It was Duna, his dog, who came back from that exile with him to lead his team in that famous last year's race which had made Kerry forever "The Trail Eater" to all of Nome. He had run the race with outcasts from the "Kashim," a retreat for dog waifs he had set up with the help of "Doorknob" Balsh. The dogs were a joke—and Kerry checked in at Nome three weeks after the four-hundred-mile course had been covered by the last of the other teams.

Now another Sweepstakes was at hand. Rance and Barton had formed a Syndicate, with the best dogs cornered—including Tokon, greatest and most lawless husky in all Alaska. On the morning after the club supper several things happened to Kerry. Lim Phayden, carrier of water and gossip for Nome, confirmed his fears about Rance and Kitty. Rance tried to induce him to join the Syndicate, which he refused to do because he was entering his own team. This so stung Rance's pride that the Gold King swore he would drive one of the Syndicate teams himself, with Tokon in the lead—he would tame the brute or kill him. And then Rance, quite casually, broke the staggering news that he was engaged to little Barbee Neilan!

PART II

AT HERRINGTON'S announcement of his engagement to Barbee Neilan, Kerry felt the subtle radiancy of the morning ebb away. He hardly listened to his friend's account of the meeting with Barbee on the steamer that had brought them both from Seattle that summer, and he was relieved when Herrington broke off his recital and with a groan pressed his hands against his temples: "Oh, man! What a headache! It's getting worse, Kerry. Let's get out of this warm room

"For gosh sake, Rance, don't try to run that brute today," Barton pleaded

I'll tell you—come over to Doc Kramer's with me, and I'll get something to straighten me out."

The low frame house that was both dwelling and office for Doctor Kramer lay so far out on the white road known as Steadman Avenue that by the time the two men reached the little path leading to the front door, frost had crisped the fur about their faces.

There was no one in the doctor's office, but from behind the door leading to the physician's living quarters at the back of the house came the sound of a phonograph. Herrington tapped lightly upon the closed door, and, without waiting, turned the knob and passed familiarly into the Kramer living-room.

Kitty, in a house gown of ivory-colored wool, was sitting against a square of curtained window through which the snow-light filtered on her bright hair. At the sound of the opening door, her listless hazel eyes moved to rest on her unceremonious guests. For the nonce those eyes were misted with tears.

"Why—what's the matter, Kitty?" queried Herrington.

Kitty languidly indicated chairs; then, with a sigh, she stared pensively at the phonograph, which was grinding out a song:

I bring—a breath—of Spriiing—time
From woodlands—where I—greeew...

"That's what's the matter with me, Rance!" She spoke tremulously. "That dewy, springtime stuff. I—I wish I were different. I'd like to be very young, and —and innocent—and clean. . . . You know what I mean, Rance. Like pretty little Barbee Neilan."

Herrington did not smile. Perhaps some vague longing for unsullied youth touched him too. He crossed to her side and put a hand on her shoulder.

"Sure, I know," he said kindly. "It's a pig-iron world, Kitty. But where's Doc? I want something for my headache."

Kitty reached out and shut off the phonograph. "He's down at the Fort. But you'll find the bromo on the top shelf of the medicine cabinet."

Hung with nuggets! Shackled with lumps of raw gold, with blatant diamond eyes that winked mockingly at her

AFTER Herrington had gone into the office Kitty sat silent and, without turning her head, looked out from under her hair at her other visitor. Kerry was six years younger than Rance and, despite the lines that were already deep at the corners of his eyes, he had that lean, alive look that is attractive to women.

She sat long enough now, so that Kerry might not miss the plaintively lovely picture her wall mirror gave back; then, wiping the tears from her eyes, she turned toward him with an apologetic smile. Before five minutes had passed, she was earnestly questioning Kerry as to the name and characteristics of each new dog in his team, and listening with every appearance of intelligent attention to details which he knew she did not remember two minutes.

Herrington returned from the office and leaned in the doorway listening, a faint, uneasy expression growing in his eyes. A moment later he sauntered in and drew Kitty's attention to himself by announcing his intention of driving his champion team in the coming Sweepstakes.

This news wiped all thought of Kerry and his mongrel dogs from the lady's mind. She sprang to her feet, her hazel eyes lighting with genuine interest: "Oh, Rance! How splendid of you! Only—" Her glance shifted from Herrington's thickened waist line to Kerry's lithe figure, and her blond brows came together. She reached out and patted Herrington's waistcoat. "Off with that tummy, Rance. You must get into training at once! I'll tell you—from now on you mustn't drink a drop. No more liquor for you." She hesitated a second, then in an unwonted burst of generosity, "And none for me, either!"

"Hurrah for you, Mrs. Kramer!" applauded Kerry. "Come, come, Rance, you old slowpoke! Shake hands on it, and I'll be a witness to the pact!"

"What are you two trying to do to me, anyway? Put me on the water-wagon? Oh, for gosh sakes!" as Kitty kept insisting. "Well, all right! All right! Have it your own way."

THE telephone in the doctor's office began an insistent ringing and Kitty hurried to answer. Through the open door her words came distinctly: "Y-e-s. . . . He's here. . . . Who? . . . The Gray Wolf! *O-oo!*" Her voice rose ecstatically. "Here! Come quick, Rance! Your foreman—he says the pay streak's doubled in width at the Gray Wolf! He says it's *lousy* with gold!" She thrust the receiver into Herrington's hand, and tiptoed back to the living-room to stand before Kerry, a vibrant, radiant creature utterly foreign to the weeping Kitty of a short half-hour before.

On Herrington's return he seated himself on the couch beside Kerry, but made no comment on his good fortune. It was Kitty who supplied the enthusiasm for the occasion. She swooped over to Rance and, placing a hand on either of his shoulders, bent down to look into his face.

"Oh, Rance! How ripping! How perfectly splendid!" A new idea caused her to step back and include both men in her flashing glance. "Boys, shouldn't we do *something* in recognition of this wonderful luck? Shouldn't we at least—" She broke off and disappeared into the kitchen.

On her return Nallah, her Eskimo servant, followed in her wake, his brown face a-grin above a tray on which were three glasses and a cocktail shaker.

"But . . . look here, Mrs. Kramer," Kerry protested, eying the tray. "What about that pact you and Rance made a few minutes ago?"

Herrington leaned forward in sudden animation. "Oh, shush, shush, Kerr. We'll swear off tomorrow; you meant tomorrow, didn't you, Kit? . . . Sit down, Kerry, and behave yourself." He flung an arm about the younger man and drew him roughly to the couch.

By the time the first drink had been multiplied by three, Kitty had become convinced that the only proper gesture in the face of the golden favors Fortune had showered upon Rance was the celebration of her own birthday a few weeks distant, the celebration, it went without saying, to be financed by Rance.

Later, when the two men stepped out

Original from UNIVERSITY OF IOWA

of the warm house into the street, Kerry was grateful for the clean smell of snow and the crisp air that stung refreshingly in his lungs and nostrils. He whistled to his scattered dogs and, despite his friend's impatience, devoted a moment to their welcoming charge.

Then the two linked arms, and in a fellowship enhanced by Kitty's refreshments set off toward the town, where pale lights were already pricking through the blue haze of approaching dusk.

They had gone only half the length of a city block when the sound of harness bells crept up behind them.

"Trail! . . . Trail!" A girl's voice, clear and peremptory, rang out above the tinkle.

Kerry swung Rance to one side, ceding the right of way, and looked back.

Down the road toward them dashed the coral-tongued, tail-waving mail team. Swaying on the runners back of the handlebars was a slight figure in a white parka, the hood of which had slipped back to frame the small, vivid face of Barbee Neilan.

AS SHE neared them recognition crept into her attitude. Kerry noted that she applied her foot brake with the alternating pressure of the accomplished dog driver, and skillfully halted her twenty-malamute team beside them.

"Are there any passengers for me?" She leaned smiling over the handlebars, her face fresh and cold from the Arctic air, her violet eyes half closed and provoking under wind-tossed hair that the frost had touched.

"I'll say there are passengers!" the gold king exclaimed, sliding a possessive hand over that of the girl. "Have you heard the news, Barbee? The Gray Wolf's pay streak has doubled. You can run me out there, dear, and on our way we'll drop Kerry at the Kashim." He stood looking down at her.

A shadow, fleeting, but unmistakable, crossed Barbee's face, marking that moment when she became aware that Rance had been drinking. Her quick glance swept Kitty Kramer's nearby house, and came back to rest on her fiancé's flushed face. Was she thinking that Rance, not three hours ago, had excused himself from driving with her, only to spend the afternoon with the doctor's wife? If so, her voice, with its gay touch of humor, did not betray her when she urged the men to take seats in the basket sled.

Barbee was almost vehement in her refusal to allow Herrington to drive the dogs, and he reluctantly took his place on the sled in front of Kerry. As the team sped along the white road toward the Kashim, Kerry was silent. Though loyalty made him close his mind to critical thought of his friend, he was feeling strangely heavy of heart. And he could not stifle the protective tenderness that was born in him for Barbee Neilan. Gallant little Barbee!

She was jauntily riding the runners back of him and Rance; but Kerry kept wondering if she hadn't insisted on driving so that she might hide from them both the hurt he had glimpsed in her violet eyes. . . .

Barbee Neilan lay among the cushions of the couch in her living-room, reviewing the events of the month that had passed since the Malamute Club supper. She looked very young as she lay there, yet there was a suggestion of something vital in her slender, girlish figure, a potential energy that might be called upon in emergencies. Her hands were clasped behind her small dark head; her little foot in its high-arched slipper swung up and down.

She was waiting for Rance.

She had put on the frock he liked best, a soft silken thing of pale rose; and, though she despised the barbaric nugget jewelry so much favored in Nome, she had wound about her throat a chain he had given her.

There was a shade of impatience in the swing of her foot, unconsciously keeping time to the rhythmic muffled thump of the printing press downstairs where her father was running off the "boiler plate" sheet of tomorrow's "Prospector."

Barbee recalled the day she had returned from the States last summer—the day she had told her father of her engagement. She had been sitting on his knees, her face level with his own. At the news his gray eyes for a long moment of silence had searched the depths of her violet ones with a look she didn't understand.

"Do you love him, Barbee?"

"Oh, yes! I do—I do, George!" She buried her face against his shoulder.

"But he's twelve years older than you are, dear; and—"

"That's what makes him so wonderful, Dad! He knows all about life! He's so wise, so big, so protective! But, oh! You're not wanting me to marry him, George! I can see—I can see—"

"Darlin'—it isn't that I don't want you to marry him, but—" there was a vague, sorrowful indulgence in his tone that she knew of old; his arms went about her—"but it's what life with him will do to the soul of you."

AND a feeling faint and indefinitely menacing had stirred in her, a cool fog of foreboding that dulled for a moment her romantic visions of a future with Rance Herrington.

Those radiant daydreams had begun on the steamer last summer, when Barbee, through with school days and eager for the North, had found herself homeward bound across the twenty-five hundred miles of open sea that lie between Seattle and Nome.

For the first few days, surrounded by a coterie of admiring young men, Barbee had paid little attention to Rance Herrington—big Herrington of the Gray Wolf Mine, for whose golden favor half the women on the ship were vying. Then had come the night when the vessel overtook the wake of a storm, a night with a tawny moon rounding in a wind-spent sky. Very late, Barbee had gone out alone on the deserted deck. She leaned on the railing, pleasurably surrendering her body to the motion of the ship, which swung down into wide-spaced hollows, then climbed gloriously to crests breaking silver in the moonlight.

After a long time she looked up to find Rance Herrington balancing his tall figure on the tilting deck near her. Through her father's letters, she was familiar with stories of Nome dogs and the racing trail, and when Herrington came over to her and leaned on the railing beside her it was of these things that they talked. Before they parted that night their acquaintance, founded on a mutual interest in dogs, had ripened into friendship.

Barbee liked to recall the glamorous intimacy of that voyage: how she and Rance had swung along the deck together breathing the cool sea air, light-hearted, light-footed, keeping time to the gay airs they hummed; how they'd sat in the secluded corner on the upper deck by the smokestack while he told her incidents of his life—stories that made vivid, appealing pictures in her mind.

BARBEE came to think during those shipboard days that he could be easily hurt. Once or twice he had hinted at a woman in his past who had played with his heart and tossed it aside. "But I'm like a wolf," he finished. "You know, when a wolf gets hurt he goes off by himself to lick his wounds. . . . I came to Alaska."

To Barbee's youthful, romantic mind there was something infinitely touching in that statement. She thrilled with sudden tenderness for the big man, so strong, and yet so lonely. She longed to make up in some way for the hurt done him by that other unknown member of her sex.

One evening, as the ship lifted to the drowsy swell of Bering Sea, they sought their corner near the smokestack. The other passengers had deserted the decks for a concert in the social hall, and they two were alone in a land of color and enchantment.

She stood beside Rance in the twilight, her head not quite level with his wide shoulders, her mind busy with her shy young thoughts. Then suddenly she found him looking down at her with an expression that made his dark face radiant and youthful. Something electric passed between them. He caught her up in his arms, an ardent, impetuous lover, murmuring against her ear words that melted her, sent her spirit soaring on the wings of a wild ecstasy: "Barbee! Come here where you belong . . . into my arms . . . against my heart. . . . Oh, you little, little soft thing—you little fragrant, soft thing. . . . You belong to me—you're mine! Put your arms round my neck, Barbee . . . sweetheart. Kiss me . . . kiss me. . . ."

Barbee stirred among the cushions on her couch and sighed. During the months that had passed since then there had been many such moments—fierce, blinding contacts when Rance's great arms had closed about her. But, did love hold nothing but embraces?

Barbee wondered why she should feel this vague disappointment, this baffling expectation of something that had not come? She wished she might ask her father about it. But she couldn't. He didn't want her to marry Rance. He hadn't forbidden her, that wasn't his way. But he had asked her to wait a year, and think the matter over carefully for herself.

She had been doing a lot of thinking lately. And she was vaguely troubled. Something seemed not quite right between Rance and herself. She didn't know exactly what it was, but sometimes she almost thought it had to do with Kitty Kramer. Of course, with Lim Phayder delivering water in the kitchen every day

Digitized by Google Original from UNIVERSITY OF IOWA

Herrington returned from the office and leaned in the doorway listening, a faint, uneasy expression growing in his eyes

she couldn't help hearing gossip about Kitty; but to one of Barbee's age many of these tales seemed so preposterous that she dismissed them with an unbelieving laugh. Still—

Sometimes, as on the night of the Club supper, the way Rance looked at Kitty—Barbee frowned and her teeth caught sharply at her lower lip. Then she put the memory from her. Rance had been angry because she had gone to the supper that night. That was the reason for his apparent devotion to Kitty. He had confessed as much after the quarrel they had had the next evening here at her home.

The sound of someone's coming rapidly up the stairs brought her to her feet. That would be Rance, she thought, running eagerly to the door.

Half an hour had passed since Barbee opened the door to her fiancé. He was dressed as for some special occasion, in his dinner clothes; but with fine disregard for the creases in his trousers, he was kneeling before Barbee's chair. He liked to do this, taking both her hands in his to rub her palms over his face. He always concluded by taking her fingers, one at a time, between his strong white teeth, and biting them.

Sometimes he hurt her, and then he laughed, as he was doing now. It made Barbee faintly dizzy to look at him then, his dark, laughing face with its cleft chin; his dusky eyes with little fires glowing way back in them, so close to her, so overwhelmingly masculine. It wasn't easy to think of anything but his physical nearness then.

But already she had begun to long for other more impersonal things. With her keen curiosity of (*Continued on page 88*)

The baffling case of "The Invisible Thieves" shows how

Unseen Eyes *Protect You when You* Travel

By SHERMAN GWINN

LET'S begin with the story of what the newspapers next day called "one of the greatest diamond robberies of the country," but which in the minds of at least five of its actors will forever be remembered as "The Case of the Invisible Thieves." It is a typical Keliher story.

Timothy T. Keliher, to give him his full name, is the Chief Special Agent of the Illinois Central, which means that he heads and directs that great mid-country railroad's "special service," the Unseen Eye of the system that stands guard over its thousands of miles of track, its equipment, its goods, and the lives of its passengers.

Every railroad in the land has its hundreds of Unseen Eyes. Whenever and wherever you travel, or whenever and wherever you ship freight or express matter, these "eyes" are intently on watch for the protection of you and yours. They may be in the car seat across the aisle, or behind you in the line at the ticket window, or off alone somewhere in the night. The railroad unromantically calls them special agents. Timothy T. Keliher is one of the master eyes of this craft.

On the night of September 8th, 1926, three men carrying hand bags and brief cases boarded the crack New Orleans train of the Illinois Central, at Chicago. They were substantial-looking, middle-aged business men, and their tickets assigned them to a stateroom together.

"Wholesalers, on a selling trip," was the mental check of a tall, quietly dressed man who unobtrusively was watching the passengers file onto the train.

Less than a minute later, another trio of men boarded the train and occupied a stateroom in the car ahead. These were younger men, dressed a little too showily for traveling men. One of them, distinguished by heavy-rimmed spectacles, carried a large yellow suit case. His companions were empty-handed.

"Ever see any of them before?" the tall man inquired of the colored porter. The porter had not. "Look like card sharps," said the watcher. "Keep your eye on them."

When the train pulled away from the station, the tall man also was aboard, in the sleeping car behind that of the business men.

The train rolled southward through the night. Outside, the rain came down in torrents, driving against the car windows like sheets of water flung violently from countless lines of hose. Dimly lighted stations flashed by, almost deserted. Porters were slow about making down the berths. A few passengers read, but most sat in their seats idly staring at the windows.

At Champaign, Illinois, the train stopped to change engines. During that brief interval, the porter heard a muffled, wailing scream. It came from behind the closed stateroom of the three business men, a distorted cry for "Help!" The porter hurried through his car to the sleeper behind. He touched the tall man on the shoulder. "Somethin' terrible's happened, Chief," he gasped. "A man's groanin' in the stateroom!"

"All aboard!" came the conductor's shout outside.

"Tell him to hold the train," snapped the tall man to the porter, and an instant later he was trying the knob of the stateroom door. The door, unlocked, swung open.

There sat the three business men, bound hand and foot, gagged and helpless. The contents of their hand bags were strewn over the floor.

AS THE tall man quickly released the men, he noted that their bonds were of picture wire, and that they were secured with professional ingenuity. The three, in mingled alarm and rage, sputtered out their story:

Three men, they said, had suddenly entered the stateroom, thrust revolvers under their noses, and threatened instant death to the one who made an outcry. The intruders had gagged and bound them, looted the baggage, and had escaped before they even had recovered from their surprise.

"What were they after?" demanded the tall man.

"We are diamond merchants," answered one of the victims. "We had $437,000 worth of diamonds in these bags. They got everything except about $100,000 worth I happened to have in my brief case."

"When did it happen?" came the next question.

lay on a seat. Beneath a seat he found a wooden spool that once had been wound with picture wire, and a pair of heavy shell-rimmed spectacles.

Not more than ten minutes had elapsed since the porter's alarm; but when the Chief stepped from the train to the station platform two men reported to him, special agents ready for duty. A third was summoned by a word over the nearest 'phone.

ONE of the agents, familiar with the town, went to a telephone to call every garage with cars to hire. A second, familiar with the surrounding country, sent out telephonic alarms which put local police, state highway police, and sheriffs on guard at every road and crossroad. The telegraph stuttered the alarm to outlying agents, sent it on back to Chicago. The train was searched, and the disappearance of the three robbers explained. They had opened a door on the side away from the station, slid down an embankment, and vanished into the rainy night.

All of this delayed the train only fifteen minutes. The merchants were hustled off, and the train went on. The red light of its last sleeper was still in sight when an agent reported to Keliher the first definite trace of the fugitives! They had hired a taxicab which had taken the road to Kankakee. Nineteen miles north on this road, drenched by the rain, waited Sheriff Charles Curtis, of Paxton, and a deputy. The deputy stood in the middle of the road with a red lantern. The sheriff, at the side, had a shotgun loaded with buckshot. (*Continued on page 107*)

"Less than twenty minutes ago," was the reply. "They probably left the train when it stopped at this station."

At this statement, the porter edged through the doorway. His mouth hung open and his eyes stared. "Chief, suh," he said, addressing the tall investigator, "I's been close by this do' for an hour an' I's seen nobody go in or out. I'd swear to that, suh. Nobody opened that do'."

"The porter is right," broke in a passenger. "I've been less than ten yards away in my seat ever since dinner. I saw nobody enter or leave the stateroom."

One by one the other passengers were examined. A woman had been reading so close to the stateroom door that she could have reached out and touched it. A second woman had been facing it two seats away. The manager of an insurance company had sat near by. Not one of these, not one person in the entire car, had seen anybody go in or out of the stateroom since the merchants themselves had returned to it, following dinner! No trainman had seen three men leave the train!

This was the positive and unanimous testimony of reputable, disinterested witnesses.

THE three merchants reiterated their story, exhibited the deep red marks left by the tightly bound wire on their wrists; but I doubt if a person present believed them, save the tall quiet man whom the porter addressed as "Chief." You no doubt have guessed his name, Timothy T. Keliher.

After a whispered word to a trainman and a nod toward the merchants, Keliher darted into the forward sleeper and flung open the door of the stateroom occupied by the three who had followed the business men onto the train. The room was empty. The yellow suitcase sat in a corner, empty. A discarded coat and hat

The Mill of Miracles

Doctor FRED H. ALBEE devised it, and with it he and other skilled surgeons can transplant bones from one part of the human body to another—Cripples are made whole, limbs restored, and shattered faces built up

By FRANK PARKER STOCKBRIDGE

FORTY years ago or so a Yankee boy, handy with tools, made a toy buzz saw out of a sheet of zinc, rigged up a crude turbine water wheel for running it by the power of a brook which flowed through his father's farm, and amused himself by sawing rutabaga turnips into toy "timbers" and "planks." He had to use turnips for lumber, because the zinc teeth wouldn't cut wood and he couldn't lay his hands on a piece of steel out of which to make his saw.

Twenty years afterwards the same boy, Fred H. Albee, with a Harvard "M. D." added to the Bowdoin "A. B." which he is entitled to inscribe after his name, was casting about for some means of shaping another kind of raw material into strips, plates, and pegs. But the "lumber" this time was living human bone. His problem was how to fashion and manipulate it for surgical repair work in the speediest and most workmanlike fashion. Then he remembered the toy buzz saw of his boyhood, and after some experimentation, a new surgical technique came into being.

As a result of the application of a boy's toy to surgery hundreds of hunchbacked children have been made strong and healthy, thousands of men and women shattered by war or by the accidents of peace have been given new bones to replace those lost, and many more thousands who otherwise might have spent the best years of their lives as helpless, hopeless cripples, have been restored to self-supporting activity.

The Albee bone mill, a direct evolution from the Maine boy's toy, is the tool which enables the modern surgeon to perform operations so marvelous in their methods and results that they almost deserve classification as miracles. What other word than "miracle" is there with which to describe the fabrication of a new jawbone from the patient's own skeleton? How else describe the manufacture of a finger, and making it grow on a human hand?

What could be more miraculous than rebuilding the pelvis of a young woman, whom Nature had designed in such a faulty manner she could never bear a living child, and making it possible for her to become a mother of healthy children? Or combining a bone from a woman's

foot with another bone from a man's leg to give a little girl a new hip joint? Or fitting a new and perfectly working shoulder joint to a pianist who had been so crushed in an automobile accident that her means of livelihood had been destroyed?

THOSE are just a few of the wonders among the more than three thousand bone-grafting operations contained in Dr. Albee's case-books. Every part of the human body, from skull to toes, can be patched and restored, as a carpenter repairs the timbers of a house or a ship, but with this difference: the patches and plates, the braces and screws and dowels in this human joinery are carved, sawed, and turned out of *living* material, the bones of the patient himself.

There are many instances of marvelous plastic surgery in Dr. Albee's records. But I found it much easier to get him to talk about his other enthusiasms and activities than it was to break down the barrier which the medical code of ethics sets up between the physician and the general public when it comes to the discussion of his own work. And before we had got through talking I found myself marveling at the apparently limitless energy and enthusiasm of the man himself almost as much as at the wonderful things he has done in orthopedic surgery.

Only a physique inherited from generations of Yankee farmers and seafaring men and trained on the football field of Bowdoin—where Fred Albee played right tackle on the famous eleven of which Donald MacMillan, the Arctic explorer, was halfback—could stand up under the strain of this man's multifarious activities. They cover such a diversity of interests as the development of a Florida subdivision, the foundation and the active presidency of a bank, the operation of an orange grove, editing an international magazine, the "Rehabilitation Review," acting as consulting surgeon to three railroad companies and twenty hospitals scattered all over the country, directing the work of the Curative Workshop for the restoration of industrial cripples to productive activity, serving as Chairman of the New Jersey Rehabilitation Commission, holding down the chair of Professor of Orthopedic Surgery at the New York Post Graduate Medical School and personally operating on hundreds of difficult cases every year.

And as if that were not enough to keep a man of fifty-one fairly well occupied he responds to a dozen or more demands a year to address medical societies and conventions all over the world. In the couple of months during which I was checking up with him the material used in this article, he gave addresses and demonstrations in North Carolina, New Jersey, and California, and was preparing to sail for Europe to give a course in bone-graft surgery at the International Clinics in Paris.

To me such tremendous, untiring activity seems even more marvelous than the grafting of a piece of a "chinless" young man's shin bone to his lower jaw thereby giving him a "strong" face. His new chin, by the way, won him a position that had been denied him because of the fallacious belief of his employer that his receding chin indicated a weak character.

FOR fifteen years Dr. Albee has been teaching other surgeons his method and the use of the bone mill which he invented. It sounds simple enough, the explanation of the method of taking a piece of bone out of one part of the body and putting it in at another place and making it grow there. But it took years of study and experiment to find a way of doing it so efficiently and expeditiously that the newly transplanted bone would

Digitized by Google

DRAWN BY B. J. ROSENMEYER

Dr. Fred Houdlett Albee's original methods of bone grafting are responsible for much of the surgical reconstruction of wounded soldiers during the World War. Born 51 years ago in Maine, Dr. Albee obtained his medical degree from Harvard, and is now internationally famous as a surgeon

"stay put" and the patient be in no great anger while the operation was being erformed.

For years surgeons had been using etal plates and bands, screws, nails, and egs, in the effort to fasten together broen bones failing to unite or to take the lace of missing pieces of bone. The rouble was that the metal was not and ever could become an actual part of the keleton. It was always a foreign subance, and as such always a possible urce of trouble.

"The strongest and most highly temred metals, including metallic alloys, ill weaken and give way when subcted to constant overloading," said Dr. bee. "In marked contrast to this, bone, hen overloaded, will not only increase in e and strength but will undergo readtment of its external contour and its internal architecture, to withstand the added stress."

Realizing this, surgeons here and there tried transplanting bones from other animals into the human body. There were a few temporary successes and a great many serious failures. Occasionally opportunity offered to graft a bone from another human being. That was often more successful, but the supply of fresh human bones available to the surgeons for such purposes is, naturally, limited. Moreover, it was found that many of these bone grafts from one person to another would not grow in their new environment. Hardly any two individuals in the world have the same chemical and biological make-up, so the chances of success in transplanting any kind of tissue from one person to another become more and more remote with differences in kinship. A graft from a brother or a sister stands a better chance of growing than one from a parent. Even then, there is always the possibility of the introduction of disease germs with transplanted bone.

"One of the most pathetic incidents that has ever come to my attention," Dr. Albee told me, "was a letter I received some years ago from a woman who offered her bones for sale for transplantation in my operations. She had read, somewhere, that such things were being done, and she hoped that she might get enough money to keep soul and body together for a while, by selling her bones. She was entirely destitute, she said, and was dying of tuberculosis of the lungs. She was willing to sell her skeleton piecemeal, leaving the bones necessary to life until the last. But even had I been willing to negotiate with anyone in

"If you're poor, you can come to my party," is this man's Christmas invitation to all the kids he knows

Challiss Gore *is* Santa Claus *to* Children *of the* Slums

IT WAS an October evening in Hell's Kitchen, one of New York City's poor sections. Unkempt children played on the wide sidewalks and overflowed into the street. Tired-looking mothers sat upon dingy doorsteps watching, or gossiping with neighbors only a few feet away.

An automobile, driven by a plain-looking man, slowed to a stop beside the curb. The man stepped out on the sidewalk, walked over to the nearest woman and, apparently, made an inquiry. Then he passed on to the second door beyond, went up the steps, and disappeared into a desolate-looking building.

Later, a little boy, his trousers tied up with a piece of string, came running out of the door through which the man had disappeared and skurried down the sidewalk. "Hey, Red! Mr. Gore—the Christmas-party man—he's up t' our place!"

"You gonna git to go?"

"Yeah—he said so. He took the size o' my shoes."

"Aw, gee, wish I could—"

Before long the man came back down the steps. The children crowded about him, while he shook the hand of each one and asked him his name.

"Mr. Gore, this here kid wants t' come t' yer party. His ole man's sick and his ma works out."

"Let me see, what did you say your name was?"

"Red."

Another child to be investigated, another destitute home for the man to visit.

PHOTO BY CHARLES MILLER

In such a manner, Challiss Gore, philanthropist of moderate circumstances, who lives in Crestwood, New York, and works for an advertising company in New York City, each year makes up the list of children who receive invitations to his Christmas party.

Ten years ago, Challiss Gore was a bachelor. There were several girls, knew, to each of whom he wished to se a remembrance on Christmas Day. went to one of New York's well-kno candy stores and ordered his prese The cost to him amounted to more tl fifty dollars. Mr. Gore began to feel easy. He thought:

"I have spent fifty dollars on gift candy that are unnecessary. Somewh there are families to whom fifty dol at Christmas time would bring gr happiness. Next year, I shall spend Christmas money on those who do already have more than they can preciate."

And so the two following Decem he filled stockings and carried them the homes of shut-in cripples. The t year he called at the New York Office and collected Santa Claus let He selected for investigation those w seemed the most hopeless. He calle the homes of the children who written these letters, and observed t situations. Fourteen he invited t Christmas party which he gave in apartment of a friend.

The following year, invitations sent to seventy-five children. But year Mr. Gore had to call upon al friends for assistance. They used automobiles for transportation, helped to look after the little ones. T outsiders learned of it, approved the and asked to be allowed to aid financ

ones between the ages of four and twelve were entertained. Shining sedans were seen stopping in unaccustomed places. Women in fur coats and well-groomed men climbed three and four flights of rickety stairs, and felt their way along dark and distressing corridors to knock at the doors of these children's homes.

Sometimes they would find one or two small rooms crowded with stove, table, bed, a dog or cat, and bewildered people. But in most instances two or three children would be waiting in the foreground with wraps already on, and the ride to the hotel followed, where the party was being held.

When every car with its quota of children had arrived, the party was ready to begin.

The orchestra swept into a lively march. The doors of the grand ballroom in the Hotel Majestic swung open, and down the hall toward a glittering Christmas tree went the grand march, led by Mr. Gore himself.

In time, Christmas dinner was announced, which consisted of turkey, cranberries, ice cream, cake, and all that one pictures at an old-fashioned Christmas dinner, including nuts, apples, and candy.

Each and every child received a whole bag of Christmas gifts wrapped decoratively in colored paper, gifts that had been selected and wrapped with the needs of that particular child in mind. The success of the party glowed in the faces of the little ones, but there was more to come.

Each family represented was sent a basket of groceries, turkey, potatoes, sugar, butter, and other things, when the child or children returned home.

VIRGINIA GOFF

Here's How Mrs. Rochester Met a Big Emergency

Out in Enid, Oklahoma, Mrs. Hewer Rochester discovered that she could make handkerchiefs that would sell like hot cakes. Now it's her business

ABOUT seven years ago, Mr. and Mrs. Hewer Rochester bought a little home on what used to be a part of my front yard, and settled down to housekeeping. But things somehow went wrong, as they sometimes have a way of doing in this topsy-turvy world, and the Rochesters lost not only their home but practically everything else they owned.

One unsuspected resource remained, however, which came to light some time later on.

Mrs. Rochester is nothing less than an artist when it comes to doing fine embroidery on the little squares that now masquerade as women's handkerchiefs. All through the year, she used to put in her spare time making handkerchiefs to give her friends at Christmas.

It was curious that this kindly custom was to be the stepping stone to her unique success.

One day she carried some of these cobweb creations to the office where she was employed, to show them to the girls, and a lady happened to step in. Attracted by the beauty of the work and the originality of the designs, she picked one up and remarked: "If these are for sale, I'll buy this one." More as a joke than anything else, Mrs. Rochester consented, and the woman gave her two dollars. Right there and then a handkerchief business was born that has grown by leaps and bounds ever since, and that gives pleasant employment, to say nothing of weekly pay checks, to many women and girls.

Mrs. Rochester considered that if one person would pay two dollars for a handkerchief that she had intended to give away, why shouldn't there be many more who would do likewise. Therefore, she questioned, why shouldn't she go into the business of making and selling just such unusual handkerchiefs?

She lost no time in following up the idea, and by the time Christmas had rolled around, she had made and sold 108 handkerchiefs, besides the ones she gave her friends. With this as a starter, she commenced making handkerchiefs in real earnest, and in 1924, 600 handkerchiefs were sold. The following year the number had swelled to 1,300, and in 1926 she made and sold 3,600. Last year, the sales crawled up to around 10,000 handkerchiefs, and it seemed then that she was just beginning.

This year Mrs. Rochester has set the goal at 50,000.

At first, Mrs. Rochester carried on the handkerchief business in her home; but it outgrew that, and larger quarters had to be obtained. Fourteen trained assistants are now employed on regular salaries, while from fifty to sixty piece-workers are paid according to the amount of work they do in their homes.

Mrs. Rochester mentioned one woman, a widow, living in the outskirts of her town, who made in one month fifty-four dollars doing handkerchief work just at odd times. How she has any odd time is a mystery, for, Mrs. Rochester tells me, she milks five cows every day, churns three times a week, does all her housework, and takes the children to and from school.

August of last year, Mrs. Rochester decided to hire an assistant, as the business had outgrown a one-woman affair. It seemed the natural thing to employ her sister, who already had a good position.

In talking it over, the sister said: "Now, if I give up my work and come with you, it must be clearly understood that I can't be fired!" Laughing, Mrs. Rochester replied: "Well, since we are having a heart-to-heart talk, I want to say this: You are not to go round with a chip on your shoulder, imagining things; and when I tell you to do something, or to change something, it is because I understand conditions better than you do—and what I say goes." The sister agreed, and the subject has never been mentioned since.

Most of the finished product of this unique little handkerchief plant finds its way to the gift shops, and to the big de-

Digitized by Google
Original from UNIVERSITY OF IOWA

partment stores of Chicago, Kansas City, Tulsa, Wichita, and Los Angeles, as well as those of New York, Philadelphia, and other Eastern cities.

"An interesting angle of the business," said Mrs. Rochester, "is the everlasting hunt for new designs for the embroidery. I have got so that I sometimes find myself actually thinking in terms of handkerchief embroidery; and I often get ideas from the most unlikely sources. Sometimes the etching in a sherbet glass, the stitching on the toe of a sports slipper, the scroll work on a vase, the carving on a picture frame, or the tooling on the back of some old book, may give me a valuable idea. I can see handkerchief designs in nearly everything I look at—and when I close my eyes they fairly tumble over one another."

Mrs. Rochester's mother is also an artist, with years of experience in the designing department of an exclusive dressmaking establishment. Not long ago she gave up her work in this field to join her daughter in the handkerchief business. Both mother and daughter have great times together, puzzling over the creation of new handkerchief designs.

"I'm just as enthusiastic about it all today," says Mrs. Rochester, "as I was the day I started. Even the selling end of the business fascinates me as much as the manufacturing end, and though I have salesmen on the road, I still give my personal attention to the first big accounts I sold. It's a joy to meet the buyers and see how thoroughly each one knows his or her special line."

Mrs. Rochester's home town is Enid, Oklahoma, and the unusual handkerchiefs she makes have done their part in putting it on the map. CHARLES A. DAVID

This "Marrying Parson" *is a* Janitor *in his* Off Hours

IF YOU secure a marriage license at the Montgomery County Court House, Norristown, Pennsylvania, and wish to be married within the walls of the imposing building, the license clerk will refer you to the Rev. Harry Thompson, one of the corps of janitors and an ordained minister of the Holiness Christian Church, who is known as "The Marrying Parson of the Court House."

When Pastor Thompson applied for his present position nine years ago, it was learned that he was a clergyman, and since then he has been frequently called upon to assist Cupid in completing a "world-without-end bargain." Although no part of this temple of justice has been set aside for hymeneal rites, any unoccupied room in the building may be used as a nuptial chapel. Jury rooms, small apartments arranged for jurors' sessions during a trial, serve usually for court-house ceremonies.

Before performing a marriage service, this sincere, spiritual-looking janitor-pastor takes off his denim working clothes and assumes the sober black cloth of his calling. He is then ready to join the waiting couple in the holy bonds of matrimony, provided they hold the proper license from the state and—this is also essential—possess no previous matrimonial partners. The tenets of his religion and his own convictions prevent him from marrying persons who have living husbands or wives, even though the state has granted them divorces. Tempting sums have been offered him to forego his unbroken rule, but Pastor Thompson has never sacrificed his principles for golden dollars.

The fees received by this marrying parson of the court house vary, according to the means and generosity of the bridegrooms, from one to ten dollars. He never got more than ten dollars on any occasion but—sometimes his purse is no heavier after he has performed a ceremony than before.

"You see," he explained, "some of them are rich in love but poor in worldly goods. A few I've met didn't offer to give me a cent; while others said they would send me something later on when their fortunes improved. But then," his smile softened with the tolerance of one who has learned to make allowances for the failings of fellow men, "people forget."

A wedding a week is the record of the Rev. Harry Thompson, the "marrying parson" of the court house in Norristown, Pennsylvania

"I married fifty-two couples last year," he went on. "That was an average of one a week, although June and July are my busiest months in the marrying business. Easter time, too, brings a big crop of weddings. But no matter what the month, Saturday is the most popular wedding day of the week. So far, I've married two and sometimes three couples a week, so I think this year will carry off the honors for court-house ceremonies.

"They come here all ages from fifteen to seventy-five. Last week I had a man past seventy just starting out on his fourth matrimonial voyage—took a sailing partner half his age this trip. They're mostly young folks, however, and not overly anxious as a rule for their parents to know too much about their affairs; but as long as they show the proper license I don't refuse to marry them. Twenty-one is the legal age in Pennsylvania; otherwise they've got to have their parents' consent as shown by their signatures written on the court-house records.

"Most brides come here to get married to avoid fuss and fancy fixin's, but one lady I recall didn't want to be cheated out of her bridal finery just because she chose a court house instead of a church for the ceremony. I was called away from the west corridor one afternoon and when I turned a corner there stood a vision all in white.

"White satin dress, long veil floating all around her, white slippers, bouquet of roses and lilies with fluttery ribbons, just like a bride in a picture. There was a man, too, but I didn't notice him very much just then. As a rule, the employees here don't bother about weddings; they're too used to them by this time, but that day they all turned out. The jury room was crowded and they overflowed into the hallway. That was the most stylish wedding I ever had in my nine years' experience.

"While I am repeating the solemn words of the marriage service, 'Until death do us part,' it happens sometimes that a judge in the adjoining court room is handing down a decree dissolving the union of those 'whom God hath joined.' One couple married by me in an office of this building three years ago obtained a divorce in the very next room a month ago. It's too bad," he said, shaking his silvery head sadly. "I like to see them live long and happily together."

His own marriage testifies to the sincerity of his views regarding matrimony. The Rev. Harry and Mrs. Thompson have celebrated twenty-eight joyful anniversaries of their wedding day. Thoroughly sympathetic with her husband's religious zeal and eager to aid the cause of Christianity, Mrs. Thompson assists him at frequent meetings and, as a licensed evangelist, conducts revivals herself.

The marrying parson gives his birthplace as Holmesburg, Pennsylvania, a suburb of Philadelphia, and his birthday March 17th, 1868. Tall and straight, his clear blue eyes shining with good will to all men, Pastor Thompson looks much younger than his avowed years.

MARY THERESA COLLINS

Miss Sadie Young, of Beacon, New York, turned her love for beautiful flowers into a profitable business

Neither Bad Luck *Nor* Bad Weather *Could Damp* Miss Young's Enthusiasm

THIRTY-FIVE years ago a woman who owned and conducted her own business was something of a novelty. Those were the days without the automobile and without many of the conveniences which today are quite common to most of us.

It was in those good old days, as some folks are wont to call them, that Dr. Young, a well-known Fishkill physician, passed away, leaving his family of five girls and one boy not only fatherless but penniless.

True, they had a beautiful estate on the banks of the Hudson River, but this home was heavily mortgaged, and with no income whatever the family could not hope to continue living there.

One of Dr. Young's daughters, Sadie, determined upon a plan of action. She was led to her decision by the only asset which her father's estate contained—twelve greenhouses. Dr. Young loved flowers devotedly, and paid one man to bestow his time exclusively on the care and nurture of rare varieties of blooms. Perhaps Miss Sadie naturally developed her love for the fragrant plants, as there were few activities in which she could engage, because of a foot deformity from which she had suffered since childhood. Consequently, she spent much time with her flowers and had marvelous success with them.

Shortly after their father's death, Sadie and Mary Young decided, after much consultation, to become florists. To anyone knowing the girls' early environment, the situation would have been ludicrous had it not been exceedingly pathetic. We, of today, could not but prophesy that their venture would have been an immediate failure. Doubtless it would have been that, too, had not Sadie Young possessed courage and perseverance.

"I won't say that we weren't discouraged," Miss Young admitted. "But the very persistence in growth of the plants all about us reminded me that we must just keep on going regardless of occasional bad weather." She laughed a little. "We know what the rain does for roses, and I really think that too much sunshine is a bad thing for humans even as it is for plants."

The sisters' first experience in flower selling was indeed unfortunate. The wholesaler to whom they shipped their flowers took advantage of their innocence and they lost what little they had invested. The incident, however, was not without its advantages, for they decided to market their wares in their little home town, which was then known as Fishkill-on-the Hudson. With rapidly dwindling resources they inserted an ad in the local paper, which brought to their greenhouses many sympathetic and admiring purchasers. Their venture seemed really to be succeeding in spite of their preliminary loss.

But the weather suddenly went against them and their plants were ruined by such unforeseen calamities as droughts, storms, and an unusually severe winter. The boilers in the greenhouses that had always seemed solid began developing leaks, and consequently they were unable to heat the houses to the necessary temperature.

And then, as if this misfortune were not enough, fate now dealt them another blow when the mortgage on their old home was foreclosed.

An old friend learned of their plight and lent them sufficient money to enable them to "get on their feet." Their friend's confidence in their ability gave them new courage to face the struggle ahead of them.

"It was the most heartening incident in all our experiences," Miss Young revealed. "It was an instance of faith in us individually, and we both felt it to be a turning point in the whole affair. Some one *believed* in us, and this thought made it lots easier to carry on and to have confidence in the future."

Then, slowly and surely, they began to make progress. At last they opened a tiny store in Fishkill, and business began to grow in no uncertain way. They were so well known for their fair-dealing and for the beauty of their plants that many customers came from distant points to patronize the little store, known as The Spy Hill Conservatories.

The business was indeed doing well, when suddenly Mary died, leaving Sadie alone in her new prosperity and with a great ache in her heart. But she put all of her energies into her work, hoping thus to forget a bit, while she made further plans for the future.

Recently, Miss Young celebrated her thirty-fifth year in business. She turns her gaze reminiscently away now, as she shows you the large and centrally located city block which she has purchased, and I know that she pictures that first tiny store and recalls the hard knocks that the world gave two fatherless girls.

She is proud of her modern and lovely flower shop in the center of her city block. She is proud too of her nice new delivery truck—her thirty-fifth anniversary present to her business—and she is happy to know that she can give employment to six assistants.

Bob Limbert's Feet *Have* Carried Him *Into* Strange Places

BACK in the days when the region was largely peopled by Indians, a lone white man was cooking his supper over a camp fire beside a little stream on the Fort Washakie Indian Reservation in Wyoming. A party of Indians rode up and, dismounting, said: "You huntum money rock" (meaning "prospecting"). "Me no like."

Relying on his ability to awe the red men through their superstitious natures, the white man retorted, "Me no huntum money rock, me huntum *money*," and with clever sleight-of-hand maneuvers he palmed several coins from his pockets. "Ho, look, ketchum money all around!" he exclaimed, as, with sleeves rolled up, he began picking actual money out of the air.

The braves watched every move with keenest interest and finally the leader concluded, "Huh, heap big medicine man!" and they sat around the camp fire, delighted, while Bob Limbert went through his whole repertoire of tricks and magic.

Robert W. Limbert, naturalist, master of the craftsmanship of the out-of-doors, and explorer of American wildernesses, came into national prominence when he discovered the volcanic wonderland called "Craters of the Moon" in Idaho, which was later set aside as a National Monument.

Limbert has spent most of his life in the hills and mountains, and knows as much about the remote sections of our Western country as any other living white man. Moreover, his training and experience in natural-history study have enabled him to bring the secrets of the wilderness to the attention of the civilized world.

Robert W. Limbert, naturalist and explorer, discovered "The Craters of the Moon" in southern Idaho

For years Limbert had heard of the lava beds in the triangle between Minidoka, Circo, and Carey in southern Idaho. One trapper had told him he had penetrated about eight miles, and another six miles, but both were forced back through fear. So, daring disaster from desert thirst and laughing at the weird legends of old-timers who tried to dissuade him, Limbert set out with one partner to explore this area which for a hundred years had been shunned by the superstitious Indians and whites because of its hostile aspect and mystifying desolation.

For many days they subsisted on a diet of dehydrated foods and on water obtained from a few water holes which the explorer located by flights of doves or by the melting ice from great caverns. In this manner, they traveled a rough area of eighty miles in seventeen days.

Sleep at night was almost impossible, for they could find no level place on which to lie. After the fourth day, however, traveling became easier, and they began to pass straggling cinder cones and blowout holes which had evidently been caused by underground explosions of steam and gas. Then they came to more open country with patches of scrub cedar, juniper, and piñon pine.

On this marvelous volcanic trip, Limbert saw hundreds of bottomless abysses, literally honeycombed with underground caves, and passages bewildering in their immensity and mystifying in their variety of strange forms. Natural bridges unknown to geographers, and lava formations which rival in interest and beauty even those famed lava beds of Vesuvius in Italy and Mauna Loa in Hawaii, were among the other natural wonders he beheld.

The explorer was amazed to find in all this waste land dwarf buckwheat and tufts of grass growing in bear tracks which were made hundreds of years ago in the then plastic lava. Here he found craters of dormant volcanoes half a mile wide and apparently bottomless, huge cups in which a five-story office building might be dropped by Titan hands and resemble a lone cube in a huge sugar bowl.

Exhibitions of lava flow were most interesting and bizarre. Here were pieces of sage brush with lava "frozen" around them. One flow, called the Blue Dragon, was like gray and blue taffy, magnified until its twists and folds were thirty feet across like whirlpool snakes, colored a remarkable cobalt blue with an enameled surface smooth as glass. Limbert did not wonder at the superstition which the region evoked in the human mind.

"Some of the outlandish formations," he said, "were enough to give you the shivers. They were unlike anything I had ever seen or read of before."

At what he called "Echo Crater," which was a mile and a quarter wide and eight hundred feet deep, the explorers established central, or headquarters, camp, and made daily side trips of exploration.

Near Echo Crater, Limbert found eight caves varying from a half to a full mile long. One was like a miniature theater; another had its walls coated with a two-inch armor of ice and from its roof hung pendants of icicles five to eight feet long, upon which the lantern lights played magically. From the ceiling of still another cavern hung lava stalactites covered with fine green flower moss.

The Craters of the Moon will soon become a mecca for the American travelers who are curious enough to see such odd things on the earth's surface. A visit to this wonderland can well be made in connection with a tour of Yellowstone Park. From Pocatello, Idaho, one travels to Arco, then twenty-six miles west on the Hailey road. Visitors from the west should go to Hailey, then or to Picabo, or from Shoshone to Picabo then nine miles to Carey and thirty-one miles to "The Craters."

In the early days, Limbert was champion wrestler of Omaha. At twelve years of age he swam across the Missouri River, and at thirty-seven he allowed himself to be tied hand and foot and then dived from a height of sixty-three feet into fourteen feet of water at the Boise City Natatorium. He tells of an experience with Zybysco.

"At one time I was making a trip in the Craters country with Stanislaus Zybysco the famous wrestler, and I jokingly filled his pack with rocks. When Zybysco got wise to it, he grabbed me by the legs and nape of the neck, lifted me high in the air and doubled me up as if I were a baby; but when it came to tramping over the hills made him lie down and holler for mercy."

WITH THE MEAL OR AS A MEAL
SOUP BELONGS IN THE DAILY DIET

Why deprive your family of Vegetable Soup•• *because you "haven't time to make it"!*

No wonder vegetable soup is so seldom made at home! It's a bother to make, if ever there was one. Yet it's a soup the whole family enjoys so much and it is so good for them. So why deprive them of it when Campbell's famous French chefs do the work for you? Remember that they are at your service every day.

Campbell's is the finest Vegetable Soup that can be made! And it's so easy for you. Add an equal quantity of water, bring to a boil, simmer a few minutes. And then serve!

Fifteen different vegetables in Campbell's Vegetable Soup. Even the best home-made vegetable soup does not contain anything like that number. So hearty and substantial that it is served as a meal in itself by millions of women.

Here's an ideal luncheon or supper—so tempting and convenient for those "in-between" meals. This soup is wonderfully healthful for the children, too. And how they like it!

For variety in your menus, let your grocer supply you with selections from the 21 Campbell's Soups listed on the label. 12 cents a can.

All the machinery is on top

–you never see it.. never oil it..barely hear it!

ALL the machinery is on top . . . do you realize the importance of this simple statement? Do you know that this radically different design was chosen only after fifteen years of painstaking research in the laboratories of General Electric to determine the simplest, the most efficient, the most worry-proof arrangement? The General Electric Refrigerator is one of the outstanding engineering achievements of recent years.

All its mechanism is contained in an hermetically sealed steel casing, mounted on top of the refrigerator. There it is safe from dust and difficulties. It never needs oiling. And it operates so quietly that you can scarcely hear it. Installation is a matter of minutes—without any soldering, plumbing or wiring. You simply attach the cord—just as you would with an electric iron—to any outlet, and turn on the switch.

Automatically, economically, this machinery which you never see gives you the perfect refrigeration that safeguards health. It keeps your food always within the safety zone—well below the fifty degree danger point. It makes plenty of ice cubes for you . . . and uses surprisingly little current. For complete specifications of all the models, write for Booklet A-1.

The Bishop Murder Case

(*Continued from page 14*)

like to speak about to you.—We understand you have a key to the rear door of the Drukker house."

She gave him a puzzled nod.

"Yes; I've had one for years. I run back and forth so much; and it saves Lady Mae a lot of bother. . . ."

"Our only interest in the key is that it might have been used by someone who had no right to it."

"But that's impossible. I've never lent it to anyone. And I always keep it in my hand-bag."

"Is it generally known you have a key to the Drukkers'?"

"Why—I suppose so." She was obviously perplexed. "I've never made a secret of it. The family certainly know about it."

"And you may perhaps have mentioned or revealed the fact when there were outsiders present?"

"Yes—though I can't recall any specific instance."

"Are you sure you have the key now?"

She gave Vance a startled look, and without a word picked up a small lizard-skin hand-bag which lay on the wicker table. Opening it, she felt swiftly in one of its inner compartments.

"Yes!" she announced, with relief. "It's where I always keep it. . . . Why do you ask me about it?"

"It's important that we know who had access to the Drukker house," Vance told her. Then, before she could question him further, he asked: "Could the key possibly have left your possession last night?—that is, could it have been extracted from your bag without your knowledge?"

A LOOK of fright came into her face. "Oh, what has happened——?" she began; but Vance interrupted her.

"Please, Miss Dillard! There's nothing for you to worry about. We're merely striving to eliminate certain remote possibilities in connection with our investigation.—Tell me: could anyone have taken your key last night?"

"No one," she answered uneasily. "I went to the theatre at eight o'clock, and had my bag with me the entire time."

"When did you last make use of the key?"

"After dinner last night. I ran over to see how Lady Mae was and to say good-night."

Vance frowned slightly. I could see that this information did not square with some theory he had formed.

"You made use of the key after dinner," he recapitulated, "and kept it with you in your hand-bag the rest of the evening, without letting it once go out of your sight.—Is that right, Miss Dillard?"

The girl nodded.

"I even held the bag in my lap during the play," she amplified.

Vance regarded the hand-bag thoughtfully.

"Well," he said lightly, "so ends the romance of the key.—And now we're going to bother your uncle again. Do you think you'd better act as our *avant-courier;* or shall we storm his citadel unannounced?"

"Uncle is out," she informed us. "He went for a walk along the Drive."

"And Mr. Arnesson, I suppose, has not yet returned from the university."

"No; but he'll be here for lunch. He has no classes Tuesday afternoons."

"In the meantime, then, we'll confer with Beedle and the admirable Pyne.—And I might suggest that it would do Mrs. Drukker no end of good if you'd pay her a visit."

With a troubled smile and a little nod the girl passed out through the basement door.

HEATH at once went in search of Beedle and Pyne and brought them to the drawing-room, where Vance questioned them about the preceding night. No information, however, was obtained from them. They had both gone to bed at ten o'clock. Their rooms were on the fourth floor at the side of the house; and they had not even heard Miss Dillard when she returned from the theatre. Vance asked them about noises on the range, and intimated that the screen-porch door of the Drukkers might have slammed shut at about midnight. But apparently both of them had been asleep at that hour. Finally they were dismissed with a warning not to mention to anyone the questions that had just been asked them.

Five minutes later Professor Dillard came in. Though surprised to see us, he greeted us amiably.

"For once, Markham, you've chosen an hour for your visit when I am not absorbed in work.—More questions, I suppose. Well, come along to the library for the inquisition. It'll be more comfortable there." He led the way upstairs, and when we were seated he insisted that we join him in a glass of port, which he himself served from the sideboard.

"Drukker should be here," he remarked. "He has a fondness for my 'Ninety-six,' though he'll drink it only on rare occasions. I tell him he should take more port; but he imagines it's bad for him, and points to my gout. But there's no connection between gout and port—the notion is sheer superstition. Sound port is the most wholesome of wines. Gout is unknown in Oporto. A little physical stimulation of the right kind would be good for Drukker. . . . Poor fellow! His mind is like a furnace that's burning his body up. A brilliant man, Markham. If he had sufficient bodily energy to keep pace with his brain, he'd be one of the world's great physicists."

"He tells me," commented Vance, "that you twitted him on his inability to work out a modification of the quantum theory in regard to light-interference."

The old man smiled ruefully.

"Yes. I knew that such a criticism would spur him to a maximum effort. The fact is, Drukker is on the track of something revolutionary. He has already worked out some very interesting theorems. . . . But I'm sure this isn't what you gentlemen came here to discuss. What can I do for you, Markham? Or, perhaps you came to give me news."

"Unfortunately we have no news. We have come to solicit aid again. . . ." Markham hesitated, as if uncertain how to proceed; and Vance assumed the rôle of questioner.

"The situation has changed somewhat since we were here yesterday. One or two new matters have arisen, and there is a possibility that our investigation would be facilitated if we knew the exact movements of the members of your household last night. These movements, in fact, may have influenced certain factors in the case."

The professor lifted his head in some surprise, but made no comment. He said merely: "That information is very easily given. To what members do you refer?"

"To no member specifically," Vance hastened to assure him.

"Well, let me see. . . ." He took out his old meerschaum pipe and began filling it. "Belle and Sigurd and I had dinner alone at six o'clock. At half past seven Drukker dropped in, and a few minutes later Pardee called. Then at eight Sigurd and Belle went to the theatre, and at half past ten Drukker and Pardee went away. I myself turned in shortly after eleven, after locking up the house—I'd let Pyne and Beedle go to bed early.—And that's about all I can tell you."

"DO I understand that Miss Dillard and Mr. Arnesson went to the theatre together?"

"Yes. Sigurd rarely patronizes the theatre, but whenever he does he takes Belle along. He attends Ibsen's plays, for the most part. He's a devout disciple of Ibsen's, by the way. His American upbringing hasn't in the least tempered his enthusiasm for things Norwegian. At heart he's quite loyal to his native country. He's as well grounded in Norwegian literature as any professor at the University of Oslo; and the only music he really cares for is Grieg's. When he goes to concerts or the theatre you're pretty sure to find that the programs are liberally Norwegian."

"It was an Ibsen play, then, he attended last night?"

"'Rosmersholm,' I believe. There's a revival of Ibsen's dramas at present in New York."

Vance nodded. "Walter Hampden's doing them.—Did you see either Mr. Arnesson or Miss Dillard after they returned from the theatre?"

"No; they came in rather late, I imagine. Belle told me this morning they went to the Plaza for supper after the play. However, Sigurd will be here at any minute, and you can learn the details from him." Though the professor spoke with patience, it was plain that he was annoyed by the apparently irrelevant nature of the interrogation.

"Will you be good enough, sir," pur-

sued Vance, "to tell us the circumstances connected with Mr. Drukker's and Mr. Pardee's visit here after dinner?"

"There was nothing unusual about their call. They often drop in during the evening. The object of Drukker's visit was to discuss with me the work he had done on his modification of the quantum theory; but when Pardee appeared the discussion was dropped. Pardee is a good mathematician, but advanced physics is beyond his depth."

"Did either Mr. Drukker or Mr. Pardee see Miss Dillard before she went to the theatre?"

PROFESSOR DILLARD took his pipe slowly from his mouth, and his expression became resentful.

"I must say," he replied testily, "that I can see no valid object in my answering such questions.—However," he added, in a more indulgent tone, "if the domestic trivia of my household can be of any possible assistance to you, I will of course be glad to go into detail." He regarded Vance a moment. "Yes, both Drukker and Pardee saw Belle last night. All of us, including Sigurd, were together in this room for perhaps half an hour before theatre time. There was even a casual discussion about Ibsen's genius, in which Drukker annoyed Sigurd greatly by maintaining Hauptmann's superiority."

"Then at eight o'clock, I gather, Mr. Arnesson and Miss Dillard departed, leaving you and Mr. Pardee and Mr. Drukker alone here."

"That is correct."

"And at half past ten, I think you said, Mr. Drukker and Mr. Pardee went away. Did they go together?"

"They went downstairs together," the professor answered, with more than a suggestion of tartness. "Drukker, I believe, went home; but Pardee had an appointment at the Manhattan Chess Club."

"It seems a bit early for Mr. Drukker to have gone home," mused Vance, "especially as he had come to discuss an important matter with you and had had no adequate opportunity to do so up to the time of his departure."

"Drukker is not well." The professor's voice was again studiously patient. "As I've told you, he tires easily. And last night he was unusually played out. In fact, he complained to me of his fatigue and said he was going immediately to bed."

"Yes . . . quite in keeping," murmured Vance. "He told us a little while ago that he was up working at six yesterday morning."

"I'm not surprised. Once a problem has posed itself in his mind he works on it incessantly. Unfortunately, he has no normal reactions to counterbalance his consuming passion for mathematics. There have been times when I've feared for his mental stability."

Vance, for some reason, steered clear of this point.

"You spoke of Mr. Pardee's engagement at the Chess Club last night," he said, when he had carefully lighted a fresh cigarette. "Did he mention the nature of it to you?"

Professor Dillard smiled with patronizing lenity.

"He talked about it for fully an hour. It appears that a gentleman named Rubinstein—a genius of the chess world, I understand, who is now visiting this country—had taken him on for three exhibition games. The last one was yesterday. It began at two o'clock, and was postponed at six. It should have been played off at eight, but Rubinstein was the lion of some dinner downtown; so the hour set for the play-off was eleven. Pardee was on tenterhooks, for he had lost the first game and drawn the second; and if he could have won last night's game he would have broken even with Rubinstein. He seemed to think he had an excellent chance according to the way the game stood at six o'clock; although Drukker disagreed with him. . . . He must have gone directly from here to the club, for it was fully half past ten when he and Drukker went out."

"Rubinstein's a strong player," observed Vance. A new note of interest, which he strove to conceal, had come into his voice. "He's one of the grand masters of the game. He defeated Capablanca at San Sebastian in 1911, and between 1907 and 1912 was considered the logical contender for the world's title held by Doctor Lasker.* . . . Yes, it would have been a great feather in Pardee's cap to have beaten him. Indeed, it was no small compliment to him that he should have been matched with Rubinstein. Pardee, despite the fame of his gambit, has never been ranked as a master.—Have you heard the result of last night's game, by the bye?"

Again I noted a faint tolerant smile at the corners of the professor's mouth. He gave the impression of looking down benevolently on the foolish capers of children from some great intellectual height.

"No," he answered; "I didn't inquire. But my surmise is that Pardee lost; for when Drukker pointed out the weakness of his adjourned position, he was more positive than usual. Drukker by nature is cautious, and he rarely expresses a definite opinion on a problem without having excellent grounds for so doing."

VANCE raised his eyebrows in some astonishment.

"Do you mean to tell me that Pardee analyzed his unfinished game with Drukker and discussed the possibilities of its ending? . . . Not only is such a course unethical, but any player would be disqualified for doing such a thing."

"I'm unfamiliar with the punctilio of chess," Professor Dillard returned acidly; "but I am sure Pardee would not be guilty of a breach of ethics in that regard. And, as a matter of fact, I recall that when he was engaged with the chessmen at the table over there and Drukker stepped up to look on, Pardee requested him to offer no advice. The discussion of the position took place some time later, and was kept entirely to generalities. I don't believe there was a mention of any specific line of play."

Vance leaned slowly forward and crushed out his cigarette with that taut deliberation which I had long since come to recognize as a sign of repressed excitement. Then he rose carelessly and moved to the chess table in the corner. He stood there, one hand resting on the exquisite marquetry of the alternating squares.

"You say that Mr. Pardee was analyzing his position on this board when Mr. Drukker came over to him?"

"Yes, that is right." Professor Dillard spoke with forced politeness. "Drukker sat down facing him and studied the layout. He started to make some remark, and Pardee requested him to say nothing. A quarter of an hour or so later Pardee put the men away; and it was then that Drukker told him that his game was lost—that he had worked himself into position which, though it looked favorable, was fundamentally weak."

VANCE had been running his fingers aimlessly over the board; and he had taken two or three of the men from the box and tossed them back, as if toying with them.

"Do you remember just what Mr. Drukker said?" he asked without looking up.

"I didn't pay very close attention—the subject was not exactly one of burning moment to me." There was an unescapable note of irony in the answer. "But, as nearly as I can recall, Drukker said that Pardee could have won provided it had been a rapid-transit game, but that Rubinstein was a notoriously slow and careful player and would inevitably find the weak spot in Pardee's position."

"Did Pardee resent his criticism?" Vance now strolled back to his chair and selected another cigarette from his case; but he did not sit down again.

"He did—very much. Drukker has an unfortunately antagonistic manner. And Pardee is hypersensitive on the subject of his chess. The fact is, he went white with anger at Drukker's strictures. But I personally changed the subject; and when they went away the incident had apparently been forgotten."

We remained but a few minutes longer. Markham was profuse in his apologies to the professor, and sought to make amends for the patent annoyance our visit had caused him. He was not pleased with Vance for his seemingly garrulous insistence on the details of Pardee's chess game, and when we had descended to the drawing-room he expressed his displeasure.

"I could understand your questions relating to the whereabouts of the various occupants of this house last night, but I could see no excuse for your harping on Pardee's and Drukker's disagreement over a game of chess. We have other things to do besides gossip."

"A hate of gossip parlance also crown' Tennyson's Isabel thro' all her placid life," Vance returned puckishly. "But—my word, Markham!—our life is not like Isabel's. Speakin' seriously, there was method in my gossip. I prattled—and I learned."

"You learned what?" Markham demanded sharply.

With a cautious glance into the hall Vance leaned forward and lowered his voice:

"I learned, my dear Lycurgus, that a black bishop is missing from that set

*Akiba Rubinstein was then, and is today, the chess champion of Poland and one of the great international masters of the game. He was born in Stavisk, near Lodz, in 1882, and made his début in international chess at the Ostend tournament in 1906. His recent visit to America resulted in a series of new triumphs.

It's not the ads

That have won Palmolive Shaving Cream's spectacular success. It's the 10-day test we offer that proves to men the cream itself is what we claim for it.

GENTLEMEN:

You can't shave with beautiful advertising, and no ad can succeed with a product that is not right itself.

So, when we first told you of the remarkable delights of Palmolive Shaving Cream, we advanced our claims modestly, leaving it to the product itself to "sell" you.

We told you, "Don't buy—yet." We asked you first to let us prove our case at *our* expense.

To the hundreds of thousands of men who mailed the coupon in, we sent a 10-day test of the shaving cream as its own best ad.

Once won, men have boosted it

The big majority of men, we find, who once give Palmolive Shaving Cream a trial, become wedded to it.

When we decided to create a new shaving product we first found out just where other creams were lacking — what men desired in a shaving preparation. 1000 men told us their wishes, and we set out to fill them.

When, after 129 failures, we found the formula, we exceeded the four things they asked, by adding a fifth. Our vast laboratories, skilled for generations in soapmaking, developed a shaving cream that men tell us is truly remarkable in its action and effect.

These 5 unique features

1. Multiplies itself in lather 250 times.
2. Softens the beard in one minute.
3. Maintains its creamy fullness for 10 minutes on the face.
4. Strong bubbles hold the hairs erect for cutting.
5. Fine after-effects due to palm and olive oil content.

Now mail the coupon

We take the risk—not you. We undertake to please you . . . to win you in ten shaves. Give us the opportunity to prove our case. The coupon is for your convenience—to prevent your forgetting. Won't you use it, please?

PALMOLIVE RADIO HOUR—Broadcast every Wednesday night—from 9:30 to 10:30 p. m., eastern time; 8:30 to 9:30 p. m., central time — over station WEAF and 32 stations associated with The National Broadcasting Company.

To add the final touch to shaving luxury, we have created Palmolive After Shaving Talc—especially for men. Try the sample we are sending free with the tube of Shaving Cream.

4227

35¢ With the new unbreakable Bakelite top.

10 SHAVES FREE

and a can of Palmolive After Shaving Talc

Simply insert your name and address and mail to Dept. B-1589, Palmolive, 3702 Iron St., Chicago, Ill.

the library, and that the chessman left at Mrs. Drukker's door matches the other pieces upstairs!"

XV

AN INTERVIEW WITH PARDEE

(*Tuesday, April 12th; 12:30 p. m.*)

THIS piece of news had a profound effect on Markham. As was his habit when agitated, he rose and began pacing back and forth, his hands clasped behind him. Heath, too, though slower to grasp the significance of Vance's revelation, puffed vigorously on his cigar—an indication that his mind was busy with a difficult adjustment of facts.

Before either had formulated any comment the rear door of the hall opened and light footsteps approached the drawing-room. Belle Dillard, returning from Mrs. Drukker's, appeared in the archway. Her face was troubled, and letting her eyes rest on Markham, she asked:

"What did you say to Adolph this morning? He's in an awful state of funk. He's going about testing all the door locks and window catches as if he feared burglars; and he has frightened poor Grete by telling her to be sure to bolt herself in at night."

"Ah! He has warned Mrs. Menzel, has he?" mused Vance. "Very interestin'."

The girl's gaze turned swiftly to him.

"Yes; but he will give me no explanation. He's excited and mysterious. And the strangest thing about his attitude is that he refuses to go near his mother. . . . What does it mean, Mr. Vance? I feel as though something terrible were impending."

"I don't know just what it does mean." Vance spoke in a low, distressed voice. "And I'm afraid even to try to interpret it. If I should be wrong . . ." He became silent for a moment. "We must wait and see. Tonight perhaps we'll know.—But there's no cause for alarm on your part, Miss Dillard." He smiled comfortingly. "How did you find Mrs. Drukker?"

"She seemed much better. But there's still something worrying her; and I think it has to do with Adolph, for she talked about him the whole time I was there, and kept asking if I'd noticed anything unusual in his manner lately."

"That's quite natural in the circumstances," Vance returned. "But you mustn't let her morbid attitude affect you.—And now, to change the subject: I understand that you were in the library for half an hour or so last night just before you went to the theatre. Tell me, Miss Dillard: Where was your hand-bag during that time?"

THE question startled her; but after a momentary hesitation she answered: "When I came into the library I placed it with my wrap on the little table by the door."

"It was the lizard-skin bag containing the key?"

"Yes. Sigurd hates evening dress, and when we go out together I always wear my day clothes."

"So you left the bag on the table during that half-hour, and then kept it with you the rest of the evening.—And what about this morning?"

"I went out for a walk before breakfast and carried it with me. Later, I put it on the hatrack in the hall for an hour or so; but when I started for Lady Mae's at about ten I took it with me. It was then I discovered that the little pistol had been returned, and I postponed my call. I left the bag downstairs in the archery-room until you and Mr. Markham came; and I've had it with me ever since."

Vance thanked her whimsically.

"And now that the peregrinations of the bag have been thoroughly traced, please try to forget all about it." She was on the point of asking a question, but he anticipated her curiosity and said quickly: "You went to the Plaza for supper last night, your uncle told us. You must have been late in getting home."

"I never stay out very late when I go anywhere with Sigurd," she answered, with a maternal note of complaint. "He has a constitutional aversion to any kind of night life. I begged him to stay out longer, but he looked so miserable I hadn't the heart to remain. We actually got home at half past twelve."

VANCE rose with a gracious smile.

"You've been awfully good to bear with our foolish questions so patiently. . . . Now we're going to drop in on Mr. Pardee and see if he has any illuminatin' suggestions to offer. He's generally in at this time, I believe."

"I'm sure he's in now." The girl walked with us to the hall. "He was here only a little while before you came, and he said he was returning home to attend to some correspondence."

We were about to go out, when Vance paused:

"Oh, I say, Miss Dillard; there's one point I forgot to ask you about. When you came home last night with Mr. Arnesson, how did you know it was just half past twelve? I notice you don't wear a watch."

"Sigurd told me," she explained. "I was rather mean to him for bringing me home so early, and as we entered the hall here I asked him spitefully what time it was. He looked at his watch and said it was half past twelve . . ."

At that moment the front door opened and Arnesson came in. He stared at us in mock astonishment; then he caught sight of Belle Dillard.

"Hallo, sis," he called to her pleasantly. "In the hands of the *gendarmerie*, I see." He flashed us an amused look. "Why the conclave? This house is becoming a regular police station. Hunting for clews of Sprigg's murderer? Ha! Bright youth done away with by his jealous professor, and that sort of thing, eh? . . . Hope you chaps haven't been putting Diana the Huntress through a third degree."

"Nothing of the kind," the girl spoke up. "They've been most considerate. And I've been telling them what an old fogy you are—bringing me home at half past twelve."

"I think I was very indulgent," grinned Arnesson. "Much too late for a child like you to be out."

"It must be terrible to be senile and—and mathematically inclined," she retorted with some heat, and ran upstairs.

Arnesson shrugged his shoulders and looked after her until she had disappeared. Then he fixed a cynical eye on Markham.

"Well, what glad tidings do you bring? Any news about the latest victim?" He led the way back to the drawing-room. "You know, I miss that lad. He'd have gone far. A rotten shame he had to be named Johnny Sprigg. Even 'Peter Piper' would have been safer. Nothing happened to Peter Piper aside from the pepper episode; and you couldn't very well work that up into a murder. . . ."

"We have nothing to report, Arnesson," Markham broke in, nettled by the man's flippancy. "The situation remains unchanged."

"Just dropped in for a social call, I presume. Staying for lunch?"

"We reserve the right," said Markham coldly, "to investigate this case in whatever manner we deem advisable. Nor are we accountable to you for our actions."

"So! Something *has* happened that irks you." Arnesson spoke with sarcasm. "I thought I had been accepted as a coadjutor; but I see I am to be turned forth into the darkness." He sighed elaborately and took out his pipe. "Dropping the pilot!—Bismarck and me. Alas!"

Vance had been smoking dreamily near the archway, apparently oblivious of Arnesson's complaining. Now he stepped into the room.

"Really, y' know, Markham, Mr. Arnesson is quite right. We agreed to keep him posted; and if he's to be of any help to us he must know all the facts."

"It was you yourself," protested Markham, "who pointed out the possible danger of mentioning last night's occurrence. . . ."

"True. But I had forgotten at the time our promise to Mr. Arnesson. And I'm sure his discretion can be relied on." Then Vance related in detail Mrs. Drukker's experience of the night before.

ARNESSON listened with rapt attention. I noticed that his sardonic expression gradually disappeared, and that in its place came a look of calculating somberness. He sat for several minutes in contemplative silence, his pipe in his hand.

"That's certainly a vital factor in the problem," he commented at length. "It changes our constant. I can see that this thing has got to be calculated from a new angle. The Bishop, it appears, is in our midst. But why should he come to haunt Lady Mae?"

"She is reported to have screamed at almost the exact moment of Robin's death."

"Aha!" Arnesson sat up. "I grasp your implication. She saw the Bishop from her window on the morning of Cock Robin's dissolution, and later he returned and perched on her door knob as a warning for her to keep mum."

"Something like that, perhaps. . . . Have you enough integers now to work out your formula?"

"I'd like to cast an eye on this black bishop. Where is it?"

Vance reached in his pocket, and held out the chessman. Arnesson took it eagerly. His eyes glittered for a moment. He turned the piece over in his hand, and then gave it back.

"You seem to recognize this particular bishop," said Vance dulcetly. "You're quite correct. It was borrowed from your chess set in the library."

For Christmas we have dressed the Sampler in a gay, festive wrapper that says "Merry Christmas" for you in such a delightful way.

We designed a Christmas card which harmonizes with the elegant Prestige metal chest.

This Christmas give Whitman's Chocolates

Everybody wants candy for Christmas that is "all their own." Whatever other gifts one has, a Christmas wrapped Sampler...individual...enticing...satisfying, will fill a Christmas craving that will be satisfied with no substitute.

Whitman's Prestige Chocolates, too, make a charming gift. The artistic and substantial metal chest brings a new note in elegance. And in contents—smaller pieces...new costly combinations . . . extra handwork. This package in one short year has become the national favorite at $2 the pound.

Choose your Christmas candy (and do it early) at the selected Whitman agency near you.

© S.F.W. & Son, Inc.

SALMAGUNDI
Chocolates, packed in a charming metal box—$1.50 per lb.

PLEASURE ISLAND
Chocolate treasure at $1.50 per lb. With a special outer treasure chest—$3.50.

CLOISONNÉ
Chocolates in a metal box with authentic cloisonne design. 3½ lbs.—$5.00.

BONNYBROOK MILK CHOCOLATES
Delicious centers with milk chocolate coatings. $1.50 per lb.

PINK OF PERFECTION
All that the name implies. $1.50 per lb.

A FUSSY PACKAGE
Nut combinations, nut and chew-y centers—$1.50 per lb.

FLORENTINE PACKAGE
Specially assorted and designed for the holiday season, $4.00.

WHITMAN'S WONDERBOX
Get a carton and make twelve children happy.

CHOCOLATE COVERED FRUITS AND NUTS
A luxurious treat in chocolates. A favorite—$1.50 per lb.

LIBRARY PACKAGE
A novel package. $1.50 per lb. Enclosed in useful green suede book cover—$4.00.

Arnesson nodded a slow affirmative.

"I believe it was." Suddenly he turned to Markham, and an ironic leer came over his lean features. "Was that why I was to be kept in the dark? Under suspicion, am I? Shades of Pythagoras! What penalty attaches to the heinous crime of distributing chessmen among one's neighbors?"

Markham got up and walked toward the hall.

"You are not under suspicion, Arnesson," he answered, with no attempt to conceal his ill-humor. "The bishop was left at Mrs. Drukker's at exactly midnight."

"And I was half an hour too late to qualify. Sorry to have disappointed you."

"LET us hear if your formula works out," said Vance, as we passed out of the front door. "We've a little visit to pay Mr. Pardee now."

"Pardee? Oho! Calling in a chess expert on the subject of bishops, eh? I see your reasoning—it at least has the virtue of being simple and direct. . . ."

He stood on the little porch and watched us, like a japish gargoyle, as we crossed the street.

Pardee received us with his customary quiet courtesy. The tragic, frustrated look which was a part of his habitual expression was even more pronounced than usual; and when he drew up chairs for us in his study his manner was that of a man whose interest in life had died, and who was merely going through the mechanical motions of living.

"We have come here, Mr. Pardee," Vance began, "to learn what we can of Sprigg's murder in Riverside Park yesterday morning. We have excellent reasons for every question we are about to ask you."

Pardee nodded resignedly.

"I shall not be offended at any line of interrogation you take. After reading the papers I realize just how unusual a problem you are facing."

"First, then, please inform us where you were yesterday morning between seven and eight."

A faint flush overspread Pardee's face, but he answered in a low, even voice:

"I was in bed. I did not rise until nearly nine."

"Is it not your habit to take a walk in the park before breakfast?" (I knew this was sheer guesswork on Vance's part, for the subject of Pardee's habits had not come up during the investigation.)

"That is quite true," the man replied, without a moment's hesitation. "But yesterday I did not go,—I had worked rather late the night before."

"When did you first hear of Sprigg's death?"

"At breakfast. My cook repeated the gossip of the neighborhood. I read the official account of the tragedy in the early edition of the evening 'Sun.'"

"And you saw the reproduction of the Bishop note, of course, in this morning's paper.—What is your opinion of the affair, Mr. Pardee?"

"I hardly know." For the first time his lackluster eyes showed signs of animation. "It's an incredible situation. The mathematical chances are utterly opposed to such a series of inter-related events being coincidental."

"Yes," Vance concurred. "And speaking of mathematics: are you at all familiar with the Riemann-Christoffel tensor?"

"I know of it," the man admitted. "Drukker uses it in his book on world lines. My mathematics, however, are not of the physicist's type. Had I not become enamored of chess"—he smiled sadly—"I would have been an astronomer. Next to maneuvering the factors in a complicated chess combination, the greatest mental satisfaction one can get, I think, is plotting the heavens and discovering new planets. I even keep a five-inch equatorial telescope in a pent-house on my roof for amateur observations."

Vance listened to Pardee with close attention; and for several minutes discussed with him Professor Pickering's recent determination of the trans-Neptunean *O**, much to Markham's bewilderment and to the Sergeant's annoyance. At length he brought the conversation back to the tensor formula:

"You were, I understand, at the Dillards' last Thursday when Mr. Arnesson was discussing this tensor with Drukker and Sprigg."

"Yes, I recall that the subject came up then."

"How well did you know Sprigg?"

"Only casually. I had met him with Arnesson once or twice."

"Sprigg, also, it seems, was in the habit of walking in Riverside Park before breakfast," observed Vance negligently. "Ever run into him there, Mr. Pardee?"

The man's eyelids quivered slightly, and he hesitated before answering.

"Never," he said finally.

Vance appeared indifferent to the denial. He rose and, going to the front window, looked out.

"I thought one might be able to see into the archery range from here. But I note that the angle cuts off the view entirely."

"Yes, the range is quite private. There's even a vacant lot opposite the wall, so that no one can see over it. . . . Were you thinking of a possible witness to Robin's death?"

"That, and other things." Vance returned to his chair. "You don't go in for archery, I take it."

"It's a trifle too strenuous for me. Miss Dillard once tried to interest me in the sport, but I was not a very promising acolyte. I've been to several tournaments with her, however."

AN UNUSUALLY soft note had crept into Pardee's voice, and for some reason which I could not exactly explain I got the feeling that he was fond of Belle Dillard. Vance, too, must have received the same impression, for after a brief pause he said:

"You will realize, I trust, that it is not our intention to pry unnecessarily into anyone's private affairs; but the question of motive in the two murders we are investigating still remains obscure, and as Robin's death was at first superficially attributed to a rivalry for Miss Dillard's affections, it might help us to know, in a general way, what the true situation is concerning the young lady's preference. . . . As a friend of the family you probably know; and we'd appreciate your confidence in the matter."

Pardee's gaze traveled out of the window, and the suggestion of a sigh escaped him.

"I've always had the feeling that she and Arnesson would some day be married. But that is only conjecture. She once told me quite positively that she was not even going to consider matrimony until she was thirty." (One could easily guess in what connection Belle Dillard had made this pronouncement to Pardee. His emotional as well as his intellectual life had apparently met with failure.)

"You do not believe then," pursued Vance, "that her heart is seriously concerned with young Sperling?"

PARDEE shook his head. "However," he qualified, "martyrdom such as he is undergoing at present has a tremendous sentimental appeal for women."

"Miss Dillard tells me you called on her this morning."

"I generally drop over during the day." He was obviously uncomfortable and, I thought, a little embarrassed.

"Do you know Mrs. Drukker well?"

Pardee gave Vance a quick, inquisitive look.

"Not particularly," he said. "I've, naturally, met her several times."

"You've called at her house?"

"On many occasions, but always to see Drukker. I've been interested for years in the relation of mathematics to chess. . . ."

Vance nodded.

"How did your game with Rubinstein come out last night, by the bye? I didn't see the papers this morning."

"I resigned on the forty-fourth move." The man spoke hopelessly. "Rubinstein found a weakness in my attack which I had entirely overlooked when I sealed my move at the adjournment."

"Drukker, Professor Dillard tells us foresaw the outcome when you and he were discussing the situation last night."

I could not understand why Vance referred so pointedly to this episode, knowing as he did how sore a point it was with Pardee. Markham, also, frowned at what appeared to be an unforgivably tactless remark on Vance's part.

Pardee colored slightly, and shifted in his chair.

"Drukker talked too much last night." The statement was not without venom. "Though he's not a tournament player he should know that such discussions are taboo during unfinished games. Frankly, though, I put little stock in his prophecy. I thought my sealed move had taken care of the situation, but Drukker saw farther ahead than I did. His analysis was uncannily profound." There was the jealousy of self-pity in his tone, and I felt that he hated Drukker as bitterly as his seemingly mild nature would permit.

"How long did the game last?" Vance asked casually.

"It was over a little after one o'clock. There were only fourteen moves in last night's session."

"Were there many spectators?"

"An unusually large number, considering the late hour."

*Since this discussion took place Professor Pickering has posited, from the perturbations of Uranus, two other outer planets beyond Neptune: *P* and *S*.

PLYMOUTH

Plymouth Coupe, $685

The Secret of this Amazing Popularity—

Greater Dollar Value

Greater dollar-for-dollar value is the important difference which people at once recognize when comparing the new Plymouth with the few other cars of its price-class . . . ¶ To place any of these cars beside the Plymouth is to become conscious immediately of contrasts in Plymouth's favor. These begin with its full-size, its new style, and include such luxury features as the new chromium-plated slender-profile radiator, "air-wing" fenders, arched-windows, among a score or more of others . . . ¶ Moreover Plymouth has built into it those qualities of performance which distinguish each and every car built under the Chrysler principle of Standardized Quality . . . ¶ Riding in the Plymouth, you sense at once its fundamental strength and durability as well as the abundant power, speed and smoothness of its new "Silver-Dome" high-compression engine and the safety of its internal hydraulic 4-wheel brakes . . . ¶ Give yourself the joy of half an hour's demonstration in the Plymouth . . . ¶ We are confident you will declare it as unapproachable in performance as in dollar-for-dollar value-giving.

$675 AND UPWARDS

All Plymouth models will be exhibited at the National Automobile Shows; and at special displays in the Commodore Hotel during the New York Show, Jan. 5th to 12th, and in the Balloon Room and entire lobby space of the Congress Hotel during the Chicago Show, Jan. 26th to Feb. 2nd.

Roadster (*with rumble seat*), $675; Coupe, $685; Touring, $695; 2-Door Sedan, $700; DeLuxe Coupe (*with rumble seat*), $735; 4-Door Sedan, $735. *All prices f. o. b. Detroit. Plymouth dealers are in a position to extend the convenience of time payments.*

Vance put out his cigarette and got up. When we were in the lower hall on our way to the front door, he halted suddenly and, fixing Pardee with a gaze of sardonic amusement, said:

"Y' know, the black bishop was at large again last night around midnight."

His words produced an astonishing effect. Pardee drew himself up as if he had been struck in the face; and his cheeks went chalky white. For a full half-minute he stared at Vance, his eyes like live coals. His lips moved with a slight tremor, but no word came from them. Then, as if with superhuman effort, he turned stiffly away and went to the door. Jerking it open he held it for us to pass out.

As we walked up Riverside Drive to the District Attorney's car, which had been left in front of the Drukker house on Seventy-sixth Street, Markham questioned Vance sharply in regard to the final remark he had made to Pardee.

"I was in hopes," explained Vance, "of surprising some look of recognition or understanding from him. But, 'pon my soul, Markham, I didn't expect any effect like the one I produced. Astonishin' how he reacted. I don't grasp it—I don't at all grasp it. . . ."

He became engrossed in his thoughts. But as the car swung into Broadway at Seventy-second Street he roused himself and directed the chauffeur to the Sherman Square Hotel.

"I have a gaspin' desire to know more of that chess game between Pardee and Rubinstein. No reason for it—sheer vagary on my part. But the idea has been workin' in me ever since the professor mentioned it. . . . From eleven until past one—that's a deuced long time to play off an unfinished game of only forty-four moves."

WE HAD drawn up to the curb at the corner of Amsterdam Avenue and Seventy-first Street, and Vance disappeared into the Manhattan Chess Club. It was fully five minutes before he returned. In his hand he carried a sheet of paper filled with notations. There was, however, no sign of jubilance in his expression.

"My far-fetched but charmin' theory," he said with a grimace, "has run aground on base prosaic facts. I just talked to the secret'ry of the club; and last night's session consumed two hours and nineteen minutes. It seems to have been a coruscatin' battle, full of esoteric quirks and strategical soul-searchin's. Along about half past eleven the onlooking genii had Pardee picked for the winner; but Rubinstein then staged a masterly piece of sustained analysis, and proceeded to tear Pardee's tactics to smithereens—just as Drukker had prognosticated. Astonishin' mind, Drukker's. . . ."

It was plain that even now he was not entirely satisfied with what he had learned, and his next words voiced his dissatisfaction:

"I thought while I was at it I'd take a page from the Sergeant's book, so to speak, and indulge in a bit of routine thoroughness. So I borrowed the score sheet of last night's game and copied down the moves. I may run over the game some day when time hangs heavy."

And, with what I thought unusual care, he folded the score and placed it in his wallet.

XVI

ACT THREE

(*Tuesday, April 12th—Saturday, April 16th*)

AFTER lunch at the Élysée, Markham and Heath continued downtown. A hard afternoon lay before them. Markham's routine work had accumulated; and the Sergeant, having taken on the Sprigg case in addition to the Robin investigation, had to keep two separate machines working, coördinate all his reports, answer innumerable questions from his superiors, and attempt to satisfy the voraciousness of an army of reporters. Vance and I went to an exhibition of modern French art at Knoedler's, had tea at the St. Regis, and met Markham at the Stuyvesant Club for dinner. Heath and Inspector Moran joined us at half past eight for an informal conference, but though it lasted until nearly midnight nothing of a tangible nature came out of it.

Nor did the following day bring anything but discouragement. The report from Captain Dubois stated that the revolver given him by Heath contained no sign of a finger print. Captain Hagedorn identified the weapon as the one used in the shooting of Sprigg; but this merely substantiated our already positive belief. The man set to guard the rear of the Drukker residence spent an uneventful night. No one had entered or departed from the house; and by eleven o'clock every window had been dark. Nor had a sound of any kind come from the house until the next morning, when the cook set about her chores for the day. Mrs. Drukker had appeared in the garden a little after eight; and at half past nine Drukker went out the front door and sat for two hours in the park reading.

Two days went by. A watch was kept on the Dillard house; Pardee was put under strict surveillance; and a man was stationed each night under the willow trees behind the Drukker house. But nothing unusual happened; and, despite the Sergeant's tireless activities, all promising lines of investigation seemed to be automatically closed. Both Heath and Markham were deeply worried. The newspapers were outdoing themselves in gaudy rhetoric, and the inability of the Police Department and the District Attorney's office to make the slightest headway against the mystery of the two spectacular murders was rapidly growing into a political scandal.

Vance called on Professor Dillard and discussed the case along general lines. He also spent over an hour on Thursday afternoon with Arnesson, in the hope that the working out of the proposed formula had brought to light some detail that could be used as a starting point for speculation. But he was dissatisfied with the interview, and complained to me that Arnesson had not been wholly frank with him. Twice he dropped in at the Manhattan Chess Club and attempted to lead Pardee into conversation; but each time he was met with the reticence of cold courtesy. I noticed that he made no effort to communicate with either Drukker or Mrs. Drukker; and when I asked him his reason for ignoring them, he answered:

"The truth cannot be learned from them now. Each is playing a game; and both are thoroughly frightened. Until we have some definite evidence, more harm than good will result from any attempt to cross-examine them."

This definite evidence was to come the very next day from a most unexpected quarter; and it marked the beginning of the last phase of our investigation—a phase fraught with such sinister, soul-stirring tragedy and unspeakable horror, with such wanton cruelty and monstrous humor, that even now, years later, as I set down this reportorial record of it, I find it difficult to believe that the events were not, after all, a mere grotesque dream of fabulous wickedness.

Friday afternoon Markham, in a mood of desperation, called another conference. Arnesson asked permission to attend; and at four o'clock we all met, including Inspector Moran, in the District Attorney's private room in the old Criminal Courts Building. Arnesson was unwontedly silent during the discussion, and not once did he indulge in his usual flippancy. He listened with close attention to all that was said, and seemed purposely to avoid expressing an opinion, even when directly appealed to by Vance.

We had been in conference perhaps half an hour when Swacker entered quietly and placed a memorandum on the District Attorney's desk. Markham glanced at it and frowned. After a moment he initialed two printed forms and handed them to Swacker.

"Fill these in right away and give them to Ben*," he ordered. Then, when the man had gone out through the outer-hall door, he explained the interruption: "Sperling has just sent a request to speak to me. He says he has information that may be of importance. I thought, in the circumstances, it might be well to see him now."

TEN minutes later Sperling was brought in by a deputy sheriff from the Tombs. He greeted Markham with a friendly boyish smile, and nodded pleasantly to Vance. He bowed—a bit stiffly, I thought—to Arnesson, whose presence seemed both to surprise and disconcert him. Markham motioned him to a chair, and Vance offered him a cigarette.

"I wanted to speak to you, Mr. Markham," he began, a bit diffidently, "about a matter which may be of help to you. . . . You remember, when you were questioning me about my being in the archery-room with Robin, you wanted to know which way Mr. Drukker went when he left us. I told you I didn't notice, except that he went out by the basement door. . . . Well, sir, I've had a lot of time to think lately; and I've naturally gone over in my mind all that happened that morning. I don't know just how to explain it, but everything has become a lot clearer now. Certain—what you might call impressions—have come back to me. . . ."

He paused and looked down at the carpet. Then, lifting his head, he went on:

"One of these impressions has to do with Mr. Drukker—and that's why I

*Colonel Benjamin Hanlon, commanding officer of the Detective Division attached to the District Attorney's office.

WHERE THE HILLS are high but the temperature low: Mobiloil-lubricated snowplow at work in the Swiss mountain passes.

SAFE IN JAPAN: Bringing a supply of Mobiloil to the U. S. Army Round-the-World 'Planes after they had left the Alaskan snowstorms behind them.

QUALITY ALL AROUND: The Crown Prince of Denmark (left) visits a Mobiloil exhibit in Copenhagen where they still have old-fashioned winters.

A LINE on the Poles: Mobiloil being the most-used oil in wintry Poland, these Polish Boy Scouts naturally look for it wherever they go on their motor tour of the world. Here they find it in warm Morocco.

Easy starting is not enough

Winter engine troubles are invited if you use many of the so-called "winter oils" which are made extra thin to give you quick starting in cold weather.

Such oils will give you the quick starting—but at the sacrifice of good lubrication.

Such oils usually lack the body and richness needed to seal the pistons and prevent dilution by gasoline.

And they usually lack the rich oily character that insures thorough lubrication of all moving parts.

Mobiloil Arctic meets both of the major winter lubricating requirements. It has fluidity enough to give you easy starting. And it has the rich oily body and character that insure thorough lubrication and prevent undue dilution by gasoline.

Mobiloil Arctic is recommended for the lubrication of most cars in winter (below 32° F.). Consult the Chart at your dealer's. You are always sure with

GARGOYLE

Mobiloil

Look for the red Gargoyle trade-mark on the Mobiloil container

Fair retail price—30¢ a quart

from bulk, except "B" and "BB" which are 35¢ a quart. (Prices higher in Rocky Mountain and Pacific Coast States.)

Cold Weather Tips:

1. Always push out clutch pedal before starting the engine. This relieves the "drag" of the transmission on the starter.
2. When starting in cold weather use choke only while starting. Push it in part way the instant the engine starts and fully as soon as possible.
3. Allow the engine to warm up before attempting to drive your car fast.
4. Use suitable anti-freeze mixture (first cleaning out the radiator thoroughly). Keep at proper strength during cold weather.
5. If the temperature of the engine is not maintained by thermostatic control or radiator shutters, use a suitable radiator cover.
6. Be sure you have an adequate supply of Mobiloil Arctic in crankcase, or Mobiloil "E" in Ford (Model T) cars.
7. Be sure you have Mobiloil "C" in the transmission and differential.

TO assure satisfactory operation during cold weather have your garage man or service station attend to the following:

1. Test to see that battery is fully charged. If below 1200 gravity have recharged.
2. See that contact points in distributor are clean and that breaker points are properly adjusted. This will result in easier starting, with less strain on the battery.
3. Be sure that spark plugs are clean and points properly set. This will aid in the same way.
4. Adjust the carburetor for cold weather.
5. Lubricate all parts of the chassis including the spring leaves. This will protect these parts from rust, wear, and squeaks, and the spring leaves from breakage.
6. Drain the old oil out of the crankcase. Put in Gargoyle Mobiloil Arctic unless your car is a Ford (Model T) in which case use Mobiloil "E". Change oil more frequently in winter than in summer.

wanted to see you. Just this afternoon I was—well, sort of pretending I was in the archery-room again, talking to Robin; and all of a sudden the picture of the rear window flashed across my mind. And I remembered that when I had glanced out that morning to see how the weather was for my trip, I had seen Mr. Drukker sitting in the arbor behind the house. . . ."

"At what time was this?" Markham demanded brusquely.

"Only a few seconds before I went to catch my train."

"THEN you imply that Mr. Drukker, instead of leaving the premises, went to the arbor and remained there until you departed."

"It looks that way, sir." Sperling was reluctant to make the admission.

"You're quite sure you saw him?"

"Yes, sir. I remember distinctly now. I even recall the peculiar way he had his legs drawn up under him."

"You would swear to it," asked Markham gravely, "knowing that a man's life might rest on your testimony?"

"I'd swear to it, sir," Sperling returned simply.

When the sheriff had escorted his prisoner from the room, Markham looked at Vance.

"I think that gives us a foothold."

"Yes. The cook's testimony was of little value, since Drukker merely denied it; and she's the type of loyal, stubborn German who'd back up his denial if any real danger threatened him. Now we're armed with an effective weapon."

"It seems to me," Markham said, after a few moments of speculative silence, "that we have a good circumstantial case against Drukker. He was in the Dillard yard only a few seconds before Robin was killed. He could easily have seen when Sperling went away; and, as he had recently come from Professor Dillard, he knew that the other members of the family were out. Mrs. Drukker denied she saw anyone from her window that morning, although she screamed at the time of Robin's death, and then went into a panic of fear when we came to question Drukker. She even warned him against us and called us 'the enemy.' My belief is she saw Drukker returning home immediately after Robin's body had been placed on the range.—Drukker was not in his room at the time Sprigg was killed, and both he and his mother have been at pains to cover up the fact. He has become excited whenever we broached the subject of the murders, and has ridiculed the idea that they were connected. In fact, many of his actions have been highly suspicious. Also, we know he is abnormal and unbalanced, and that he is given to playing children's games. It's quite possible—in view of what Doctor Barstead told us—that he has confused fantasy and reality, and perpetrated these crimes in a moment of temporary insanity. The tensor formula is not only familiar to him, but he may have associated it in some crazy way with Sprigg as a result of Arnesson's discussion with Sprigg about it. . . .

"As for the Bishop notes, they may have been part of the unreality of his insane games—children all want an approving audience when they invent any new form of amusement. His choice of the word 'bishop' was probably the result of his interest in chess—a playful signature intended to confuse. And this supposition is further borne out by the actual appearance of a chess bishop on his mother's door. He may have feared that she saw him that morning, and thus sought to silence her without openly admitting to her that he was guilty. He could easily have slammed the screen-porch door from the inside, without having a key, and thereby given the impression that the bearer of the bishop had entered and departed by the rear door. Furthermore, it would have been a simple matter for him to take the bishop from the library the night Pardee was analyzing his game. . . ."

Markham continued for some time building up his case against Drukker. The logical and relentless way in which he pieced his various factors together was impressively convincing; and a long silence followed his résumé.

Vance at length stood up, as if to break the tension of his thoughts, and walked to the window.

"You may be right, Markham," he admitted. "But my chief objection to your conclusion is that the case against Drukker is too good. I've had him in mind as a possibility from the first; but the more suspiciously he acted and the more the indications pointed toward him, the more I felt inclined to dismiss him from consideration. The brain that schemed these abominable murders is too competent, too devilishly shrewd, to become entangled in any such net of circumstantial evidence as you've drawn about Drukker. Drukker has an amazing mentality—his intelligence and intellect are supernormal, in fact; and it's difficult to conceive of him, if guilty, leaving so many loopholes."

"THE law," returned Markham with acerbity, "can hardly be expected to throw out cases because they're too convincing."

"On the other hand," pursued Vance, ignoring the comment, "it is quite obvious that Drukker, even if not guilty, knows something that has a direct and vital bearing on the case; and my humble suggestion is that we attempt to prize this information out of him. Sperling's testimony has given us the lever for the purpose. . . . I say, Mr. Arnesson, what's your opinion?"

"Haven't any," the man answered. "I'm a disinterested onlooker. I'd hate, however, to see poor Adolph in durance vile." Though he would not commit himself it was plain that he agreed with Vance.

Heath thought, characteristically, that immediate action was advisable, and expressed himself to that effect.

"If he's got anything to tell he'll tell it quick enough after he's locked up."

"It's a difficult situation," Inspector Moran demurred, in a soft judicial voice. "We can't afford to make an error. If Drukker's evidence should convict someone else, we'd be a laughingstock if we had arrested the wrong man."

Vance looked toward Markham and nodded agreement.

"Why not have him on the tapis first, and see if he can't be persuaded to unburden his soul. You might dangle a warrant over his head, don't y' know, as a kind of moral inducement. Then, if he remains coy and reticent, bring out the gyves and have the doughty Sergeant escort him to the bastille."

Markham sat tapping indecisively on the desk, his head enveloped in smoke as he puffed nervously on his cigar. At last he set his chin firmly and turned to Heath.

"Bring Drukker here at nine o'clock tomorrow morning. You'd better take a wagon and a John-Doe warrant in case he offers any objection." His face was grim and determined. "Then I'll find out what he knows—and act accordingly."

THE conference broke up immediately. It was after five o'clock, and Markham and Vance and I rode uptown together to the Stuyvesant Club. We dropped Arnesson at the subway, and he took leave of us with scarcely a word. His garrulous cynicism seemed entirely to have deserted him. After dinner Markham pleaded fatigue, and Vance and I went to the Metropolitan and heard Geraldine Farrar in "Louise."*

The next morning broke dark and misty. Currie called us at half past seven, for Vance intended to be present at the interview with Drukker; and at eight o'clock we had breakfast in the library before a light grate fire. We were held up in the traffic on our way downtown, and though it was a quarter after nine when we reached the District Attorney's office, Drukker and Heath had not yet arrived.

Vance settled himself in a large leather-upholstered chair and lighted a cigarette.

"I feel rather bucked this morning," he remarked. "If Drukker tells his story, and if the tale is what I think it is, we'll know the combination to the lock."

His words had scarcely been uttered when Heath burst into the office and facing Markham without a word of greeting, lifted both arms and let them fall in a gesture of hopeless resignation.

"Well, sir, we ain't going to question Drukker this morning—or no other time," he blurted. "He fell offa that high wall in Riverside Park right near his house last night, and broke his neck. Wasn't found till seven o'clock this morning. His body's down at the morgue now. . . . Fine breaks we get!" He sank disgustedly into a chair.

Markham stared at him unbelievingly.

"You're sure?" he asked, with startled futility.

"I was up there before they removed the body. One of the local men 'phoned me just as I was leaving the office. I stuck around and got all the dope I could."

"What did you learn?" Markham was fighting against an overwhelming sense of discouragement.

"There wasn't much to find out. Some kids in the park found the body about seven o'clock this morning—lot of kids around, it being Saturday; and the local men hopped over and called a police surgeon. The doc said Drukker must have fallen off the wall about ten o'clock last night—killed instantly. The wall at the spot—right opposite Seventy-sixth Street—is all of thirty feet above the playground. The top of it runs along a bridle path; and it's a wonder more people haven't broke their necks the

*"Louise" was Vance's favorite modern opera but he greatly preferred Mary Garden to Farrar in the title rôle.

Just One Thing

"Do you remember, you said you would give me anything I wanted for a New Year's present? Well, what I want is something for you as well as for me. . . . Is it a promise?"

© 1928 M. L. I. CO.

THERE is one thing that every wife who loves her husband wants above anything else in the world—that he may have good health and a long life.

How many thousands of wives there are who are haunted by a secret fear that their husbands are not entirely well—who steal glances, when the other is off guard, in an effort to discover the cause of that constant dragging weariness, those too frequent headaches, those mysterious fleeting pains. Almost every woman knows that sharp thrust of anxiety to her heart, that catch in her throat when she thinks something is wrong with the man she loves. What is it? What can she do?

No longer must a doctor judge the physical condition of a man by his unaided senses alone. Now, by means of marvelous instruments, he can actually look inside the body and watch the various organs at work! He can see the heart beat, the lungs contract and expand, he can watch the activities of the digestive tract. He can take x-ray photographs showing nearly every part of the body.

The doctor today who has kept step with the great discoveries in medicine can sometimes learn important things about the condition of the person he is examining, merely by testing the blood or taking the blood pressure. He can often trace the cause of pain in some remote part of the body to infection in a sinus or tonsil. Frequently ailments of years' standing have been traced to unsuspected infection at the roots of teeth.

Doctors today need not guess. There are means for them to find out. They can detect trouble and in many cases check it before it has had time to damage the body greatly. Often their scientific examinations show the beginning of serious ailments of which the person examined had not the slightest suspicion. It is folly of the most inexcusable sort to refuse to take advantage of the marvelous aids science has given us to discover and check disease and to prolong life.

Make sure that your dear one has a thorough health examination this month. And why not have one yourself? No better New Year present can be made.

So new are the discoveries of medical science in relation to prolonging life that the majority of intelligent men and women have not heard about them. So amazing are some of these discoveries that they are difficult to believe. That seems to be the only sensible explanation of the estimate that but one person in 500 has an annual health examination.

To determine the value of health examinations, a group of 6,000 policyholders of the Metropolitan Life Insurance Company were given physical examinations. These persons were advised to the extent they and their physicians deemed necessary on the proper way to conserve their health. In nine years the saving in mortality in this group was found to be 18 per cent.

The Metropolitan has recently prepared a booklet containing most important rules for gaining and keeping health. It gives much valuable information that tends to make life both long and happy. Send for booklet 19-A. It will be mailed without charge.

HALEY FISKE, *President.*

METROPOLITAN LIFE INSURANCE COMPANY—NEW YORK

Biggest in the World, More Assets, More Policyholders, More Insurance in force, More new Insurance each year

Kids are all the time walking along the stone ledge."

"Has Mrs. Drukker been notified?"

"No. I told 'em I'd attend to it. But I thought I'd come here first and see what you wanted done about it."

Markham leaned back dejectedly.

"I don't see that there's much of anything we can do."

"IT MIGHT be well," suggested Vance, "to inform Arnesson. He'll probably be the one who'll have to look after things. . . . My word, Markham! I'm beginning to think that this case is a nightmare, after all. Drukker was our principal hope, and at the very moment when there's a chance of our forcing him to speak he tumbles off of a wall——" Abruptly he stopped. "Off of a wall! . . ." As he repeated these words he leapt to his feet. "*A hunchback falls off of a wall! . . . A hunchback! . . .*"

We stared at him as if he had gone out of his mind; and I admit that the look on his face sent a chill over me. His eyes were fixed, like those of a man gazing at a malignant ghost. Slowly he turned to Markham, and said in a voice that I hardly recognized:

"It's another mad melodrama—another Mother-Goose rhyme. . . . 'Humpty Dumpty' this time!"

The astonished silence that followed was broken by a strained harsh laugh from the Sergeant.

"That's stretching things, ain't it, Mr. Vance?"

"It's preposterous!" declared Markham, studying Vance with genuine concern. "My dear fellow, you've let this case prey on your mind too much. Nothing has happened except that a man with a hump has fallen from the coping of a wall in the park. It's unfortunate, I know; and it's doubly unfortunate at just this time." He went to Vance and put his hand on his shoulder. "Let the Sergeant and me run this show—we're used to these things. Take a trip and get a good rest. Why not go to Europe as you generally do in the spring——?"

"Oh, quite—quite." Vance sighed and smiled wearily. "The sea air would do me worlds of good, and all that. Bring me back to normal, what?—build up the wreck of this once noble brain. . . . I give up! The third act in this terrible tragedy is played almost before your eyes, and you serenely ignore it."

"Your imagination has got the better of you," Markham returned, with the patience of a deep affection. "Don't worry about it any more. Have dinner with me tonight. We'll talk it over then."

At this moment Swacker looked in, and spoke to the Sergeant.

"Quinan of the 'World' is here. Wants to see you."

Markham swung about.

"*Oh, my God!* . . . Bring him in here!"

QUINAN entered, waved us a cheery salutation, and handed the Sergeant a letter.

"Another *billet-doux*—received this morning.—What privileges do I get for being so big-hearted?"

Heath opened the letter as the rest of us looked on. At once I recognized the paper and the faint blue characters of élite type. The note read:

Humpty Dumpty sat on a wall,
Humpty Dumpty had a great fall;
All the king's horses and all the king's men
Cannot put Humpty Dumpty together again.

Then came that ominous signature, in capitals: THE BISHOP.

(*To be continued*)

The Strangest Adventure a Woman Ever Had

(*Continued from page 27*)

familiar things. With sinking heart, I realized that I must make camp while there was still enough light to find a comparatively smooth spot for my blankets. There were no makings for a fire. There was no water. My two-gallon canteen was nearly empty. I poured some into the skillet for John and he then began nibbling contentedly at the grass which grew among the cactus roots. I ate some oatcakes and lay down on my stony bed.

Coyotes, with their howls of indescribable loneliness, were beginning their night prowling high above me. I set my teeth and stared at the stars. For a long hour every sense in my body seemed turned to hearing. From every direction I caught the whisper of unknown movement. Did all the tiny life of the desert range about at night—rattlers, Gila monsters, lizards, horned toads, rats? Perhaps!

"Well, what then?" I asked myself.

"Why, then," I replied with a surprised laugh, "it's quite all right with me. I am just making the discovery that I have no fear at all of creatures."

"Why, then, are you so tense?" I asked myself.

The reply required thought. "Because I'm lonely," I answered, after a long stare at the new stars pricking through the blue velvet above. "I depend on human contacts for courage not to meet creatures but my own thoughts and dreads."

"BUT," I asked myself, "what have humans ever done for you?—done to soothe that which lurks within you? I'd say one purpose of the *entrada* was to wean you from that futile dependence. Humans can't help your loneliness because it's the desolation of a soul which has no faith in an all-caring, all-seeing Providence."

"You mean," I cried, "that if I believed that death was not chemistry but evolution, evolution planned by some force that recognized and cared about our little personalities, I'd feel as if I belonged somewhere and to something and my desolation would leave me?"

"Don't bite off more than you can chew as usual," was the reply. "The matter to face right now is this particular night alone in the ranges. You say you don't fear creatures. And you admit that human beings never have really helped you. Just for tonight, then, why not go to sleep?"

Why not, indeed! I closed my burning lids and when I lifted them it was not to the stars but to the dawnlight.

BREAKFAST was meager but that didn't matter, for, two hours later, we emerged from the pass and stood looking across the Sacramento wash to the saw-toothed Cerbat range. Ten of Padre Garcés' leagues it was, or thirty miles, to the pass south of Cherum's peak. Close at hand lay the spring I had hoped to reach the night before. It was grass-grown and willow-fringed, just as the diary described it.

The night in the pass did a little for me because when dusk again found me in my blankets, flat in a sandy draw, I felt little uneasiness as to my physical situation.

We took three days to the march across to the Cerbats, John and I. It was very hot and very sandy, with no shade and little water. But, oh, what a world of burning beauty!

We'd been out about a week when I began to work John up into the Cerbats, rich yellow against bronze-blue heavens. The trail followed a broad canyon for several miles, then swung north around the thighs of a peak, to disclose still another peak, black and rose-colored and striated in pale green. Slowly we dipped into the intervening valley, where lay the ruins of an old stamp mill, and slowly up the spine of the black-and-rose mountain.

Still to the northwest Garcés sent us, where uptilted still another naked peak, while behind us half the range dropped into twisted, tormented, multicolored chaos. Late one afternoon, we found another of Garcés' springs, in a canyon so barren that not even a cactus mirrored itself in the quiet pool. There were hieroglyphics on the rocks hereabouts. We drank, and moved on to find food for John. The night before, he'd eaten part of my bacon and the papers off all the cans in my pack. Halfway up the next mountain we came upon an old, sheet-iron shack near a crude hole in the rocks. There was a spring at hand and grass. On the window ledge of the shack lay several pieces of uncut turquoise matrix. "This must be one of the old Tiffany workings," I thought.

A SHOUT arrested me. Out of the shack rushed a man in faded brown overalls. I dropped my hand and apologized.

"Funny I can't cure a few stones without someone trying to steal 'em," he snarled.

He was a bearded old fellow with a queer look under his shaggy eyebrows. He wouldn't accept my apologies, but ordered me to move along. I'd have been glad to do so but for John's hunger.

"Do you own the spring, too?" I asked.

"I been watchman here for thirty years and I reckon I got more rights here than you or any other fool. You get along to where you're going to. And when you get there you tell 'em Grover S. Cleveland's still on the job but he can't show himself till the assessment work's done."

"But my father voted for you," I urged.

The Secret of her Popularity
a glorious flashing smile

Since Childhood Days
Miss Gittere has used this one dental cream
and look at her lovely teeth today

Miss Gittere in 8th-Grade Days

NO WONDER she's popular! Wherever she goes, her charming personality wins a host of admiring friends.

Much of Miss Dorothy Gittere's charm is due to a really remarkable smile. A smile that shows two even rows of sparkling, lustrous teeth.

Miss Gittere tells us she has used but one dental cream during the past 18 years. Daily cleaning with Colgate's and a trip to the dentist every six months . . . that's her secret.

Many tell same story

In this country, and in foreign countries the world over, you will find thousands of men and women like Miss Gittere who began using Colgate's ten, fifteen, even twenty years ago, whose teeth today are exceptionally sound and beautiful.

Many of these people are grateful enough to write to us sincere, unsolicited reports from people proud of the soundness and attractiveness of their teeth.

There is nothing mysterious about these enviable results.

The men and women fortunate enough to secure them did nothing that you cannot easily and quickly do yourself.

They visited their dentists for periodic inspections. And they used Colgate's.

Choose your dentifrice on the basis of results. Follow the lead of those who have already kept their teeth sound for years.

Simply adopt for your own use the dentifrice most popular among people with well-preserved teeth.

Also, wouldn't it be an immense satisfaction to know that the dentifrice you were using was the one which dentists recommend most frequently?

Accept our free offer

So, for lovely teeth . . . for teeth that make your smile the social and business asset that it should be . . . ask your druggist to-day for Colgate's. Or, if you prefer, let us send you a sample to try.

A

Clean

Years ago we set out to make the best dentifrice possible. We interviewed leading dental authorities. They told us that the one thing a dentifrice should do is to clean teeth. We then produced Ribbon Dental Cream —designing it to do that one thing superlatively well. It is not medicated, because all experiments in the meantime have sustained the original principle that cleansing is the only thing a dentifrice can properly do.

Colgate
595 Fifth Avenue, New York

Please send me a Free sample of Ribbon Dental Cream.

"That ought to win me a few spears of grass."

"Why didn't *you* vote for me?" he shouted. Then without giving me a chance to reply, he roared, "By God, thought you'd fool me, coming here with a Democratic donkey. I knowed you the minute I seed you! Susan B. Anthony, that's who you are! Now you get away from here or I'll get my gun out of the shack."

It took all my strength on the lead rope to win John away from the grass-grown spring, yet I managed it with considerable celerity and started eastward again. But I was still in sight of the shack when the old man shouted, "Susan! Come back! Come back!"

I jerked John's lead rope and shook my head. But I wasn't reckoning on the depth of Grover's sudden passion for my society. He sent a shot over my head. I returned, towed rapidly by the delighted burro, and I was very angry.

"I'll not have anything to do with you," I panted, as I reached the shack, "unless you put that gun away."

"You'll come when I call you, Susan, with your heels fanning your ears," growled Grover. "I called you back because I didn't want you should go away mad."

I dropped John's lead rope. He immediately began gorging himself, so I could give my whole attention to Grover.

"But I *am* mad!" I cried.

"Just for that, you can get out of here again!" he shouted.

"I'll do nothing of the sort till my burro's had all he can eat," I retorted.

"And just for that you can leave the burro with me!" The old man grinned craftily.

I suddenly tried a different angle. "What chance will you have for reëlection when your constituents hear you stole a donkey from Susan B. Anthony?"

He dropped his rifle into the crook of his left arm and scratched his beard reflectively, then said, with a nod, "They'll say I done right, seeing Susan had no business with it. It certainly ain't yourn, Susan!"

I was too angry to chuckle. "It's mine as much as that turquoise is yours," I said, as I began to edge down the trail again.

But he was too quick for me. Keeping me neatly covered, he threw the bags and the Navajos off John's back. "Now git!" he ordered. And I picked up the pack and got! Still angry, but helpless.

HERE was a quandary. Garcés had always had his burro at least. I couldn't pack this stuff a mile without being done up. I decided to go back to the hieroglyphic springs for the night. It was full dusk when I arrived there. I was trembling with exhaustion and, now that my anger had receded, very much afraid that the insane old man might follow me. I ate cold oatcakes, then rolled up in a Navajo, and as my weariness topped my fears, I shortly fell asleep.

A consciousness of someone's presence woke me at dawn. At first I was sure it was Grover. But it wasn't. An Indian woman was squatting over my pack, examining its contents with the naïve curiosity common to her race. I sat up, angry again. Then checked myself. I was forgetting that I was seeking the thing Garcés had found. Though he had been Spanish and priest and over a century and a quarter dead, still he had been human, and some of the things he did in the way of self-control I could do. I walked over to the woman. She looked up at me. It was Molly of the Pass.

"Hello!" I said, as I took away the hairbrush she was trying. "I've been having hard luck. I've lost my burro. If you'll help me pack this stuff till we find firewood, I'll cook us both some breakfast."

She gave me an impudent look and repeated the previous formula, shivering violently and twitching at my shirt sleeve. "Heap cold! Give 'em shirt!"

"No! but I'll give you your meals if you'll help me pack this stuff down to Kingman where I can rent a burro."

"Heeko squaw can go to hell," was her response.

"I'm right next door to there now, I reckon," was my reply. "You know, whites have to wear these flannel shirts out in the desert or they get a heat chill. You know it as well as I do, Molly. And there's no use in your pretending not to understand me, because you're young and that means the government's educated you. Now, do tell me where you live and where you're going."

THERE was a short silence, during which the squaw appraised the amount of food in the gunny sack. Then, evidently having made up her mind to pay the price, she said, with a grin that made her whole face kindly, "I live over yonder," jerking her thumb eastward, "on the Hualapai reservation. My sister married Kemah, the Mohave chief, and I've been visiting her. Now I'm going back to my husband. I'm going to have a baby and I want the other wives to take care of me."

"Would you mind telling me," I inquired, "why you pretend you can't speak English?"

"Because it shuts the whites up," she answered. "I get tired of their questions. I went to school at Fort Mohave eight years and I worked for two white women in Kingman. I'd rather be a squaw."

"Shall we go get breakfast?" I asked, with a smile.

"I'm ready when you are!" She scrambled to her feet and hoisted the heavier of the two bags to her head where she balanced it, neatly. I picked up the other bag and the blankets, gave Molly the canteen, and followed her as she moved rapidly down the canyon.

By sunup she had found a good growth of scrub cedar. There was no water, but my canteen was full. We set about getting the meal in an amicable silence. It was not until she'd had a good drink of coffee and several hot cakes that Molly began to talk.

"The Mohaves think you're crazy," she remarked. "Why do you do such a thing as this? If you wanted to get to Kingman, why didn't you go on the Santa Fe or take an auto, or even a horse outfit? You bet I wouldn't have come on foot only there was no money left after Iretaba's burning. *Are* you crazy?"

I examined her round brown face appraisingly. It was ugly but not dull. The eyes were intelligent. So I told her the story of Padre Garcés. She listened intently but said nothing when I had finished. For several moments we both looked at the far view of the desert, framed in the open end of the canyon.

"Don't you see what I mean?" I finally urged.

She shook her black head. "Indians don't die," she murmured. "They shed their skins like snakes and we burn up the old skins so they can't be used again."

"And don't you mind leaving the old skin?"

"I never think about it," she answered. "Live in the sand and you don't think!" She smiled. "Anyhow, you don't worry over what you can't help."

I gave up and began to tell her about my experience with Grover. She laughed till the mountains rang.

"That's old Turquoise Jim!" she said. "He's been crazy a long time. Years ago he killed a man and the white law let him off because he was crazy."

"Good gracious!" I ejaculated. "Well, he has my burro. Will you help me to get to Kingman?"

"I've got to go home, but you come with me up toward the reservation. My husband is coming to meet me and he'll find you a burro."

I liked the suggestion and shortly we picked up our loads and started onward. We made an easy day of it; too easy for Molly. Barefooted and long-skirted and near motherhood, she still could walk me off my feet. We found another of Garcés' springs about five o'clock. Molly knew it well. We made camp and after the meal Molly suggested that we go on down to the valley below to look for her husband. But I shook my head.

"Molly, I've done fifteen mountain miles today. I'm white and I'm soft and I'm through, until tomorrow."

She laughed delightedly. "First white woman I ever knew would admit she was no good! Well, I'll go down and if I find him I'll send for you. If I don't, I'll come back myself."

I nodded and dropped to my blanket.

IT WAS dark when a long-drawn cry roused me. At first I thought it came from a lone coyote. But as it was repeated I realized that it was a human voice. I crawled to my aching feet and stood listening. The call was repeated from the valley.

"Help!"—It must be Molly. I cupped my hands around my lips and sent a return shriek. "Coming! Coming!"

In about twenty minutes I found her twisting in the sand. A few miles out, a rattler had bitten her just above the ankle. She had tried to hurry back to me but was soon too ill to walk. She had crawled for a mile or so but her agony was too great. While she gasped out her explanation, I was kindling a greasewood fire. The moon was not up and we needed light. I used the red tie as a tourniquet, slashed and bled the bite and cursed myself for not carrying permanganate of soda, as I knew one ought in July.

"Where's the nearest help?" I asked as I worked.

She was perfectly cool. "There's a ranch ten miles up this valley." She paused till a spasm of pain passed. "You stay and when the baby comes you take him there. He'll be full of snake bite and need a white doctor.—Maybe you'll meet my husband on the way—"

"Don't be frightened!" I said. "You

The U. S. A. is only a few minutes wide

An Advertisement of the
American Telephone and Telegraph Company

In the gold rush year of '49 a stage-coach succeeded in crossing the continent in about three months. Two decades later, for the first time, an unbroken stretch of railroad lay from New York Harbor to San Francisco Bay, and America was seven days wide. Today, by telephone, that entire width is only a matter of minutes. And these few minutes represent a round trip, taken in the ease of office or home.

The Bell System is ever busy reducing the width of America and the distance between cities. For example, during 1929 it will add to its lines nearly 2,000,000 of the new permalloy loading coils for correcting and maintaining the speeding voice currents.

Seven thousand miles of new inter-city cable, $40,000,000 worth, will be added to the System to protect against storms and other slowing up influences.

In the last five years 350 major improvements, as well as thousands of others whose aggregate importance mounts high, have been made in telephone central office equipment.

Improved operating practices have eliminated the necessity of your "hanging up" and being called back in 95 per cent of toll and long distance calls, adding new speed and ease to out of town calling. You hold the wire and the operator does the rest.

Since New Year's Day, 1927, the average time for completing all out of town calls has been cut 35 per cent and at the same time the per cent of error has been further materially reduced.

There is no standing still in the Bell System. Better and better telephone service at the lowest cost is the goal. Present improvements constantly going into effect are but the foundation for the future's greater service.

"The Telephone Books are the Directory of the Nation"

be all right. I'll see you through if you'll tell me what to do."

"I'm beyond fright!" she panted.

Thus it came about that the moon three hours later found me tramping along the east trail with Molly's boy in my arms wrapped (after all) in my flannel shirt and his mother's tomakwich. He was, I thought, a very sick little Hualapai, though I didn't know much about babies with rattler bite in their circulations. So I was making what speed I could under the faded old moon, my thoughts alternating between Molly in a coma, back there in the sand, and the baby in my arms. Dawn showed me a green patch to the northeast; the dry rancher's alfalfa. But it showed me also more immediate help in the shape of a tent made of burlap bags and bits of carpet before which a squaw was kindling a fire. She stared at me in my undershirt, with a broad grin. But the grin faded rapidly as I told my story.

Before I had finished, she snatched the baby and ran shrieking into the tent. In a moment, out she came, followed by another woman and a tall old man, naked save for a pair of striped underdrawers. He carried the baby in his arms and began to talk to me excitedly in pidgin English. I cut him short by telling him to send one of the women to the ranch with the baby and to hitch up his old ore wagon and go after Molly.

After a mighty hurrah and scramble my orders were carried out and I was left alone with the first squaw, who fed me coffee and some delicious tortillas baked on the coals as I ate. She offered me the tent to rest in, but I preferred the clean sand under a mesquite bush. Here I slept soundly, till they brought in Molly, who really seemed in fair condition. The squaw had come back from the rancher's with the poor little baby, dead in his blanket.

It was mid-afternoon when, in my badly laundered shirt and riding a moth-eaten burro that Molly's husband had given me with a magnificent gesture—I had a conviction that it belonged to the dry rancher—I made my way back to my previous night's camp. Affairs there were just as I had left them.

I FELT the need of thinking matters over more than I did of sleep. So I tethered John the Second near some gramma grass and seated myself against a boulder while I examined the inner side of the *entrada*.

The trip thus far had been at times a little on the strenuous side. I knew enough about desert living to realize that there was nothing extraordinary in that fact. Life under pioneer conditions is life in the raw, and when I placed myself in contact with these conditions, melodrama was sure to follow. Garcés had found it so. I don't know how many births he attended nor how many deaths. He recorded them with monotonous frequency. But he took them in his stride, as it were!

Well, hadn't I, to a small extent? Hadn't the cessation of physical cowardice which had begun in the Pass continued with me? I had looked death in the face when Grover threatened me. I had known I was looking at death and I hadn't been afraid. I had been too indignant to have room for fear. Surely, one aspect of death—fear—was pure bugaboo. All of us meet death hundreds of times during our lives and are too much concerned with extricating ourselves from his clutches to give thought to fearing him. Poor Molly, writhing in the double agonies of labor and snake virus, spoke the truth. She was beyond fear!

Aye, bugaboo! Evidently we all are possessed of physical courage sufficient to meet death with something of gallantry. But before I could preen myself further, a new thought came crowding. Wasn't the real terror concerned less with the act of dying than with afterward? Whither?

I felt the sweat of agonized concentration spring to my forehead as I tried to picture myself as non-existent. I did not concern myself with the body's dying nor with the mind's, but with the death of the essential *me*. I gave every ounce I possessed of will power to the effort, yet I could not send my thoughts into a future that did not contain *me*. Somehow, in some condition my mind could not grasp, I was forever there.

DID this mean heaven? No! But it could mean that the essential me is part of an eternal whole; the whole that is the animating cause of the universe. It could mean that my mind and body are only one of the innumerable manifestations of the whole cause. And as the whole is indestructible, so is the part which is me. Only my manifestation can disappear.

And this cause, does it care? Can it be named Providence? Is it soul or mere chemistry?

For one moment something supernal within me stirred and almost replied. But I could not hold the moment. This poor physical thing through which that something had to function was utterly inadequate—clumsy, and so soon exhausted in this effort to pierce through pure mystery! All that glorious summer afternoon, as I fought again and yet again to give voice to that faint stirring within me, my poor old mind and body never would permit me to go on after a rest period from the last barrier we had crossed. Each effort must begin with the *entrada*, from the first minute, must examine each experience, must demand the herculean concentration, and then must come to a dead stop with only, one believed, a single thin wall between us and truth.

It had long been dusk. My little moth-eaten John Second, lonely too after the manner of his kind, nudged me with his soft nose and made mysterious breathing in my ear. I talked to him and we got supper together.

The next morning I made an inventory of my resources. They were not impressive. My face and hands were blistered and peeling. My eyes were inflamed from sun and sand. My flannel shirt, by some alchemy of squaw and alkaline water, had shrunk three sizes and had split in several directions. The leather reinforcing of my riding breeches hung in tatters. All this, of course, might be mortifying but was not serious. The serious matter was that the soles of my shoes were worn through. Garcés probably wore moccasins. But I didn't see how I could procure them. The Indians thereabouts went barefoot.

Moreover, I was practically penniless. There was a chance that a small check for a story lay in the post office at Needles, but going back for the check meant breaking in on the *entrada*. My food supplies were at low ebb. Feeding Molly had made frightful inroads on my commissary. The padre had lived off the country and the Indians. I thought of eating desert rats by myself as the only available game or of sharing an Indian rabbit stew along with dogs, burros, sand lice, and other intimates of Indian home life—thought of these and turned a little sick. There was no use pretending. I was not within a thousand degrees of Garcés' quality of fortitude.

Yes, my inventory made rather shameful showing! And yet as I looked ruefully at the blistered sole of my foot through the hole in my boot, I was conscious of a degree of content in spirit that I never before had known. What if I was broke? So much the nearer was I to Garcés' riches.

Molly's husband, Obob, had told me that old Kemah was soon to join him and that then they were all going up into the Navajo country near the Grand Canyon to trade turquoise matrix for Navajo blankets. I undoubtedly could bargain with them to take me along, paying my share after the return to Needles. But could I exchange my clean solitude for an Indian journado? —Garcés did so frequently.—With a curious combination of amusement, liking and distaste, I once more broke camp and, after padding my shoes with leather from my breeches, began to retrace my steps to Obob's camp.

Indians sometimes have a pleasantly casual attitude toward the vagaries of the whites. No one appeared surprised to see me nor to learn that I wanted to join up with them. Molly was frankly glad and made the bargain with her husband for me. For a dollar a day I could share and share alike with the other squaws. I found a piece of old rubber belting from a deserted mine in Obob's miscellany and made new soles of sorts for my shoes. Then I went to sleep under the mesquite bush.

AT SUNDOWN, I was wakened by the arrival of Kemah with his *entourage*: two ponies dragging a buckboard in which were packed two wives and several small girls, half a dozen dogs, an equal number of horses and burros, and the old chief himself on a rattle-boned pinto mare. Obob's dogs greeted Kemah's dogs; Obob's burros greeted Kemah's burros; Obob's wives greeted Kemah's wives. The New York subway was quiet in comparison.

But in the course of a couple of hours the children and the lesser creatures settled down for the night, and one of Kemah's wives, Ochee, and I joined Obob and the old chief, who were sitting in the sand near a tiny fire. Then blessed silence.

After a half hour, Ochee said something in the Hualapai tongue. I spoke quickly "I'll add two bits a day to my fee if you'll speak English when I'm around." I knew that although Obob and Kemah had only pidgin English, Ochee had been to school. They all laughed.

"I only said it was queer," repeated Ochee, "that Kemah and Obob should have had the burnings of their only sons so close together."

"It is best," murmured Kemah.

"No!" grunted Obob fiercely.

"What good for Injun chief have son?" demanded Kemah. "Big sheriff at Washington, he Injun's chief now. Great Spirit knows that. Takes sons away."

"If the Great Spirit knows it, why does He send sons in the first place?" I asked

Tooth paste starts Baby's bank account with a $3 deposit

Sounds strange, doesn't it? But it really isn't. Figure it out this way: by using Listerine Tooth Paste at 25c the large tube, instead of ordinary dentifrices costing twice as much, your average saving per year is $3. With this $3 you can open a savings account for your youngster. Or you can buy yourself gloves, or hosiery. There are countless items to choose from —the choice is yours.

A *remarkable* tooth paste at a *remarkable* price

You be the judge

Large Tube
25¢

As makers of Listerine, we learned much about the requirements for firm, healthy gums, and beautiful gleaming teeth.

We felt that there was room for an improvement in the quality of tooth paste—and a real demand for a lower price.

Therefore we created a first class dentifrice suitable for all types of teeth. Listerine Tooth Paste is its name, and its price is but 25c for the *large tube.* Such a price for such a paste is possible only because of ultra-modern methods of manufacture and mass production.

The moment you begin to use Listerine Tooth Paste, you will be conscious of the delightful, fresh, clean and healthy feeling of your mouth and gums. And in a very short time you will note a marked improvement in your teeth—a new gleaming whiteness.

* * *

And remember, Listerine Tooth Paste accomplishes an average saving of three dollars a year per person, assuming that a tube a month per person is used. Think how substantial is the saving, when there are several in a family. Lambert Pharmacal Company, St. Louis, Mo., U.S.A.

LISTERINE TOOTH PASTE

Original from UNIVERSITY OF IOWA

"Great Spirit won't change way of world, way of men and women, just for Injuns! He say, let Injun learn, poor fool!" Kemah's tragic eyes were on the fire.

"When Iretaba alive you no talk so," Obob said sardonically.

"Injuns never learn," muttered Kemah.

"Great Spirit heap sorry about that!" Obob still was sardonic.

Kemah's return was serious. "Yes, He's heap sorry."

I leaned forward to catch the old Mohave's eye. "Kemah, how do you know He's sorry?"

"Because," replied Kemah seriously, "Great Spirit is in me, in Obob, in Ochee, in Molly. We all sorry. He is in us so He must be sorry too. Must be."

I gasped. This old Indian had come farther than I. What was this he had just given me? I looked at him eagerly, but he turned away as if regretting that he'd said even that much. I felt as if one of the rare moments of the previous day's thinking were beckoning me and I rose from the fire and strode into the desert to meet it. Not until I was out of sight and sound of the camp did I halt and face the low-hanging stars.

ONCE again I forced my brain to cross the barriers in colossal effort to catch up with Kemah's thought. What he meant was that the essential me, which is a part of the universal cause, suffered and was sorry for the agony of every living creature. There was no separating my soul from the universal soul. Whatever my brain recorded as being felt by the essential me was being felt by that of which I was an integral part.

"He's in use so he must be sorry. Must be!" Yes, the cause did care! *It was not mere chemistry. It could be called Providence.*

Such an unprecedented increase in the visibility of my spiritual world, such a lift of barriers, was all but shattering to my mental machinery. I stood, I know not how long, struggling to take in its implications. After a time I realized that there was no use trying to interpret nor assimilate it all at one mouthful. I must get it subconsciously first. In the meantime I could respond to a mental buoyancy unique in my experience.

Filled with new purpose, I returned to the fire.

"Kemah," I said, "I'm not going up into the Navajo country with you. I'm going to start back to Needles tomorrow, if you'll trust me for a week's grub."

"How come?" asked the old Mohave.

I eyed him thoughtfully. Would he understand? Certainly he had given me enough that night to entitle him to an explanation. So, choosing my words with great care, I tried to make him see the state of mind that had brought me to the desert. I told him how I had felt about Iretaba's burning and I described Padre Garcés to him, his bravery and some of his adventures with the early Mohaves. Kemah listened intently.

"It seemed to me," I said, when I had finished with the account, "that if I came into the desert and lived as the padre lived, I might get to look at death the way he did; not afraid of it; sure that it is good for our spirit."

"All Injuns believe," said Kemah simply, "that birds, stones, coyotes, and stars are all his brothers. Great Spirit use same sand to make them all. Why you all time worry is because you stay so far away from your brothers. You come back to desert, live like Injuns live, then you believe like Injuns believe and you not worry."

I took this in, then went slowly on with my account of my *entrada* and the thoughts it had begot, ending with Kemah's own contribution that evening.

He gave me a long, not unkindly look. "How long you going to live near Mohave village?"

"But don't you see, Kemah, you and the rest of my *entrada* have given me strength to go back to the city where I belong, where I *must* be. I'm returning to New York as soon as I can pack up."

"Big fool!" grunted Kemah. "Any desert in New York?"

"I'll take my desert back with me," was my answer. "I can be brother to the same stars in New York as you are here, Kemah. I must get back to my own campfire though its circle is so broken; like yours, Kemah."

Kemah shook his head. I was not sure that I had made him understand. But it didn't matter. He had given me his best and he had no need for my broken thoughts.

The next morning John Second and I started back to Needles.

It took us about a week to make the trip. The grade was easier than on the out-journey. My new buoyancy of mind helped the pace, too. I tried to form into words what the *entrada* had given me. But not with striking success. To formulate it was like painting the rainbow in hard stripes, without the impalpable blending that makes the real rainbow a part of both earth and sky.

I could say that death had found its rightful place for me in the scheme of things. But so tight a sentence would not explain that the loss that had driven me desertward had lost its horror, had even attained a melancholy beauty, because through it I had been put on Garcés' trail.

I could say that I had found a belief in immortality, but it was nothing so concrete that had come to me. Say, rather, that I'd come to feel that the cause would not and could not destroy itself in me or in any other of its manifestations. Yet saying this would not convey how completely my loneliness had dropped from me and how deeply, though intangibly, I felt myself to be an inalienable part of the indestructible universe—brother to the sand, the coyote, and the star.

LOOKING back on the experience, I see it as my most tremendous spiritual adventure, the adventure that stilled the desperations of my mind. I see it in colors of unbelievable beauty; an *entrada* set with sapphire and gold of sky and earth, with rose and ocher and turquoise of snow-capped peaks, and with the sepia of the voracious river. But when I attempt to share the experience to the full with others, I falter and fail.

It was an *entrada* of the soul for which there are no words.

This seemed for a long time to be the sum of what I brought back from the desert. But today, as I wrote this last sentence, I paused. I am in New England. It is early autumn and outside my window a majestic wind sweeps the oak-tops and is still. In the quiet, a jay calls once, twice, then he too is silent. Peace! And deep, deep within me, after the mighty winds of grief and unrest, peace. Yes, it is there, an increasing essence distilling slowly from the ardors of that strange *entrada*.

And I realize as I write that the *entrada* no longer lacks words. For I believe concretely that my soul is a part of the universal soul; that death no more ends it than shutting off an electric light destroys the current; rather, the current is conserved thereby. Thus death is as good for my soul as life. I believe that the uses to which my soul shall be put in the universe are infinite in number and time. And I believe that with each manifestation my soul will become more conscious of itself and its relation to the universe. And as I for the first time set down these words, I am conscious of the astounding and stupendous fact that I look on death without fear and without horror. Amen

Where Do You Go When You're in Trouble?

Prize Contest Announcement

MRS. MORROW says that when she wanted solace she went to the desert for it. We know a man who journeys to a certain spot on a little river when he is in trouble and threshes it out with himself. Some children sob their woes to the trees. Most of us have a "solace spot," to which we retreat when in distress. It may be a human "spot," someone to whom you run with your problems; it may be a particular chair that not only eases your body but eases your mind and spirit; it may be a spot in the woods, or it may be your church.

Tell us about your "solace spot" and how it came to be such.

For the best four-hundred-word letter we offer the following prizes: $30, first prize; $20, second prize; $10, third prize. Competition closes on January 20th. Winning letters will appear in the April issue.

Address Trouble Contest Editor, The American Magazine, 250 Park Avenue, New York City.

Contributions to this contest, and all enclosures, cannot be returned, so you must make a copy of them if you want to preserve them.

Manuscripts and inquiries not connected with the contest must be sent under separate cover to the Editor of The American Magazine.

How Does Your Employer Size You Up?

How much are you actually earning for your company?

How much are you *capable* of earning?

What are you doing to increase your earning power?

Answer those questions — as your employer answers them — and you will know exactly how he grades you for promotion.

SO MANY employes wonder why they stick at the same old salaries year after year!

"Just an old tight-wad," that's the way they speak of the boss — when he isn't listening — and in their dreams they see themselves stepping into his office and laying a curtly worded resignation on his desk. "I'm leaving to go with So-and-So," reads the ultimatum, "and they're paying me twice as much. *There's* a place where my services are *appreciated.*"

How dumbfounded such employes would be if someone in authority should ask them point blank the three questions at the top of this page — and what a revelation if, for just an instant, they could see themselves as their *employer* sees them!

Little they dream how eagerly he watches the man who is able to cut costs and increase profits—who possesses the capacity for *growth*—who in spare time is striving to increase his earning power!

Does the average employer favor such a man—promote him rapidly?

You bet he does—and by way of proof we are going to tell you about three men who put their employers to the test!

A LaSalle Button Won the Job It Proved His Case

A bookkeeper-cashier was wanted by a large Chicago firm, growers and shippers of flowers, to supervise the accounts of their fifty greenhouses.

More than one hundred men applied for the position.

But a LaSalle lapel button helped turn the trick for Louis Breisch. It showed the employer that Breisch had successfully completed six months' training with LaSalle Extension University. That carried weight, and Breisch got the job *at a salary higher than he had asked.*

How G. Roy Eshelman Said Good-bye to $16 a Week

G. Roy Eshelman, of Decatur, Illinois —cog in a big industrial machine—was earning only $16 a week when ambition prompted him to enroll for Higher Accountancy training with LaSalle.

"Through my training," writes Mr. Eshelman, "I became interested in the Auditing Department of my company, and often remained after hours watching the auditor at his work.

"Observing my interest, he soon placed me in his department at a 50% increase in pay, and as I progressed with my LaSalle work, I was shortly rewarded with an additional 40% increase.

"My studies rapidly equipped me to strike out for myself, and at present I have an extensive practice as a Public Accountant.

"It is sufficient to say that with the aid of my LaSalle training my present income is many times greater than when I enrolled."

A "Raise" of 137 Per Cent in Fifteen Months!

For four years Philip S. Blessing, of the Lancaster Brick Company, Lancaster, Pa., worked hard as a clerk and got nowhere.

During that time plenty of opportunities came his way—and passed him by. He began to realize what every successful man knows—that opportunities without trained ability mean nothing. He decided to get ready.

Within 15 months after he started training with LaSalle, Mr. Blessing was made Assistant Treasurer of his company, and his salary was increased 137 per cent. It has now been increased 250 per cent.

His employer, Clarence B. Horning, General Manager, adds the vital point: "We believe he has many successful years ahead of him." His business progress has only begun.

Send for Free Book "Ten Years' Promotion in One"

How does *your* employer size you up?

Does he see in you the trained ability to cut costs, increase profits? *Read again how Louis Breisch won out over 100 applicants for a position!*

Does he perceive by your interest in some special field that you are capable of discharging greater and greater responsibilities? *Read again how Eshelman said good-bye forever to $16 a week!*

Can he say of you—by reason of your spare-time efforts to increase your earning power—"We believe he has many successful years ahead of him?" *Read again how Philip Blessing won the position of Assistant Treasurer at a 250% increase in salary!*

The business world is crowded with unthinking fellows who are forever looking to hard work and faithful service to put them ahead—forgetting that these are only the *beginning* of what the boss wants.

"Merely a loyal worker"—is that the way your employer sizes you up? Or does he rate you as a first-class business man —*a future leader?*

Prove that you have the will and the stamina to win success—by what you do with this coupon NOW!

The Trail Eater

(*Continued from page 57*)

life she wanted to hear his ideas, his thoughts about men and women, and to tell him hers. She wanted to read with him the books her father was always having sent her from the States.

Rance released her fingers, but instead of rising from his knees he took a jeweler's box from his pocket and held it between his hands.

"Now, Barbee, honey, shut your eyes and hold out the little paws!" That was his absurd formula whenever he wanted to give her a present. But tonight he had already given her an armful of carnations and a huge box of glacé fruit ordered especially for her from San Francisco. Wondering, she obeyed.

She felt the cool touch of gold as he snapped a bracelet on each arm, then his warm lips shoving them aside to press a kiss on the inside of her wrists where tiny veins showed blue under her skin. "*Now!* Look what happens when you've been a good girl!" She knew the pleased expectancy with which he awaited her thanks.

SHE looked. Falling heavily over each of her hands was a circlet of nuggets, and—crowning touch of barbarity—every nugget was set with a small diamond!

"Oh-o-o . . . Rance! . . ." Her voice broke hysterically as she tried to force a note of glad surprise into her words. Her weighted arms went about his neck and she hid her face against his shoulder. How could she ever wear those chunks of gold set with diamonds! She wanted to cry; yet, paradoxically, Rance's pathetic bad taste roused in her a very passion of protective tenderness. Her arms tightened about him and she kissed him rapidly on his ear, his neck, his chin. "Oh, Rance . . . Rance! . . ."

He laughed with masculine complacence. "I knew you'd like 'em, Barbee. I picked every one of those nuggets myself out of the last clean-up at the Gray Wolf. . . . Darling! . . . I'd like to hang 'em all over you—and drench you with the finest perfume in the world, you little, soft thing!" He wrapped his arms about her and buried his face in her hair.

But a few minutes later he said something about having to leave early. "Oh, no!" Barbee drew away from him and looked, with astonished protest, into his face. "Why, you don't have to go so soon, dear! It's only nine o'clock—and your bedtime during training season is *ten*, Rance!"

"Yes, little one, I know. But tonight, you see, there's a special meeting of the Malamute Club. We're making a few changes in the Sweepstakes rules. Several of us are talking things over with Doc Kramer this evening."

Barbee drew down her hands and considered him with grave eyes. He avoided her gaze by sweeping her to him and murmuring against her ear, "Don't look at me that way, honey. I don't want to run off and leave my little girl now; I swear I don't, Barbee. But you see how it is, darling—I'm due there right this minute. They're waiting for me now. . . . There, there. You're a reasonable little thing, Barbee. You can understand I'm in this Sweepstakes business now, and I can't very well stay away when the boys are discussing anything important. . . . You *do* understand, sweetheart? Don't you? . . . Don't you?"

Barbee was ominously quiet in his arms. He kissed her throat and repeated his explanations—repeated them until the girl nodded her head wearily. "Ah, that's my sensible little woman! And she won't find it so hard to forgive her busy old Rance when she looks at these." He ran his finger round the bracelets. "Barbee, I don't think you realize what a lucky little thing you are, honey!" He laughed "There isn't another woman in town who can show a pair of diamond-studded handcuffs like those!"

After he had gone, Barbee stood alone at the window that commanded a view of the Bering's frozen sweep. Then she turned from the window, and holding out her wrists considered them a long time. . . . Hung with nuggets and drenched with perfume! So that was the way Rance liked women. Hung with nuggets and drenched with perfume—like *Kitty Kramer*.

Kitty was giving a birthday party tonight. Barbee hadn't been invited, of course; neither her father nor Rance would let her go to these parties of the One Hundred set. But she knew, because Lim Phayden had told her when he arrived late to deliver water; he had been delayed because he had to take two loads to the Kramer house. Rance had not mentioned the party. A cold, leaden feeling of distrust deepened about Barbee's heart.

She looked down at the bracelets and shook them. . . . Hung with nuggets! Shackled with lumps of raw gold, with blatant diamond eyes that winked mockingly at her. . . . Suddenly she stripped them from her arms, twisted the nugget chain from her neck, and threw them all into a carved ivory vase that shared the top of the bookcase with a handsomely framed photograph of Rance.

BY DECEMBER mining and all other occupations had become of secondary importance in Nome, for the camp was plunged into dog-training, the serious business of the winter. Homes, stores, glittering bars and clubrooms, all hummed with talk of racing dogs, their speed, endurance, feeding, and conditioning.

Slim, alert drivers who had won fame in former races were at the grueling work that would fit them again for driving in the Sweepstakes; other drivers whom dissipation had rendered unfit for the rigors of the Trail were there too, unable to resist the indefinable lure which attended even the preparations for the great event. The Dog Room at the Golden Sands was open to all those members of the sporting fraternity who drove or owned racing teams; and the "Daily Prospector" ran a column headed "Dog Dope," which was eagerly read by every man, woman, and child in the community. George Neilan, at his daughter's insistence, had turned this department over to Barbee, who spent half her time gathering items for her column.

Though December was too early in the season for the opening of betting books, every move of the racers was watched by Sweepstakes gamblers intent on making a clean-up. In every saloon, at every kennel, or wherever dog men gathered to talk, there appeared sharpshooters avid to learn anything which might enable gamblers to place their money with more certainty when the time came.

Along the trails where teams were tried out were telephone stations, where railbirds, with stop-watches in hand, timed the increasing speed of the dogs between known points. Every subterfuge was resorted to by these men in order to get the time of different entries; and on the drivers devolved the double duty of developing the speed of their teams, while keeping their time from those sharpshooters and railbirds.

KERRY was thinking of this problem as he shoveled freshly-fallen snow from the dooryard of the Kashim. Though his long-legged cross-breeds were objects of derision to the other dog men who raced nothing but pure-bred malamutes, huskies, or Siberians, Kerry had become aware, even during the short ten- and fifteen-mile runs with which he began his training, that he was never free from espionage.

He knew he would have to use every honorable artifice, every stratagem of which he was capable if, practically penniless, he were to compete successfully with the picked teams of the gold kings. To this end he was secretly using a weighted sled for training; but in a locked room back of the Kashim he and Doorknob worked as secretly on the sled he would use in the big race. It was a lithe thing of steamed hickory that was less than half the weight of the lightest racing sled in Nome.

He grinned to himself when he thought of his weighted sled. There wasn't a sharpshooter or railbird in the country who could get his real time while he used it!

Rance had begun his training; that is, he had purchased an elaborate outfit of racing furs, and he was taking his dogs out for a daily run. After the first flush of his enthusiasm wore off, he decided he would not drive his champion team. He turned it over to Slim Carvey, who had won the cup for him last year. Rance worked another Syndicate team, trying, though so far unsuccessfully, to use the rebel Tokon as a wheel dog next to the sled.

Kerry was still suffering from the pangs attendant on his giving up of tobacco; but Rance, while daily informing the boys in the Dog Room that he would stop smoking "tomorrow," continued to consume his usual quantity of cigars and cigarettes. Kerry knew that Kitty Kramer, despite her promise, was not making it any easier for Rance.

Kitty had given her birthday party last night, and both she and Rance had been

offended when Kerry refused to break training to attend. He felt a peculiar satisfaction in recalling the fact that Barbee had also stayed away from Kitty's party. Barbee was often in his thoughts, she and Rance—and Kitty Kramer. One night, soon after Kerry's return to town, he had found Rance at the Malamute Club a little the worse for liquor and had taken him home.

"Wha—wha's wrong with me, Kerry?" the big fellow had asked plaintively as he settled into a black leather chair before his own fireplace. "Now—I'd never dream of cheating my partner, would I? . . . But, darn it all—with Barbee . . ."

He slumped forward, elbows on his knees, hands clasped between them, dull eyes fixed on the fire. "An' I think the worl' of her, too. Little thing, all youth, an' innocence, an' . . . ideals. Kitty now, absolu'ly different—no ideals, no brains, but lord—can't she w-w-ear clothes! An' that flaming hair . . . above white shoulders. . . ."

"For Pete's sake shut up, Rance! You're maudlin. Hey, Amatook!" Kerry roared, as he rushed out of the room, "put him to bed!"

He ran down the stairs into the cold, starlit night and walked to the Eskimo village and back before he could compose himself.

"WHOA there, Kerry!" A contralto voice with a laugh in it roused the young man from his thoughts. "Easy on the shovel, kid, or you'll be dislocating your shoulder!"

Kerry straightened himself. "Thunder, Tolovana! I wasn't expecting you for an hour yet. But you're as welcome as a pay streak! We've got everything ready."

It was difficult at first glance to tell whether Tolovana Belle was a man or a woman. Her reindeer parka was a man's, as were her neat mukluks, which met it at the knee. Her bare head rose from the thick ruff of her parka hood; but in an age of long-haired women, heavy black locks with a touch of gray were cropped and swept back off her forehead. And neither rouge nor powder hid the lines that frankly recorded every one of her thirty-seven years. From one arm dangled a man's fur cap. Under the other she carried a sewing basket such as her own grandmother might have used.

Kerry took the basket from her, and the two, with Duna twisting at their heels, walked to the wide door of the Kashim and entered.

It was warm in the shadowy, barnlike room, lighted even at this hour by a hanging gasolene lamp. A driftwood fire crackled in the big stove made of a gasolene drum; and in another flat-topped stove in one corner a coal fire was glowing under the tin washtub in which dog feed was cooking—the carefully balanced ration of oatmeal, walrus, and whale meat which Kerry fed his racers at the beginning of their training.

A man with his back toward the door stood before the tub stirring the steaming contents with a large wooden paddle. His mukluked legs were astraddle to withstand his vigorous stirring, and the stagged sleeves of his shirt left bare strong white arms that were sprinkled not only with freckles but with golden hairs so thick-growing that they would have been a distinct addition to the bald head which gave Doorknob Balsh his nickname.

Intent on his task, he was unaware of the entrance of Kerry and Tolovana until the latter stepped up behind him and slapped her small, muscular hand on his shoulder.

"How's the dog-punching old reprobate?"

Doorknob's genial flushed face looked back over his shoulder. "Finer than frog hair, Belle! Hold a minute, my girl, and I'll help you off with your parka."

Doorknob Balsh was the only one in Nome who called Tolovana Belle by her given name alone. Before she had acquired the Tolovana, he had known her—back in the wild Dawson days of 'Ninety-Eight, when her singing of "After the Ball" and "On the Banks of the Wabash" had set the gang in the old Monte Carlo a-wiping their frost-burned eyes with the backs of their hands. And he was a witness when she later married his friend, Walter Ballinger, impractical, good-hearted Wally, who just missed making good in everything he undertook.

IN a businesslike manner Tolovana crossed to a large table under the hanging lamp, where a bolt of white canton flannel had been cut up into dozens of dog moccasins. These, when sewed together and padded, would protect the feet of Kerry's racers from sharp ice on the Trail. During her husband's absence in the States, Tolovana came daily to sew on this canine footwear.

"Well, boys, the Ladies' Aid is now in session," she announced cheerfully. And for some time talk of racing equipment occupied the workers—the proper thickness of blankets, the green mosquito-netting that kept a dog from snow-blindness, the lightest weight possible for harnesses and collars, until finally Kerry asked when Wally Ballinger was bringing his team in over the ice from the coast town of Valdez.

"Well," Tolovana drawled, "as for my sainted Wally, he missed his steamer in Seattle. He always does miss his steamer two or three times before he finally gets aboard. If he makes the next one, I expect him in over the trail in about six weeks. . . . The tow-headed, blundering, elongated son of Britain," she added fondly. "I'll certainly be glad to see him!"

As she finished there sounded outside the jingle of harness bells, together with Lim Phayden's voice. He was bringing his water sled to a halt next door where he lived in a small cabin Kerry had fitted up for him. A few minutes later he entered the Kashim, the tinkling little Crooger padding at his heels.

Tolovana hailed him with a thimbled finger.

"Come hither, Phelim, me jewel! Sit forninst me now, and spill all your back-door dirt!"

"Divil a whisper have I heard this day, Mistress," denied Lim, sadly. He placed himself on a long packing box near the fire, and, leaning over, swung his fur cap between his knees. "But 'tis enough I've seen," he said.

"As I wiz passin' the Syndicate this mornin' I spies a crowd outside the fence. Thinks I, I'll see what's goin' on, so I edges up an' begins axin' questions.

"'Twould seem Rance came down to the kennels this mornin' wid the liquor from Kitty Kramer's party still in him, an' tried to work that divil outlaw of his. But the baste Tokon growls at him, an' won't let him put the harness on him. Thin Rance chains him to a telephone pole, an' begins pourin' the silk into him; but Tokon gets one good swipe at him an' fair rips the parka off Rance's back. 'Tis foamin' wid rage Rance is thin; an' whilst Slim is prayin' him not to do it, he sends for a bolt cutter. He ties the poor divil of a dog down, jams a two-inch stick in his mouth to keep him from bitin', an' wid the bolt cutter breaks Tokon's lower tusks off at the gums!"

Exclamations of pity, of horror, of incredulity, greeted this announcement. Kerry rose from the table, an indefinable nausea rising within him. Taking his cap and mittens from a peg near the door, he called to Duna and passed into the back section of the Kashim, where his dogs were housed in stalls behind a partition.

At his entrance there was a joyous tattoo of tails thudding against stall walls. Every dog was on his feet, wagging, whimpering, woofing, in welcome; but, though none was chained, each animal, perfectly trained, stayed in his place awaiting the word which would release him.

Kerry talked to them while he harnessed them and hitched them to the towline, but for once his mind was not on his team. He was thinking of Rance. He found it hard to believe that his best friend, the man who was so generous with his money, could have done this unreasoning, cruel thing to a dog.

KERRY was snapping the towline to his sled when he stopped midway to look down the road. From the direction of the Eskimo village came Barbee Neilan in her short white parka and ermine cap. She was walking fast, with her skates over her shoulder. Luce Barton, patently unskilled in winter walking, skidded along beside her.

The girl saw Kerry standing among his dogs, and her hand went up in gay recognition. After a word to Barton she came toward the Kashim. He shrugged his shoulders, raised his cap, and reluctantly went on alone.

Kerry met her at the Kashim gate, his cap raised with an air of shy respect.

"Could a lame lady get a bit of a lift home on your sled, Mr. Wayne?" she asked gravely.

There was nothing of lameness about her, and Kerry looked puzzled for a moment. Then his eyes followed the road, where Barton's plump figure was at that moment engaged in a wild left slipping, arm-flinging effort to regain balance. His glance came back to Barbee and they laughed in mutual understanding. He thought her half-closed eyes and the little wrinkle on the bridge of her nose adorable when she laughed.

He felt he wouldn't change places with Barton for all the money in the world. He was suddenly aware of his own lithene of his swift sure-footedness, of his tingli youth. Would he take Barbee home? wanted nothing better!

He wrapped her in the wolf robe on sled, and took his place behind the hand bars. "All right, boys! Let's go!" Ev

"Yeast builds resistance," says PROF. DOCTOR PAUL REYHER

famous lecturer at the University of Berlin

"THE MEDICINAL USES *of yeast are many-sided. There is a high percentage of Vitamin B in yeast . . . Vitamin B bears a very close relation to the proper functioning of the nervous system. It also improves the appetite, regulates metabolism, promotes growth and raises the body's power of resistance to every kind of infection . . . One can see, therefore, that yeast contains a remarkable healing factor."*

Prof. Dr. Reyher

ANOTHER of the great medical leaders of Europe to add his voice to the movement of health preparedness is Prof. Dr. Paul Reyher, of the University of Berlin.

Dr. Reyher has made an exhaustive study of yeast. His findings extend new hope to all who suffer from indigestion, headaches, nervousness, depression, too frequent colds and sore throat—sure signs of constipation and lowered vitality.

FROM THROAT TO COLON is one continuous tube. 90% of ills start here. Poisons from clogged intestines easily spread through the system, lowering resistance to disease. But here is where yeast works. "Yeast builds resistance," says Dr. Reyher. It keeps the entire intestinal tract *clean, active* and *healthy*. Eat Fleischmann's Yeast regularly.

In a recent survey throughout the United States, half the doctors reporting said they prescribed fresh yeast for constipation and its attendant ills.

Fleischmann's Yeast is fresh. Unlike dried or killed yeast it contains millions of living, active yeast plants. As these live yeast plants pass daily through your system, they rouse the muscles that control elimination, combat harmful poisons. Your digestion improves. Your skin clears.

Eat three cakes of Fleischmann's Yeast every day, one cake before each meal or between meals, plain or in water (hot or cold). To get full benefit from yeast you must eat it regularly and over a sufficient period of time. At all grocers and many leading cafeterias, lunch counters and soda fountains. Buy two or three days' supply at a time, as it will keep in a cool, dry place. Start now!

Write for latest booklet on Yeast in the diet—free. Health Research Dept. J-60, The Fleischmann Company, 701 Washington St., New York, N. Y.

PROF. DR. PAUL REYHER

Lecturer, University of Berlin, on Vitamins, X-Ray and Pediatrics; Director, Children's Hospital, Berlin, which he built and equipped. The Germans refer to this hospital as "the jewel box" because of its perfect appointments and beauty of structure.

dog, yelping with eagerness, sprang in the harness to a flying start. Out of the gate they dashed, onto the broad white road. Duna, leading free and unharnessed, leaped ahead like a lean gray wolf.

The two on the sled laughed in sheer joy of the motion. Cold air broke against their faces, filled their lungs, went to their heads exaltingly! The road lured like the North itself. Tundra cabins fell behind them. All signs of civilization ceased. There was at last only the vast white country sloping up from the frozen sea, and the line of dogs speeding with them across snowfields toward a mystical, far-away mountain range.

Kerry, swaying on the runners, had seldom felt so happy.

He felt that Barbee was happy too She said little, but sometimes she turned her head and looked up at him, smiling, sparkling-eyed, young; and he read in her face an appreciation of the pure enchanting beauty of their Arctic world.

Kerry wanted to go on thus for hours; but already there was the violet of evening in the hollows of the hills. The short afternoon light would soon be gone. He swung his dogs and reluctantly headed back toward town.

The calling of ptarmigan came wistful and thin above the silver of the harness bells. The cries sounded like: *Go b-a-c-k! . . . G-o . . . b-a-c-k!* Strange, he had never noticed that before. . . . He wished he might go back now—back across the Range to the high-timbered country that he knew so well. The country where frost crystals sparkled on fir and spruce growing thick about a hunting cabin he had built on the shores of a mountain lake; back with Barbee on his sled to the warmth of a supper fire, the luxury of a moose steak and coffee, and afterward the wonder of ideas shared in the candle glow, while outside the forest twilight deepened into a night overspread with stars.

But suddenly he remembered—he had no right to think of Barbee this way. He never would have. She belonged to Rance Herrington.

The rose of sunset went gray about him. A night wind woke and blew across the tundra, scooping up powdered snow and flinging it coldly into his face. Ahead in the town, lights were coming out. He gee-d Duna into Steadman Avenue, the street down which Barbee had driven a month ago when she had picked up Rance and himself after their bibulous afternoon with Kitty. He wondered if she remembered.

But Barbee did not glance toward the Kramer house as they passed. Instead, she looked up at him with some laughing remark. He bent to catch her words and neither of them noticed the two men who were standing at the front window of Doctor Kramer's office.

THE news that Herrington had broken the tusks of the racer Tokon spread like wildfire up and down the coast, and for the time being concentrated the interest of the community on the Syndicate kennels. To the euphony-loving Northerners the outlaw dog instantly became "Tokon of the Broken Tusks," a cognomen he was never to lose.

All Nome was aware of the hatred that lay between Herrington and the dog, and it was no secret that when he drove Tokon he carried a revolver. Both he and Slim kept a billy-club handy when they harnessed the outlaw; and the snow about the wire netting that fenced off the Syndicate kennels was trampled flat where crowds gathered daily to watch the harnessing.

A few days after the incident of the broken tusks the usual crowd was assembled outside the Syndicate kennels watching the teams get off for their tryouts. A murmur of interest broke from the spectators when the trainer, with a harness over his arm, came from the low, wide kennel-house, leading Tokon on a chain leash. The wolf-dog followed, reluctant, hostile, balefully eying the curious faces banked outside the wire fence. At the sight of Herrington and Barton waiting at the head of the team, his lean head, with its pale gold spots above the eyes, lowered watchfully. Barton backed away a few steps.

"For gosh sake, Rance, don't try to run that brute today," Barton pleaded. "It would be better for all of us if you'd shoot him!"

"I'll make a racer—or an angel—out of him before I'm through," declared Herrington stubbornly. "Either way I'll get my money's worth."

HE TOOK the harness from Slim and stepped to the side of the magnificent tawny husky. Today it was evident that Tokon was in one of his devil moods. He stood waiting. Not a muscle quivered in his long, lithe body; but as his owner approached, his nose wrinkled and his lip lifted in a canine sneer that bared his upper fangs.

Herrington bent to slip the collar over the dog's muzzle. Taking no account of the still bruised jaw he shoved it roughly home. A yelp of pain turned to a menacing growl in Tokon's throat.

"Shut up!" Herrington cuffed him on the ear. Like lightning Tokon struck and ripped Rance's parka from throat to waist. Slim leaped and laid hold of the dog's collar as Barton jerked the cursing Herrington aside. "For the lord's sake, have some sense, man!" he implored. "Let that beast alone!"

"Let him alone?" Herrington's voice shook. Someone outside the fence laughed. "Let him alone?" he repeated, the line of his jaw showing white. "Not while he makes me a laughingstock! Slim! Tie him to that pole."

Deliberately he unwound the rawhide whip fastened about his waist.

There was a disapproving, murmurous shifting outside the fence. Herrington rose on his toes, flung back his whip and with all his strength brought it down. The husky reared on his hind legs and met it with a roar, ears flattened, eyes flaming, lips writhing back from his saber fangs.

That unmistakable challenge plunged Herrington into a mood of unreasoning fury. Panting, mad for conquest, he swung his blacksnake, cutting blindly across the dog's legs, his back, his ears, his eyes. But Tokon, with quick, grating cries of defiance, reared forward at every lash. His head darted like a snake's, his terrific lunges threatened every moment to snap the chain that held him from his flogger. Never had Nome seen such indomitable courage—nor such a brutal dog beating.

It was Herrington that showed the first sign of weakening. Finally, with a furious, baffled curse, he flung the whip aside and thrust his hand beneath the tatters of his parka. A second later a revolver gleamed in his trembling fingers.

The harnessed team, instinctively knowing the meaning of firearms, began to cringe and belly away at the sight. But Tokon, breathless, heaving, stood looking into the rage-contorted face above him—looking with proud, fighting eyes that had something human in their depths. Herrington raised his weapon. The dog sprang forward the full length of his chain and, standing on his hind legs, snarled his defiance into the death-dealing muzzle of the revolver.

Shaking with fury and fatigue, Herrington took aim—and pulled the trigger!

The pistol crack was lost in a yell of warning from a hundred throats, for the harnessed malamutes, bolting in terror for the kennel-house, had looped their tow-line about Herrington's legs and mowed him down. His smoking gun went flying into a snowbank.

For a moment he floundered helplessly in a tangle of yelping dogs. Then, waving aside Slim's assistance, he scrambled to his feet and looked for the body of his victim.

A baffled roar broke from him. A few feet away, Tokon was shaking his head and pawing at the tip of the ear which had been barely grazed by the bullet.

The crowd was delighted and uproarious at the turn of events. "Oh, momma! did you see him flop on his ear!" . . . "Say, Slim, bring him a machine gun, so he can hit the dog next time!" . . . "You broke his tusks, you big bum, but you can't break his spirit!" . . . "Awh, he's yellow! Has to tie a dog to shoot him!"

THIS last gibe penetrated Herrington's frenzied, futile searching for his weapon. "Who said I was yellow?" he demanded, his rage suddenly transferred to the jeering throng outside the wire netting. He brushed the black hair back from his mad eyes and shook a fist at them. "Who thinks I'm yellow? . . . Why, you loud-mouthed stiffs, I'll bet you a hundred there isn't one of you has the guts to shoot that dog when he's loose! . . . Come on! Come on! Here's your chance! Prove yourselves! I'll make it two hundred dollars! Two hundred dollars!"

"Oh, button up your lip, Rance! No one wants that kind of money!" . . . "Freeze your teeth, Herrington, and give your tongue a sleigh-ride!" . . .

Goaded by the badgering of the crowd Rance changed his challenge. "But of course," he continued with heavy sarcasm, "there's one among you who can show me how to *drive* him! Don't all speak at once now! Come! Who'll drive Tokon?"

Among the spectators there was a jostling and a turning of heads; but no man stepped forward in response to Herrington's offer. "A fine bunch of dog whalers you are—telling *me* what I should do! I'll make you another proposition: I paid two thousand dollars for that dog—two thousand cold cash! More money than some of you stew-bums ever saw in your lives. But if there's one of you who can drive him—drive him even to the

Harnessing the Waves of Sound

In any building—as in these widely varying structures, Johns-Manville, through the science of sound control, can end troublesome noise and reverberation—and insure perfect acoustics.

475,000 square feet of ceilings in the New York Life Insurance Company Building are finished with Johns-Manville sound-absorbing material.
—*Cass Gilbert, Architect*

THESE buildings were put up to meet a wide variety of purposes—to earn dividends, to house businesses and fraternal orders, to provide care for the sick, and entertainment for the public. Yet in each a problem of sound control was present and important. In some there was excessive noise, echo, and reverberation to be stilled—in others sound had to be amplified and properly directed so that audiences of thousands might easily hear and enjoy. In each instance Johns-Manville acoustical engineers were successful in harnessing the waves of sound!

How Science Controls Sound

Sound travels in waves, ordinarily invisible to the eye, but subject to reflection and distortion just as are water waves. The sound waves of voices, music, office machines, or street traffic strike against the hard cement, plaster and glass surfaces of our modern building construction—and bound back to another surface until the constant overlapping and amplifying of these reflected waves produce that irritating, nerve-wracking noise and reverberation which make life or work in such structures unbearable.

Johns-Manville acoustical engineers through scientific application and substitution of interior finishes that absorb and dissipate the sound waves, are able to control, subdue, or amplify the all-important factor of sound in modern life, to meet the individual acoustical requirements of any building.

Noise, if necessary, can literally be blotted out. In hundreds of offices, hospitals, restaurants, etc.—in fact, wherever quiet is desired—an amazing quietness and elimination of disturbing noise have resulted from the work of the J-M acoustical experts. In scores of churches, theatres, auditoriums—wherever sound must be carried clearly and distinctly to large audiences Johns-Manville has so controlled echo and reverberation and the path of the sound waves that perfect audition and acoustics are now enjoyed.

Free Advice on Sound Control

Write to us now about any problem of sound control in any building. We maintain a department for free advice on any phase of sound control. Architects value our suggestions so highly that we have been consulted on almost every important auditorium constructed in this country in years. And remember that this is not a treatment for auditoriums only—but for every place where sound must be controlled.

Fort and back, I'll *give* him to you! Give him to you free, gratis, for nothing!"

The commotion at the edge of the throng increased; the blur of talk rose suddenly to a hubbub of new excitement. Then a triumphant voice soared: "You overplayed your hand that time, Rance! Here's a fellow who'll take your two-thousand-dollar jinx! Here's the baby who'll drive your hoodoo pup!"

There were sounds of laughing dissent—some resistant scuffling—then from a hundred hoarse throats came the cry, "Break 'way, there! Gang-way! Gang-way!"

The crowd was split by a flying wedge of three men, and the next instant two brawny bouncers from the Golden Sands broke through the wide Syndicate gate, shoving before them the helpless but protesting figure of a young man in a fur parka. "The Trail Eater! The Trail Eater!" came a yell of acclaim. And his captors left him, somewhat bewildered, facing Herrington and the outlaw dog.

KERRY, caught up by the sport-mad crowd as he was passing the kennels, was totally unaware of the events that had led up to Herrington's challenge. He looked questioningly into the man's tensed, swarthy face. "What's the trouble, Rance?" he asked quietly. "You don't really want me to try my luck with Tokon today, do you?"

Into Herrington's black eyes hostility leaped like a flame. After a calculated, contemptuous silence he spoke. There was a bitter twist to his lip, and he purposely kept his words deep in his throat so that only Kerry should hear: "You've had no scruples about trying your luck with my girl, so why balk at my dog? Unless"—deliberately now he raised his voice so that it should carry to the crowd—"unless, of course, you're afraid of him!"

Kerry took a step forward, his puzzled gaze still fixed on Herrington's face.

"Just what do you mean by that, Rance?"

"You know what I mean well enough!" The words were clipped to a vicious significance. "As for the dog—I'm through!" He threw out his hands in a gesture of finality. "You can drive him, beat him shoot him—anything you please with him. *If* you've got the nerve!" he sneered, as he turned on his heel and started for the kennel-house.

Kerry flushed, then he woke to action. He sprang after Herrington, and swung him around to a standstill.

"Hold on a minute!" His voice, pitched low for Herrington's ear, shook with suppressed anger. "You've been making a big war talk here, and I'm going to call you. I'll drive Tokon. And I'll do it by giving him what he's never had before from you, or from anyone else who's owned him—I'm going to give him a square deal! . . . As for that other question—we'll settle that later."

"If you think you're so good, go to it!" sneered Herrington. "Everything I said stands."

Kerry turned back to the uproarious crowd and the problem of the dog. The tawny husky was lying on the snow. His watchful topaz eyes were on Kerry; but his lip lifted in a silent snarl at every fresh burst of yelling that rent the air.

Kerry became acutely conscious of that motley crew, whose favor swayed like smoke in the wind. At any other time or place he would have gone about harnessing Tokon immediately; but here he had to consider the disturbing effect of the crowd on the dog, Tokon's recent cruel flogging, and, most important of all, his own state of mind. He could not hope to deal successfully with the nerve-racked animal until he had mastered himself; until he had wiped from his heart all the anger, the resentment, the turmoil seething there. He knew he could hide his inner self from those babbling men who craned their necks outside the fence; but he had no shield against that enigmatic intelligence, that strange, unerring intuition of the wolf-dog who lay studying him with steady eyes.

When he did turn from the crowd to Tokon there was a deliberate surety in his manner. He saw the dog become tense, alert. He walked directly to the pole to which he was tied, talking quietly to instill confidence. When he unfastened the chain, the husky, vigilant-eyed for treachery, came to his feet, and began to back away. Kerry picked up the harness and put his hand on the tawny head. Tokon flinched and lifted his lip.

"Now then, old man, you and I are going to be friends." He patted the dog's head. "We're going to be friends. We're beginning all over again, Tokon. A good clean start—and no trouble."

He slipped the working collar over the outlaw's neck, stroked him for a moment longer, and in a nonchalant manner knotted the traces to keep them from dragging.

"Come along, old man!" Without looking back, he led off toward the gate, beyond which his own team lay waiting for him on the outskirts of the crowd.

Tokon, with lifted head, was considering Kerry's back, eyes steady, nose twitching. "Come on, Tokon!" Kerry's voice sounded calm, kind, but inexorably commanding. The dog hesitated, then sullenly advanced, ears back and tail straight down, his stalking wolf-walk setting his muscles rippling under his tawny coat.

A MURMUR rose as the watchers fell apart to clear a passage to Kerry's team. Tokon, passing down the line, shifted malevolent eyes from one side to another, lips lifting in spasmodic, silent snarls.

When Kerry reached his sled he hitched the wary rebel team-mate with Karluk, a pointer, just behind the swing dogs. He put an extra section into his towline and placed Duna on the end of it, a spike leader. When all was in readiness for the start, he raised himself and looked about him. Herrington was nowhere in sight.

"Hey, Barton!" Kerry shouted to the lawyer. "Hop aboard. I'm going to drive to the Fort and back—and I want you to see me do it!"

"Take me too, Kerry!" Slim Carvey came forward. As one prize-fighter measures another in the ring, so this dare-devil of the Sweepstakes Trail had been studying every move that Kerry made.

"Sure. Get in, Slim!"

The two passengers settled themselves on the sled. Kerry grasped the handlebars and whistled sharply. His team came to attention.

"Mush, Duna! Let's go, fellas!"

Every dog threw himself into the collar. Tokon, stiff, suspicious, was carried along. The team dashed down the road in a tinkle of bells, and the crowd, whooping with excitement, surged behind Kerry swaying on the back of his sled.

"The Trail Eater's driving Tokon of the Broken Tusks!"

BY TELEPHONE and by word of mouth the news spread. From every corner of the town came dog teams and reindeer sledges, spilling over with fur-clad human freight. They fell in line behind Kerry. As he shot down Front Street, every saloon, every restaurant, every store, added to the cavalcade its quota of men, women, and children, both white and Eskimo. Everyone was eager to witness the contest of wills that was inevitable between the Trail Eater and Tokon, the two most notorious figures of the All-Alaska Sweepstakes.

The team worked as a unit until Kerry reached Barracks Square in the middle of the town. Here he had to swing them to the trail, which ran along the edge of Bering Sea.

"*Haw!* Come *haw!*" he shouted, in the short, explosive tones that meant a quick turn to the left.

Duna swung immediately, but Tokon plunged headlong in the opposite direction. His superior strength, so near the head of the team, took half of them with him.

"Who-o-oa!" Kerry's pronged foot-brake bit the hard-packed snow, and the sled slowed down in a screen of flying white.

"Haw, Duna! . . . *Tokon!* Come *haw!*"

Duna threw himself gallantly into the collar, whining, scratching, bellying lov to swing the string of dogs. But his eage strength was insufficient against th powerful Tokon, who continued to hea gee, straight for a restaurant where durin the summer he had been fed daily by th fat proprietor.

The sled stopped. Duna whirled for th refractory Tokon. "Down, Duna! I' fix him!" The leader obeyed, plainly at loss to account for his master's comman The outlaw yelped and lunged resolute toward the restaurant. With every le the halted team was jerked into agitate uncertainty. The well-trained anima kept their feet, but their eyes turn questioningly toward the rebel.

Tokon's lungings suddenly ceased. H turned in his hampering harness. H topaz eyes grew malignantly intelliger his legs doubled under him. As Ker rushed forward he met him in a defia snarling leap.

The fettering towline broke his stri so that Kerry grasped him easily on ea side of the jaw. He flung him down in t soft snow by the sidewalk and held h there while he winded him with his kne

Even as he was doing it he realized t this was but the beginning of his fi with the outlaw. He must conquer Tok now, conquer him here in the pu square, the last and most unfavora place he would have selected for the j . . . He became conscious of the gr crowd that was gathering about. drill; Kitty Kramer glowing from the white fox depths of a basket sled that was bringing her back from a Fort tea.

He was even aware of the weather-beaten saloons about the Square, each with its windows filled with faces; and of the "Prospector" building just across the way—and Barbee Neilan looking down on him from an upper window.

All these impressions flashed across his vision while he knelt beside Tokon. The dog was quiet now, breathless but unhurt by the careful pummeling of Kerry's knees.

He hastily unbuckled the traces from the towline, and unwinding the long whiplash from about his waist, snapped the end of it, like a leash, to Tokon's collar. When he came to his feet he noticed a red stain seeping through the slashed white fur of his sleeve. A burning sensation told him that Tokon's upper fangs had ripped a furrow along his arm. Dr. Kramer started forward solicitously, but Kerry waved him aside.

The winded dog was recovering. Kerry stripped his parka from him and tossed it to the sled. He waited bareheaded, slim and athletic, a soft leather jacket buttoned snugly about his body. His alert blue eyes never left the recumbent dog.

The husky recovered and slowly got up on his feet. Kerry stepped out toward the middle of the square, the improvised leash in his hand. When it tightened, he tugged on it meaningly. "Come here, Tokon!"

There was no response. He turned.

The outlaw stood in his trailing traces, every muscle tensing for action, ears flattened, hair lifting above his neck and along his spine, eyes blazing with murderous energy clamoring for release. . . . He crouched, a low, rumbling growling in his throat.

Kerry suddenly dropped the leash and snapped into an attitude of defense.

A hoarse voice shouted, "My *God!* He's going to fight him like a man!"

A woman screamed.

And the great, tawny beast, gleaming-fanged and terrible, hurled himself straight at Kerry's throat!

(*To be continued*)

The Mill of Miracles

(*Continued from page 61*)

such a transaction, the fact that she had tuberculosis made it impossible to use her bones. Tuberculosis is the most serious enemy of the bony structure."

Very early Dr. Albee came to the definite conclusion that nothing would satisfactorily replace human bone tissue except living human bone, preferably taken from the individual himself.

His problem, therefore, was to find a way of taking a piece of bone, of the right size and shape, from one part of the patient's skeleton, and putting it in another place; doing this, moreover, swiftly and accurately so as to avoid unnecessary shock to the patient or keeping him too long under the anæsthetic. That was simple enough if it involved merely the making of a new bridge for the nose; it was immensely more difficult when deeper and more extensive repairs were needed.

You know the result

Here's the reason why

Shaving is Smoother
Small-Bubble Way

Razor-pull banished. No more sting or smart. Off come whiskers clean and smooth when beards are softened this scientific way. There's a big difference in shaving creams that you can prove by test . . . see offer in coupon below.

◆ ◆ ◆

IF you think all shaving creams are alike, there's a surprise for you in this advertisement.

It's the story of a new way . . . an easy way . . . a quick and scientific way to get your whiskers off.

Already millions have adopted it. Thousands buy it daily.

No other shaving cream is like Colgate's. No other can offer you such unique results.

It is, we believe, the ultimate attainment in the science of beard-softening. A shaving cream based on the now proven principle that water, and not soap, is the real softener of your beard.

Ordinary Lather

Photomicrograph of ordinary lather surrounding single hair. Note how the large bubbles hold air instead of water against the beard.

Colgate Lather

Under identical conditions note the closely knit texture of Colgate lather. The small bubbles hold water instead of air against your beard.

Thus Colgate lather is designed to absorb more water . . . to scientifically drench your beard with moisture right at the base where the razor work is done. It's a "small-bubble" lather. For small bubbles hold more water. They carry it closer to the base of your beard.

Good-by, Razor-Pull

The minute you lather up with Colgate's, two things happen:

1. The soap in the lather breaks up the oil film that covers each hair—floats it quickly away.

2. Then billions of tiny, moisture-laden bubbles seep down through your beard . . . crowd around each whisker . . . soak it soft with water.

Instantly your beard gets soft and pliable . . . limp and lifeless . . . scientifically softened . . . ready for your razor.

Thus your whiskers come off clean and smooth. No razor-pull. No stinging and smarting. Twice-over shaves aren't needed now. Your face feels clean, fresh, smooth, invigorated throughout the day.

You be the judge . . for 7 days

These astonishing improvements are so easy to judge, that we ask you to make a test.

We'll gladly send a 7-day trial tube of Colgate's to any fair-minded man. Compare it with the shave cream in your bathroom now.

Do this please, at our expense.

As an extra dividend we will also send you a sample box of Colgate's Talc for Men. Try it after shaving. Mail coupon below.

Colgate
Dept. A. M., 595 Fifth Ave., New York

FREE OFFER

Please send me FREE sample of Colgate's Rapid Shave Cream. Also sample of Colgate's Talc for Men.

It was the pitiable plight of the little hunchbacked children who came under his observation in a New York hospital, where he was a visiting orthopedist, that led Dr. Albee into his first great success in bone grafting. I think he still feels deeper satisfaction over the development of a means of helping these crippled little children than in any of the other marvels he has performed since.

It was victory memorable in medical annals, this victory of Fred Albee's over Pott's disease, the tubercular condition of the vertebræ which causes hunchback.

The medical profession had recognized that cure was practically impossible, in the majority of cases, so long as there was the slightest motion of the bones of the spine. So the little hunchbacks were encased in plaster casts, buckled into metal braces, or strapped tightly to flat boards, in the effort to hold their spines rigid while Nature, aided by nourishing food and sunshine, did its work of checking the infection which was eating away the substance of the bones themselves. Many wonderful cures were made, but at best it was a slow, long-drawn-out process.

"Even the influence of the movement of the ribs in the act of breathing keeps up an irritation in such cases, which delays recovery or prevents it," Dr. Albee told me. "Any external device which would hold the vertebræ absolutely rigid would prevent breathing entirely. I concluded that if we could devise some way of holding the diseased spinal bones in place so that they could not rub against each other under any conditions, there was a better chance for cure. So I tried grafting a piece of bone to the vertebræ themselves; one strip of solid bone long enough to extend through all the diseased bones and the two healthy ones at each end. If it grew into place, became part of the spine itself, it certainly should keep the vertebræ from moving. And that is just what happened."

FOR the strip of bone required for this operation, Dr. Albee had recourse to the patient's own shin bone, the tibia, or larger of the two bones of the lower leg. The tibia has proved in thousands of bone-grafting operations to be the most generally useful source of repair material. It is possible to take almost half of the tibia and still leave a nucleus of bone which will again develop into a perfectly good leg in a short time.

Instead of six years of immobility, such as was often imposed, the little patient now discards his bandages in six *weeks*. For in that short time his new backbone has grown strong enough to hold in place the three or four vertebræ in which the germs of tuberculosis had found lodging. Nature's remedy of fresh air, sunshine, rest, and nourishment can then be relied upon to effect a cure, for nothing the ex-hunchback can do will make those spinal bones move upon each other enough to irritate the infected parts and so keep the infection alive.

And when the cure is complete, the spine is almost as good as new. Even if it is not always straightened—for in some cases the disease has advanced too far and too fast to make a complete removal of the "hump" possible—it does not interfere with the free use of all the big muscles which are attached to the spine. Once cured, the former hunchback is able to do nearly anything other boys or girls can do.

"We found that in practically every case which was taken early enough we could straighten out the spine," said Dr. Albee. "And many of those early cures developed into really athletic young men and women."

THIS first successful operation for hunchback, in 1911, widely heralded in the medical press, brought a demand from all over the world for instruction in the new technique. But Dr. Albee was not satisfied with the crude method of chiseling the strip of bone from the tibia. There was too much shock to the patient, it took too long, it could not be regarded as an accurate piece of work in any event, and there was too much danger of the strip of bone being broken while being removed. How could he shorten the operation, increase its precision, lessen the risk to the patient from being kept under the anæsthetic long enough for *two* operations, one on the tibia and another on the spine, and at the same time reduce the shock of mallet on chisel? Pondering that problem, Dr. Albee remembered the toy sawmill of his boyhood in Alna, Maine.

How swiftly those saw-teeth had slid through those slices of turnip! Why not cut bone as fast as that? A little steel saw, an inch and a quarter in diameter, with the tiniest of teeth but driven at high speed by electricity—*that* would do the trick. Two little saws, mounted parallel on the same axis, so as to cut both edges of that strip of bone from the tibia at the same time. Easy enough to fit the saw mandrel with depth gauges, to determine in advance just how deep to cut into the bone and make it impossible to cut deeper.

If he could make a machine like that, light enough to be handled easily, and capable of meeting the rigid aseptic requirements of the operating-room, he believed he had the answer. You can't boil an electric motor without ruining it as a motor; but with the aid of an ingenious electrical concern Dr. Albee finally encased the motor in an outer jacket or sleeve which could be boiled, insulated the connection-cord so that it could also be boiled, and found that his "bone mill" could be rendered as germ-free as any other operating equipment.

That was the beginning of the marvelous new surgical technique, the results of which I have faintly suggested. The bone mill worked. It worked so much faster than the old-fashioned hand saw and chisels that the heat generated threatened to burn and so destroy the bone. Dr. Albee overcame that in the same manner that the machinist overcomes the heat generated when turning or cutting a piece of metal with a high-speed steel tool. The machinist keeps his work and tool immersed in a stream of oil or soda solution; a stream of normal salt solution, of the same mineral content as the blood, keeps the bone and the cutting tool of the Albee bone mill cool while the operation is going on and aids too in keeping the transplanted bone alive until it has finally been grafted to its new base.

The electric motor which ran the little saws at such high speed would run a drill, even a miniature turning lathe. Tools and chucks were devised for attachment to the bone mill, by means of which a piece of living bone could be turned into a peg or dowel, to fit precisely into a hole drilled by the same machine; and these dowels could even be screw-threaded, the holes tapped to engage the threads, where greater security was required!

Dr. Albee and I were looking over some X-ray photographs when he called my attention to one which showed clearly the outline of a long bone peg or dowel running through the neck of a thigh bone. The femur, or long bone of the upper leg, carries an arm at its upper end, projecting inward at a right angle or, in women, even a sharper angle, and terminating in a ball-shaped protuberance which fits into a socket in the pelvic bone, forming the hip joint. This projecting arm, connecting the long shaft of the thigh bone with the ball-head, is the neck of the femur.

"FRACTURE of the neck of the femur is one of the commonest of accidental injuries and formerly was one of the most difficult to cure," Dr. Albee said. "But today such a fracture, if there are no complications, offers no difficulties. This X-ray picture shows the hip of a young carpenter who fell from a scaffold on which he was working, fracturing the neck of the femur. With the aid of the X-ray it is easy to diagnose the precise nature of such an injury, and it is a comparatively simple matter of mathematics to bring the broken parts into juxtaposition again. The problem is how to hold them there. There is a tremendous muscular pull working to keep them apart. The ball which forms the head of the femur just doesn't want to stay in one place, after it has been broken off. And even though it can be held in place by external means, there is no certainty that it will ever reunite with the rest of the bone.

"If it does not unite it needs to be pinned, and pinned tightly, to the rest of the thigh bone. The pin must be made of something which will grow new bone. So in this case, as in many others of the same kind, I drilled a hole right through the center of the neck of the femur, passing through the shaft from the outside and going on into the head. Then I sawed a strip out of the patient's tibia and with the dowel-shaper attached to the bone mill, turned it into a peg which exactly fitted the hole.

"That is one of the beautiful thing about working with precision machinery like this—the ability to get a cabinet maker's fit. What we try to do in a cas like this is to have the peg fit the hole s precisely that it will not only hold the tw pieces of bone firmly in place, but wil leave no open spaces to cause trouble either by filling up with air or a blood clot The peg must *grow* to the bone in whic the hole has been drilled.

"In this case the bone peg from the le had become an actual part of the bon of the femur in a very few weeks. Th operation was done nearly five years ag and the carpenter is still working at h trade, climbing ladders as well as he di before he was hurt."

Another of Dr. Albee's noted cases w the manufacture of a complete new low jaw for a man who had been injured b the explosion of a Fourth-of-July canno All of the jawbone, except the joints, h been torn away, and with it had go

Digitized by Google Original from UNIVERSITY OF IOWA

much of the flesh of the chin and throat. Even though the victim might retain all of his mental faculties, and be able to keep alive on the liquid food administered through a tube, which was the only nourishment he could take, he could never appear in public without a mask. In this case the tibia could not furnish a large enough piece of bone, so Dr. Albee sawed out a thin, semicircular layer of bone from the patient's pelvis, just above the hip. The pelvic bones are made up of two layers. Taking off a piece of the outer layer did not materially weaken that part of the skeleton, and the thin piece taken off was counted upon to grow in thickness after transplantation, which it did.

Before making the bone-graft, Dr. Albee prepared the way for covering the new jaw with flesh. What remained of the soft tissues of the patient's chin was sewed to a pedicle graft of skin and underlying tissue obtained from his shoulder, which was held in place with plaster of Paris for a few weeks until circulation was established between the chin and graft. Two months later a piece of bone was sawed from the pelvis and mortised into the fragments of the jaw, just in front of the joints, and the fleshy flap from the shoulder was molded around the new jaw.

The transplanted bone grew to the bony parts to which it was grafted, and the transplanted flesh grew to the bone. A dental plate furnished new teeth and now the patient is able to eat, to talk, and to appear in public without having people turn their faces from him.

ONE of the most interesting jobs of human repairing accomplished by means of the bone mill was the creation of a new finger for a man who had lost all four fingers in the war. His thumb was uninjured, but useless, since he had nothing to which to oppose it. The first step in this operation was to cut a slit in the patient's abdominal skin, marking three sides of a quadrangle, and to sew the scarified stump of the crippled hand to the abdominal skin and subcutaneous tissue, bandaging it so that the parts could not be moved. In three weeks the hand had grown fast to the abdomen, with the blood circulation established between the two parts. Then the patient was again put on the operating table. The flap of skin and tissue was cut away from the abdomen, remaining attached to the hand. The tibia, that human lumber yard, was called upon for a strip of bone, which was screwed into a hole drilled in the bone at the base of the hand, where the missing forefinger had once been jointed. The flesh flap from the abdomen was molded around the new bone and sewed fast in place.

It was only a few months before the patient was using his new finger as if he had always had it. It had no joint, to be sure, but between it and the perfectly sound thumb he is able to pick up small objects, handle tools, button his clothes, and do almost as much as most people do with their forefingers. And there is no fingernail to require manicuring!

There is something magical, almost, in those little strips of bone which the tiny saw of the bone mill slices from the tibia. It is hard for one not familiar with Nature's wonderful ways to see how a piece

No more coaxing....

with these new ways of handling children

"MOTHERS are discovering that there are simple ways to make children *want* to do a particular thing. Then the thing almost does itself," says Gladys Huntington Bevans, famous authority on child training.

Just when you think you've solved the problem of bringing up these little scamps—out they burst in a new direction! Today there are new ways of handling children. Full of fun but scientific, too.

That matter of correct breakfast habits, for instance. Mothers know that nation-wide school tests show that the child who tackles his lessons after a *hot, cooked* cereal breakfast has a head start on the child who goes to school without it. That is why this rule hangs on the walls of over 70,000 school rooms:

"Every boy and girl needs a hot *cereal breakfast"*

Conscious of how important hot cereal is, parents make the often fatal mistake of saying, "Now you *must* eat your Cream of Wheat. It's good for you."

Then it's all off, nine cases out of ten. The youngster pushes his bowl aside and answers, "I don't want to eat Cream of Wheat," or "I don't want oatmeal," or whatever the cereal may be. That "must" has spoiled everything.

Child psychologists have realized that mothers need help. So an ingenious plan has been devised. When it is used, children delight their parents by wanting *hot, cooked* cereal every morning.

Considered ideal by child specialists

For 32 years specialists have recommended Cream of Wheat as an ideal *hot, cooked* cereal for growing children.

1. Because it is so rich in both mental and physical energy. It is all real food.
2. Because Cream of Wheat is astonishingly easy to digest. It contains none of the harsh, indigestible parts of the grain.
3. Because it is so easy to vary its creamy goodness by adding raisins, dates or prunes while cooking.

Safeguard your children by giving them Cream of Wheat regularly.

© 1929, C. of W. Co.

FREE—*mothers say this plan works wonders*

A club—called the H. C. B.—that children work out for themselves. A plan that arouses children's interest in a *hot, cooked* cereal breakfast and makes them want to eat it regularly.

Badges and a secret for members, gold stars and colored wall charts. All materials free, sent direct to your children, with a sample box of Cream of Wheat (if desired). Children cannot resist it! Eating Cream of Wheat becomes a fascinating game, then an enjoyable habit. Mail the coupon now—watch the club idea work.

CREAM OF WHEAT COMPANY DEPT. P-19
MINNEAPOLIS MINNESOTA

Gentlemen: Please send my child the free material for the H. C. B. Club as described above.

of bone only half or three quarters of an inch across and not any thicker can be made to grow into a full-sized thigh bone or upper arm bone. But Dr. Albee's own records and the surgical textbooks are full of instances in which precisely that thing has happened. It happens, with but few exceptions, when Nature is given the chance to make a new bone grow.

BOTH in war and peace, fractures, bone infections, or tumors necessitating the removal of several inches of the femur or of the humerus, the upper arm bone, are not uncommon. Sometimes the remaining sound portions, after the crushed or diseased part has been removed, may be brought together and made to grow together; but that is a difficult and uncertain operation, and when it succeeds the patient is left with a permanently shortened arm or leg. And if the gap is not filled, a dangling leg, useless because there is no continuous bony support, or a "flail" arm, equally useless, remains. Rather than be bothered with such useless appendages, thousands in the past have consented to amputation.

Now, when a man loses three or four inches of bone in his upper arm, as happened to many soldiers of all the warring nations in the recent conflict, a piece of his own tibia is inserted in place of the missing bone, mortised into the remaining ends of sound bone, pegged into place with dowels from the same tibia shaped in the bone mill, and Nature does the rest. Out of a strip of bone which is literally nothing but a strip taken from the surface of the leg bone, Nature manufactures a complete round bone, fills it with marrow, attaches the muscles to it, welds it to the sound bones at either end, and in a year or two even the X-ray cannot detect the substitution!

Even the bearing surfaces of such important joints as the shoulder and the hip can be replaced, when they have been entirely destroyed, by methods of Dr. Albee's devising. A woman pianist, her shoulder crushed in an automobile accident, had been assured by several surgeons, before she came to Dr. Albee, that she would never be able to play again. Some had even advised amputation of her right arm. Six inches of the upper end of the humerus, including the shoulder joint, had been lost, and the arm hung limp and dangling. In this case the bone drawn upon for replacement was not the tibia, but its companion, the fibula, the smaller bone of the lower leg. A piece of the patient's fibula, including the upper joint surface and head, was taken out and grafted to the remaining part of the humerus. The former knee joint became the new shoulder joint. Eleven months after the operation the patient had resumed her professional piano concert work!

One of the rare instances in which bone from another person has been successfully grafted was that of a little girl of five, who had lost the head of the thigh bone. At the same time, Dr. Albee had under his care an Italian who was to have a bone-graft operation for a fractured arm and a Polish woman with a deformity of the foot which necessitated taking out the astragalus, which is the large, round bone just in front of the heel. It occurred to the surgeon that this astragalus, with its hard, rounded surface, was just the thing with which to replace the ball-shaped head of the little girl's thigh bone; so when he took the bone-graft from the Italian's tibia he took a piece not only large enough for that patient's own requirement, but a surplus sufficient to fashion a dowel with which he pinned the bone from the woman's foot to the neck of the little girl's femur.

It is not to be wondered at that surgeons all over the world are constantly inviting the man who works wonders like that to come to their meetings and show them how to perform miracles. For much of the surgical reconstruction of wounded soldiers on both sides in the World War, Dr. Albee's teaching and his bone mill are responsible. In the spring of 1914 he went to Germany, to lecture at Berlin on bone surgery, and it is a matter of military medical history that his methods and his bone mill were used throughout the war by German army surgeons. Then, in 1916, he joined with Dr. Harvey Cushing, the great brain surgeon; Dr. George W. Crile, the authority on surgical shock, and Dr. Richard H. Harte, famous for his plastic operations on the face, on the staff of the American Hospital in Paris, where some of the most wonderful surgery ever performed was done by these American volunteers.

Several French soldiers were given new faces by Dr. Albee and the other American surgeons, and the fame of the Albee method and the bone mill, by means of which innumerable wounded men were restored to duty, who otherwise would never have been able to fight again, became so great that the French Government asked him to make a tour of their base and field hospitals, to instruct the French surgeons in the new surgical technique.

He spent six months as close to the firing lines as a noncombatant could get and, accompanied by Mrs. Albee, visited the great reconstruction hospitals of both France and Belgium. When they returned to America Dr. Albee brought with him the conviction that, if and when his own country entered the war, one of the first and most important needs would be the establishment of a reconstruction hospital where war cripples could be rehabilitated and taught to use their repaired and restored faculties.

It came about as he had foreseen. America did enter the war, and Fred Albee, with his European experience in war surgery, was one of the first to be called into consultation by the Surgeon-General of the Army.

SINCE the war this task of the rehabilitation of the injured and crippled has been one of Dr. Albee's chief enthusiasms. "I maintain that the surgeon's work is not complete until his patient has learned how to use the restored members to the limit of their possibilities," he said to me. "It is not enough to give the patient a foot or a finger or an arm which *looks* all right; he must be taught to use it. And that is not merely a matter of muscular manipulation. It is easy to overcome the muscular stiffness which follows any important bone operation. It is often extremely difficult to overcome the mental apathy to which injured men and women succumb if means are not adopted to lift them out of it. Fortunately, this fact is now recognized by surgeons all over the world.

Through the "Rehabilitation Review," which Dr. Albee edits, the work of these organizations throughout this country and in Europe is coördinated on an international scale.

His educational visit to Europe last summer was his third since the war. He was a representative of the United States Army Medical Corps at the Inter-Allied Rehabilitation Congress of 1919, where he read the opening papers at the sessions in Rome and Paris. In 1925 he was the Honorary President of the Fourth International Congress for Reconstruction Surgery at Amsterdam. But always, in spite of the multitudinous calls upon him, he finds time for his beloved Florida.

LONG before there was anything like a "boom" in Florida real estate, Dr. Albee foresaw the eventual demand for property there as a refuge from Northern winters. He went to Florida ten years ago, found an enchanting strip of land along the Gulf of Mexico, and began to buy it as fast as he could raise the money, until he owned thirty miles or more of water frontage which somebody, some day, would surely want to build and live upon. He set the example by building for himself a beautiful home, on a hundred-acre point surrounded on three sides by water, where he and his family spend every moment of time which he can spare, from November to May.

We sat there by the fountain in the *patio*, looking out across the bay to the setting sun, sinking into the Gulf o Mexico, Mrs. Albee, Ted, Shawn, and the Doctor. Ted is Fred H. Albee, Jr., nin years old and as full of energy as migh be expected of an American boy of nin with two such energetic parents. Fo Mrs. Albee herself is almost a match fo her energetic husband. She was Mis Louella May Berry of Williamspor Pennsylvania, before her marriage to D Albee, twenty years ago, and she has bee his constant companion, closest frien and, as he admits, his soundest advis ever since.

"We don't make enough use in Americ of our natural advantages for the trea ment of disease," Dr. Albee said. "He in Florida we are throwing away Nature greatest curative agent—sunshine. So am going ahead now with plans, whi are practically complete, for a great sar tarium right here at Venice, to whi medical men can send every kind of ca for which sunshine and winter warmth c possibly be beneficial.

"They have discovered in Switzerlan for example, that not only tuberculo of the lungs and joints is definitely cural by exposure to the sun, under care medical observation, but that rickets a other infantile diseases due to failure the physical mechanism to assimilate fo are also curable by the same means, wh in the treatment of nervous affectio heart troubles of many kinds, rheumatis and a long list of other ailments, the tinic rays of the sun are worth more th all the medicines in the physician's mamentarium."

Egbert the First

(*Continued from page 19*)

is," he said. "What do you make of that, Herndon?"

"It's an ultimatum, Ed," Herndon said, grinning, but not grinning much. "He means we can tell the reporter we're going to put our money into the factory, or he will tell him he is going to peddle suspenders or sail for Paris or some disgraceful thing."

"If you haven't any news to tell him, Edward," Celia said, "let me speak to him. 'Society Girl to Hawk Braces.' With photographs by the staff photographer."

At this point Norbert Blane glanced at his wife, and Emma gave him a meaning look.

"Pshaw! Why all the chatter?" he demanded. "We know that we're in a corner. We're dealing with a desperate man. I'll put a hundred thousand into the factory if that will shut him up."

"How about you, Herndon?" asked Ed Torrance. "I'll match Norbert's amount."

"All right; let's get the agony over," said Herndon. "I'm in," and Ed Torrance spoke into the 'phone.

"Sorry, old fellow, we haven't got anything sensational to give you," he said, as genially as he could. "There's nothing but that we three sons-in-law are putting money into the Spotts Suspender Factory. Just tell Mr. Spotts, will you?"

IN HIS office in the suspender factory Mr. Spotts listened while his chief clerk, who had for the moment impersonated a reporter of the 'Daily Tabloid,' reported what Ed Torrance had said.

"Very good, Brent," said Egbert I. "You will order the new webbing machines by telegraph. Telephone to the advertising agency, and have someone here at one o'clock prompt. And one moment, Brent; write this for me."

Mr. Spotts put his hands behind his back and walked up and down the office, thinking deeply.

"Send this by special messenger to my house," he commanded. "Are you ready?" He dictated his final manifesto:

Family! I will be home for dinner at six o'clock; love to all.

Taking the pen from Brent he dipped it deep in the ink and wrote his name—"E. Spotts."

IF GEORGE WASHINGTON were alive today would he be a general, a senator, a cabinet minister, or President? Well, the chances are, according to Eugene Ernst Prussing, who has been thirteen years digging up fresh material about Washington, that he would hold no one of these jobs. He might be a presidential candidate, but it would be for the presidency of some big industry or public utility, rather than of the United States of America. Next month, in "George Washington as a Business Man," the Father of Our Country will be revealed in a new and interesting light.

Her hair is oily

She should use

Packer's Pine Tar Shampoo

If you have the kind of hair that loses its fluffiness shortly after shampooing, use Packer's Pine Tar Shampoo. This preparation is tonic and mildly *astringent* . . . approved by dermatologists. It leaves the hair fluffy, with a natural sparkle. Use it every four or five days at first; later every week or ten days may be enough.

Her hair is dry

She should use

Packer's Olive Oil Shampoo

Like all Packer soaps, this shampoo is a vegetable oil soap . . . in addition, it contains a rich, soothing emollient (and nothing to dry the scalp). Dry scalps will never feel a stinging sensation when they use this special shampoo. Leaves your hair soft and silky to the touch—more manageable—and delicately perfumed.

He has dandruff

He should use

Packer's Tar Soap

. . . the soap that made pine tar famous for shampooing. Pine tar is antiseptic, healing, with properties valuable in the treatment of dandruff. Packer's Tar Soap is endorsed by dermatologists for skin and scalp. For noticeable dandruff use Packer's Tar Soap every few days until improvement begins.

Select the shampoo your hair needs

Acute cases of dryness, oiliness and dandruff need the care of a dermatologist—a doctor who is a skin specialist. But nearly all scalps *tend* to be dry or oily, and many are mildly affected with dandruff. Now—each type of scalp can have the special shampoo which meets its particular needs. The coupon below is for your convenience. The regular size of each shampoo is for sale at your drug or department store.

You Can Soon Tune In and Get Your Education

(*Continued from page 15*)

this piece goes like this:" And then the instructor turns around and plays very deliberately on the piano the dominating strain of the piece.

"Now, children," he concludes, "we are ready to hear the music. You must keep your ears open for the theme and watch for those oboes and those Panpipes—the piccolos."

Then he rises and lifts his baton, and the great orchestra proceeds to play that gloriously merry little march. The children are transported. They recognize at once the controlling strain which has been noted for them. Whenever those little Panpipes ring out shrilly, there is a brightening of eyes. When the deep guttural of the oboe rumbles in the piece, the children note it with the delight of understanding recognition. When it is all over they break out into uproarious applause. A thing of beauty has touched their souls and, because of the genius of that wonderful instructor, they have been able to perceive it, to catch it, and to receive its refining impress.

OF COURSE this sounds like a piece of fiction. There can be no little prairie schoolhouse with such an instructor and a symphony orchestra of sixty fine musicians. Can't there? Well, the fact is there is hardly a little schoolhouse anywhere in the land which cannot have this very thing. For this is the beginning of that great University of the Air of which I have spoken.

The instructor is Walter Damrosch, for so many years director of the New York Symphony Orchestra, and he reached that little schoolhouse through the radio. Last year Dr. Damrosch laid before the National Broadcasting Company his plan for giving this kind of musical instruction to American children. He had just rounded out a distinguished career as conductor of our greatest purely American orchestra and announced his retirement. But Dr. Damrosch had been learning something about the radio. His own broadcasts had brought to him such a flood of letters from everywhere that he came to see in this new invention the most potent force for advancing the musical culture of America.

"Give me three years," he said, "and I will make America the most musical country in the world."

He proposed to give three experimental concerts last year in order to see whether or not the schools were really interested. The results of those concerts were so amazing that the National Broadcasting Company, without waiting for anybody to finance the great plan, decided to make Dr. Damrosch its music councilor and to start him off this year with twenty-four concerts like the one I have described.

After the experimental concerts letters poured in on Dr. Damrosch. He must have gotten more than twenty-five thousand of them, and they came from colleges and from crossroads village schools. His concerts had converted thousands of schools and millions of children into one vast classroom in music. Down in Florida with the sun shining briskly; out in Minneapolis with a near blizzard piling a late snow against schoolroom doors; up in Portland, Maine, with a wind roaring in from the Atlantic; way down in San Antonio, Texas, under a tropical sun—all were part of a single class in music, with the instructor and his musicians in New York. And did the children love it? One little boy wrote from Iowa that he had always wanted to know what an oboe was and he was delighted to have heard it and recognized it in that little piece about the Entrance of the Little Fauns.

But here was and still is the rub: A boy of eleven wrote Dr. Damrosch that he was glad he had broken his leg not long before because it forced him to remain at home where he could hear the concert; whereas, had he been in school, he would have missed it *because the school had no radio set.*

That was true in the vast majority of schools. It is still true. In one city four thousand children were marched to the city hall, where there was a large auditorium and a fine set, because there was no school in the town with a radio receiver. In most of the cities where the children were able to hear, they would not have been able if public-spirited citizens—and in most cases merchants—had not supplied the sets for that day.

And yet they most certainly did want to hear. In New York City over two hundred schools with their two hundred thousand pupils sat in at this great music class. In Washington, D. C., when Dr. Damrosch broadcast his concert for high schools and colleges, sixteen thousand students listened in. Hardly had the last notes of the first concert faded out of the ether before the telegrams began pouring in from all over the country.

WHEN it is possible to have Walter Damrosch visit your school with his orchestra in a series of music lessons without paying one cent for it, can it be possible for a single school anywhere to miss it for the sake of saving the price of a good receiving set? So here is a chance for public-spirited residents all over the land. If you are looking for a way to spend a few dollars usefully—donate a good receiving set to your school. The youngsters—if they can't find any generous grown-ups to pay for them—can get up little entertainments and buy them. Go down to the Mayor in a body, or to the School Board, and tell them you want to join Dr. Damrosch's music classes. Here is one of the finest cultural things that has ever been done in any country. It is up to the school to see that it is not only a success but is made permanent.

It is well that this new university idea should begin with music. Radio has had a good start there. And already radio has done wonders for the musical taste of our people. When I first began announcing programs eighty per cent of the music broadcast was jazz. The demand was for jazz. Now seventy-five per cent of the requests are for the better music and seventy-five per cent of the leading programs give better music. Dr. Damrosch once mentioned to me his own observation of this: "Without any friction," he said, "the bad has given place to the better music, the better to the good, and in some cases the good to the best."

Has not everyone noticed the vogue of Victor Herbert's music? Herbert has been dead for some time. Some of his operas, like "Dreaming" and "Babes in Toyland," have been off the boards for many years. And yet scarcely a day passes without a rendition on some program of a Herbert number.

EVERYONE will remember how some years ago George Cohan had a trick of making songs around the sentiment in some old piece of music and weaving a few bars of the old song into his popular hit. People would be sure to recognize the old song. Now, however, several song hits have utilized the same trick, but instead of using some familiar folk song, they have used well-known operatic numbers. The other day we had a program of Paul Whiteman music played by his jazz orchestra. One of the numbers was called "Tchaikowskiana." A popular audience would not have recognized that name a few years before. The success of the piece depended largely on the audience's recognizing the original music of Tchaikowski, the famous Russian composer. And of course an audience now would be almost sure to do so. The most popular symphony number over the radio is Tchaikowski's Sixth Symphony.

Another amazing thing is the way in which fine old songs, disused for years, come back and have almost as much vogue as a popular hit.

In my own case, I was on a musica program for the Atwater Kent radio hou and had to select a group of several song to sing. Perhaps many of my readers d not know that all my time is not con sumed in broadcasting. Before I was radio announcer I was a concert singe And even yet I manage to get in abou two hundred concerts a year. In one these concerts I had sung an old favorite- "Drink to Me Only with Thine Eyes"- and it had been favorably received. So picked it out for my radio concert. Wel after that I began to hear it everywher Other singers used it. Orchestras playe it, and with the cumulative effect whi the radio produces, the first thing I kne the old song had something of the force a popular hit. Other singers have had t same experience. But always it is wi songs and music of high quality.

Now, so much for the start in t great university dream. What are to the next steps? Well, the next ste have already been taken. First of a the National Broadcasting Company h named an advisory council to work c this fine ideal. It is made up of m whose national reputations are a guar tee of the seriousness of the undertaki It comprises Mr. Owen D. Young, Cha man of the Board of the General Elect Company; Dr. Edwin A. Alderman, Pr dent of the University of Virginia; H Charles E. Hughes; Hon. Elihu Root; M Julius Rosenwald, head of Sears, Roeb

UNIVERSITY OF IOWA

& Co.; and others. A special committee headed by Dr. Alderman has worked on the plan and it is probable that little time will be lost in extending the idea to include other fields than music.

Of course, education does not end when people leave school. In fact, it is only then that the opportunity and the capacity for real culture begins. And so these gentleman have recognized the need for making this University of the Air useful to the adult listener-in. A beginning has been made in a scheme for political education by the man who has done much to develop this great dream—Mr. M. H. Aylesworth, President of the National Broadcasting Company. It has been worked out with the assistance of the League of Women Voters. It is, in fact, a good deal like a course of lyceum lectures on the structure and functions and problems of government and public affairs. It undertakes to take care of another one of these three C's—Citizenship. Lectures are given each week on such subjects as "How Congress Works," "How Party Platforms are Made," "How We Nominate Presidents," and so on. In connection with the lectures the American Library Association issues lists of books for the use of those who wish to follow the subjects further, and the League is promoting the formation of groups to meet and make the subjects topics of discussions.

WE HAVE had a number of experiments in radio teaching. The schools in Schenectady have done some work along this line. Over our own broadcasting station we have had a course in Phonetics by Dr. William Tilly of Columbia University. Professor Phillip Molt has given a course in French which was most successful. Beyond doubt, the radio will lend itself admirably to the teaching of languages. Dr. John B. Watson has given a course of lectures in Psychology. We have had other lectures on various subjects. But all this has been unorganized. Radio instruction will work out its own technique in the field of science and literature just as in the field of music. In the past it has not been possible to have a great musical authority give lectures in a school accompanied by a magnificent symphony orchestra. But the radio enables the school to do what American business is doing—adopt the benefits of mass communication.

So when we come to have courses in literature, it will be possible to have the greatest critics and scholars reach the remotest schools and to have the students hear the greatest living authors tell at first hand of their methods.

And now we are apparently about to have another ally in this great university idea. It is television. Think what this will do for students of science and art! Studies in science can be best carried on visually as well as orally. There will be nothing in the scientific world which the lecturer on a scientific subject will not be able to bring to his hearers, with this new invention feeding his teachings to both their eyes and ears. And as for art—well, just as Damrosch can send to the crossroads school the concert of a great orchestra, so the greatest works of art in the world can be delivered through television to the humblest schoolhouse.

✤ ✤ ✤ ✤ ✤

"Schoolhouses"

THREE homes, on different streets, in different sections of the same city. Stately Georgian, pleasant Colonial, and a low-roofed bungalow of no particular period. Each is just as much a schoolhouse as the majestic mass of stone on Main Street. Each has its own classroom—paneled library, comfortable living-room or diminutive parlor.

And tonight when dinner is done in these three homes, three men will start to study. The same earnestness of purpose impels them all. The same competent teachers and comprehensive texts come to them alike. They are students of the International Correspondence Schools.

In the large house up-town, lives the head of a manufacturing concern. He is a university graduate and a successful executive, but he has encountered specific business problems for which his general training provides no answer. Just now he is studying Personnel Management in an effort to increase the efficiency of his organization. Later on, he intends to take up Traffic Management to further round out his business education.

A dozen blocks away, in a somewhat smaller home, one of his own salesmen is engrossed in an Advertising course. Out on the road he has acquired a real respect for the power of the printed word. Now he aspires to be Advertising Manager.

On the other edge of the city, a young bookkeeper from the manufacturer's office is struggling to master the intricacies of Accounting. Both his bride and his bungalow are new and he wants and needs a better position with increased salary.

Three men. One purpose. *Three standards of living.* One standard of education —*"The Universal University."*

Men and women in all walks of life, in every business or profession, from every nation of the earth, know the breadth and worth of I. C. S. service. Leading colleges and universities use I. C. S. text-books in their classes. And you can master your present position—prepare for the one ahead—most easily and thoroughly through home-study of the right sort. The coupon below will bring you fuller information.

INTERNATIONAL CORRESPONDENCE SCHOOLS, Box 7453-F, Scranton, Penna.
"The Universal University"

Without cost or obligation, please send me a copy of your booklet, "Who Wins and Why," and full particulars about the subject *before* which I have marked X:

BUSINESS TRAINING COURSES

☐ Business Management
☐ Industrial Management
☐ Personnel Management
☐ Traffic Management
☐ Accounting and C. P. A. Coaching
☐ Cost Accounting
☐ Bookkeeping
☐ Secretarial Work
☐ Spanish ☐ French
☐ Salesmanship
☐ Advertising
☐ Business Correspondence
☐ Show Card and Sign Lettering
☐ Stenography and Typing
☐ English
☐ Civil Service
☐ Railway Mail Clerk
☐ Common School Subjects
☐ High School Subjects
☐ Illustrating ☐ Cartooning

TECHNICAL AND INDUSTRIAL COURSES

☐ Electrical Engineering
☐ Electric Lighting
☐ Mechanical Engineer
☐ Mechanical Draftsman
☐ Machine Shop Practice
☐ Railroad Positions
☐ Gas Engine Operating
☐ Civil Engineer
☐ Surveying and Mapping
☐ Plumbing and Heating
☐ Mining
☐ Steam Engineering
☐ Radio
☐ Architect
☐ Architects' Blueprints
☐ Contractor and Builder
☐ Architectural Draftsman
☐ Concrete Builder
☐ Structural Engineer
☐ Chemistry ☐ Pharmacy
☐ Automobile Work
☐ Airplane Engines
☐ Navigation ☐ Agriculture
☐ Mathematics

On the Road to Jericho's

(*Continued from page 37*)

to wait. This business is important. We got to be getting on up the creek."

The men looked down at the ground. Their hands brushed their hat brims in awkwardly courteous salutes and they rode away, with Jim in the lead. Persis stared after them.

They had kept her outside again. They had told her nothing. And Jim had deemed her tidings too trivial to mention.

It was when her thoughts touched upon his "important business" that fear stole upon her. In her mind she could still see the tenseness of the men's faces. What were they going to do?

Almost without realizing her intention, she found herself running toward the corral. *She* had purpose, now. She wanted to know the meaning of those flint-hard expressions and averted eyes. Well, she knew where she could find out easily enough: Mrs. Jenkins would know.

She saddled and, mounting, rode away, heedless of the open gates behind her.

Mrs. Jenkins must have seen Persis coming, for she walked part way down the path in front of her cabin door. Persis, looking very small and wide-eyed, thundered up on Natchie, her big roan horse, and stopped.

"I want to know what's going to happen," she said, her voice shaking. "I want to know why Jim and all those men are riding up Bear Creek. I want to know what they're going to do up there."

"Gracious sakes, child! Ain't you heard? They're goin' to hang Rob Jericho!"

Persis at first thought she had not actually heard the words; then they began to pound on her consciousness. She seemed to see the look on Jim's face, on the faces of the men who rode with him. Her mind leaped back to the night before—the lamplight on Rob's face—his wounded arm—the cricket chirping under the floor—the stars looking down—the wind in the leaves—Rob looking up at her. She felt a numbness stealing over her, trying to dull her senses. "They're going to hang Rob Jericho! Why? What's he done? Tell me, Mrs. Jenkins. Tell me quick!"

MRS. JENKINS rested the backs of her hands on her hips. "He held up the stage from Show Low about nine o'clock last evenin', where the trail crosses Bear Creek down below your place. He shot Link Haynes, the driver. Link hung onto the ribbons clear into Pine City, and he told some of the boys before he died that he'd shot the road agent once—seen him sway a little as he rode off."

"How'd they find out it was Rob Jericho? Did Link Haynes say it was him?"

"Why, no, he didn't. It was one of the boys found out. Shag Slade. He noticed Rob warn't to his cabin all last night, an' then, early this mornin', he seen the young rascal ride in with his arm all bandaged up."

"Oh, he did, did he?"

"Yes; an' this mornin', when they was lookin' at the ground near the holdup they found Jericho's gun layin' in the dirt. Guess they'll hang him all right."

"How did Slade happen to see him riding in this morning? What was he doing around Jericho's cabin?" Persis leaned toward Mrs. Jenkins, one hand on her knee, the other twisting in Natchie's red mane.

"Why," said Mrs. Jenkins, "Slade's land is right 'joining on Jericho's. You know they always been squabblin' over water rights, them two."

Persis thought she remembered some vague talk about it. Then, for just a moment, something seemed to snap inside of her. It was not her own controlled voice that cried sharply, "They shut me away from them! They wouldn't talk to me! Jim rode on without speaking to me! But they *won't* hang Rob Jericho!"

The two women regarded each other. A rain-freshened breeze blew down the valley, and carried to them the faint reports of rifle shots.

Mrs. Jenkins turned her head, listened for a moment, looked again at Persis. "They're shootin'," she said.

Persis had heard. She gripped the bridle reins. Natchie snorted and started at a dead run.

DIMLY Persis saw things from the corner of her eye as she rode—gray-green clumps of sage, distant peaks, a yellow rimrock, cattle staring at her. Once, when the wind came just right, she heard shots again. This time they were much nearer. She brought the quirt down sharply.

One moment she felt the stifling horror of failure; the next, a recklessness born of pounding hoofs and relentless purpose. She was in the thick of things. She was the only really important cog in the important business of averting a boy's death. She knew things that those men did not know. She could stop them all. She could show Jim—if only she could get there in time. . . .

A four-strand barbed-wire fence loomed ahead. She took a long chance and determined to jump Natchie. He was running at terrific speed. Now! Up! His front hoofs cleared—one of his hind hoofs caught. She felt him tip sideways, and twisted her body to balance. She heard the wire screech through the staple on the post. Then the strand snapped. Natchie stumbled, plunged headlong. She pitched over his head onto the soft ground. There was a little cut on her face, and the blood trickled down.

She got up and turned toward the fallen horse. Natchie struggled to rise, fell back, struggled again, and lay still. She came to him and saw that his leg was broken. She cried out once, stretching her hand toward him: "Natchie!"

She ran on. Down a steep draw, quickly up the other side, through a thin, clean growth of pines. She listened once. The shooting had stopped. Probably they were bringing Rob from his cabin now. Probably he had surrendered. Perhaps he had been killed.

Suddenly she came to the edge of a high plateau, where she could look down at Rob's homestead. She could see by the cottonwoods where the creek wound its way. She could see the cloud shadows chasing across the hills and bottom lands. Below her, not more than two hundred yards away, stood a little group of men.

She stumbled swiftly down the incline, crying out as she ran. She came right into the little circle they had formed, and stood panting, her breast heaving with the pain of fear and exhaustion. Her hair streamed down over her shoulders, and some blood had dried in a streak on her face. It showed dark against her whiteness.

She took a swift step toward her husband, who stood near Rob Jericho. Shag Slade and the others stood around her, staring.

"What do you think you're going to do!" she gasped. "You've got to tell me!"

The men looked up from under their hat brims at Jim Rogers. He frowned, and drew in his breath. "You ought not to have come here," he said. "This is a man's business. You'd better go away."

"Oh, I had better go away, had I? You think this is no place for a woman, do you? Well, I'll show you that it is! I'll prove that Rob Jericho didn't hold up the Show Low stage! I'll prove he didn't kill Link Haynes. He couldn't have, because he was with me at the time it was done!"

The lips of some of the men moved. Jim turned a little paler. Rob's eyes were looking straight at her in a strange, wide-open way. His lips were parted.

Persis turned suddenly, and walked close to Shag Slade, nearly touching him.

"You thought you were safe enough! You thought I wouldn't *dare* say Rob Jericho was with me last night, didn't you? You thought you had me in a trap! You spied on me, and thought you'd found out something about me! Well, you didn't! You thought you could pin the blame on him because I wouldn't dare tell he was with me! You knew *he* never would, on account of me. Well, he *was* with me, and I don't care who knows it. He was hurt, and I helped him."

ONE or two of the watchers moved nervously, shuffling their feet. Some one muttered. Slade looked all around him—looked at everyone for a fraction of a second. Then he looked behind him, moved backward a step.

Persis turned again to Jim, speaking in a low, husky voice: "Why wouldn't you listen to me this noon when you rode by? You might have saved all this. You didn't even ask me if Rob delivered the letters you sent by him. I suppose you thought, just because I was home instead of over to Jenkinses, that Rob had never come by with your message at all, that he'd been too busy robbing and killing people. Why didn't you *ask* me?"

In the silence, a spur chain tinkled, and a boot scraped on the ground. A man cleared his throat. "What about finding Jericho's gun near the holdup?" he said.

"Well, did you ask *him* about that?"

The man's eyes abruptly switched away.

"Why didn't you tell them, Rob?"

UNIVERSITY OF IOWA

said. "Why didn't you explain about the gun?"

Someone said, "I don't b'lieve we gave him much of a chance to explain anything!"

"I can tell you how my gun got to be there!" cried Rob. "I can tell you how I got shot." He strained at the ropes which pinioned his wrists. He tried to move to where he could see Slade.

There was a sudden commotion among the men. Slade leaped for the nearest horse. He swept up the reins dangling from the bridle, mounted, and drove home the spurs, racing toward the cover of a clump of cottonwoods and alders by the creek.

In a twinkling men had mounted and strung out in pursuit. Only Jim Rogers, Persis, and Rob Jericho remained, watching the riders approach the fringe of cottonwoods, then suddenly disappear among them.

"I reckon we must have made a mistake about you," said Jim. He didn't look at Rob.

"Well, yes, I guess you did, all right."

Persis heard them talking, and the words seemed to come from a long way off. Her knees began to weaken. Jim must have seen her trembling, she thought, because she could feel his arm tightening around her.

"She must be pretty near all in," Rob said. Then, after a little while, she heard him telling Jim about the gun; how Slade had met him as he was riding home from Pine City; how they had got to arguing about the water rights of their homesteads; how one thing had led to another; and how Slade had called him something, and shot him; how his gun had dropped in the trail, and how Slade had picked it up and made him ride on. Later, Slade must have planted the gun at the scene of the holdup.

PERSIS was riding Jim's horse on the way home, with Jim taking long strides beside her. She had told Jim about Natchie's broken leg, and Rob had gone off to find him. She had told Jim about everything—almost everything.

Jim had been silent, sadly silent, as he walked beside her. His hand tightened on the reins and he brought the horse to a stop. He looked up at her.

"I haven't been playing square with you," he said. "I haven't let you in on things. I seem to have left you alone on the outside of everything."

"You thought I was just a woman, didn't you?" she asked. "You thought a woman wasn't of much account."

"I guess that was it. Today has made me feel like 'just a man.' You were pretty wonderful. You—you *are* pretty wonderful. I guess I haven't thought about you enough. I guess I didn't know much about you until—until today."

Persis leaned down and kissed him. She seemed to have a sudden engrossing thought, which made her smile a little, as she looked down at a broad green patch of alfalfa.

"Jim," she said, "look there at that alfalfa. Don't you think it's beautiful—all deep green with millions of purple blossoms?"

Jim looked. "Say! It sure is—just beautiful!"

✣ ✣ ✣ ✣ ✣

WARM·WARM·WARM

Charles A. Banister lives at Indian Orchard, Mass. Winters there are nippy. His steam radiators warmed the house an hour or so after the fire was brightened—except the dining room. *That* radiator never *did* get hot.

But the minute the fire subsided the radiators began to cool. In an hour his house was chilly. Again and again each cold day his rooms were hot—then cold—then hot—then cold.

"Today", says Mr. Banister, "things are *different*. My heating contractor replaced the radiator air valves with Hoffman No. 2 Vacuum Valves. Now when the fire is banked the radiators stay hot for *three hours and more*, instead of 30 minutes. On zero days I get up steam only three times—morning, noon and evening. What is more, the radiators are piping hot *15 minutes* (instead of an hour) after drafts are opened. The dining room radiator comes through like the others. Already, I've saved many dollars worth of fuel."

This simple, inexpensive change to Hoffman No. 2 Valves automatically *vacuumizes* your steam heating system. They let air out of the system the first time steam rises—*then lock it out.*

With air shut out, steam unimpeded, rushes into every radiator. Steam formerly condensed and robbed of its heat by fighting air, is concentrated on the job of heating your home. Because air cannot get back into radiators to chase and dissipate the steam, radiators hold their heat for three hours and more after pressure fades.

Your local heating contractor can (in a few hours) perform this same miracle on your steam heating system. Phone him today. Ask him about Hoffman No. 2 Vacuum Valves.

FREE BOOKLET ***Tells All "How to Lock Out Air—the Heat Thief"*** tells with word and picture how and why Hoffman No. 2 Vacuum Valves can give new life to your steam heating system—save ⅓ your fuel. Your name and address on the margin of this page brings you the booklet and the name of a reliable nearby heating man. Hoffman Specialty Company, Inc., Dept. P-16, Waterbury, Connecticut.

HOFFMAN
No. 2 VACUUM VALVES

Do You Make these Mistakes in ENGLISH?

Sherwin Cody's remarkable invention has enabled more than 50,000 people to correct their mistakes in English. Only 15 minutes a day required to improve your speech and writing.

SHERWIN CODY

MANY persons say "Did you hear from him today?" They should say, "Have you heard from him today?" Some spell calendar "calender" or "calander." Still others say "between you and I" instead of "between you and me." It is astonishing how often "who" is used for "whom," and how frequently the simplest words are mispronounced. Few know whether to spell certain words with one or two "c's" or "m's" or "r's," or with "ie" or "ei." Most persons use only common words—colorless, flat, ordinary. Their speech and their letters are lifeless, monotonous, humdrum.

Every time you talk, every time you write, you show what you are. When you use the wrong word, when you mispronounce a word, when you punctuate incorrectly, when you use flat, ordinary words, you handicap yourself enormously. A striking command of English enables you to present your ideas clearly, forcefully, convincingly. If your language is incorrect it hurts you more than you will ever know, for people are too polite to tell you about your mistakes.

Wonderful New Invention

For many years Mr. Cody studied the problem of creating instinctive habits of using good English. After countless experiments he finally invented a simple method by which you can acquire a better command of the English language in only 15 minutes a day. Now you can stop making the mistakes which have been hurting you. Mr. Cody's students have secured more improvement in five weeks than previously had been obtained by other pupils in two years!

Learn by Habit—Not by Rules

Under old methods rules are memorized, but correct habits are not formed. Finally the rules themselves are forgotten. The new Sherwin Cody method provides for the formation of correct habits by calling to your attention constantly only the *mistakes you yourself make*—and then showing you the right way, without asking you to memorize any rules.

One of the wonderful things about Mr. Cody's course is the speed with which these habit-forming practice drills can be carried out. You can write the answers to fifty questions in 15 minutes and correct your work in 5 minutes more. The drudgery and work of copying have been ended by Mr. Cody! You concentrate always on your own mistakes until it becomes "second nature" to speak and write correctly.

FREE BOOK ON ENGLISH

A command of polished and effective English denotes education and culture. It wins friends and makes a favorable impression upon those with whom you come in contact. In business as well as in social life correct English gives you added advantages and better opportunities, while poor English handicaps you more than you now realize. And now, in only 15 minutes a day—in your own home—you can actually see yourself improve by using the 100% self-correcting method.

A new book explaining Mr. Cody's remarkable method is ready. If you are ever embarrassed by mistakes in grammar, spelling, punctuation, pronunciation, or if you can not instantly command the exact words with which to express your ideas, this new free book, "How to Speak and Write Masterly English," will prove a revelation to you. Send the coupon or a letter or postal card for it now. SHERWIN CODY SCHOOL OF ENGLISH, 91 Searle Building, Rochester, N. Y.

Why Are Jews Like That?

(*Continued from page 9*)

least a subconscious fear that they are being slighted because they stem from Jews. Always there lurks in them a trace of a suspicion that perhaps, after all, they do not "belong."

Nor can you blame them, nor the rest of the Jews, if they feel so suspicious and sensitive. After all, you've given us ample fuel for such emotions. For almost three thousand years now you have hunted and harassed us incessantly. Never have you let us alone, never have you allowed us to live in peace. And the reason? You yourselves have not known it. Oh, you've always been glib with good excuses, but you've never faced the real cause of your hostility. You've always resorted to gross or petty faultfinding; you've complained of this little thing in us, or that. At different times you've complained that we killed Christ, or worshipped an ass, or ate soup noisily, or drank Gentile blood at Passover (but very quietly!).

In Russia under the Czar it was said that all Jews were Socialists, and now under Stalin it is said they are all Capitalists. In Germany during the World War it was said that the Jews were secretly French spies, and in France that they were German spies. All sorts of silly legends and stupid rumors and petty prejudices and plausible lies have been used to justify the hostility toward us. But without exception these have been mere afterthoughts, lame rationalizations. The basic reason has always been simply that we Jews remain Jews and don't or won't become Gentiles. Our chief crime has always been that we persist in being different.

DIFFERENTNESS seems to be the most grievous fault conceivable, for invariably it arouses hostility. It seems to be innate in all living things to dislike the unlike. We see that in the lower animals fighting in jungle growths, and we see it also in the higher ones patrolling national frontiers. The instinct to preserve ourselves makes us feel a challenge in the very existence of anything foreign. Therefore, the native has always resented the alien; and the majority has always sought to crush the minority.

If the ancient Jews were preyed upon, for instance, by the Assyrians, it was not because those Jews talked loudly on hotel verandas or owned all the theaters, but simply because they were not Assyrians. All the other little Levantine nations—for example, the Philistines and Edomites and Phœnicians and Arameans—were also preyed upon by the Assyrians. Their experience differed from that of the Jews only in that after a while these other little nations tired of the struggle and let themselves be crushed out of existence; whereas the Jew stubbornly carried on.

Even after the Jews lost their land and ceased to be a nation, they continued to carry on. They carry on to this day. Why? No one can say for certain. Perhaps it is because once upon a time we Jews believed in ourselves.

Centuries ago we got the idea into our heads that we were the Chosen of God. That was not unique with us, for almost all other peoples, from the ancient Egyptians to the modern Californians, have at one time or another been obsessed with a similar idea. What alone was unique with my ancestors was that they interpreted their election to mean that they were destined not to fatten on God's favors but to suffer for His cause.

Centuries ago there arose in their midst certain strange men called prophets who told them they were chosen for a holy mission unto mankind. These prophets said to my fathers that they were the "suffering servants of the Lord," a folk graced with a supernal duty—to teach the nations of the earth to do justly, to love mercy, and to walk in the ways of peace. And my fathers believed it. Every other conceited nation imagined it had been chosen only to enjoy riches and power; and the moment it was robbed of those boons it ceased to be conceited—and died. But the ancient Jews, because they imagined the very opposite, thrived on disaster—and lived. The more they suffered, the stronger grew their belief in themselves; the closer they came to death, the nearer they thought themselves to eventual victory. And that was why they were able to survive: *they believed in themselves*.

OF COURSE, it would be absurd to maintain that the average Jew in America today persists as a Jew because he still consciously cherishes that old Messianic conviction. But it is indisputable true that in earlier days the average Jew did cherish it. His whole thought was steeped in the Holy Writ, and all his life was bound up with the prophecies. For centuries, therefore, he survived because he felt it his God-given duty to do so. And now we can't help surviving. We are traveling on momentum. The will to remain Jewish has become a habit with us—as has also the world's will to keep us Jewish. For it must be realized that our present persistence is not all of our own volition. You non-Jews contribute not little toward preserving us as a separate folk. Even in America you discriminate against us. You close certain residential districts against us, and certain clubs, colleges, even religious institutions. Well-founded rumor has it that at least one church on Fifth Avenue actually refuses to receive any more Semitic converts because its Jewish quota is filled!

However, whether the cause be in the Jew or in the Gentile, the result is the same: the Jew has to remain a Jew whether he wants to or no. And that does something to him. The mere ordeal of keeping alive in spite of the world's hostility gives him that distinctive mark about which we've been speaking. The fact that he is *considered* different compels him to *be* different.

Now, the first and most pervasive symptom of this manner is a certain hypersensitiveness. We Jews are quick to see a slight, so quick, indeed, that often we see one where none is intended. But this is not to be wondered at. We've been harassed for so long that now our flesh

Digitized by Google Original from UNIVERSITY OF IOWA

chronically raw, and we wince at the least gesture in our direction. We all admit this is a grievous fault in us, but we realize we are helpless to remedy it. For it is a fault not really of our own making. So long as we continue to be attacked or disdained, so long must we remain a chip-bearing people.

A few years ago many Jews in America showed signs of being in a fair way toward losing that sensitiveness. But then Mr. Ford began his anti-Semitic attacks, and the recovery was set back at least a generation. Mr. Ford has since apologized and his attacks in the Dearborn Independent have ceased; but the damage he did will not soon be remedied. I do not refer to the damage he did to many non-Jews in that he loaded their minds with ridiculous fears and filled their hearts with suspicion. I refer only to the greater damage he did to us Jews, in that he reopened in our flesh our half-healed wounds and reawakened in our souls our old terrors. Those who want to preserve the Jews at any price, have a right to be grateful to Mr. Ford. He did more for their cause, at least in America, than they were ever able to do for themselves. Any number of Jews who had drifted far out on the Gentile seas, suddenly doubled in their course when they heard the tinny thunderings from Fort Dearborn, and came racing back in a panic to the ghetto. The Jewish fraternal orders took on a new lease of life, and the synagogues were crowded as perhaps never before in the history of American Israel. Our most appropriate coat of arms during those years would have been a tin shield bearing two Jews rampant over a Ford sinister! . . .

IT IS because anti-Semitism continues to crop up even in this supposedly enlightened day that we Jews continue to be sensitive. And also because of anti-Semitism we exhibit our second most significant trait—intensity. We Jews are anything but an easy-going, leisurely folk. On the contrary, it is characteristic of us to attack life with a rush and a fury, for we realize that a Jew must push twice as hard to get half as far as a non-Jew. Therefore, whatever we attempt, be it the amassing of wealth or the measuring of stars, characteristically we attempt it impatiently. Of course, that does rob us of grace at times; it does sometimes make us a bit over-aggressive. But we simply are to be that way. In the first place, it is part of our heritage to work fast. For two thousand years we have been involuntary gypsies, forever driven from city to city and land to land. In the past if a Jew wanted to have his own house, he had to build it quickly, for he knew that otherwise he might never be able to live in it. He was in incessant danger of deportation, and he dared not take his time.

It has become part of what one might call our inherited wisdom to be in a hurry. Do not mean that aggressiveness is to be found in our chromosomes, and that we inherit it like the color of our eyes. I have doubt that a Jewish child reared from the moment of birth in a completely non-Jewish environment would, if never told its origin, never grow to be especially aggressive. But if reared in the home of own parents, the trait would have to grow out almost inevitably. Why? Simply because nervous haste is in the air in the Jewish home. From infancy we see parents and friends about us who act with a peculiar impulsiveness and react with a striking intensity, and from them we learn by imitation and emulation to do likewise.

And fortunate it is for us that we do learn it, for even today we still need to be excessively vigorous. The odds are still against us everywhere; not merely socially, but—and this is an infinitely graver matter—economically. Jewish stenographers are finding it increasingly difficult to obtain positions in New York, and Jewish professors are finding it almost impossible to receive their deserved promotion in most colleges in the land. Many banking establishments, not a few industrial corporations, many hospitals, innumerable law firms, exercise a quite obvious boycott against Jews. Of course, that boycott is rarely absolute, and an able Jew can almost always break his way in. But there's the rub: he has to be able, inordinately able.

It is our clear knowledge of this situation that makes us as eager and ambitious as we are. We realize that only by becoming indispensable can we make ourselves acceptable, and therefore we work with such prodigious vigor. Undoubtedly we overdo it at times, pushing and crowding with obnoxiously indecorous haste. But you must expect that. After all, if you won't be fair, how can we be decorous?

SENSITIVENESS and aggressiveness: these are the two major traits in us Jews—and both are patently a result of our age-old struggle to survive amid hostility. Similarly, all our minor traits have their origin in that struggle. Take our so-called clannishness, for example. In reality we are not at all inordinately clannish. What harmony there is within our own fold is definitely negative, not positive. We are at one only in our reactions, never our actions. We squabble among ourselves outrageously and show no more internal union than does the Democratic Party. Indeed, as someone has wittily put it, there is only one thing any two Jews can agree on, and that is how much a third ought to give to charity! Solely when we are attacked from without do we achieve any sort of solidarity within; for, like any other herd, we realize that when one of us is attacked, all of us are menaced.

That explains our intense family loyalty. It likewise explains our comparative extravagance in giving to charity. Finally, it explains our persistent tendency to live near each other and frequent the same gathering places. We feel more comfortable among ourselves. In a measure we react as did the pioneers when they pushed out across the prairies. They, too, clung together, and befriended each other, and huddled together behind stockades. For we feel, even as did they, that there is danger, or at least hostility, abroad in the land.

And again, only on the ground of the prejudice against us can one explain another of our secondary traits—our radicalism. There is no denying that we Jews as a group are especially prone to favor change in the present order. But what else can you expect? If the present order won't accept *us*, how can we accept *it?* In this respect we are like most other vigorous minorities. Take the poets and art-

Stranded Traveler Finds "Voice" In Favorite Blue Tin

Lonely pipe-smoker says he can now dream of rainbow's end

There's no time a man wants companionship more than when he's stranded in the rain far from friends. Then he longs for homely things—a good book, an easy-chair, or a pipeful of his favorite tobacco.

But from what Mr. Al Stanley says on this subject it's really not so very bad—especially if you happen to be lucky enough to have a certain familiar little blue tin of tobacco along with you.

Newton, Ill.
Feb. 22, 1928

Larus & Brother Co.
Richmond, Va.
Gentlemen:

The tobacco samples you sent me have been received, and they are great.

If you can picture in your mind the lonesomeness of a traveling man in a small town on a rainy night, not a friend in a hundred miles, nothing to do and no place to go:

That was the position I was in when your samples of Edgeworth came. It was like a voice from above when I opened the package and got the old pipe steaming.

I have smoked various brands of tobacco for the past fifteen years, but never in my life have I found a tobacco at any price that will equal Edgeworth. It does not bite the tongue, and a beautiful aroma follows. With the good old friend pipe and a can of Edgeworth you can dream of the rainbow's end.

Please count me in the future as an Edgeworth booster.

Very truly,
(signed) Al Stanley

That's the way Edgeworth seems to affect people. Letter-writers all over the world tell us it brings added smoke enjoyment to every pipe-loving friend it meets.

Some are even moved to poetry on the satisfaction Edgeworth brings; some, like Mr. Stanley, write high words of praise on its fragrant aroma. A kind of fellowship seems to exist among Edgeworth smokers—an informal brotherhood that enjoys a mutual bond in what they themselves term "the tobacco that's always the same."

Personal: Let us send you *free* helpings of Edgeworth so that you yourself may put it to the pipe test. If you like these trial pipe-loads, you'll like Edgeworth whenever you buy it, for as any member of the Edgeworth Club will tell you, its quality *never* changes.

Write your name and address to Larus & Brother Company, 3 S. 21st Street, Richmond, Va.

Both Edgeworth Ready-Rubbed and Edgeworth Plug Slice are sold in various sizes from small, pocket-size packages, to handsome humidors holding a pound, and also in several handy in-between sizes.

On your radio—tune in on WRVA, Richmond, Va.—the Edgeworth Station. Wave length 270 meters. Frequency 1110 kilocycles.—Special Feature: The "Edgeworth Club" Hour every Wednesday evening at nine o'clock, Eastern Standard Time.

Put Their CHRISTMAS MONEY into the BANK of LEARNING

WHAT'S best to do with the children's gift money is no longer a problem now. Today, over 250,000 mothers are putting it into the Bank of Learning; for they have found that in a set of Compton's Pictured Encyclopedia, that Christmas money will pay dividends daily for a lifetime.

There is no other way of accomplishing the same end. $3.50 of itself is insignificant. Put into the regular bank it would bring little interest. On the toy counter it wouldn't go far.

But as a first deposit on Compton's in the Bank of Learning it will start any child on the road to leadership in school and success in later life.

For Compton's is the first complete set of reference books in encyclopedic form that children have ever had. And so interestingly written that no mother has ever had to urge her children to "look it up in Compton's."

If you want to help your children to get ahead in school and in later life, mail this coupon now. You will be doing the greatest thing for your children you have ever done. You will be finding out how to put part of their Christmas money into the Bank of Learning, and that is the one bank in which they can never be overdrawn.

ists, for example. Predominantly they are radical, and for precisely the same reason. They find themselves "outsiders" in this world of Philistinism; they are rejected and neglected and allowed to starve. Therefore they are opposed to this world as it is, and want to make it over into something they think better. The Jew is remarkably like the artist. He too suffers the recurrent fate of being stoned while alive and enthroned when dead. It is no accident that in the eyes of the world the only good Jew—I am thinking, of course, of Jesus of Nazareth—is a dead Jew. . . .

Yes, there is ample reason why we Jews are rarely to be found among the conservatives. It is because the world we see around us is not all worthy to be conserved. It is still narrow and fearful and vile with prejudice; and not until it becomes clean of these ills can we be expected to think it worthy.

FINALLY, there is that most advertised of our traits, our intelligence (or, if you will, our shrewdness)—and that, too, can be explained by the life we have led. It is no wonder if we Jews seem to exhibit inordinately sharp wits, for, after all, during almost two thousand years we have had naught else to live by save wits. While all the other peoples on earth were toughening their muscles to fight their way out of danger, we Jews had to be developing our brains so that we could talk our way out of it. For we were always and everywhere too few in numbers, and too scattered, ever to be able to protect ourselves by force. No, we always had to rely on our brain for our salvation, never our brawn. As a result, intelligence became one of the primal virtues in our code of values, and the only artistocracy we cared for was that of the mind. While you folk hurrahed for your warriors, we Jews made heroes of our learned men. Love of learning became part of our tradition, and going to school —even centuries ago, I mean—seemed as natural and proper to us as going to war was to you.

There was another element, aside from our lack of numbers, which forced us to develop brain rather than brawn. We Jews for centuries were utterly unable to live on the soil. Once we were driven from our own homeland in the year 70 A. D., we were left with naught save trading as our means of making a livelihood. In most of the countries to which we fled we were not permitted to own land and become farmers. And even in those places where no such restrictions were put upon us, we felt in too great jeopardy to dare tie ourselves up to the soil. For centuries we were never sure even from day to day whether our hosts might not turn on us and deport us bag and baggage. Therefore, we always had to have our possessions in an easily portable form. Fields and barns were not easy to roll up and carry off in a sack on one's back; consequently, even in those few lands where we were not forbidden to own real property, we preferred to lay up our treasures in other forms.

Nor was it feasible even for the poor among us to stay on the soil, for as farm laborers they found themselves too remote from each other, and too exposed to the world, for safety. Poor or rich, we preferred to live in the cities, where our existence, even though less healthy, was at least less insecure.

And this protracted separation from the soil helped not a little to develop our mentalities. In the cities we were forced to live by trading, for practically all the industries were controlled by guilds which discriminated severely against Jews. We had to eke out an existence in the cracks between the boulders in the social structure; we had to be the middle-men. It was a hazardous profession, and to a high degree demeaning; but we were determined to keep alive and that was the one way we could do it. So we became the hucksters of civilization. We bought and sold in all the market places of Europe, settling down and opening shops, or else peddling with packs on our backs. Chiefly we dealt in objects which were easily portable and not fixed in value—as jewelry and textiles—for these we found most profitable. And that is why still to this day so many Jews deal in diamonds or have clothing stores.

Or else we took to money-lending which for centuries was forbidden to Christians by the church. We became fly-by-night financiers for the petty princelings of Europe, and sometimes even for the kings and the popes; for though pious Christians considered money-lending a sin, they were right glad to have the Jew around to commit it. And that is why still to this day so many Jews go for pawnbroking or banking. We're old hands at the game of finance; we served our apprenticeship in it when most other folks were still trading in kind.

BUT it must not be imagined that Jews are good for nothing in the world but trading. Given the opportunity, we can and will go down to the soil and labor in it as tenaciously as any other people. The best proof of this is the amazing degree to which Jews have taken to farming within the last generation. In Palestine there are now thousands of Zionists tilling fields and planting vineyards in what was arid wilderness until they came there. Enormous tracts of uncultivated land in Russia have been taken up and colonized by Jews within the last decade. Or, to come closer home, in New England you will find many hundreds of Jewish farmers who have bought up old homesteads, abandoned as useless, and have made them flourish magnificently. It is absurd to think we are congenitally and incorrigibly averse to the physical. Give us the chance to live normal, vigorous, physical lives and we can produce farmers and fighters, football players and even circus strong men.

If we Jews are still prevalently city living in cities and subsisting by trading is only because we haven't yet been able to outgrow our past. Everything about us, our vices as well as our virtues, our sensitiveness, aggressiveness, clannishness, and commercialism, as well as our progressiveness, sobriety, decency, intelligence—all these traits are the results of the life we have been made to lead. So if you, like my friend, ask: "Why are Jews like that?" I can only answer what I answered him: "Because we can't help it!"

Unseen Eyes Protect You When You Travel

(*Continued from page 59*)

A speeding automobile lurched into ght, and the deputy waved his lantern to op. On came the car, increasing its eed. As the deputy jumped to keep m being run down, the sheriff let go th both barrels of his gun, aiming at the es. The car swerved, crashed, and three en piled out, leaving a dazed and frighted taxi-driver behind. The three men inged into a corn field and were lost, nporarily. But about them, during the xt hour or two, formed an ever-narwing circle of grim men.

On the New Orleans train next afteron passengers who bought newspapers d what was to them an astonishing ry. The three bandits of the night be e had been captured in a barn, the ssing diamonds recovered, and the men l confessed. They *had* entered the statem, just as the merchants had said, and boldly they had left it. No attempt had en made to evade the eyes of passengers porter, because furtiveness would have used instant suspicion. They had exted to be seen!

"What made you discount the evidence the five people?" I asked Chief Keliher.

"The thorough way in which the merents had been bound," he explained. hey could not possibly have tied themves up in that fashion."

"But didn't it seem equally impossible," rgued, "for the story of the merchants be true?"

"In the light of what the onlookers in car said, yes; in the light of the eslished fact of the wire bonds, no," wered the chief. "The case simply ves, what has been proved time and e again, that actually we see little of at is happening around us.

Here were three men who, as far as ir actions outside the stateroom were cerned, did nothing unusual. Had they n noisy, or whispering, or sneaking, unbtedly they would have drawn attenl. As it was, they were veiled behind ordinary."

"IM" KELIHER was reared and trained in the Old West during its l and woolly days. His boyhood was t in North Platte, when that Nebraska of today was a sprawling frontier vil. After reading law for two years, and ing in an abstract and land office for ral more, he was elected sheriff of oln County and charged with ridding horse thieves and cattle rustlers. He the job for eight years, and how well andled it is attested by what followed.

e Union Pacific, driving its virgin westward to the coast through banfested country that was in sections better than desert, persuaded Keliio become its special agent at Chey.

For months the railroad had been sed by robberies, which apparently nowhere and ended nowhere. Valuaaterials given into its care for ship simply vanished.

thin a few months Keliher had not uncovered the robber band but had n it up. It had its center right within ilroad's own organization. Four of the leaders went to the penitentiary, ten of them paid fines and spent time in the county jail, and twenty-four trainmen lost their jobs. That ended the robberies.

But the Union Pacific had a still tougher job on its hands. Its Wyoming Division, through Wilcox, Medicine Bow, Rawlins, Tipton, Wilkins, and Green River, penetrated one of the worst bandit districts in the world. Here were Jackson's Hole and the infamous "Hole in the Wall," bloody rendezvous of cutthroats, highwaymen, cattle rustlers, and killers.

The valley known as the "Hole in the Wall" was a natural fortification. Desperadoes from all parts of the West had congregated here and in the wild, rough mountain country about, defiant of all law. For their supplies and diversion, they robbed stages, dynamited banks, and held up railroad trains for a hundred and more miles around. When pursued, they took to their retreats in the mountains, barricaded themselves, and shot to kill.

INTO this country in 1902 with orders to "stop train robberies," the Union Pacific sent Keliher. "Take what men you want and what equipment you want," his chief instructed him.

Immediately, Keliher formed a posse of ten rangers, a posse still remembered in the West. Three of its members—Joe La Fors, Pat Lawson, and Tom Meggeson—were probably the best trailers in the United States at that day. The others—Jeff Carr, High Davis, Si Funk, Bill McCarty, Tom Cooper, Tipton Bill and Zeb Camp—were dead shots with either revolver or rifle. For that matter, every man of the posse was a dead shot, tried under fire.

The posse was equipped with fast, tough horses. A special car was built for their transportation from one part of the railroad to another, and this car under emergency call was given right-of-way over any train on the road. Headquarters were established at Cheyenne. Within thirty minutes after a hold-up, Keliher had it so arranged that his posse could be under way to any point. The men slept and ate in the car, and their mounts were stabled in it when on the road. Additionally, on every Union Pacific passenger train was placed an armed guard.

The posse and the guards and the coming of the telephone to those parts ended train robbing in Wyoming, without the death of a man or the firing of a single shot! Keliher and the men he had assembled had reputations. No outlaw wanted that crew on his trail. The result was that the lawless elements promptly took to their heels, and kept to them. There wasn't another train robbery on that part of the Union Pacific for twenty years!

In 1910, after eight years of service with the "U. P.," the Illinois Central called Keliher to Chicago to head its special services. There are three hundred men in this branch of the railroad organization. Last year, the Illinois Central did a business in freight amounting to $145,000,000. The total of freight claims charged to robbery was less than $19,000.

Keliher was president of the old Railway Special Agents and Police Association, and is the first vice president of the Protective Section of the American Railway Association. This and his record give you his measure as a director and leader.

Almost six feet two inches in height, of more than two hundred pounds heft, Keliher is proportioned like an athlete in training, though he is fifty-seven years old.

I found him in a big, plain, old-fashioned office in the big old-fashioned terminal of the Illinois Central, in Chicago. I wanted a peep behind the scenes into this backstage of railroading, which we, of the public, seldom see.

"The train robber with his mask, his pony, and pair of 'six-guns' is gone," Mr. Keliher reminded me. "Likewise, the old-time gambler of checked waistcoat and diamond pin is no more. In their places, we have the gambler who carries golf sticks and looks like a millionaire on vacation, and the thief who plies his trade like an organized business. In order to win, the special agent of today must usually pit brains against brains."

CHIEF KELIHER first told me of the diamond robbery about which I have already told you. From diamonds he jumped to sugar, and to one of the most cleverly maneuvered robberies in recent years:

During the war, when sugar was under restriction to conserve its supply, a box car loaded with eight hundred sacks of it was shipped from Chicago to Denver. The car, one of a long train, arrived in Denver three days later with its seals intact, its waybills in perfect order, and with every outward sign that the sugar was inside. Yet when opened the car was empty!

"Those fellows at Chicago have simply made a mistake," said Denver. "Somebody has billed us with an empty."

"It was loaded," returned Chicago. "The records here are exact. Car numbers and everything agree."

A special agent at Denver made a second investigation. It only confirmed Denver's original contention of an error, for on the floor of the empty car was a tiny heap of snow. This snow had drifted into the car through a knothole in the roof, and, while there had been snow in Chicago there had been none in Denver. Manifestly, the car must have been empty at the time of the snow; the cold weather had kept this bit of evidence intact.

Again, in Chicago, Chief Keliher checked up. The official records of the Weather Bureau showed that the snowfall had indeed been limited to the Chicago area. The snow had begun to fall at about nine o'clock and had ceased falling two hours later on the night of the departure of the Denver freight from the Chicago yards. Yet, as positively, the official records of the railroad showed the car had been loaded with eight hundred sacks of sugar. The loading had taken place prior to the snowfall.

Here were two sets of facts, one of which seemed to contradict the other. And the two, if accepted, as they had to be, in turn could only indicate that a robbery almost impossible to execute had occurred, *between* the time of loading and the termination of the snowfall. During this period, the car had been under the constant surveillance of yard workers. Surrounded by the tracks of the yards, it had been beyond the approach of automobile trucks—and only by truck could such a quantity of sugar have been moved.

"You can't get away from a positive fact," is a saying of Chief Keliher. The sugar had been stolen; it must have been hauled away in trucks. He reasoned, therefore, that, since the trucks had been unable to get to the sugar car, the sugar car had been taken to the trucks. The accident of the snow, and the clue it had left on the car floor, set the approximate time of the robbery. He began to question employees who had been on duty at about that time, and not only solved the mystery but broke up at its outset a plot for wholesale robbery.

Taking advantage of a man shortage, due to the war, a number of picked thieves had been inserted into the railroad organization. These men were trained to their jobs as railroad workers, and so, as employees, did not attract suspicion. It was their duty to "spot" cars which contained valuable freight that could easily be disposed of by the band leaders without suspicion. For example, sugar has no identifying mark, and at the time was in acute demand.

One of these "inside" thieves had spotted the sugar car, and, at an opportune moment, had removed from the car its carding and substituted for it an "empty" card designation. One of the yard crews, coming upon the "empty," had shifted it back to the loading platform, where it supposedly belonged. And at the loading platform the trucks of the thieves were waiting. The sacks of sugar were unloaded in the night, after which the original card was replaced, and the car again sealed with the manipulated seals. Later, cursing somebody's oversight, a shifting crew had discovered this car billed for Denver, and had moved it to its position in the Denver train.

"HAD it not been for the knothole in the car roof which gave us our starting clue," said Chief Keliher, "those thieves might have robbed us for months without detection. Under their system, we had no means of detecting the robbery until the car, days later, had reached its destination. And there we had no clue to tell where the robbery had taken place—it might have occurred anywhere along the line where the freight had stopped, or where the car had been sidetracked."

The forged waybill and bill of lading were for a time, the Chief told me, worked successfully by the modern robber. But a new method of waybilling freight stopped this.

However, the train thief is not the only problem of the railroad special agent. The public when it travels has a way of forgetting caution, a fact which makes possible the thriving business of the card sharp and the pickpocket.

"When it comes to protecting the traveler on passenger trains, the card sharp is our biggest problem," Keliher continued. "If you look around when you enter a Pullman car one of the first things you will see will be a warning placard picturing five aces in a hand. The placard will warn you not to play cards with strangers.

"Nowadays, your card sharp is usually a stateroom traveler. He is well-groomed, tips liberally, is just friendly enough to get acquainted with the more substantial of his fellow passengers, and looks the part of a substantial citizen himself. You will find him riding the crack trains to Florida for the winter season. From Florida he will cut across to New Orleans; then from New Orleans to Chicago, and from Chicago to the Pacific Coast. He doesn't bother with the 'small fry'; if he can't play for big stakes he doesn't play. It takes him from two to six months to make a round of the country, and he keeps an eye on the newspapers for news of important travelers who might be going his way. Seldom does he travel alone, though his partner or partners are never evident as such.

"IT IS this type of stranger against whom the placard in the car warns you. I doubt if there is a traveler who has not seen it; but there are hundreds and thousands who have not heeded it, invariably to their sorrow. One of these latter, a well-to-do Western manufacturer, I recall as a typical example. He was going to Florida for the winter, and in the course of a smoking-car conversation mentioned he had just built a house there. The man next to him, it happened, was also planning to build in Florida. Later, in his stateroom, he exhibited to the business man his plans in blueprint. For an hour or more they discussed building, the business man being liberal with his advice, based of experience. Before reaching Florida he had contributed more than fifteen hundred dollars toward his new friend's 'home' through the medium of a 'friendly game.'

"'The fellow looked and talked like some rich Englishman,' the business man complained afterward. 'Why, the house he was going to build was a mansion! He had had one of the best architects in Chicago draw up the plans.'

"We recognized the gambler from his description, and said as much. At this the business man was indignant. 'Why don't you put him in jail?' he stormed. 'It's an outrage, letting him loose on the trains to swindle innocent passengers.'

"'All you need do,' we said, 'is to swear out a warrant. The man will be arrested. Your testimony in court will convict him.'

"'Me testify in court?' he exclaimed. 'Not on your life! The whole town would laugh at me when I got home, and I never hear the end of it.'

"That is why we have card sharps on trains. Their victims would rather be quiet about their losses than expose themselves to the ridicule of their friends. They don't want to be called 'rubes' and 'sports.'"

There is one other story Chief Keliher told me, which I've saved for the last, too, deals in human nature. It goes back twenty-odd years to the days when Keliher and his rangers were patrolling the Wyoming bandit lands. The scene was at Williams, a lonely pumping station that day, six miles west of Green River.

One night, late, a telegram came to Keliher and his men from their headquarters in Cheyenne. Outlaws had held up the pumping station at Williams, shot the pumper through the arm, and had set the switch, with the view to stopping an east-bound express, which carried gold. The pumper, left for dead by the outlaws, had managed to crawl to the telephone and warn Green River in time to have

Digitized by Google Original from UNIVERSITY OF IOWA

express there. His brave act had frustrated the outlaws, who had taken to the hills.

So read the telegram. By daybreak Keliher and his men were at Williams. The wounded pumper, weak from loss of blood and the agony of his wound, had already been taken to the hospital. Keliher's job was to pick up the outlaw trail and follow it to the end, if it took a year.

His trailers went out, one three miles to the north, one three miles to the south. Then, moving in opposite directions, the two trailers began to circle the pumping station in ever-lessening circles toward the center. At the pumping station they met.

"It's darned funny, Chief," they reported, "but we find no trail."

"Try it again," directed Keliher.

Again the trailers went out, again they circled, again they reported a fruitless search.

"If outlaws were here, they must have left tracks," said Keliher. "Look a third time."

And a third time they looked. There wasn't a hoof print, nor a foot print, nor an overturned stone, nor a crushed blade of grass. "No trail, Chief," they reported. "We're certain of it."

THERE was the broken switch. There were blood stains in the dirt, and a trail of blood led to the telephone. Otherwise, nothing. No house was within miles, so there had been no witness. Nobody had heard the shot. "That's the trouble with this place," said Keliher softly; "it's nothing. There's nothing here but loneliness and space, space and loneliness. A man could live here a lifetime and be unknown; the day after he was dead he'd be forgotten." He sent his rangers back to Cheyenne. Himself, he went to the hospital in Green River.

The pumper was in bed, white from loss of blood. No question about his wound, said the doctor; the bullet of a .44-caliber revolver had gone crashing through his forearm; it was a wonder the arm hadn't been torn off. Yet the pumper seemed happy.

Keliher sat down by the bed. "If a man were lonely enough, and forgotten enough, he'd be likely to do 'most anything to get folks to pay attention to him, wouldn't he?" he asked the pumper.

The pumper's happiness left his eyes. He looked at Keliher dumbly, miserably. "If, day after day, night after night, he was away from every soul but himself," said Keliher, "and about him was one of the most desolate countries God had made—a country filled with nothing—he might even shoot himself to get attention, mightn't he?"

"I didn't!" cried the pumper; but he saw that Keliher knew—more, that he understood. He saw compassion in the Chief's eyes that, officially, should not have been there.

"I did shoot myself," he confessed, "and I made up the story. Nobody had ever heard of me. I was out there, alone, plumb forgotten. I *had* to do somethin'. And I'm not sorry; I think I'd do it again if I had to go back."

"That," said Chief Keliher to me, "was my strangest case. And," he added, "it was my hardest."

Thousands of Happy Youngsters Have Lived in His Air Castles

(*Continued from page 53*)

"Since then this plan in its entirety has been worked out at Good Will. This isn't an orphan asylum, a reform school, or a boarding school. It is a home for boys and girls between the ages of nine and fourteen who need a helping hand and who remain and graduate from the high school if they wish. Provision for girls was made at the insistence of our friends, and we now have seventy-five girls living in five cottages which are about three quarters of a mile distant from the boys' cottages. Each cottage houses fifteen, which was the size of an old-fashioned New England family. We could double the number of our cottages and still be unable to accept all of the boys and girls who wish to live here.

"BUT let's get back. I've told you of how, in Bangor, I took the needy boy into my home and how, at the end of a year, I had a surplus of two hundred dollars. Then I publicly announced my plan, but it was two years more before the Fund was large enough to permit me to make a real start with the home."

"It took you two years to raise enough money?"

"It was two years before enough additional money had come in," corrected Mr. Hinckley. "I didn't beg or campaign for money. I simply told folks of my plan. My first check came to me on New Year's morning from Mrs. S. L. Wing, of Bangor. It was for fifty dollars and with it came this message: 'Go ahead. He will bring it to pass.'

"One Sunday in spring I preached in Dover, Maine. At the church, Mrs. Adah Ober approached me and told me that she had heard of my proposed home, how I don't know. She said: 'I've a class of five boys in the Sunday school. Each of the boys every Sunday brings a penny for the collection. If I ask them, I believe they'd be glad to bring an extra penny every Sunday to go toward the boys' home you have in mind.

"Then, as we talked over her Sunday-school work, I suggested that she organize her class of boys into some kind of club, with a president, a secretary, and a treasurer. As a boy in Guilford I had belonged to such an organized Sunday-school class, called the 'Truth Lovers.'

"'What shall I call our club?' Mrs. Ober asked.

"'The name doesn't matter,' I said. 'However, the spirit of the gospel is expressed in the song of the herald angels—"Peace on earth, good will to men"—why not call it a "Good Will Club"?'

"Some weeks later I heard from Mrs. Ober that the class had been organized and that its name was the Mayflower Good Will Club. It wasn't long until I was told of the organization of the Mutual Good Will Club, in Bangor; then of the Central, the Columbia, and of others in Bangor, Portland, Augusta, and elsewhere in the state. There were never very many of these clubs, but each Sunday their members brought a penny apiece, or two pennies, or at most a nickel, to be given toward my home for other boys. And they did more through their example.

In the spring of 1889, my Boys' Fund had grown to $2,000. A farm known as the Chase Farm was for sale near the town of Fairfield and the price asked was exactly $2,000. The farm had one hundred and twenty-five acres; it was on the west bank of the Kennebec River and crossed by a main highway and the Maine Central Railroad. It had some woods on it and a good farmhouse, and I decided to buy.

"'You say you're going to make this a house for poor boys?' inquired the owner. 'Then the price to you is $1,950.'

"A neighbor gave me a cow; with the fifty dollars I bought a horse, and then I moved in with all that I possessed. And I named the place Good Will Farm in honor of the boys in the Good Will Clubs, and the farmhouse I called Good Will Cottage.

"On the first day of September, 1889, the cottage was formally opened, and three boys took up their abode along with my own family. The cottage had been occupied during the summer by fifteen children sent out from Boston, that they might have a vacation in the country, and three of the boys had asked to stay.

"We had no money on this opening day, not money enough to support the three boys for a week, but I knew that money would be provided from somewhere. Furthermore, at the dedicatory services at the cottage, I announced that one year from that day we would have another dedication at the farm, of what I didn't know, but that I hoped it would be another cottage.

"Each year for a number of years on the first day of September I have made a similar announcement," Mr. Hinckley added. "And each year we have had a new building to dedicate, and one year we had two, which makes a total of forty buildings in thirty-nine years. The single exception to this was Christian Endeavor Cottage, built through funds raised by the Christian Endeavor Societies of Maine. By request, this cottage was dedicated on the last day of August."

"DO I understand you to mean," I interrupted, "that without any funds at hand, and without assurance of any kind, you yearly announced that an addition would be made to Good Will during the twelve months to follow?"

"Exactly," said Mr. Hinckley. "Our only assurance has been the promise in the fifth verse of the Thirty-seventh Psalm. During that first year, and in many other years, we went week after week without money enough for the following week. Not one time have we ever wanted; not one year have we failed to grow.

"Our first addition was a modest one. An acre of land, on which was a small house and stable, the latter only big enough to accommodate a single horse and carriage, adjoined our land on the north. Our surplus near the end of the year, two hundred and fifty dollars, was just enough to buy it. The house wasn't large enough for a family of fifteen boys and a matron, but it could be made to accommodate a matron and seven boys. Also, by adding a stairway to the stable, its hay loft could be made into a little schoolroom for week days and be used for church services on Sundays. This was our first church.

"SO, IT came to pass that on September 1, 1890, we dedicated this little farmhouse and called it Sunshine Cottage; and again I announced that a similar dedication would be held on September 1st the following year. And that year, from all parts of the country, donations came in to us, in sums ranging from five cents to two hundred and fifty dollars. We built Golden Rule Cottage, which was dedicated on the anniversary of the others.

"During the third year, unexpectedly, we purchased an entire farm which adjoined Good Will on the south. There was a one-story house on this farm and a few other old buildings which had to be removed. The house itself was badly in need of repairs, for which we hadn't funds. But early in the summer we received a legacy, our first, from Mrs. Susan D. Copeland, of Dexter, Maine. It proved just enough to remodel the house into a two-story structure, and so Prospect Cottage was dedicated that September.

"By now, in Maine and elsewhere, Good Will was attracting some attention. The 'fool experiment of a crazy preacher' was working out. In nearby towns folks spoke well of us and our boys, who were growing in number. In November of that year C. M. Bailey, of Winthrop Center, Maine, sent for me and in the presence of his family commissioned me to build a cottage at his expense. Two months later, Hiram H Fogg, of Bangor, handed me a check to be used for a similar purpose, so that on September 1, 1892, we dedicated Bailey Cottage and Fogg Cottage. The next year was added Christian Endeavor Cottage, to which hundreds contributed, and following that, the Mary Louisa Ha Cottage, built 'to the memory of a good mother' by Thomas W. Hall, the President of the American Hide and Leather Company. I hadn't asked any of these people for money and, in the main, they were complete strangers to me.

"For example, our next bequest of six came from some people of whom I ha never before heard. I received a letter dated Bath, Maine, and signed 'Mary I Moody.' It contained the bare reque that I come to the 'estate of the la Charles E. Moody' at once. I went, wo dering what it was all about, and met t Misses Mary D. and Frances E. Mood Their brother, Charles, had died sudden and had left no will, and it fell upon the sisters to dispose of his property, to whi they were the only heirs.

"'Mr. Moody on several occasions me

UNIVERSITY OF IOWA

tioned Good Will and expressed an intention to do something for it,' one of the sisters told me. And she asked, 'Now what can we do in his name?'

"Our little hay-loft schoolroom had long since been outgrown. Prospect Cottage had been converted into a school, but it was now so crowded that pupils had to sit on the stairway for seats. I explained this need. The result was a $25,000 building for school use which was dedicated as the Charles E. Moody Building in September.

"Perhaps you are wondering," Mr. Hinckley suggested, "to whom all these buildings belonged, to me or to the boys. To settle this question forever and to insure the perpetuation of what by now had become a sizable school, the Good Will Home Association was organized under the laws of Maine, with a board of nineteen directors. I have lately been made president, but I am merely an employee of Good Will."

"What is the most remarkable gift you've ever received?" I asked Mr. Hinckley.

"I don't know," he replied. "They've all been remarkable. Andrew Carnegie broke a set rule when he built our library, which is the only one he built for a school of this kind. Amos L. Prescott, of New York, built an administration building in memory of his parents at a cost of $75,000, only to have it destroyed by fire. When we wired him of the loss, he replied, 'We will rebuild,' which he did, finer than before. Edwin Bancroft Foote built Bancroft-Foote Cottage and provided it with an endowment of $45,000, largely as a result of reading a letter written by one of our boys in Dartmouth College; and this started other endowments which now total $800,000, and which I hope to see at $1,000,000 before I die. My old friends and neighbors in Guilford raised the money which built Guilford Cottage, and the farmers of Maine erected Grange Cottage.

"HOWEVER, no story that I might tell is more remarkable than that of the starting of our girls' homes. Friends kept insisting that we admit girls, but I refused to do this until a substantial donation was made for this purpose. I said we would start if we got $10,000 or even $5,000, but no money came. Even the boys, some of whom had sisters in need, wondered why we did not admit girls and build cottages for them too.

"Then one day a boy came into my office. He was only nine years old and he had been at Good Will less than two months. He told me stammeringly that he had been 'on dishes' for two weeks at his cottage, along with another boy: that is, the two had been washing the dishes for the matron.

"'We ain't broke a dish either,' he explained, 'an' we've got five cents apiece comin' to us just as soon as the matron makes out our order.'

"'That's fine,' I said. 'Now what are you going to do with all of that money?'

"His cheeks grew red with embarrassment. 'We wanta—wanta give our two nickels toward building a place for the girls,' he said, 'so they can come here to live too.'

"I thanked him, and turning to my secretary announced that the work for the

Hotels Need Hundreds of Trained Men and Women

Will you accept one of these big paying positions in America's 3rd Largest Industry? Thousands of positions now open in hotels, restaurants, clubs, schools, colleges, hospitals and institutions! You can easily get one of them! No previous experience necessary!

CLIFFORD LEWIS, President
Lewis Hotel Training Schools

Formerly U. S. Gov't Hotel and Restaurant Expert, now Managing Consultant to over 300 hotels, who has qualified thousands of men and women for success in the fascinating hotel and institutional field.

These Students "Made Good"

Thru Mr. Lewis' efforts a Lewis Student was appointed Executive Housekeeper in a State Governor's Mansion. Another, without previous experience, became Manager of a large hotel—3 months after enrolling! A Lewis Trained woman is now Hostess and Manager of a fashionable apartment house—salary $3,600 a year, apartment included, while the man recently made Assistant Manager of a 15-story residential hotel in New York, knew absolutely nothing about hotel work before taking the Lewis Course! YOU can do as well.

MANAGE AN APARTMENT HOTEL

Men and women needed as Managers for $200,000,000 worth of apartment hotels now being built. Interesting work, big pay. YOU can qualify!

Thousands Make $2,500 to $10,000 a Year

The Lewis Schools have qualified thousands of men and women for $2,500 to $10,000 a year hotel jobs. Get into this delightful profession—earn $45 to $125 weekly! Learn in your spare time at home. Many students obtained well-paid hotel jobs *before* finishing the course!

Big Pay—Fine Living—Fascinating Work

America's 3rd Largest Industry offers many big advantages. Salaries are liberal, meals and apartments usually furnished FREE—advancement quick!

I Absolutely Contract to Teach You

in my home study course all that leading hotelmen know about the business. Age is no obstacle—previous experience unnecessary. A common school education is all you need. I put my students in touch with positions everywhere!

BE A HOTEL HOSTESS

Hotels, clubs, apartments everywhere are calling for hostesses, managers, etc. Splendid salaries, fine living, luxurious surroundings for *you!*

Our Free book, "YOUR BIG OPPORTUNITY," tells about the wonderful opportunities open to you in this fascinating profession and explains how you can quickly become a high-salaried hotel executive. Registration in our Employment Bureau FREE of extra cost! Send for this big, FREE book TODAY!

Amazing Contract to pay you for learning—

Double Money-Back Bond

We agree, in legal, binding, contract form, to provide spare-time selling practice with one or more of the million-dollar companies co-operating with us—which must pay you $150 in cash (more than the cost of learning salesmanship) or money refunded

Chas. Michel
Pres.

and make you a real salesman!

Get this astonishing agreement to prepare you for selling positions paying from $3,500 to $10,000 a year—to pay you at least $150.00 in cash while learning, *or no cost!* Here is your chance to get into the best-paid branch of modern business. Mail coupon for details of this amazing opportunity.

"A few years ago I was working in a shop for $15.00 a week. Immediately upon completion of my course I was offered a position through N. S. T. A. My earnings were from $5000 to $6500 per year. Today I am earning $7500 a year."—C. W. Birmingham, 1712 W. 1st St., Dayton, O.

Big Jump in Earnings for "Average" Men

Maybe you wonder if you can learn the "mysteries" of selling. Perhaps you think it takes some natural born qualities you lack. *Not a bit of it!* I'll set before you the records of *hundreds* of men—mechanics, clerks, building-trade men—storekeepers, farmers, laborers, bookkeepers, chauffeurs. Men with no more brains, no more education, no more experience than you have. And I'll show you in black and white, with names and addresses and exact figures, how they have doubled and trebled their income with our help.

"I was a clerk earning $1,000 a year when I enrolled. Last year I made $7,236. Now own my home, drive a nice car and am able to give my family the things I always wanted to."—F. J. Walsh, Box No. 1586, Springfield, Mass.

Amazing News! **1 Million Dollar Companies Offer You Jobs—Experience—Cash**

We have just completed arrangements with great companies in many different lines of business to employ our members in spare-time immediately after they complete the lessons, lectures, sales talks, examinations, etc.—to give them actual selling experience in the field—to give them a chance to apply their instruction and learn salesmanship by SELLING. Minimum earnings of $150 are guaranteed for this part-time practice work.

Read this Amazing FREE BOOK *and Double Your Pay!*

That sounds funny—but here are the sober facts: That simply *reading* this wonder-book has proved the turning point in the lives of THOUSANDS of ambitious men. And I promise you it will open your eyes to the opportunities within your easy reach in selling that you never dreamed were possible. Mail coupon—send no money.

girls was commenced. In the next issue of our school paper, the Good Will 'Record,' I explained how it had been commenced. A few days later I received a letter in which were two dimes—one for each boy who had contributed his nickel. I read the letter to the two boys and handed them the dimes.

"'We wanta give them too,' one said, and the Girls' Fund became thirty cents.

"The men's class in the Congress Street Methodist Church, of Portland, next contributed one hundred dollars. Then, one day E. S. Converse, of Malden, Massachusetts, arrived at Good Will, and I showed him over the place, as we show all visitors. When he had seen it all, he suddenly asked: 'Now, what would you like me to do?' I was at a loss for an answer, for we needed so many things.

"Then I told him of the Girls' Fund and what we planned. It involved the purchase of two farms, together costing $7,300. Without a word, Mr. Converse wrote his check for the sum.

"Hardly had the farms been purchased, and the deeds secured, when Mr. and Mrs. Walter M. Smith, of Stamford, Connecticut, came forward with funds for the first girls' cottage—a home for fifteen girls, built in memory of their daughter. The Grange Cottage followed a year later, then others, and the beginning of it all were those two nickels given by two very earnest little Good Will boys."

Thus Good Will began, and thus it has flourished, and thus has a very old promise been tested and fulfilled.

I have space for but one more fact:

Mr. Hinckley has four children, two sons and two daughters. All of them are graduates of the Good Will school, and three of the four are married to former Good Will pupils. The preacher who presided at their marriage ceremonies was their father.

One Out of Every Seven

(*Continued from page 49*)

skeptical lift in his voice. I may have been unduly sensitive, but I certainly got the feeling that he thought sadly it was about what you'd expect of children whose mother wore pants.

After supper, he and Will sat out on the porch while I did the dishes. Will always dries the supper dishes for me, and while, of course, I wanted him to be polite to Uncle John, I thought I'd never get done. However, I was buoyed up by remembering that tomorrow was Sunday.

"WHAT time do you have breakfast tomorrow?" Uncle John asked, as he was leaving.

Usually, Sunday morning, the twins come in and get in bed with us, and Will plays with them and we fool around, not having breakfast till nine or half past, just in time to get to church. I was about to say so, when Uncle John said kindly:

"Don't get up early on my account. I know young people like to sleep late Sundays, these days. I'm always up at half past five myself, but it doesn't make a bit of difference to me if I don't have breakfast before seven."

I was so flabbergasted I couldn't think of a word to say, and Will just stood with a foolish look on his face and didn't open his mouth. When Uncle John had left, leaving us committed to Sunday breakfast at that heathenish hour, both Will and I were cross at each other. Each of us felt that the other should have been quick-witted enough to have thought of something.

I had a lovely Sunday dinner the next day, if I do say so myself. So, as we happened to come out of church with Mrs. West, who runs the Thread and Needle store, I asked her to come home with us. She was a widow and lived alone in a flat over the store and she seemed very pleased.

As it turned out, the invitation was a perfect inspiration on my part. Because she sat out on the porch and entertained Uncle John, which gave Will a chance to help me with the dishes. And when she found that Scott and Corinne were away, she invited Mr. Perkins to her house for supper on Wednesday evening. I didn't appreciate the invitation so much at the time she gave it, but by Wednesday evening getting rid of Mr. Perkins for one meal seemed the only thing that stood between me and a suicide's grave.

It wasn't exactly anything that Mr. Perkins did—I'm sure nobody ever meant to be kinder. But by Wednesday it seemed to me that he had been coming for meals for years, and when I thought of the week and a half still ahead it looked endless. It was mostly little things, that shouldn't have seemed important, but did. Like the way it took all the fun out of getting meals. I take a lot of pride in cooking, planning well-balanced meals for vitamins and everything. And I love trying out new dishes. Cooking is just drudgery if you can't use some imagination.

But Uncle John didn't care for imaginative cookery. I made a grave mistake by having sweet potatoes, mashed and seasoned and baked with a marshmallow meringue, that first Sunday dinner. After that he looked with unhappy suspicion at everything that came on the table. "What's in it?" he'd say, in the tone of one who feared it might be marshmallows again. He would always say apologetically that he didn't care much for newfangled dishes.

ANOTHER thing, he expected you to have meals by the tick of the clock, and everybody knows how hard that is with children. He never said anything; but if I said we'd have dinner at twelve-fifteen he was there by twelve-ten, and he'd keep looking at his watch till, if I happened to be five minutes late, it seemed awful. Goodness, that must have been harder on easy-going Corinne.

Then, too, it was becoming very confining. Will and I usually are invited out for supper at least one night a week to some house where we can take the children along and pack them off to bed in an upstairs room. Of course, we could pack Uncle John off upstairs, and somehow people didn't seem to ask us.

Digitized by Google Original from UNIVERSITY OF IOWA

invited the Kirsteds to our house one night and they brought Frankie. That child always is a pest, but it was especially unfortunate that he should have broken Mr. Perkins's watch.

When Will and I were going to bed that night, he said he didn't think I was strict enough with the twins.

"Children don't respect you if they don't have to mind you," he said.

Honestly, I was furious at Will. When I think of the way I have to fight to keep him from spoiling the twins to death! I knew it was Uncle John who had put the idea in his head, but that didn't help any. It seemed to me Will might have a little sense of his own in his head to start with.

Take it altogether, it was a great relief when Wednesday evening came. Uncle John had a wonderful time too, apparently. He talked all the next day about what a brave little woman Mrs. West was, how he had been left without a penny and with three children, and supported them with that little store. She had, it appeared, invited him for supper again Sunday.

IT WAS Sunday evening, while Will and I loitered over our supper, that I realized what was the trouble with Scott and Corinne: It was Uncle John.

It would have been very hard to explain this to anyone who had never had Uncle John, herself. He was so kind and eager to be helpful—he'd do any little odd job of carpentry I wanted around the house, and meant so well in every way. But he was critical by nature. He noticed every little thing and always spoke of it, in the nicest way, of course. He always said how he was an old man who had seen a lot of life, and who liked to see young people getting started right.

The things that he noticed were always true; that was what made it so bad. When I'd say, "I should think Will could get the car into the garage without going over that corner of the lawn every time," I'd remember how I'd nagged at Will about that very thing till I'd given up. And it would make me get cross about it all over again. It was the same with things about me. I know I'm not perfect, and I have to admit that everything he spoke about was true enough. But it was likely to be something that Will had got used to, and Uncle John's bringing it up started him all over again.

That was what made it so clear to me what was happening to Scott and Corinne. Because the things Mr. Perkins suggested never made us cross at him, only at each other. That was the whole trouble with Scott and Corinne.

The very second this idea occurred to me, I knew that it was true. And when I mentioned it to Will he saw it right away too. And it seemed so hopeless. It had changed all life for Scott and Corinne. Scott didn't like the business he was in. And though the house was bigger than any of their others, there had been a spirit, a happy-go-lucky, in all the little houses that had never been in the big one. It suddenly occurred to me that the crowd never went there any more. This was partly because Uncle John went to bed at 10, and we didn't feel free to be noisy. But there was more even than that. It was no longer the kind of house a crowd wanted to go to.

And Uncle John had spent his savings buying the partnership for Scott! He would be right there, trying to help them get started right, ruining their lives, as long as he lived. And, though he always spoke of being an old man, he was really only sixty-six.

The hopelessness of it swept over me, and I could have dropped my head on the table and cried from sheer pity if I hadn't suddenly thought of Mrs. West.

Why shouldn't Uncle John marry Mrs. West? He admired her tremendously, anyone could see that. She was about his age. She didn't want to bob her hair or wear knickers; she thought just the way he did about things. She fried her steak just the way his first wife had, making it indigestible and juiceless, but the way he liked it. And when she mentioned that breakfast never seemed breakfast to her without a doughnut, I knew that here were two truly congenial souls that it would be wicked not to bring together!

What followed is, of course, what makes Will kid me about matchmaking; but as a matter of fact I really didn't have to do much. After that Sunday-night supper in her flat, the thing seemed to travel under its own steam. Will, however, was very sympathetic, and between us we did what little we could. We wrote Corinne and Scott, urging them to stay another week—everything was going fine, we said. And during those last two weeks, we certainly did our best. I had Mrs. West for supper a lot. Will and I would lead her and Uncle John on, to get them to talking, and once they were started we'd stop and if, a little later in the evening, we sort of faded out of the picture, they never seemed to miss us.

In one way, it didn't seem quite fair to Mrs. West. She'd always been poor as Job's turkey and worked like a dog, and for her to take on a husband who had put his money into a nephew's business didn't seem quite right. Still, it was so plain that she liked and admired Mr. Perkins, and that she loved to be with him. After all, I thought, he could help her in the Thread and Needle. Probably it would support the two of them.

Anyway, whenever I had any compunctions, I'd let myself recall Corinne in her wedding veil, and I'd go right on.

IT WAS the last week that turned the trick. It turned cold and rainy. For young lovers, warm moonlight is the best, but in the sixties there seems to be nothing that can touch a kitchen range. I built up a fire in ours, and after the supper dishes were done, instead of coming back into the living-room with us, they'd make some excuse to stay out in the kitchen. We'd peek out and see them sitting there, so cozily, their feet on the ledge, as happy as two clams.

It was two days before Scott and Corinne were due back that Mr. Perkins, all flustered and excited, told us that this little lady had agreed to make him the happiest of men.

"Oh, I think that's perfectly lovely!" I said. "I know how happy Scott and Corinne will be. I'll bet they'll give you a beautiful wedding."

"Oh, no, no, no," said Mr. Perkins, hastily. "We wouldn't care for that at all. What we thought was that it would be nice to go down to Doctor Van Sant to-

Their last ride together

THERE'S more than one reason why girls walk home. There's more than one bachelor who wouldn't have to stay that way if only some one would tell him about Sir Walter Raleigh. Oh well, for that matter, *we'll* tell him. It's milder, men, a lot milder, and it will do a lot to make that strong old briar of yours fit to enter decent company.

LIMITED OFFER
(for the United States only)
If your favorite tobacconist does not carry Sir Walter Raleigh, send us his name and address. In return for this courtesy, we'll be delighted to send *you* without charge a full-size tin of this *milder* pipe mixture.

There's the germ of a story in this picture. What can you do with it? What couldn't you do with it if you were a trained newspaper writer?

Writing for Publication

MANY people who *should* be writing never even try it because they just can't picture themselves making "big money." They become awe-struck by fabulous stories about millionaire authors and therefore give little thought to the fact that $25, $50 and $100 or more can often be earned for material that takes little time to write—stories, articles on home or business management, fads, travels, sports, recipes, etc.—things that can easily be turned out in leisure hours, and often on the impulse of the moment.

If you would learn to write Start Writing

Almost every month you hear of some new author of whom it is said: "He used to be a newspaper man." Training in newspaper methods has come to be a passport to literary opportunity.

That is why the Newspaper Institute of America bases its writing instruction on journalism—continuous writing—the training that has produced so many successful authors.

Here you have a course of home study, prepared and taught by active New York newspaper editors, which gives you real writing experience of the kind gained by metropolitan newspaper workers to add to your natural ability.

Newspaper men teach you

Newspaper Institute training is based on the New York Copy-Desk Method. It starts and keeps you writing in your own home, on your own time. Week by week you receive actual assignments, just as if you were right at work on a great metropolitan daily. Your writing is *individually* corrected and constructively criticized. A group of men with 182 years of newspaper experience behind them are responsible for this instruction. Under such sympathetic guidance, you will find that (instead of vainly trying to copy some one else's writing tricks) you are rapidly developing your own distinctive, self-flavored style—undergoing an experience that has a thrill to it and at the same time develops in you the power to make your feelings articulate. You learn to write by writing—acquiring the same experience to which so many well-known writers of short stories, novels, magazine articles, etc., attribute their success.

How you start

To insure prospective student-members against wasting their time and money, we have prepared a unique Writing Aptitude Test. This tells you whether you possess the fundamental qualities necessary to successful writing—acute observation, dramatic instinct, creative imagination, etc. You'll enjoy taking this test. The coupon will bring it to you without obligation. Fill in and mail it now. Newspaper Institute of America, 1776 Broadway, New York.

morrow and have him marry us. Perhaps you and Will would stand up with us."

"Tomorrow!" I gasped. "Why, Scott and Corinne won't be here."

"Yes," Uncle John agreed, "that's what I thought. I thought that if we were all married when they came, if it was positively settled, you know, it would be better and safer."

The poor man seemed to have some idea that Scott and Corinne would oppose the match. He acted all flustered and guilty about it. Will and I giggled our heads off as we dressed in our best the next afternoon to go down to be matron of honor and best man, so to speak. Mr. Perkins had made us promise not to tell a living soul. It was really funny; we felt like conspirators in an elopement, Scott and Corinne being cast for the stern and disapproving parents.

It proves how well we kept our word when I can honestly say that Uncle John and Mrs. West walked out of the parsonage Mr. and Mrs. John Hay Perkins and not even Miss Waters had guessed it.

With smiles that reached from ear to ear, Will and I were at the railway station the next day to meet Scott and Corinne and tell them the news. But before we had a chance to speak, they told us. Their uncle had wired them last night, it appeared. And their faces were a yard long, at least.

Uncle John, it seemed, had about a quarter of a million dollars!

You could have knocked me over with a steel girder. I never was so taken back. That plain, old-fashioned old man, who thought thirty dollars for a suit of clothes was highway robbery, who always shined his own shoes! Will and I just looked at each other in amazement. Why, the thousands that he had used to buy Scott's partnership weren't his life savings, at all. They were the merest chicken feed. And he had expected to make Scott his heir.

I never hope to see two more upset people than Scott and Corinne. They said Mrs. West was a fortune-hunter—though I'd swear she hadn't guessed the truth any more than we had—and blamed themselves for not having told Will and me, so that we could have taken better precautions with Uncle John. Thank heaven, they'll never know how hard we worked to lose him for them!

I'LL give the Forrests credit though. Once they had come out of the shock, they were wonderful sports. They admitted that Mrs. West really always had been a fine woman, and they had her and their Uncle John for Sunday dinner, and, in general, behaved like real Christians.

I suppose there's still a chance that Scott may come into some of that money. But it's very uncertain. For one thing, Mr. Perkins looks and acts younger every time I see him. Fried things seem to agree with him. Then his wife has a little grandson that he thinks the sun rises and sets in. The youngster calls him Gwumpa, and Mr. Perkins, after having told us how to bring up our children, is simply spoilin that child to death.

Of course, he may not leave litt Timmie all his money; but there's no te ing. Anyway, Scott and Corinne aren counting on getting any at all. If they d it will come as a surprise. And in th meantime, Scott is right back on the jo in earnest. They're making their h place over into a duplex, and they' going to rent both floors and get a small house for themselves.

Just the other day, Scott told Will th Mr. Morley wants to buy him out of t Coal and Ice, and he thought he'd let hi He can get his job back with Mrs. Wal Blake and use the partnership money f deals of his own. When he's runni things his own way, he's a very practic man. I haven't heard him figuring changing the Gulf Stream since Un John got married.

ON HIS and Corinne's wedding an versary, we all had a party at th house. One of our regular, old kind. T house was all torn up with carpenters, b we didn't care. We made the most aw racket and stayed till one o'clock, a nobody minded. The children slept ri through. It seemed just as it used to b fore the Forrests had begun waiting inherit a quarter of a million.

And the wonderful part was that, ready, Scott and Corinne seemed just same as they'd been before, too. Jok each other affectionately, making rea for their annual move as though it was most fun in the world.

Suddenly somebody remembered t it was their wedding anniversary, and had a mock wedding, with Howard M ton for minister and Corinne in a mosqu netting veil and carrying a bouquet carrots and radishes. The piano wa little out of tune, but nobody minded Dulcie struck up the Wedding March

"Here comes the bride—here comes bride—"

Someway, I couldn't enter into the at all. I felt suddenly too happy. V heard that one of the couples in the Harvester crowd was getting a div and it occurred to me that that ougl help to keep the law of averages off crowd. Then, too, this was the Forr eighth anniversary—that meant tha perilous seventh year was over.

Oh, there was no doubt that the was over. You could tell that in the feel of the room. In the way Co looked at Scott out from under mosquito-netting veil, in the way h his arm around her when Howard rut out, "And whom God hath joine gether, let not man put asunder—"

I didn't want to be conspicuous i midst of hilarity, so I blinked bac tears of sheer joy and relief and we to kiss the bride. But I did hav thought that was honest and so That, even at a quarter of a million, come cheap!

NEXT month in "When You're Through Changing, You're Through" (a on the second "through"), Bruce Barton shows how a foolish consis and a deliberate closing of the mind and eye to new trends and chang ruined many able men and prosperous businesses. It is the forward-lo man with his finger on the pulse of life who comes out on top. So be averse to change. Even Henry Ford had to change his famous Mo

If You Had Leisure and Money What Would You Do with Them?

RST PRIZE

Oh, for a Grand Spree of Selfishness!

DURING the high-school session, a nightmare of themes and notebooks; during the months of vacaon, a swelter of summer-school study; ch is my "leisure;" such has it been for ars. What a paradise if my wife and I ght play hooky for a grand spree of fishness and freedom! Never have we tended a college football game—we uldn't afford it; never driven a car of r own, for the same reason; never lived an apartment that suited our tastes, or rn the clothes we would like, or chosen r own social set.

Teachers and their wives, in small wns, can no more be human than street hts; everybody looks up to them but nts new ones when they go out. Econize? We couldn't go *anywhere*. We ve even stopped taking the daily paper, ough we live in dread lest someone ty find it out. And doesn't the whole wn know how many years my wife has rn the same coat?

Nothing could please me better than s: To mark one last set of papers as r as they deserve, say "ain't" and arn" at a faculty bridge party, and oke a cigarette on Main Street. To gh at protesting parents. To spank bank president's oh-so-spoiled offing. To dress my wife like the woman o snubs her, as richly but in much ter taste.

But now for the lasting glories: A little ne of our own, with everything just as want it. Our Billy will soon be a der. My heart beats faster when I alize the tiny library with its books Sonny and me—the wide margins, the ar, black type, the beautiful illustions, the colorful bindings—everyng in contrast to the miserable "Robin Crusoe" I bought for my first quarter en a boy. No more droning through e-honored classics. When the new day wns I want to enjoy all the moods t come with it. R. B. M.

OND PRIZE

've Never Cared for Leisure

I had leisure and money, I'd give the isure to the first person that wanted nd throw the money into the sea—at t, I hope I'd have sense enough to do . For I don't want leisure and there's ing I long most for that money can . It cannot bring back my mother to e the little home for that she died wanting. It cannot take me back ty years and give me another start e youth and life I missed.

can't change the years I walked lame. n't buy me two good ears. Millions not buy a dog that would love me than the five-dollar dog that runs farm. Fur coats—but I prefer my fur coats roving around on their four feet. Diamonds? What are their rainbows to those you stand out in a shower to watch?

Travel? The last word in travel is working your way from strange land to strange land. Traveling *de luxe* is all right, if you like it, but after a few years of it what have you?

Oh, I long to be twenty, free, white, and starting out over the blue, seeking adventure and seeing the great, wide beautiful world.

Leisure is something I've never wanted. Rather, I would like three or four hundred years in which to do all the things I want to do. Rather, I'd have a house to keep clean and half a dozen children getting it untidy faster than I could tidy it up. And when they'd grown up, I'd want to start all over with another half dozen. My private opinion of this matter of leisure is that the more you have to do, the more you get done; or, the more time you have, the less you accomplish.

Yes, indeed, I'd give leisure away, if I had it, and throw money into the sea. At least, that's what I hope I'd have sense enough to do. G. L.

THIRD PRIZE

I'd Build a House for Lonesome Folks

THESE are my three dreams and desires if God gave me the chance to fulfill them:

I would build a home for Lonesome People. Not an institution, but a place of warmth and love and sunshine, with soft white curtains, flaming fires, and shelves of dusty books. With a kitchen where Mrs. John, whose daughter-in-law will not let her putter around, may bake sugar cookies; with a kitten and radio for Grandma Fones, who is eating her old heart out in one small strange room; with a good-night kiss and tucking-in for Jimmy and Charlotte, whose mother has scolded them; with comfort and juicy steaks for the college boys who are so desperately working their way through. A lovely Home, with music and laughter!

And then—oh, I would have a den all my own! A little house right near the Lonesome ones, with etchings and watercolors on the walls; with all the books I long for; a grand piano; and money enough to see my own poems in print, since no publisher will accept them!—and time enough to work in the garden. For there would be a garden, with tiny walks, a sundial, and gold and blue and crimson blossoms nodding in the sun all day long.

And when I gave money, it would not be to the very poor, but to those splendid middle-class families who need just a little more to take the worry away. To pay up some pressing bill, or take care of some boy's college debt, or pay off some dad's mortgage.

Dreams are tender, foolish things. But I could make them true, I know I could, if I had the chance! D. H.

Out of Debt
a bank account, college ahead for the boys —

ARE you struggling with the old problem . . . how to make both ends meet? Instead of worrying, why not grasp the same kind of opportunity which brought Regensburger from debt to prosperity and an executive position.

No matter what your previous training has been, this offers real opportunity. What this man, who joined this organization but a few years ago, has accomplished is typical of what others have done and are doing. A. F. Regensburger of New York is now manager of a large and prosperous branch. But things for him were not always so rosy.

"When I joined the Fuller Brush Company," says Mr. Regensburger, "I was working for an eastern concern and I wanted to get back to my home. I heard of a fellow who made $100.00 in one day selling Fuller Brushes. This naturally interested me as I needed money badly at the time. I was then about $1,300.00 in debt.

"When I started with Fuller, I didn't know anything about the company and only intended to stay a short time. But I was soon convinced through my work that there were not only possibilities of making money but of getting ahead into jobs of large responsibility.

"While I worked as a salesman I stacked up some real sales records, bought a new car and tucked away $1,500.00 in the bank after I had paid my debts.

Now An Executive

"Then my branch manager was promoted and the company saw fit to send me along with him as field manager. This meant bigger earnings and wide experience. After ten months, I was selected for special work. Further increases in earnings followed. Shortly after, I was returned to my home city and placed in charge of the company's business there.

"I have now saved considerable money, bought and furnished a new home, have stock in the company, a new Hudson car and a couple of fine youngsters coming along on their way to college." *If you are interested in a career like the above, are now in a rut and don't know how to get out, wish to ally yourself with a company where work and persistence pay large dividends, talk to the nearest Fuller Manager, (there is a Fuller office in 200 leading cities) or*

A Man Who Worked

(*Continued from page 21*)

nitrate and other constituents of the viscous fluid spread on plates of glass and metal to catch magically the patterns of light and shade that made a photograph. The limited resources of his little studio had given him an opportunity to demonstrate improvement to his own satisfaction. But this was not enough. He had nothing commercially valuable until others recognized superiority in his photographs.

"Although very young," he recalls, "I was profoundly dissatisfied with available materials for my trade. Postage and express charges were, for me, a considerable item. Yet I sent all over the United States for emulsions and solutions. They never came up to the standard I set for them. So I went about experimenting with the manufacture of my own emulsions."

The test was the finished photograph. When that prospective bridegroom came to him with an unsolicited testimonial, there was immediate reward for his labor, with prospect of more reward to come. Other bridegrooms heard of Stuber and called him in to photograph wedding ensembles. His practice expanded. He became one of Louisville's rising, very early rising, photographers.

IN THAT "watch-the-bird" era of camera work, a wide clientele meant little more than a narrow living. Young Stuber could afford no assistants. With a fair share of customers for cabinets and vignettes at two to three dollars the half dozen, with his tintype apprenticeship several years behind him, he remained dissatisfied.

A layman will learn little, no matter how diligent and diplomatic his inquisitiveness, regarding the mystic contents of photographic solution. Every formula is carefully guarded, and the product, highly perishable, is hardly analyzable by skilled chemists, because the slightest exposure swiftly translates it into other chemical entities. But a layman readily learns that the concoction of emulsions is the secret of successful materials in photography, an art in itself, demanding keen and delicate sensibility and prodigious work. This was especially true forty years ago, when photography was not much advanced from the days of Daguerre, its inventor; when it lacked adequate research, adequate tools, even trade papers—to say nothing of a general market.

Quest of the perfect emulsion was Stuber's sole purpose, after livelihood was provided, and the livelihood was meager because his spare profits were invested in more materials for experimenting.

But even if he had been able to hire intelligent help, it is doubtful if progress would have been speedier, for certainly no hired helper could have supplied the tireless devotion that Mrs. Stuber gave him.

For weeks at a time, when it was vital to mix and stir emulsion continuously in a darkened room, Mrs. Stuber shared his labor and his anxiety. Man and wife alternated their sleeping hours. As Stuber worked, his wife would rest for an hour; then she would work while he rested for an hour. And so on through the night; so on, night after night. Poverty had to be served.

This stubborn sacrifice of a young married couple brought no result that ended William Stuber's dissatisfaction with his own work. He searched for the perfect prescription, like an alchemist of old, and apparently with little more encouragement in the result.

In the middle eighties he put his skill to the test. The American Society of Photographers held a convention in St. Louis and an exhibition of work by members and amateurs in all parts of this country and Canada. Medals were to be awarded.

Packing three of his best photographic studies in a grip, William Stuber sat up all night in a day coach to St. Louis. He returned in another day coach, with his three pictures, and no medal—not even an honorary mention. Back at home, he got down grimly to the job of producing emulsion that would make pictures to carry off prizes at the next convention. But again William Stuber failed to fetch home the bacon.

This second disappointment did not rankle; instead, it riveted his purpose more firmly. Hard at work in his Louisville gallery, he gave little thought to meeting at that last convention a young man named George Eastman. Beyond the story running the rounds of the delegates, that Eastman had hit upon the tradename of "Kodak" for a camera by shuffling a lot of cardboard letters and picking out five at random, there had been nothing more personal than a casual handshake and a bit of pleasant shop talk with the man who was afterward to engage Stuber and put him in the way of riches.

Not the first failure in a man's life, nor the second, but prospect of a third repulse by fortune seems to be the zero hour in which his fate is fixed. If he surrenders to disappointment, defeat is conclusive. If he resolutely goes back over the ground already covered, that is a sign that even if he has arrived nowhere, he has learned much.

Stuber and his wife lived through many more nights of alternated sleeping hours. When he speaks of those hard, uncertain months, his swarthy face is a study in tenacity.

"NOT vanity," he said, "but cold logic convinced me that faulty materials stood between me and the success I sought. I had sufficient photographic skill. My business grew. To devote enough time to research in emulsions I had to sacrifice work rather than skimp it. The single idea dominated me—that better sensitized mixtures could and must be found before uncertainty could be eliminated from the photographic art."

At about this time of self-trial, there strolled into his gallery for the first time a doughty figure, with wavy iron-gray hair, a typical Kentucky colonel's whiskers, and an eager appetite for acquaintance: Colonel Watterson, nationally known as "Marse Henry," oracular editor of Louisville's most powerful newspaper—The Courier Journal.

Marse Henry posed for his protrait talked voluminously. He admitted tha he knew very little about photograph But back of every man's trade or pr fession Marse Henry knew there we interesting human problems. Bit by bi he elicited Stuber's tale of unfruitf search for better photographic material The older man's face brightened.

"Why," he drawled in his heavy, rum bling voice, "over in Europe I heard ol man reputed to be a wizard in that line

Stuber pricked up his ears.

"He's in Switzerland," said Ma Henry, "Zurich. For the life of me I ca think of his name. A familiar name, to

His brows knitted in deep thoug combing his memory for the elusive nam Suddenly he splurted:

"Smith."

That year William Stuber made hopeful pilgrimage to the convention American photographers. Instead, crossed the ocean, determined to find the Old World what he could not disco in the New. For six months he wa student in Zurich. A gravely ma student was William Stuber, working way through a course in Dr. Hugo Sm laboratory by doing whatever job c his way.

Stuber went to Europe in dead ear to acquire something. At the end o months, he came home in dead ear the something acquired. He had inve time and money in himself; divid began at once.

AT THE very next annual meeti the American Society of Phot phers, held this time in Chicago, W Stuber carried off the most coveted for his study of a face. The face hap to be Marse Henry Watterson's. noted the effects he achieved; the g verdict was that American photog had found a master of the dry pl wizard with emulsion.

Within a year, Stuber had trans his original gallery from the G quarter of Louisville to one of the fashionable commercial streets.

At another photographers' conve he won other medals. Failure th dogged his heels now regarded ther a distance. Cameramen in all cor the country sought his advice, and generously, he resolved to shar others the results of the secret tec he had learned by driving study a relenting labor abroad, he was with orders. Very soon the mal materials preëmpted his time.

"Had I been a salesman," he spe "I might have forsaken photograp gether, organized a company, and headfirst into manufacturing. B always known my limitations. I c sell gold dollars for ninety cents

There is about William Stuber the traditional suavity of the pe He is direct and laconic and he w ready-made smile: the kind of c that would be narrow if inborn si and honesty of purpose were not b by an intelligence that makes him

UNIVERSITY OF IOWA

of the views and methods of others.

While his increasing reputation for excellent materials maintained a steady flow of orders, he tore himself from the business of making money to make more and more exacting tests of his product and his skill. Thus it was, little less than forty years ago, that he hit upon what moderns believe to be a very recent development in photographic illustration. His practical mind found recreation in wide reading of poetry, and among his favorites was Longfellow. Brooding over "Evangeline" one evening, he had an inspiration to picture the principal scenes. Selecting figures from his acquaintances, he made three classical studies: First, the betrothal scene—Evangeline and her father with the blacksmith and his son; second, Evangeline walking through the woods by moonlight lamenting her lost love; and, finally, the poignant scene of Evangeline as a nun discovering her lover in a hospital where she was ministering to the sick.

These pictures, skillfully enlarged to poster size, won him more medals and established him as the pioneer of the now flourishing art of synthetic reproduction which, in a way, has revolutionized magazine illustrating.

Now having demonstrated that he could do what he set out to do, and incidentally winning election as President of the American Photographers' Society in recognition of his contribution to the art, he returned with increased vigor to manufacture.

As things happened, he had little need of his ruined gallery. George Eastman—it was 1894, and the Kodak was fast becoming one of the most popular luxuries—followed up several oral invitations by a formal wire offering the Louisville man a job. Surveying the field, Eastman had picked Stuber as the foremost expert in the manufacture of sensitized goods, a vital adjunct to his camera business. Stuber accepted the offer.

"When I came to work for Mr. Eastman," says the president of the Eastman Kodak Company, "there were sixty-five employees at Kodak Park. I came because it was my judgment that this business was necessary to human happiness and therefore bound to grow. Today we have seven thousand employees at Kodak Park and more than fourteen thousand other employees in Rochester and our branches at home and abroad."

Stuber strikes no attitude when he talks of magnitude. If there is any pride in his citation of impressive figures of workers and product—millions of cameras and miles and miles of film—it is the natural pleasure of one in his seniority glancing back with satisfaction on the vindicated judgment of younger years.

A STORY told of his first days with the Kodak Company is typical of many. He recommended the transfer of a subordinate who desired no change. An amiable subexecutive tried to dissuade Stuber.

"This man has been working for the company several years," he argued. "He's punctual—always on the job at eight in the morning. Let him remain."

To which Stuber replied: "I happen to be on my job at seven in the morning. But that has nothing to do with it. You'll have to let me be judge of the men who can work for me."

Makes Life Sweeter

Children's stomachs sour, and need an anti-acid. Keep their systems sweet with Phillips Milk of Magnesia!

When tongue or breath tells of acid condition, it's time for Phillips Milk of Magnesia. Most men and women have been comforted by this universal sweetener—more mothers should invoke its aid for their children. It is a pleasant thing to take, yet neutralizes more acid than the harsher things too often employed for the purpose.

Phillips is the genuine, prescriptional product physicians endorse for general use. The name Phillips is important; don't buy a less perfect product and expect it to have the same perfect results.

Demand PHILLIPS Milk of Magnesia

"Milk of Magnesia" has been the U. S. Registered Trade Mark of the Charles H. Phillips Chemical Company and its predecessor Charles H. Phillips since 1875.

The sub-executive lifted his brows. The doctrine of one employee regarding another as working for *him* was something new. It got around the company that William Stuber regarded his department as a very personal matter. But George Eastman let it be known that he wanted all departmental heads to follow that example.

FROM the beginning of Stuber's connection with the company, its output increased in quantity and quality. In four years Rochester became America's center for the best "makings" in photography as well as for the best cameras to make them. Stuber literally reveled in the boundless resources of the company. He recruited a staff of assistants, experimenters, research men, unexcelled by the productive force of any industry. With the suddenness of a lightning stroke, Eastman's foresight in hiring Stuber and Stuber's insight into the prospects of photography were justified in a test that revolutionized the industry.

Thomas A. Edison had invented his first crude moving-picture machine, hand-operated, clumsy, wholly dependent on some miracle in film manufacture beyond the powers of the Wizard of Menlo Park. He put his problem up to the Eastman Company. In a laboratory at Kodak Park that night a giant was born. The slim reel, no bigger than a spool of thread, that Eastman, Stuber, and their men had created, was destined to grow and envelop the world.

A package was sent by messenger to Edison. In Menlo Park, Edison received the package, retired to his laboratory, and after hours of mystery emerged, radiant.

"That's it," he is said to have shouted to his helpers. "They've got it. Now work like hell!"

A strip of film exactly ten feet long and one and a half inches wide, thus became the progenitor of the millions of miles of celluloid that form the stock base of an enormous industry.

No doctor nor lawyer cherishes his diploma more carefully than William Stuber treasures a faded billhead on which is scrawled the first order for motion-picture film from Edison. If ever there was a certificate to patient preparedness and its fulfillment in fact, that is it.

Just as still photography gave birth to kinetic pictures, these in turn reacted on the appetite for visual presentation of faces and scenes, the preservation of the human procession. Rochester saw a lusty industry, founded by a bank clerk, grow year by year, its plant expanding over acres of ground, recruiting hundreds of skilled and unskilled workers until it became a city in itself, supplying the civilized globe with a product that has never failed to carry American prestige with it.

ROCHESTER watched the growth of the men selected by George Eastman to be his advisers and colleagues. Quiet, hard-working William Stuber, although he did not know it, and would have cared little about it, was in the forefront of those men. Fellow workers gave him the reputation of a martinet. Buried in the problems of maintaining output to meet vast demand, he was ruthless in changing men and methods to promote efficiency. He inaugurated a system of hiring young men from the technical schools, training them under close supervision, and putting the fit, regardless of age, in pivotal positions.

"I've always made it difficult," he explains, "for the right kind of man to be fired, by discovering the work he likes best and giving him that job. Then he sticks to it.

"I planned for my own son to take his place in the sensitized goods department of the company. With that in view, I sent him to Cornell to become a chemical engineer.

"One day I asked my boy for the answer 'Yes' or 'No' to the question whether or not he wanted to be a chemical engineer. He was brave and answered 'No,' although he knew I was keenly disappointed. So I tried him in one of our mechanical departments here. He had a talent for that work. He is now manager of the camera manufactory."

This decisiveness, perhaps more than any other quality of character, won through the years the ardent admiration of George Eastman. The philanthropic head of the Kodak Company found no colleague more cordial in support of his plans for the betterment of employees—his bonus plan of three and a half per cent on the average yearly wage over a period of five years' employment, his medical and dental clinics, personal loan services, and home-site promotions. Stuber—the disciplinarian who to this day works with his own hands in the emulsion department, to make the mixtures for the photographs he takes every day—Stuber was zealous in his advocacy of Eastman's program.

"YET," a high executive of the company told me, "of all the men who have constituted George Eastman's business cabinet, Colonel Stuber ranks first as the 'no' man of the organization. If his judgment was against a proposition, even Mr. Eastman's support of it could not sway him."

A bright thinker had an idea—to change camera models, not by improvements but by styles—an ingenious scheme to exploit consumer vanity, the universal desire to be thoroughly up-to-date. It was ethical and unquestionably enterprising. More to the point, it was practical.

William Stuber would have none of it.

"Change the product to improve it, yes," he declared in the vivid, punchful manner that is his in argument. "Ideas are always welcome here, and well rewarded, as every inventor inside and outside our organization knows. But to change the product to make profit out of fashion—No! If our cameras have long lives, that is the basis of our good name and the stamp of George Eastman's achievement."

Independence is the keynote of Stuber's character, the independence born of absorption in one thing in life. Citizens of Rochester who talk respectfully of his great wealth, mention real estate investments and shrewd stock operations.

"Nothing of the sort," he replies. "Whatever fortune I've accumulated came from this business."

"I have only one recreation, really," he says. "This is my fun."

He showed me two packages of film, made the previous day. Then he took me to a projection-room where a handsome young woman expertly reeled the films and displayed them. They were perfect movies of his granddaughter in Chinese costume strolling through a flower garden. The natural color-values were marvelously reproduced. Throughout the showing, he commented briskly on his technique in fixing each "shot" for the best blend of light and shade. He revealed that he took more than three thousand still pictures a year, to say nothing of "movies." It was also revealed that the magic color-movies that reach the height of pictorial perfection marked for him a triumph and a tragedy. His wife was suddenly stricken blind while abroad with him, so that she is denied the delight of witnessing this culmination of photographic art under his direction—an art which her devotion to him and her actual labor with him did much to promote.

THIS man, whose record and appearance mark him as a stubbornly healthy and hard-working mechanism, is a living monument to the validity of the single-track idea in business—so long as the track is well-laid and well-directed.

"I never devoted a particle of mental energy to anything but my job until I could afford to, until I was secure," he said. "I concentrated on my branch of the business. I taught other men what I knew and learned what they knew. Tomorrow I am examining a young engineer who has applied for a job here. He will teach me something during our talk—or he won't get the job.

"For me, failures have formed the highway to growth. I fail now with certain pictures I want to make. But the determination to try again and to keep on until I make the picture I want, the picture I know I can make, carries me on, stimulates my interest. It works no less now when I do these things for fun, than when I had to do them in grim earnest for livelihood.

"My ambition when I came here was not to be head of this company. That thought never entered my mind, or, if it did, it never stayed there. I took the department Mr. Eastman gave me as my own personal concern, ran it as if it belonged to me, and as if the results were my own profit or loss. It turned out that were. My profit. Every man in an executive post in this concern does the same. It's the only way to keep big business big."

Two framed portraits hang above Colonel Stuber's desk. (He derives his title from the fact that the Governor of Kentucky made him a staff colonel last March and, humanly, he relishes the honor.) The portraits are of distinguished men. I inquired.

"No," he said briskly. "I don't know the gentlemen. But I do know that they are two of the finest photographic studies I have ever seen. Pirie MacDonald made them."

For a man whose life has been photography, who has made thousands upon thousands of photographs, to select for niche of highest distinction the art of another man, is a sure evidence of character perhaps best defined as unselfishness.

May those who mock the single-track mind get what comfort they can out of that!

A Dinner Date

(*Continued from page 30*)

repeated, and looked about him at the bare little room with walls painted a robin's-egg blue.

"A darling little kitchen!" she said. "Look!"

He followed her. Three small bare rooms and bath, in a dingy house on a dingy side street. And he thought he had never seen anything so homelike. Some people were lucky enough actually to live in places like this!

"And they're only asking fifty dollars a month!" said she. "Isn't that wonderful?"

"Only fifty?" cried Cowan.

That would leave nearly a hundred a month for food and clothes. Only fifty dollars for this matchless flat? Impossible!

"Marie!" he cried. "See here! I could— We could—"

Her face grew scarlet, even her neck; she hurried before him, but took the wrong turning and was trapped in the tiny kitchen.

"I didn't mean—that!" she cried, indignantly.

"Of course you didn't," said Cowan, very crestfallen. "I'm not such a fool as to think that a girl like you— You see, I only make—"

"I know how much you make," said Marie. "And it's—for your age—I think you're doing awfully well."

"But it's not enough!" said Cowan. "See here!" His blue eyes looked dazed. "You couldn't possibly mean—a girl like *you*—"

"I'm not such a—horrible sort of girl," said she. "I'm not really extravagant. It was only just—"

"Yes," said Cowan, seriously. "I guess it's natural, not to think much about saving, and things like that, before you settle down."

HE WAS still dazed. Because there was a look on her flushed, downcast face that he couldn't possibly believe.

"But—" he said. "But then—you must—care for me!"

"Oh!" she cried. "Oh! I do!"

He caught her in his arms and held her fast.

"Then you're not angry about that coat?"

"Oh, no! Oh, no! Only sorry."

"But you needn't be," said Cowan. "That coat can just be an engagement present."

She clung to him, and he looked down at her dark head with a tenderness that was like pain. On his young shoulders fell his destined burden, and steadied him. Let the lights of that faëry land twinkle out there in the dark. *Here* would be the little steadfast light of home!

S O S—These are the most dramatic letters! This is the call that is always answered! There is a thrilling story in this call—a story that is stirringly but simply told by Mary Mullett in one of the forthcoming issues of The American Magazine.

Distinctive homes at wholesale Prices!

YOUR RENT Will Buy Your Home

THE VALENCIA
5 rooms and bath
Materials—
$1,555

If interested in building, Send for 100 Home Plans

BE independent. Own your home! All you need is a lot and some cash. If you can do work yourself you may need no cash. Builders say they save $2000 up! We furnish specified material of highest quality, free architecture, and finance you. Low interest, 6%.

Choose from 100 distinctive designs, 3 to 9 rooms. Modern throughout: Warm quilt insulation saves ¼ fuel bills; hardwood floors; colorful kitchens; linen closets; medicine cases; phone nooks; clothes chutes; built-in conveniences!

Easy monthly payments: $23 to $90. Plan-Cut gives you stronger, age-defying house. Guaranteed for twenty years. Low upkeep cost. Material comes machine-sawed, notched and ready for exact fitting on the job. No costly hand-sawing. Saves 30% in labor, and 18% lumber waste. Saves 3940 hand-saw cuts. In addition, you get wholesale, mills-to-you savings. Easy-to-follow plans and instructions. Get facts now!

NOW You Can Write SHORTHAND In the Plain A-B-C's

No Need to Learn a Whole "Foreign Language" of Signs and Symbols

AT LAST a remarkable new system makes it possible for you to learn to write shorthand in an astonishingly short time! Employing only the familiar A-B-C's, this new shorthand is so simple that you can master its basic principles in a single hour of study. So logical and natural that in three to six weeks, you can become a proficient Speedwriter. So efficient that you can attain in that time far greater speed than many shorthand writers ever attain.

Speedwriting
The NATURAL SHORTHAND

Based upon the language you already know—easy to learn, simple to use, speedy and accurate—*Speedwriting* has been enthusiastically adopted by business and professional men and women, by experienced stenographers and beginners alike. Originated by Miss Emma B. Dearborn, eminent authority on shorthand, who has taught almost all systems for eighteen years in such institutions as Columbia University, Rochester Business Institute, Simmons College, Boston, and the University of California. One student, Ethel Eddie, So. Manchester, Conn., writes: "I learned Speedwriting while working eight hours a day in an office, and managing my home with four minor children, with no help. I am now employed as secretary to Dr. E. Myles Standish at an increase of $325.00 a year in my salary."

Full Details Free!

Our Free booklet tells about Speedwriting, The Natural Shorthand, and how you can learn quickly at home. Mail the coupon NOW!

SPEEDWRITING, INC.

Adventures of a Credit Manager

(*Continued from page 33*)

tokens was well born and bred, was discovered by one of our sales persons ordering goods charged and delivered to another name. Possibly the sales person might not have noticed it if the charming lady had not so often changed her mind. She would say, 'Charge and deliver to Mrs. E. J. Radcliff' (let us call it), then would return shortly and declare, 'I guess I'll take those things home in my car.' After this had happened three times in two weeks the sales person at the lace counter, which the young lady was particularly keen about, spoke of it to a fellow worker, who promptly replied, 'That isn't Mrs. Radcliff. I've waited on Mrs. Radcliff a dozen times. She's young but not as young and blonde as your customer.'

"The next time the young lady called to look at laces the sales person did a little calling on her own account. She called her department manager. He called me and I called the store detective, who asked the sweet young lady to call on me. She came without any protest. Such an attitude is fortunate for us because even the most astute store detective hesitates to lay a hand on anyone and say, 'Come along with me.' Such laying on of hands may start a damage suit. But this sweet young lady was not that kind.

"Once in my office she explained naïvely that Mrs. E. J. Radcliff was her aunt. 'Auntie gives me permission to charge to her account,' she added. And when I registered a little skepticism she pouted beautifully. 'If you doubt me, why don't you telephone her?' she suggested, and even furnished me with the number of the Radcliff home. I accepted the young lady's suggestion but no one answered my call. This seemed to mystify my charming lady, until she brightened and exclaimed, 'Why, Auntie must be week-ending at Bar Harbor!'

"NOW it was my turn to be mystified. My charming lady had walked off with six hundred dollars' worth of merchandise. Mrs. E. J. Radcliff was a very good account. I couldn't afford to offend the absent auntie, neither could I afford to lose the merchandise. Then I got a bright idea. I do get them occasionally, although I am a plodding credit man.

"'What is your auntie's name?' I asked.

"'Why, Radcliff, of course!'

"'I mean her first name,' I replied.

"'Oh.' She hesitated just a second. 'Ella. Aunt Ella,' she stated positively.

"I sent for our records and on the Radcliff card I saw, 'Mrs. Eloise J. Radcliff.'

"The fat was in the fire after that. Confronted with this documentary evidence, the charming young lady gave way to tears. After she had signed a confession and led our detective to her apartment home, where most of the loot was recovered, she disclosed the fact that through her employment in a business office she learned that Mrs. Radcliff was one of our charge customers and would be out of town for a month or more. Although the young lady was not severely punished, she will not try that game again, because we took pains to tell her that she was posted in virtually every big store in New York.

"McCreery's belongs to the Stores' Mutual Protective Association, Inc., and after our experience with her, a letter descriptive of her appearance and methods went out to all the members.

"Had this foolish person tried the same trick on a non-member store we should have received the same report. Quite often we exchange warnings by telephone.

"THERE was the case of Lee R. Winters. He introduced himself correctly as a recently graduated medical student. He looked good to me. A fine, big fellow, well dressed and wearing a cheerful smile. He said in a few months he'd be ready to hang out his own shingle. He wanted to get a little gift for his fiancée. He spent about five dollars and gave me a check in payment for twenty-five dollars. My inside hunch told me 'No,' but the appearance and conversation said 'Yes.' But I did say meaningly, 'Doctor, you are sure this check is O. K.?' He assured me it was.

"The next day the bank returned the check as N. G. Quickly I telephoned six stores in the neighborhood. Hopefully I waited. About 4:30 P. M. a detective from Saks, Herald Square, called and said, 'We've got that bird.' I ran over. It was young Mr. Doctor. And what do you think he tried? Refused to recognize me and looked right in my eye. Finally he broke down and asked me to wire his father in Los Angeles. I did, but no reply. The doctor served time for six months.

"We have a warning system that gives us a flash on heavy buying on new accounts. Sometimes unscrupulous applicants for credit try what we call the 'rush act.' They build up a credit background and then buy quickly and heavily. All of our clerks are trained to note unusual cases and report them to me.

"At still another time a scholarly looking gentleman introduced himself as a clergyman. His dress and letters of identification appeared to prove his identity. Credit managers are naturally eager to assist clergymen. But within an hour after I had O. K.'d his charge account he had purchased five hundred dollars' worth of merchandise, including a purple bath robe and several screaming ties. Our investigation disclosed that he was a bogus clergyman who had victimized other stores.

"However, most of the abuse of credit is due to carelessness. In one such case an old, old customer was so badly in arrears that I made a personal investigation and discovered that he had $200,000 on deposit in one bank! As he owed us only $340, I went to his Park Avenue residence and talked with him. 'Our credit men's association reports that there are suits and judgments against you,' I told him frankly. He just as frankly admitted the fact. Then he produced a perfect alibi. He was a specialist in fine art. For three years he had been in Europe assembling a collection of old masters which he proposed to present to a New York museum. During his absence his New York representative had neglected his affairs. Some of his bills payable were five years overdue. Of course the tangle was soon straightened out.

"When business was in its swaddling clothes most merchants extended credit primarily to aristocrats or established families or to their close friends. But in this age of ample payrolls, when nearly all classes of society are able to satisfy most of their material needs, retail credit business has been democratized. The millionaire, the member of the medium, or white-collar, class, and the wage earner or laborer, applies for credit under the same rules or conditions. The principal problem in each case is to fix the amount of credit granted.

"Every satisfied customer is a living advertisement for my store. By the same token, every individual who is turned down by the credit department or who is offended by my inquiries is also an advertisement, but not the kind we aim to cultivate. Hence the care I use while interviewing applicants. Many of them are surprised that I am not particularly interested in their real estate holdings.

"It is a fallacy to depend upon property and large resources before accepting a credit risk. A good percentage of my customers offer nothing but positions and good intentions as security. They are fine moral risks—the best on earth.

"BECAUSE we solicit new charge accounts and employ in the credit department a large number of bill clerks, complaint clerks, miscellaneous clerks, ref clerks, new account clerks, informatic clerks, as well as managers and sub-managers, in account promotion, collecting, ar other divisions of the work, you will unde stand that we are eager to keep all char accounts alive and healthy, so that th can buy and pay. After a credit depar ment has made every safe and sane effo to get you on the books it strugg valiantly to keep you there.

"A customer will borrow from a ba and pay that loan promptly when falls due, but he'll borrow merchand from a store and then indefinitely del paying for it. Such cases are not freque but when they occur it is generally beca the accounts have gotten out of ha

"It is *our* responsibility to keep c tomers from overbuying—although m seem to think we should encourage it. perience has taught us credit men t education along uncomplicated bud lines is thankfully received and profi by, but, all in all, *controlling* account the most difficult angle of the credit ga

"If the credit manager finds an acco running away with itself, he must cou with the customer or run the chanc losing him or her, and money, too.

"Some time back I had to call in an customer who had been trading with store for a decade, whose limit of chase had been fixed by me at $ a month. She had been buying ne twice that amount from month to m and was very dilatory in paying, ta ninety and a hundred and twenty

UNIVERSITY OF IOWA

in settling for some of the merchandise.

"She turned a rosy red when I placed the matter before her. 'I'm all at fault; I know I am,' she said. 'But many of my friends lose money at bridge. They are on allowance, most of them. And when they beg me to let them buy their dresses and hats and lingerie through my charge account I cannot say "No" to them. I often lend them money, too. So my charge account is much too large, and when your bills come in my account is too small. What can I do about it?'

"Because we both had open minds and were interested in achieving the same result I succeeded, without offending her, in getting her promise to avoid all bridge games until her store bills had been paid. Moreover, she permitted me to budget her allowance, which, under proper management, was ample for her normal needs. That store customer not only learned to live within the allowance her husband gave her, but she learned to invest her surplus in good securities.

"If such situations were not handled tactfully, hundreds of our customers would be walking on the other side of the Avenue and charging their purchases at other stores. Incidentally, hundreds of husbands would be berating me for not keeping their wives within buying bounds. I avoid adverse criticism when I can, just as I try to avoid the mutual grief and cost of collecting slow pay accounts.

OUR collection department is our last resort. Kind words are sincere ambassadors. If a customer pleads poverty we generally take his word for it. We have to, even if we were not so inclined. Fortunes in high-class advertising and in merchandise can be offset by bone-headed collection methods. So we go on the principle that a merchant, through his credit man, cannot drive away a temporarily embarrassed customer and expect that customer to be sitting on the store's doorsteps when he is in funds again. We always make the most of the moral risk.

"How do I define a moral risk? A moral risk is anyone of character who has ambition, plus prospects of bettering his condition; who is conscious of obligations and seeking a backer who believes in the fundamental honesty of humanity.

"Of course, even a good moral risk sometimes becomes too dilatory. And there are others who lose both capacity and capital. When we do have to close an account and transfer it to profit-and-loss, it is for the following reasons:

1. Extravagance.
2. Financial reverses.
3. Death or prolonged illness.
4. Deliberate fraud.

"To do full justice to honest customers it should be explained that many have discharged their obligations to our store years after their names have been listed under profit-and-loss. Incidentally, because the clerical overhead is relatively small, the cost of credit to each customer is infinitesimal, and because we are always catching the negligent and fraudulent, at least eighty-five per cent of what is due us each month is paid within sixty days and our credit losses are less than half of one per cent of our sales. Teamwork between credit manager and customer has a lot to do with it."

✣ ✣ ✣ ✣ ✣

"The Curtain Speech I would like to make"
Lionel Atwill

I HAVE never made a speech like this—but often, at the beginning of a play, I'd like to step in front of the curtain and say this: "Ladies and Gentlemen: You are very kind to come to see our play. May I suggest a way by which you could enjoy it thoroughly?

"Don't cough. Coughing disturbs the actors... disturbs the play... disturbs you. To stop it, may I suggest something which I myself often use—Smith Brothers' Cough Drops? Thank you."

Unpleasant and dangerous coughs and colds—most of winter sicknesses—start in the throat. Smith Brothers' Cough Drops protect you! They soothe irritation, clear away hoarseness, relieve cigarette-dryness and—as everyone knows—*they stop coughs!*

Three Lives in One and Always Ahead of His Time

(*Continued from page 22*)

"I'm trying to bring my five-foot shelf up to date," he said, with a wave of his hand at a row of books above the desk.

"All of those books are scientific works which I have written or upon which I have collaborated. Science is always learning some new truth and it is all I can do to keep my own books up to date."

Recently, one of Dr. Jordan's students made a compilation of the articles and books he had written during half a century in science, and found that they totaled the astonishing number of six thousand. He is credited with having studied, classified, and named more fishes than any other man.

An interesting thing about the "lives" of this indefatigable man is that each began in a most humble and natural way, much as one life might begin for you or me.

"I undertook the life of the naturalist and explorer because of a love for flowers," Dr. Jordan said, in commenting upon his manner of working. "When I was a child I learned to paint and I made tolerable colored sketches of the flowers that grew about our home. It was freely predicted that I would become an artist, but it was the flowers that interested me rather than the art. When I entered college it was with the intention of becoming a botanist.

"I soon discovered, however, that the plant life of the earth was fairly well studied and catalogued. Since I did not want to repeat what someone else had done already, I sought a new field. I found it in fishes.

DR JORDAN has fished in the Sierras, in the Adirondacks, in Lake Yellowstone, and off Key West, as well as off the North American coast from Alaska all the way to Newfoundland, and in each of the Seven Seas, in his search for new fishes. There are few waters on this continent that have not attracted him. Yet he never fishes for the sport of it, and he would rather buy the new fish he seeks than pull him from the water.

Some scientific scholars insist that his contributions to ichthyology are of even more enduring importance than his achievements in other fields. Dr. Jordan was one of the first to study the habits of the salmon and to warn that this valuable fish was being wiped out by wasteful methods of catching it. His activities had much to do with saving the salmon industry.

Dr. Jordan declared, in turning to his early youth, "The purpose of all education is to train men and women to obtain their own evidence and to frame their own opinions. We know nothing until we find it out.

"My earliest scientific paper, written in 1871, was on hoof rot in sheep. It was the result of some opinions which caused me to find myself in the minority in our neighborhood while I was yet a boy in my teens. When my older brother went away to war, during the Civil War, I was placed in charge of our drove of sheep. All of the sheep in that neighborhood were subject to hoof rot, which was popularly thought to be incurable.

"I made a study of my sheep and became convinced that it was a bacterial infection, which could be cured by a solution that could kill the germs. The majority of the neighbors scoffed at the idea. Nevertheless, I secured a solution of hot sulphate of copper and drove the sheep through it, until their hoofs were saturated. The result of this was that they were soon cured of the disease.

"The majority of sheep raisers now know that this is the proper way to treat the hoof rot but it took some time for them to catch up with the *minority*."

THE second of Dr. Jordan's lives, tha of the educator, began when he was bu seventeen years old. He tells an amusin story of its start:

"The teacher of a school near my hom had been thrown out of the schoolhous bodily by the boys," he said. "The were looking for a new teacher. The onl requirement was that he must be larg enough to stay in the schoolhouse wit the boys. I may not have had any oth qualifications, but at least I stood six fe tall and I was as strong as any boy in t neighborhood.

"So I got the job, one that my fath had held likewise many years before, a by a rule of blood and iron and by mixi conciliation with the hickory stick, I ma aged to get along without much difficu until the end of the school year, wher planned to enter Cornell."

From that time on, Dr. Jordan was ways a teacher. While in college, served as instructor. Upon his gra ation, he became a teacher in a semina then a high school, and later he tau zoölogy in the University of Indiana.

He was a pioneer in modern meth of educating almost from the first. F Louis Agassiz, the great scientist, learned the art of making informa vividly alive. He organized his stud into cross-country walking parties week-ends and holidays. During v tions, his classes took walking trips lasted weeks on end, observing how earth was formed, how plants and t grew, where and how animals lived, stopping always at lakes and stream fishes to add to his growing collectior

In 1884, when Dr. Jordan was b thirty-four, the trustees of Indiana versity surprised him and everybody by making him president of the ins tion.

At that time, Indiana's seat of hi learning was "but a shell of a college Dr. Jordan put it, a football of the ticians of the state, poorly supported badly equipped. The young professo recommended several educators who thought equal to the job of buildin the university, and had begun to thi finding a new post for himself.

Imagine his surprise when the tru named him president. He was the y

est member of the faculty and became the most youthful university head in the land.

"My first task was to get money to equip and run the university properly," Dr. Jordan explained. "The majority of the members of the state legislature considered higher education as relatively unimportant. I made a speaking tour of the state, visiting every county and discussing the needs of the university.

"I went down to the legislature and appeared before the committee to explain that I did not want anything myself, but that the children of Indiana wanted good educations. I finally had to gather a small number of former students of the college who were then in the legislature and, with their help, I managed to force our appropriations through."

Dr. Jordan held views regarding education which were considered radical at that time. He wanted to reorganize the university so that all students would not be fitted into the same mold. He advocated a plan whereby educations would be fitted to men and women, rather than the reverse.

"Education should bring out one's best capacities, especially in enabling a man to build himself up," Dr. Jordan said. "The whole of your life must be spent in your own company and only the educated man is good company for himself. What a college education is worth depends entirely upon the man who has it. There is no use loading a ten-thousand-dollar education on a fifty-cent boy.

"That is epigrammatical and should be taken as such, for the boy might be worth not fifty cents for one purpose and a great deal more for something else."

Dr. Jordan advocated much more freedom for students, both in their personal affairs and in their selection of studies, than had ever been permitted before.

"A man should be as free as he can trust himself to be," he said. "Friendly guidance is worth everything, requirements and restrictions very little. However, some need them."

At the end of six years, the University of Indiana had been completely reorganized, the legislature had been convinced of the need of adequate funds, new buildings had been erected, the faculty and student body had increased several fold, and the institution was recognized as one of the most progressive schools of high standing in the country.

THE young president looked forward to a period of less active executive duties, when he could again devote himself to his study of fishes, his chosen field. One day he returned from a trip to be told that an elderly Californian and his wife were waiting to see him at the local hotel. Dr. Jordan hurried to meet them.

"We have lost our only child, our son," the Californian told Dr. Jordan. "We want to do something in his memory and have decided to found a new university in California, our home. The children of California shall be our children.

"We will contribute our entire fortune to the cause. There will be about thirty million dollars. We want to build a university free from traditions and precedents, one that will fit men and women for lives of service. My friend President White, of Cornell, assures me you are just the man to undertake the work for us."

Thirty million dollars to do that which was nearest his heart!

Imagine the emotions of David Starr Jordan when offered that sum to carry out the fondest of his dreams, the creation of a great and free university.

Leland Stanford, the Californian who tempted Dr. Jordan from his Indiana post, was a railroad builder, a former governor of his state, a United States senator, and one of the richest men in the land. His eight-thousand-acre ranch home, thirty miles south of San Francisco, was offered as the campus of the new institution.

For Dr. Jordan it was a momentous decision. It meant leaving a position as head of an established institution to take a position as president of a university that existed only in dreams. Many saw only the ridiculous in Senator Stanford's plan to rear a college in a grain field.

Ignoring these omens, characteristically Dr. Jordan accepted the proffered job without delay and was soon en route to build a college on "the farm," as the project was called derisively. This nickname clung to Stanford and became the graduates' affectionate term for the campus.

GATHERING about him perhaps the most youthful faculty that ever ran a university, all of them adventurous spirits like himself, Dr. Jordan prepared for the opening day with some apprehensions. The sandstone buildings, surrounding a mission style arcade, had risen in the grain field. All the new university needed was a student body.

Would the children of California come?

After the first day, there was no need for the question. Almost five hundred of them appeared, attracted by the new ideas in education advanced by Dr. Jordan.

"They came not only from California but from many other states," said Dr. Jordan. "They, too, were adventurous spirits. It was perhaps as remarkable a student body as could be found in any university. It included a number of men and women who had been working for a few years and who appreciated the advantages of an education which would make them more fit for their tasks.

"A number of them were not quite up to the technical requirements, but we made it a policy to admit them anyway, if they gave evidence of good character and the prospect of ability.

"I have learned that it pays to look up a man's good points. My experience with the first student I admitted to Stanford bears me out in that.

"This fellow came down from Oregon in the middle of the summer before the first term started. He wanted to enter the university but was deficient in entrance credits. He had no money, so we helped him find a job. He drove a buggy and looked after the cow at a girls' school near the campus, and accepted his remuneration in tutoring.

"He made good progress in everything but English composition, which was the only requirement we made applicable to every student who entered, but we decided to admit him anyway, on his prospects. I assigned him to a room in the men's dormitory, the very first one I gave out. He studied geology and developed a genius for organization in

You can be known as

A Clever Woman

who earns money of her own

YOU can hold the admiration of men—you can astonish your friends and win new ones—you can have a reputation for smartness.

Yes, you—any ambitious woman with a love for pretty things—with the desire to make herself and her home attractive.—And it's easy as A, B, C.

You Don't Need Experience

We show you how to do it. The Fireside way is so simple you start to paint beautiful giftwares, almost immediately; start to make money of your own. You do everything right at home.

Gifts, Bridge Prizes, Gay Toys, Etc., Etc.

Cabinets, book-shelves, wall plaques, hanging shelves, magazine baskets, lamp bases, lamp shades, table runners, beautiful bits of etched copper, batik drapes, lovable little playthings, picture frames and endless varieties of similar things. Think of the fun of decorating them, and then of having

ready buyers for them—RIGHT AT HOME—at a good profit.

$10 to $35 a Week

Many of our members have made much more. Think what that means—to YOU! Independence—freedom from money worries! And with it all the opportunity to make hundreds of lovely things for your home, the secret of smarter clothes and of making yourself more appealing.

Spare Hours or Full Time

Spend as much time as you wish on Fireside work. It will pay you well in pleasure and money. We teach you and furnish everything—including a big wonder box of artists materials, a complete outfit without extra cost.

A $1000.00 Gold Bond

backs up our warranty of satisfaction and success.

Send for FREE BOOK

It's full of colored pictures. It explains our "3 step method!" It tells you the Fireside secret. This is the big opportunity you've longed for. Don't miss it. Now, we want women in every community. Stop wishing and hoping. Write for this book TODAY. It is free!

student affairs. When he came up for graduation as a mining engineer he was still deficient in certain minor technicalities of English composition, though he had presented several excellent papers on geology.

"However, as he seemed to have all the other requirements of a useful citizen, we graduated him anyway and let him take his chances in the world.

"The boy's name was Herbert C. Hoover."

PRESIDENT JORDAN'S joy at the auspicious opening of the new university was short-lived. Senator Stanford died suddenly, before the endowment plans had been completed. His estate was tied up in court. During the long trial, the university was virtually without operating funds.

For many months the faculty served with only promises for salaries, remaining out of personal loyalty to Dr. Jordan. Some of them loaned their savings to him to buy books for the university library. Once, Dr. Jordan obtained a bag of gold coins from Mrs. Stanford and went about the campus dividing them among the hard-pressed professors. But they were only a drop in the bucket. Finally, the court ruled that the estate could allow funds for Mrs. Stanford's personal expenses, and Dr. Jordan and the others went on the payroll as her personal servants.

When the court settled the estate after long delay, another blow fell. The Federal government sued the Stanford estate for fifteen million dollars, borrowed by the railroad which Senator Stanford helped to build. The suit was thrown out of court eventually, but it tied up finances so that only the timely discovery of a life insurance policy, hitherto unknown, kept the doors of the university open.

This hurdle surmounted, a financial panic set in, making it difficult to sell securities with which it was planned to provide the endowment. In place of the thirty millions Senator Stanford had expected to realize for the endowment, but five millions were offered for his railroad holdings. Dr. Jordan was advised that the university should take what it could get, but, with Mrs. Stanford's agreement, it was decided to hold out. Eventually, the sale of the railroad stocks netted about sixteen million dollars.

The university then began to thrive, only to have another catastrophe overtake it, this time in the form of an earthquake, which destroyed buildings to the value of two and one-half million dollars. Dismayed but undaunted, Dr. Jordan undertook to build anew, this time permanently. With all these responsibilities, he found time to continue his two unofficial "lives," as a crusader for peace and as an authority on fishes.

DR. JORDAN'S crusading activities have been directed mainly against war. It is in this work that he is best known, perhaps, to the public. In this field he has been at times a lonely figure standing out against the great majority.

"I became a crusader against war," he said, "when I discovered by accident facts which convinced me that the Spanish-American War was being promoted for private profit. Later, my proclamations against war were prompted by the fi that, whereas in lower forms of life this earth survival was to the fittest, m had created an artificial condition in w whereby the reverse was true for the h man race.

"War takes the best men that nati produce. It kills them off and leaves inferior ones to perpetuate the race. have always held that wars were star by the few in power, and were fought the many at the expense of the many. was opposed to the World War until United States declared war, after whic made no more speeches against it. course, I was in a minority, but I felt t as long as we had not declared war I entitled to speak my protest.

"There was a good deal of heckl and disorder at the meetings of those posed to war, culminating for me in riot at the Academy of Music in Ba more, where we were trying to hol peace meeting. I had just begun to sp when a crowd of several hundred came down the street. They tried storm the hall, and some of the paci wanted to fight them off. Nothing c come of that, I knew, but damage to building and injury to the participa

"At the chairman's request, I stop my speech and asked the gathering to perse. I was taken to a friend's ho while the mob went from hotel to h looking for me and chanting, 'Hang D Jordan on a Sour Apple Tree.' There a good deal of unfavorable publicity the time, and I felt depressed that speech had been interfered with.

"TEN years after the affair in B more, I received a public letter the leader of the mob, Carter G. Osb Jr., who was man enough and courag enough to write me this letter:"

Dr. Jordan showed me a copy o letter, which read, in part:

"On the first Sunday in April, you were standing on the stage o Academy of Music in Baltimore, ma —before the Baltimore Open Forum protest against the impending pa pation of this country in the Eur War. You were interrupted and meeting was broken up by the sudden lent entrance of a mob which had through the cordon of police outsid theater. I was the leader of this which rendered your appeal unava

Whenever any new has arisen, I have gathered all the mation possible and then made up nind in the light of facts known to me. ing taken my position I have kept to hether I was in the minority or the rity. The question, and the only tion to be answered, is this: Where right and truth lie?

All minorities, of course, are not But often right begins with the I have little use for those who take unpopular side merely for the pur- of being 'different.' Many worthy es are injured by people who attach iem for the sake of notoriety, vainly ining that it is intelligent to disagree the masses. The intelligent thing, ously, is to search for the truth, and you have convinced yourself that have found it, stick to it!"

OTHER phase of Dr. Jordan's ex- perience which he has not included which he recalls with many a quiet kle is his career as one of the pioneers e great American game of baseball. When the game of baseball first got r way in the country," he said, "we the blacksmith from our town over to alo to see how it went. He brought such glowing reports that we organ- the Gainesville Zouaves, with red s and white trousers, and challenged pmers.

was a Zouave and developed into a y hitter, once knocking three home in a row. I thought that offered a ising field of endeavor, until one day I crashed into the catcher when both of us were after a pop fly, and broke my nose.

"I never lost my love of baseball, however, and played with the Stanford faculty team until I was fifty-eight. Then I reluctantly gave up the game because my batting was slumping and my speed was slower."

A PICTURE I shall always carry in my mind of David Starr Jordan is this one: A venerable, white-haired man, seated in a great chair by a crackling fireside, fifty or sixty men and women, some students, others older, seated on the floor in semicircles about him, literally sitting at his feet, listening to the sage discuss "anything in the world but chamber music," as he has put it.

While he was president of Stanford University, Dr. Jordan's office was always open to any student or faculty member or other visitor who wanted to see him. For all his busy three lives, he was always ready to turn the searchlight of his mind on any problem one wished to raise. This privilege was much used by students, faculty, and friends. One question invariably led to another, and the discussion was seldom finished when some duty or appointment demanded Dr. Jordan's attention.

"Come over Thursday evening and we'll talk about it some more," he would say.

So many discussions ended that way that Thursday evening always found the Jordan house full of visitors. Dr. Jordan couldn't remember whom he had invited, so Thursday evening became a weekly open-house night. All friends were welcome. After they gathered about the fireside, someone would ask a question. The evening was started, with the world for their oyster.

"Do you still have those Thursday evenings at home?" I asked, as I recalled the picture of him seated before the fire.

"Yes, but we had to build a new house," he said. "The old house was all right in its day, but it was too big upstairs after the family left, and it was too small downstairs when our friends gathered on Thursday evening. We built a new house with a room so large that several scores of people could gather about the fire, but now that is crowded too and they have to sit on the floor to make space for everybody."

Just then the car came to take Dr. Jordan to an appointment.

"Come over Thursday evening," he said, "and we'll talk about things some more."

All Arted Uppe

(*Continued from page 45*)

I ran across a sign attached to a pom and gift shop which read:

Ye Olde Griste Mille

e building sat beside the road under fine elm trees, in a fertile prairie ry. I halted Ye Antique Motor and began to investigate for some of a brook, creek, run, branch, or in the neighborhood. There wasn't and there never had been any. I was and brought up in Illinois myself, and I didn't remember having seen any water mills sitting out on the Illinois prairies when I was a kid. Ye typical Olde Village Mille in Illinois would have to be a steam mill.

The girls who ran this place weren't going to be discouraged by facts, however. They were art students at the Chicago Art Institute, in the country for the summer, and a mill appealed to them as picturesque and romantic, so they called it that. One of the antiques they had for

Santa Fe "all the way" to California

YOU always hear of some prominent person arriving or leaving on the Santa Fe. They know, appreciate and demand the best train, the best food, the best service when they travel. That is why they take the Santa Fe.

It's the short route—it's the pleasant route—through the sunny Southwest—to the outdoor playgrounds of the Pacific.

You have a whole tribe of Santa Fe trains to choose from—six transcontinentals daily! The Chief, two California Limiteds, the Navajo, the Missionary, and the Scout.

These trains offer different speeds—different types of service—different fares. You can choose just the one *you* want. Some stop at the famous Fred Harvey hotel dining stations for meals—the others carry Fred Harvey dining cars.

Finest and fastest of all is the Chief—extra fine—extra fast—extra fare!

Clyde Doerr, Famous Buescher Saxophonist
You can hear him "on the air"
and on Victor and Cameo Records.

Big Money
and a Barrel of Fun

First-Class Saxophonists make big money and the work is easy and pleasant. You might easily become a wizard like Tom Brown or a great record-maker like Clyde Doerr or Bennie Krueger or Joseph Smith. $100 to $500 weekly is not unusual for such musicians to earn.

BUESCHER
True Tone **Saxophone**

It's the ideal instrument for social entertainment. It is a key to social popularity. At parties, everywhere, the Buescher Saxophone player is the center of attraction.

Easy to Play—Easy to Pay

The Buescher Saxophone is the easiest of all instruments to play. You don't have to be "talented." Besides being easy to play, we make it easy to pay for a Buescher Saxophone. Play and earn while you pay.

Only a Buescher gives you these extra features: Snap-on Pads, greatest improvement, easy to replace, no cementing—Patented Automatic Octave Key — perfect Scale Accuracy — convenient key arrangement.

6 Days' Trial on any Buescher Saxophone, Cornet, Trumpet, Trombone or other instrument. Fill out and mail coupon for full information. Mention instrument in which you are interested.

sale was an ordinary old grindstone, worked by foot-power, such as sits around two thirds of the farmyards in America. I am very much interested in the antiquity that has suddenly been acquired in certain parts of the Middle West. In my youth we thought of ourselves and our country as being pretty new. French explorers had fussed around through there a couple of hundred years ago, but they hadn't left any interesting spinning wheels or wayside taverns behind them. These girls also had for sale Ye Olde Churne, which looked very much like the churn on which I had performed many an obbligato as a boy, when I had much rather have been fishing for bullheads. If this churn is an antique, so am I—and I bitterly deny it. Ye Olde Manne is no sign to hang on me.

Not far from this mill, located where no stream had ever been, I came upon:

YE OLDE BLUE COWE

And for a moment I was startled. My father used to own the only blue cow I ever knew, and in that same part of Illinois. She was of the Holstein family, and her blueness was amazing. I wondered, for a flurried instant, if she could be still alive and had taken to running a tea room in her old age. But I soon saw that the proprietress was a calfless spinster.

THE stuff they sell in all these arted uppe places puzzles me. As far as I can find out, it becomes artistic or antique at the decree of the proprietor.

I can imagine the proprietress of an Olde Gifte Shoppe, or Ye Olde Dutch Oven (which is located in New York State where it has a perfect right to be), or Ye Olde Sandwiche and Antique Shoppe, being puzzled herself, sometimes. She must often stand with an indeterminate piece of junk in her hands, debating within herself as to just what she can do with it.

Shall she give it a lick of orange and blue paint, and call it an *objet d'art?*

Or shall she have the Hired Man jump on it twice with his heavy plow shoes, rub some ashes into the fractures, and sell it for an antique?

Or can she subtly suggest somehow that it is both an antique (by virtue of its grimy dilapidation) and an object of art as well, because of its inherent beauty?

I have seen down South, where I lived a few years—and they probably exist in other parts of the country—a species of homemade hassock or foot rest, which made no particular pretensions to aristocracy in its youth, but which is enjoying a strange vogue now, in its maturer years.

The way you made it was this: You took five empty tomato cans and tied them tightly together. Then you covered this with a piece of carpet, or a rug, or some sort of heavy ornamented cloth, and sewed the decorative covering tightly and carefully so that no sign of the plebeian tomato cans showed through. A simple process, and a useful article.

Believe it or not, but these humble tomato-can hassocks are now being offered as antiques. Or, perhaps, as *objets d'art.* I couldn't make out which.

I came upon a place in Massachusetts one day which contained everything of every sort which I had ever seen before in a hundred other spots. It was a very large house for a country place in Massachusetts, separated from the highway by fifty yards of spacious lawn. And there were great oaks and big elms, there were arbors and flowering shrubs.

You might have thought it a safe place to stop, except for one thing that gave the tip-off that you were approaching a perfect gehenna of Art and Antiques.

This tip-off was in the nature of four enormous old-fashioned, pot-bellied rum bottles that stood upon the lawn.

They stood there shamefaced, in spite of their Falstaffian bulk. For they felt degraded. They knew that they were no longer really honest rum bottles. They would never again be genuine rum bottles. They were only objects of Art. They were only Antiques. The noble utility of their youth was gone forever; henceforth they were to be parlor ornaments, possibly in the house of some teetotaler. My heart bled for them, as I saw them standing there, as it might for some wild, savage chieftain condemned to the stiffness and formality of a footman's job.

I passed through the aura of gray melancholia diffused by these fallen kin and crossed a genuine colonial porch which sagged and dropped with its own sense of indignity, and entered a little hallway.

A foot within the door and I saw that I had entered a jungle in which spinning wheels predominated. I have no obsession against spinning wheels. Once they were useful; they still have their beauty. They connote, they remind, they evoke. I highly approve of their display, their barter, and their sale.

But a curse will surely fall upon the proprietress of this House of Horrors—*she had decorated several of these spinning wheels!*

You see into her mind a little, perhaps, do you not? The knowledge of spinning wheels are perfectly good and stuff was there. But this knowledge had been impinged upon and assaulted by a scrambled up with an entirely unrelated and different kind of thing—by the urge to art up and decorate indiscriminately. And the result was this heinous decoration of these spinning wheels. A person who would do that would paint a pansy on his godmother's glass eye!

BUT wait. The worst is yet to come. Through the hush of this strange hallway, mute in its shuddering pain, there approached me a deferential colored gentleman. He was all arted up in some way. He was supposed, I gather, to represent something colonial. I did not understand the time, and I do not understand anything more than that he was somehow designed to be included among the *objets d'art.* There let us leave him, as the saying is. He ushered me hesitantly into a big living-room, where I was given to understand I was to give my luncheon order and to wait until the viands were served.

The floor of this room had been painted a bright green. And painted on the walls were daisies!

Multitudes of daisies. A wilderness of daisies. The sweetly sentimental thought came to me that they were like stars in the firmament. They were there, and such a thought would come to one

Digitized by Google
Original from UNIVERSITY OF IOWA

And around the walls were painted den weeping willows.

Now don't quit on me. I'm not making s up. I've strung a lot of yarns in my e; but I swear by the bright blade of calibur and the keyboard of a typeiter that always aims to please its blic that today, Judge, Yer Honor, I'm ling the solemn, s'help me. I really lked upon this nether firmament of oming daisies, within this grove of den willow trees! And in this room I v:

Glass elephants with goldfish swimng in them. This could scarcely be tiquity. So it must be Art.

Old maple kitchen chairs, somewhat ed over. As these cringed away from accusing glance, I saw that they had real notion as to whether they were ere because they were supposed to be tiques, or because they were Artistic. e guilty things were neither.

A pine-board table, in a similar state of ntal confusion, knowing nothing more out itself than that it was there because had been put there.

A melodeon. Genuine. A real antique.

Batiks. In profusion. A lot of this nfounded tie-dyed stuff. I don't know ether this kind of produce is supposed cling to Antiquity or cuddle up to Art, both; or what.

Artificial flowers made of shells. Not ticularly ugly. Not particularly anyng. This racket came from Japan, I e heard. But it has spread to every ce where they have shells, apparently. u can call it a shell game, if you are not erior to that sort of pun.

A good deal of this Polychrome Stuff. u know what I mean. They make igns on boxes with it, and the figures all lumpy. And the lumps and bumps painted or enameled or lacquered, and k out in violent colors like something ly pathological. There's shellac all r it. It's quite a noticeable thing in ny of the oldy shoppies, and it proby comes under the head of Art. There t anything else it could be.

A highboy. Genuine; a pretty nifty ique. A few rugs nobody could kick hooked, rag, and so on.

Candlesticks, brass, copper, glass, that ked as if they might really have been up in the neighborhood; copper cookutensils, also genuine stuff, apparently. l along with these, a Russian samovar, sibly thrown in just to make it hard. fake "pirate's chest"—whatever a pirate's chest may be or may have n.

Wood-box that looked like a useful e of old furniture and shouldn't have n painted; but had been. Bellows, fire s. A small crane set up, out of its real e, which should have been a kitchen place, with a kettle that belonged her to that crane nor to the fireplace as in.

N THE walls were half a dozen oil paintings which had been procured the evident motive of making one be- that they were portraits of former bitants of the house. Nobody could at this, of course. And nobody could a kick coming at any of it, if the had been frankly a salesroom, a shop re all sorts of old and new things were forth candidly for sale as what they were. But the patent intention had been to give the effect of restoring the room to what it had been in the colonial period.

We will rest a moment, now, breathe deeply, and try to put ourselves into harmony with the Cosmic All.

There were a good many rooms in that house, and I inflicted several of them upon myself; everywhere was this most amazing jumble of real antiques, false antiques, current junk, and misplaced swank.

ONE must say, in all fairness, that this house is not a typical layout, as far as New England is concerned. The natives discovered the value of their antiques many years ago, and they have plenty of them for sale, genuine and almost genuine; but they usually have too much intelligence, even when they run gifty shoppies in connection with their antique lairs, to mix up the old junk along with the current hooey.

As I left the place and went out to put a semblance of life into my Horseless Carriage, I passed again the doleful guard of green rum bottles, and I thought: Why is it that a country so determined upon keeping a prohibition amendment glued tight to its Constitution should have such an enthusiasm for Ye Olde Rumme Bottle?

For old bottles that once contained liquid iniquity seem to be on display everywhere. I suppose that the genuine ones are both antique and artistic. At any rate, they have been decreed to be artistic. But the places where you most emphatically cannot get a drink are just the places where they show you the finest tantalizing lovely green old bottles.

The art eruption of the last few years, as far as the East is concerned, seems to have left its most violent scars and wounds in such places as Provincetown, at the end of Cape Cod, and Nantucket Island, and Gloucester; it is now more noticeable to the contemplative traveler than the antique complaint, which it has followed without obliterating. I suppose, here in the East, the fact that so many of the temperamental residents of New York's Greenwich Village think they must go somewhere else in the summertime has had something to do with the country getting all arted up this way. They can't all of them make the grade to their own peculiar paradise—which is to sit in front of the Rotonde and the Dome in Paris and drink three-cent wine and stare at each other. And the general arting up they have done, with regard to cottages, tea rooms, gift shops, toys, boats, and everything that can take and retain a lick of bright paint, and the jargon and palaver that accompany all this, must have had its effect upon the natives. Twenty-five years ago the Portuguese sailors and Yankee mackerel-catchers around the Gloucester water front didn't know they were picturesque. But I'm afraid they do now; and the fishermen and gobs at Provincetown loaf along the narrow street with an evident consciousness that they are part of the scenery.

I sometimes suspect that I am about the only thoroughly bourgeois person left in America, except possibly Henry L. Mencken, who has the same gusto as I have for things that are essentially commonplace, such as dark beer, German pancakes, and the novels of Sinclair Lewis. Everyone else I meet has some pre-

IF YOU ARE RUN DOWN, FAGGED OUT, CONSTIPATED AND *IN FACT . . .*

EAT YEAST IN MODERN FORM

Now you can take yeast in the form you have always wanted. Simply eat Yeast Foam Tablets. They are pure dried yeast, compressed into handy, easy-to-take tablets; they keep and they do not cause gas. Eat this tablet yeast for constipation, indigestion, skin disorders and general run-down conditions. Nothing like it.

As to the efficacy of this yeast—*it is used and recognized as the standard* for vitamin studies by the leading universities of the nation and by the U. S. Government. *You need no further guarantee.*

Get Yeast Foam Tablets from your druggist. See how much better they are! Only 50c for a large bottle. Northwestern Yeast Co., 1750 N. Ashland Ave., Chicago.

CAMPBELL'S

You Will Love It On Sight

Automatic oven control turns the heat on and off as needed. Large aluminum lined electric fireless cooker in the bottom slides in and out like the drawer in a desk. Also *automatically* controlled.

Works right off home lighting circuit. Does everything any good range will do and more. Low in price and operating cost.

COOKS AS FAST AS GAS

Never before has anyone offered an electric range as quick to operate—simple, practical, time-saving, economical, attractive, and truly beautiful in design.

Write and Get My Factory Price

Ask for our new big catalog and special introductory offer. Low cash price—or easy payments. Direct from factory. Here's where you can get the finest electric range at a wonderfully low factory-to-you price. 30 days trial. Money back if you are not entirely satisfied. Write today for new big catalog and special offer.

THE WILLIAM CAMPBELL CO.
806 Union Avenue, Alliance, Ohio

Become a Foot Correctionist A new profession, not medical nor chiropody. All the trade you can attend to; many are making $3,000 to $10,000 yearly, easy terms for training by mail, no further capital needed or goods to buy, no agency or soliciting. *Address*
Stephenson Laboratory, 16 Back Bay, Boston, Mass.

Home Made Candies
Make $35.00 to $100.00 weekly. Candies cost 14c, sell for 60c lb. Almost no cash capital needed. Make in home, sell to stores. Ladies or men. Practical money making plan, taught (by mail) by merchant 35 years successful experience. We furnish tools. Booklet Free.
CAPITOL CANDY SCHOOL
Dept. AJ-302 Washington, D.C.

New Kind Of Can Opener

Works Like Magic!

At last! An **automatic**, simple little can opening machine for the home! This revolutionary invention in only a few short months has banished old can openers from over 100,000 kitchens. And no wonder! Imagine an amazing, lifetime device that holds the can and cuts out the top leaving can rim slick, smooth and clean. Just turn a crank, that's all. Approved by Good Housekeeping Inst., Modern Priscilla, etc. Write today for special, introductory advertising offer.

tensions to being Artistic or Sophisticated or Advanced, or something. And I suffer in a world where some strange art expression may leap upon me from behind any wayside clump of trees, whiffling like a Jabberwock, to lacerate me with its clawed incomprehensibilities. I suppose, if I were not so commonplace myself, I would not be irritated by these thousands of other persons who are trying so desperately to get away from and deny their own commonplaceness. It jangles me because I feel it to be, in some sort, a criticism upon my own contented obliviousness of the higher æsthetic values in a kitchen table so painted that it sears the optic nerves, or a teacup from the dumping grounds that has been decreed an object of art just because it is cracked.

NOW and then, along with ye windmills, the weird dishes, the art jewelry made of sealing wax, the fake ship models, the tin cans, one runs upon a sign which shows a faint indication in the proprietor to kid the game himself—or, more usually, herself. Here is one from a New Jersey shop:

YE OLDE HOOPE SKIRTE

And the wire skeleton of one of those strange old garments, gilded, was hanging in front of ye shoppe. The Yellow Sunflower is near Schenectady, New York, although it ought to be in Kansas, I should think. Another bit of facetious honesty comes from Long Island:

YE OLDE JUNKE SHOPPE

And one honest citizen of Connecticut advertises that he is prepared to make duplicates and imitations of old furniture, in any pattern, out of new, sound wood.

If I see a wooden-legged man sitting in front of a country crossroads store these days, I drive hurriedly by before he has a chance to roll up his trouser to the knee and display it as an *objet d'art* or an authentic antique to me. For I am certain that it will have portraits of his ancestors, or a picture of a ship, or perhaps his age and pedigree, painted upon it; or else, in sprawling red letters:

YE OLDE PEGGE LEGGE

I tried to stage a revolt, which I hoped would spread throughout the country, in front of a Long Island windmill one day a couple of years ago. But I didn't get anywhere with it.

I had come through that strip in New England where so many pretty little villages, with a modest pride, paint signs on houses and churches and town halls, telling how old the buildings are, when the town was settled, and all that sort of thing—and always near these authentic old buildings there is an antique shop waiting in ambush to leap upon you.

When I start out through that beautiful, well-kept strip of country and read dates on buildings and in public squares, I always begin by thinking what a fine thing it is to label these houses, to foster and stimulate local pride, to minister in this fashion to a consciousness of living and continuing tradition. I begin by being pleased.

But after a couple of hours of these dates, I get fed up. Enough of these signs is enough. I begin to get irreverent. I know that they are authentic, because I have compared their dates with the date on the tombstones in nearby cemeteries—and I take it that very few families have ever been inclined to falsify with regard to the dates carved on tombstones, however much they may magnify the more fortunate traits of character possessed by the deceased. But I get after a while so don't care whether a house was built in 1637 or 1642.

As the miles of dates continue to glide before my eye, I pass from irreverence to irritation.

Well, the trip I am telling you about I had had some hours of this, and had got out of New England, and my rage had subsided, and I was on the south shore of Long Island about sunset, nursing the Horseless Carriage out towards Montauk Point.

When I suddenly realized that there was a village just ahead of me that I knew where they also had this unfortunate habit—although they stick pretty much in the early years of the eighteenth century. But everything about this town was dated; even the lanes and alleys had signs on their corners.

I became enraged again; causeless, I admit. I stopped Ye Wheeled Cockroach, and got from my suitcase one of sheets of cardboard the laundries put inside the shirts, and lettered a sign on it with a lead pencil, and hung it over the radiator cap of the car. I went on into the town, then, and stopped in front of a garage next to a windmill that had been all arted uppe into a Sandwiche and Coke Shoppe and ordered for the car a manner of mechanical ministration I could think of. I wanted the loafers about the garage, and the people in the Coke Shoppe, and as many of the village as might be, to have time to assimilate the sign, which read:

THIS HORSELESS CARRIAGE
WAS FIRST DISCOVERED
AND COLONIZED BY WHITE MEN
IN 1492

Quite a little group collected at once and read the sign, and stared at each other, and looked at the date on the windmill, and at the sign on the car again, then at a date across the street over the entrance of a lane, and then on my car, then at the sign on an old meeting house, and then at each other again. Then I would, I just simply could not get the conversation started. But as I got ready to drive away, I heard the mechanic who was still looking at my Horseless Carriage, say in a puzzled fashion:

"I always thought 1492 was when Christopher Columbus."

"It was," said an old gentleman who was leading a goat, nodding his head slow and solemn affirmation. "Christopher Columbus. That sign is a *lie!*"

"They didn't have cars then," contributed another bystander, quite anxiously. "They might have had them then," said the mechanic, considerably. Which disposed of me effectually.

Maybe I'm just an old crab, but personally, I've never seen much of the stuff I wanted to take home with me. It hurts my digestion. I'd rather look at tire and cigarette ads.

Close Calls

(*Continued from page 39*)

cowboy," he said, "was wolf-wild and free as the wind, and generally he had the grim determination to see his friends through any scrapes they got into. Early in May, 1877, I found myself foot-loose near the Chisholm Trail, and picked up a job with a northbound herd. We headed up the Chisholm Trail at first, but after a while branched off in the direction of Dodge City, Kansas, taking that route because settlers were coming in, even then, and cutting up the old drive trail with plowshares and fences.

"We had a hard time on the trail with thirty-five hundred head of wild Texas steers, especially in the Indian Territory, where we encountered many swollen rivers and had to plunge into the water ourselves, in order to get the herd across. We arrived at Dodge City on July 3d. After sixty days with wild steers, wild Indians, and wild rivers, some of us were ready to unbend. So Wess Adams, my cowboy chum, and I drew our pay and quit the job, determined to celebrate the glorious Fourth in proper style in Dodge City.

"Wess and I chose the Lone Star dance hall for our operations, and soon were swinging our partners in free and easy style. Bat Masterson, the proprietor, was there in person, wearing an apron and helping to serve the drinks. Presently I noticed Wess, at the opposite side of the hall, making signs to attract my attention. As soon as I could, I went over.

"'Come on, Charlie,' he said, 'let's get our horses from the livery stable and tie them out in front.'

"'What's up?' I asked.

"'Oh,' said he, 'I just want to show some of these buffalo hunters that they're not in the cowboy class.'

"IT APPEARED that a long-haired hunter had grabbed off the girl Wess favored, and the cowboy didn't like the transaction one bit. It wasn't my quarrel, of course, but he was my chum.

"When we came back from the livery stable, Wess's girl was sitting on the buffalo hunter's knee. I watched Wess go to the bar and order a big stein of beer. He poured out the liquor and I wondered what he had in mind, but kept my eyes peeled, knowing that trouble was bound to come soon.

"Wess walked up to the buffalo hunter and ran the fingers of one hand through his long hair. With the other hand, he brought the stein crashing down on the man's skull. The hunter was a big, powerful man, and would have made two of Wess, but his actions were somewhat hampered by having the girl on his knee. One of his men drew his hunting knife and planted it deep in Wess's back.

"After that, things popped for fair. Bat Masterson, knowing I was with Wess, picked up a handful of beer glasses and began hurling them at me. One cut a gash in my forehead, and the blood streamed down into one eye. With Wess at my elbow, guns in hand, we retreated to the door and ran to our horses.

"A town marshal tried to stop us as we rode off, but we flourished our guns and ran him up an alley, then galloped whooping and shooting out of town, and rode twenty miles to a cow camp. Wess lost a lot of blood on the way, but was all right again in two weeks; and the buffalo hunter slept off his headache in the course of time."

The wild, foolish, impulsive escapade of two boys full of hot blood and high spirits!

"I've often wondered," Mr. Siringo said, "what difference it might have made in my life if I had accidentally let a bullet slip into some man's heart that night and had had a price put on my head. Who knows!

"MY REASONED conclusion from a long experience with many kinds of men is, not to judge too harshly the chap who makes one slip, but to try to understand him. Take the cowboy: to be sure, he did lots of raw things. But he lived in the rawest surroundings, out on the edge of society; and, personally, I shouldn't be at all surprised to learn that, behind the closed doors of polite society today, just about as many things are done on impulse, which are fully as bad, considered morally, as anything the cowboys pulled in their wild, free, open style.

"Take Billy the Kid. Billy is one of the legends of the West today. Indeed, he was a good deal of a legend even before he died, being considered by many the worst of the bad men. But some of us who knew Billy as a man, ate with him, practiced shooting with him, considered him what I still believe him to have been, a real prince of a human being, who got off on the wrong foot.

"It was late in 1878 that I finished a two-hundred-and-twenty-five-mile horseback ride from Dodge City to the LX Ranch headquarters, and saw a dozen or more men playing cards under the cottonwoods. I was told they were Billy the Kid and his gang of warriors from Lincoln County, New Mexico. When the cook banged his supper gong, they raced for the table with the rest of us, and I found myself seated next to Billy the Kid. His real name, by the way, was William H. Bonney, and he was born in New York City.

"I had just been to Chicago with a trainload of fat steers and had brought back a box of cigars as a treat for the bunch. I opened them after supper and passed them around. In Chicago, with a high-heeled cowboy's disregard for expense, I had also bought a meerschaum cigar holder for ten dollars. Billy wanted to try it, and liked it so well that he asked me to make him a present of it; which I did. In return, he gave me a finely bound novel that he had just finished reading, autographing it for me, with the date of presentation.

"In the next few weeks he and I became quite chummy. As I was something of a shot, we used to practice with our six-guns, shooting at a mark. The universal practice of wearing guns, of course, was what really made the bad men of the West seem so bad. They always had the tool

What if your dog became suddenly ill?

This authoritative textbook tells what to do. 104 pages of latest approved dog information. Illustrated. Write for your copy.

Mailed Free!

An intelligent, alert and active terrier. Generally black with tan markings. His short, smooth coat displays his graceful and muscular form. Weighing about 45 pounds he stands almost two feet tall. A real "one man" dog and a successful police dog.

YOUR BEST FRIEND DESERVES THIS TREATMENT

TRY this expert care on that dog of yours. Keep him free from fleas; his skin clean and coat thick and gleaming. Treat him for roundworms which afflict most dogs from early puppyhood. Keep him regular with Glover's Laxative Pills and toned up with Glover's Condition Pills. Use Glover's Cresol Disinfectant as a germicide both for the dog's protection and for your own.

Glover's medicines for dogs are as carefully compounded and as effective as any used for humans. They are safe for every breed. The 6 shown here are just a few of these medicines.

AGENTS WANTED for Local Territory

at hand to give a mortal wound in exchange for an affront, provided better judgment didn't check the hasty impulse.

"A good many fictions have grown up about the cowboy bad man and his guns. It is perfectly true that men got so they could draw fast and shoot with remarkable accuracy, but nothing like the way they tell about in some of the stories, where the action is too fast for the eye—or the brain, either!—to follow. Billy the Kid was about the fastest man with a gun I ever shot against. Often at the LX Ranch he would point out a knot-hole, or a mark on a fence post, and say:

"'Charlie, when I count three, let's shoot and see who hits it.'

"We'd both draw and fire at the same instant. I don't mind saying that I could shoot as straight as Billy; but he could plant two bullets in the mark to my one.

"Offhand shooting of this sort, when done skillfully, was a knack that a man acquired only by practice and the wish to do it well; just as the cowboy learned by practice to throw a rope and catch a steer where and when he wanted it. With thumb on the hammer, the very momentum of the gun on its downward arc helped in cocking it, and the bullet sped on its way in a marvelously short space of time, with high accuracy at short range.

"At close range, some killers fired from the hip on the upward arc, with a view of hitting the opponent at the waistline.

"I have known a few men who could shoot two pistols at the same time, with accuracy. Billy the Kid, however, was not a two-gun man; John Wesley Hardin was.

"A blacksmith's son in Jackson County, Texas, used to be able to fire two powder-and-ball Colt's pistols, one after the other, and do great execution. He once won a bet of two hundred and fifty dollars that he could kill six quails out of a flock sitting on the ground, before they could get away.

"BILLY the Kid, though not a two-gun man, had fatal skill with one gun. As far as I know, he never killed wantonly, but shot only men who he thought needed shooting. Most of his killings, which numbered twenty-one in all, took place in the so-called Lincoln County War inaugurated by him to avenge the slaying of his friend and employer, an Englishman named Tunstall. But at last friendly, lovable, magnetic, misguided Billy the Kid stepped one night into a betraying patch of moonlight, and Sheriff Pat Garett's bullet ended his career. Billy was four years younger than I; yet it is more than forty-seven years, now, since they laid him away at Fort Sumner by the side of his chum, Tom O'Phalliard, who also died from a bullet wound. The killer's life, if a wild one, was usually short."

Speaking of another wholly different type of bad man, Jim Miller, Mr. Siringo revealed an unrecorded bit of Western history, and incidentally shed light on the typical fate of one man who chose the vicious way to wealth. Sheriff Pat Garett himself was assassinated, several years after writing the final chapter in the career of Billy the Kid. Garett was Siringo's friend, and, he says, one of the most fearless law officers of that time and region.

Wayne Brazil, a goat man, had leased a ranch from Garett, and was accused of his assassination. Brazil pleaded guilty, but claimed self-defense as his motive and was acquitted. It was Charlie Siringo, in his capacity of detective, rather than of cowboy, many years later, after all those immediately concerned in the deal were dead, dug up the true facts, which led to Miller.

"JIM MILLER," Mr. Siringo said, "was one of the few genuinely cold-blooded killers I knew. He could be, and was, hired to do murder; that was his profession.

"It was Jim Miller, hidden in a clump of willows by the roadside, who fired the shot that killed Pat Garett. The man who hired him to do it, a banker with a grudge of many years' standing, had been riding in the buggy with Garett just a few minutes previously. Wayne Brazil was an entirely unexpected factor in the party. He rode alongside on horseback at the critical moment, and began arguing with Garett about the terms of his lease. Garett and the banker got out of the buggy and stood in the road to stretch their legs. It was then that Miller, from his place of concealment, shot Garett through the back with a rifle. The wound was mortal; but before he died the courageous sheriff tried to reach his gun with the evident intention of shooting Brazil, who, no doubt, he thought was to blame. Brazil pulled his own gun first, however and shot Garett through the head.

"No doubt Wayne Brazil was paid handsomely to accept the responsibility for this crime, though there is no direct evidence to prove it. At any rate, the fact that there was a rifle bullet as well as a revolver bullet in Garett's body was not brought out and questioned at the trial and I was not even aware of it, myself until years later. Hence, at the time, no body had any reason to suspect Jim Miller.

"As it happened, however, fate took a queer and quick revenge on Miller, the real killer. Ten thousand dollars was deposited to his credit in the bank, as the price of this killing. Before he had a chance to touch a penny of it, however, he was called away to Ada, Oklahoma, to kill the marshal, Bob Gossett.

"He shot from ambush. Gossett fell on his back, his hat sliding down in such a way that it shaded and hid his eyes. Though his wound was mortal, Gossett did not die immediately, and retained consciousness. So it happened that when Miller rode out of the woods to take a look at him, the fallen marshal recognized him.

"For a moment, Miller appeared undecided. Without guessing, of course, that the marshal was observing him all the while, Miller drew his gun, apparently with the intention of firing a second shot, but decided against it, believing the marshal was thoroughly dead.

"After Miller rode away, Gossett managed to drag himself some distance to a cabin of friends. Before he died, he was able to tell what had occurred. A posse was formed. Jim Miller was tracked down, taken, and was hanged with little formality from a beam in a barn, together with the three men who, he confessed, had hired him to commit the murder."

Even in the gun-toting West, the bad men, Mr. Siringo pointed out, the real bad men were merely highlights. They were dangerous, except on rare occasions.

Digitized by Google Original from UNIVERSITY OF IOWA

"A man who attended to business and kept a good hold on himself," he said, "had nothing much to fear from them. It was only once in a long, long time that a real dead-in-earnest human 'critter' undertook the job of salivating you. If I tried to pick and choose the closest among the many narrow escapes from death that I personally had, only a few would be cases where my life was threatened by other men; the majority would be accidents and freaks of nature.

"Once, for example, I was out hunting a buffalo steak for supper. I sighted a herd, and stalked it down a dry wash. From cover along the bank, I shot a bull which was standing not far from me and a little apart from the rest of the herd. The wounded bull, infuriated, charged directly toward me, leaped into the wash, and tumbled down dead a few feet away.

"Evidently he was the leader of the herd. At any rate, the rest all stampeded in the same direction, leaping right over me in my hiding place. I hugged the bank for dear life, and for several minutes all I could see was flying hoofs and the bellies of buffalo. Had the bank suddenly caved in, or had one of the beasts missed his footing and fallen on top of me, that would have been the end of Charlie Siringo!

"Or take another time, when I was caught in front of a prairie fire, with a high wind blowing. That was about as narrow a squeak as any, I expect. Wolves and wild cattle were running with me, doing their best to escape being burned to death. My horse was so tired at the last that I could scarcely spur him to a gallop. The flames weren't more than a hundred yards behind when, by pure luck, I ran into a weedy wallow covering maybe half an acre of ground and full of water. The wet reeds wouldn't burn, of course. So I sat still in the saddle, and in a minute or two, the fire had roared by and was *ahead* of me.

"OF THE men I knew," Mr. Siringo went on, "there was one whom I always considered about the ablest manager and best cowman of the whole West; and yet he made a terrible mess of his life, simply because of his inability to control his impulses. When he saw red, he killed. The man's name was William C. Moore, made an outlaw by his own hasty acts, but a born leader.

"Outlaw Bill Moore's first bad fall from grace occurred in California, where he shot and killed his brother-in-law. He fled to Wyoming, where he became the manager of one of the biggest cattle companies in the West; but one day in a mad fit he killed his negro coachman and had to fight out again. He reached the LX Ranch one day on a worn-out pony, practically broke, and went to work for a cowboy's wages. Inside of a year he was manager of the ranch, and in a few years more he sold the interests which he had managed to accumulate on his own account, for the sum of seventy thousand dollars. With this money he bought himself a ranch in western New Mexico. There again, however, his lack of control got the better of him, and he killed two men. A big price was put on his head and he had to pull out, a jump or two ahead of the law. The last time I saw Bill Moore he was a broken, unhappy old fellow living under an assumed name a long, long ways from the cattle country where his best work was done.

"I REMEMBER an exciting experience in the Coeur d'Alene country in 1892, during the strife between the miners' union and the owners. In the end, they discovered that I was a detective. It was then that I was threatened with burning at the stake, and narrowly escaped.

"During the troubles that followed, which were long drawn out and became so serious that finally United States troops had to be brought in to restore order, I was compelled, in order to save my life, to take to the hills, and at one time had for companion in escape a young man named Frank Stark. We were skirting a mountain one night, and upon reaching a certain footpath which we had to cross or else go a long ways around, we found it guarded by three men with rifles. I told Stark it would be better to have a quick fight with them than to make the long climb up the steep mountain.

"I tried a trick. We two were well hidden. So, in a loud voice, I said:

"'You shoot the one on the right; I'll kill the fellow on the left.'

"I thought the remark might have some effect; and it certainly did! All three jumped as if really shot and started running down the canyon for dear life. They dropped their rifles and even tripped and turned somersaults, in their eagerness to get away. And Stark and I went on unmolested.

"The only kind of hasty impulse that it pays to heed is *the impulse you know is right.* When you're sure, go ahead and forget every doubt. If, for instance, when I had tough jobs of work to do on the range, or in trailing criminals, I had ever stopped to figure on the possible *dangers* to be met, instead of thinking of doing the job the best way, I never would have amounted to a row of rowels on a Mexican spur."

So that, in brief, is the story of Charlie Siringo, around whose person clings so much that is a vivid reminder of the old West. Wild, free, and untamed were the men of that world he knew so well—but, by and large, they were sound to the core.

With the memory of long days and nights under lonely skies still shining vividly in his eyes, Mr. Siringo says calmly that when the time comes for him to cross the Great Divide, there are four verses that he hopes will be inscribed on his tombstone. Of the four, this is the last:

Let cattle rub my headstone round,
And coyotes wail their kin,
Let hosses come and paw the mound,
But don't you fence it in.

GYPSIES! In that word lies the romance of the open road. There is a fascination about these swarthy, light-hearted people who have no words for possession and *duty* in their language, but who are faithful to their own gypsy law, customs, and tradition. Next month, Konrad Bercovici, who himself is of gypsy blood, gives the history of these strange nomads, who have been wandering the wide world over for two thousand five hundred years.

You'll like Iron Clads 907X as soon as you see them. They'll win your instant approval with their silken beauty—soft, clinging beauty that perfects your own natural loveliness of line.

And you'll like Iron Clads 907X as long as you wear them. You'll like their serviceable, lasting beauty that won't wash out or wear out for an unbelievably long time. You'll like them because they're exceptionally attractive, exceptionally durable—and sell for an exceptionally reasonable price. —And most of all you'll like them because, with every purchase, you get an Iron Clad *guarantee* of satisfactory service or a brand new pair of hose.

Pure Silk to the Top
In Service Weight!

A truly unusual feature in a service weight hose. Full fashioned, and specially reinforced at heel and toe for *extra wear*—907X cost you only $1.50 a pair in the following colors: black, atmosphere, skin, grain, pearl blush, pastel parchment, evenglow, light gun metal, mirage, Reveree, beach tan—sizes 8 to 10½. Ask your dealer for Iron Clads 907X. If he hasn't them in stock, send us your remittance—with his name—and we'll mail your hose direct, postage prepaid.

Making Friends With Luck

(*Continued from page 31*)

it for the last time. What should I do with it? I decided to try my luck once more. I dragged the trunk through the aisle to the smoking car. Everyone laughed as I bumped it through the door.

"Again the familiar greeting: 'Hello, boy, what ye got there?'

"'Trunk,' I answered.

"He smiled as he asked: 'How many?'

"'One.'

"'Chuck it off the train.'

"I dragged it to the platform and tumbled it to the right of way, and Nicodemus settled with me. I was out of the news-agent business for good."

EDISON'S brain, as a boy, just as in later life, was never asleep at the switch. He knew that fortuitous fortune such as this came seldom in a lifetime. Opportunity, fate, luck—call it what you will—had played right into his hands, and he realized that it was up to him to seize it and turn it to his advantage.

Having closed out his stock, he used the astonishingly acquired money to take up telegraphy and begin the serious study of electrical science, on which his mind was already set. Soon the world was his eager customer and his Nicodemus a grateful humanity. He was himself to become a creator of astonishment.

After Edison had been "jerking lightning" for some years and was getting on familiar terms with it, fate again took a hand in his affairs.

He had invented an instrument for recording sales on the Stock Exchange and reporting them instantly in many places. It was the stock ticker—now in every bank and every broker's office.

This is Mr. Edison's story of what followed, as he told it in the room upstairs after dinner:

"The Western Union Telegraph Company saw at once the value of this invention. Their manager asked me to name a price for it. I told him that I would go home and think it over and see him in a few days. I talked with my wife about it.

"She said: 'Tell him twenty thousand dollars.'

"'Twenty thousand dollars!' I exclaimed. 'I don't want to scare him to death.'

"'Say it softly and if he starts to run you can stop him,' she answered. 'Then you can say: "Joking aside, Mr. Eckert, what do you think it's worth?"'

"When I went to bed that night I lay a long time thinking of the matter. Twenty thousand dollars! It would pay my debts and build and equip a little laboratory. It would make me the happiest man in the world.

"The next day I went to the manager's office.

"'Well, Edison, have you decided on the price for that invention?' he asked.

"'Yes,' I said.

"'What is it?'

"I tried to say twenty thousand dollars but couldn't. The words stuck in my throat. I simply hadn't the nerve. That momentary hesitation was a lucky thing for me.

"'How about a hundred thousand dollars?' broke in the manager, while I was trying to brace myself to make a new start for the hurdle.

"As soon as I could recover from my astonishment I realized that if I got this sum all at once I wouldn't know what to do with it. I'd probably give up work and tackle the everlasting job of spending that mountain of money. I knew the life of a patent was seventeen years.

"'If you'll pay it in seventeen annual installments instead of all at once I'll accept it,' I said."

In the wise disposition of the unexpected fortune that fell into his lap Edison put himself on the road to great accomplishment; for, financially independent, he could devote himself solely to experimentation.

However, you will see from these two incidents that it takes more than the combination of the time, the place, the opportunity, and the man to turn the tide of fortune into a channel of success. It takes the intelligent recognition of what life is handing you and a mind prepared to meet the emergency.

NOW let us turn to another great man who knew how to join in the game of life when the gods of chance took a hand.

I was coming down the St. John River on the Gaspé Peninsula, one warm, sunny July day with A. Barton Hepburn, perhaps the most distinguished public banker America has known. At noon we landed on a pebbly point and sat down to eat our luncheon. Thrushes were singing in the green, wooded terraces above us. As we ate, Mr. Hepburn told me briefly of several lucky breaks in his remarkable career which he had turned to his advantage.

"As you know, I was born near the edge of the great woods," he began. "I had reached the age of sixteen when I knew more than I have ever known since. I intended to be a hunter and trapper. I had a rifle and had bought fifteen traps. I was going out into the deep woods for the winter. I hid my traps in the woodshed. My sister Cordelia discovered them.

"'What does this mean?' she asked.

"I told her of my intention.

"'You will do nothing of the kind,' firmly declared. 'I'm going down to the village to get you a job. You're going to be a man—not a hunter.'

"She induced the villager who ran a hardware store to take me as a clerk. I made little money but many friends. Soon I discovered that I had much to learn and decided that I would tackle the job of learning it at the Academy at Potsdam.

"A year passed. To my surprise I found that there were a lot of things I didn't know even then. I taught district school, saved my money, and finally landed in Middlebury College.

"Later I was sent to Albany as a member of the lower house from our district

Digitized by Google Original from UNIVERSITY OF IOWA

had been nominated and elected in opposition to the will of the local bosses. I was a rather lonely figure.

"One day I was sitting at my desk when a hand touched my shoulder. Turning, I saw the giant form of John F. Smythe, the great boss of Albany, standing behind me.

"'Is your name Hepburn?' he asked.

"'It is,' I answered.

"'Will you come to my apartment this evening? I want to talk with you.'

"I went.

"'There are two reasons why I have asked you to come here,' he began. 'First, I like to help a deserving young fellow. Next, I was befriended in my youth by a man by the name of Hepburn. I have never forgotten it. What do you want here?'

"I mentioned some chairmanships and a place on the Ways and Means Committee.

"'Have you seen the Speaker?' he asked.

"'Not yet.'

"'You owe it to your constituents to go to him at once and make your wishes known. You must see him tomorrow.'

"I chose my words rather carefully for that interview with the Speaker. I presented my wishes in a way that pleased him. I got all I asked for and friendly expressions of good will.

"But the big tide in my affairs came on the floor of the house. I became a student of all proposed legislation. When a bill came up I knew its history. I studied its bearings. I became an authority on the work of the house.

"Governor Tilden had caused a bill to be introduced calling for a secret investigation, without counsel. I opposed the bill because of its proposed secrecy, without benefit of counsel, as a star chamber proceeding. I found myself lined up with the most questionable characters in the legislature. The press of New York denounced me. I felt like one standing on the brink of ruin. Still I did not waver. I knew that I was right.

"Suddenly Tilden sent for me. I was relieved when I heard him say: 'Hepburn, you are right. Public opinion has changed. Today it is with you.'

"Through the influence of this man—opposed to me in politics—I became chairman of a special committee for the investigation of the railroads."

THAT investigation made history, and Hepburn turned into the straight road to bigger things. On it were the stations of National Bank Examiner, Comptroller of the Currency, President of The Third National Bank of New York, Vice President of The National City Bank, President of The Chase National Bank, Chairman of its Board, and international authority on currency and banking.

In his early career the thing called Good Luck began to follow Mr. Hepburn. And being a young man of brains, he found a way to command it. Good Luck, I have found, is a wise chooser of its companions. It is always on the lookout for a fellow who has a conscience, and sense enough to obey it. That, however, does not wholly satisfy the fickle goddess. The young man must be eager to find his place and generous in doing the work it demands. Hepburn saw that the one great need of the legislature was a man thoroughly informed as to the work ahead of it. He decided to be that. His days and evenings were filled with study. Then, knowing that he was right, he had the courage to follow his conscience against the clamor of the ill-informed.

Even then he could not have won his way without another talent which the goddess of Fortune is sure to demand of her favorites. Good Luck has little to do with a lonely man. He must have friends. Hepburn had a genius for friendship. It is probable that some one of his friends had written to the great boss about him.

Looking backward on my own life I find that I had a number of opportunities to link up with luck. Some came to me, others I went out and seized.

When I had reached the age of thirteen it was the conclusion of the wise folk of our neighborhood that I had not long to live. They did not tell me that, but I sensed it. I had a large frame and small lung capacity. Tuberculosis was the doom appointed for me. The space from my spinal column to the front of my chest was noticeably narrow.

NOW, it happened that a man came to our village who had been a famous public reader. He had a tall, impressive figure, with a musical voice and an art in using it which had won great rewards of fame and fortune.

I went to him one evening to rehearse a declamation that he had kindly promised to hear. No hour of my life has been so fruitful. He gave me a sheet of paper containing these directions:

For five minutes, every day, slowly fill the lungs and empty them. At the end of each inhalation tap the chest with the tips of the fingers for a few seconds before exhaling.

For five minutes, inhale and exhale to the limit of your lungs' capacity at the rate of about ten times a minute.

For three minutes, fill and empty your lungs as rapidly as possible.

I began to do as he bade me. It was strenuous exercise and very tiresome but I stuck to it. Every day for seven years I turned to this task as unfailingly as the Mohammedan turns to Mecca. How simple it was, yet what a change it wrought in me! I came out of the road that leads to early death. My chest expanded. My weight and strength increased. No burden appalled me. I could and did travel for hours on mountain trails with from fifty to seventy pounds on my back. In time I achieved the chest measurement of the greatest athlete of my generation—John L. Sullivan.

Thus I met and capitalized my initial turn of fortune.

When Henry Irving first came to America I was on the city staff of a daily newspaper in Brooklyn—doing the kind of work for which I had never thought that I had any special aptitude. I was never a good mixer, and a reporter must be that.

I wrote a little sketch of the great English actor. After that I met him and certain of his associates at the Brevoort House, the Star Theatre, and in the home of John Ford. Among those who had come from England with Mr. Irving was the well-known novelist, Mr. Joseph Hatton. He had brought with him the

CAMPBELL'S
INFRA-RED RAY
LAMP

Have You Some Troublesome Ailment?

You will be greatly surprised when you learn how Infra-Red Rays relieve congestion or troubles causing aches and pains in the body. The Campbell Infra-Red Ray Lamp concentrates a mild beam of Infra-Red Rays upon any part of the body.

These rays penetrate deeply into the tissues. As they penetrate they create an active circulation of the blood. Most ailments are due to congestion—relieve the congestion and you relieve the ailment. Nature herself does the healing by active, normal blood circulation.

Why Suffer Needless Pain?

If you or some one in your home have a troublesome ailment, a lamp like this is a blessing. May be used safely by anyone. Entirely unlike ultra-violet or X-Ray. Positively cannot sunburn or blister.

Relieve bronchial trouble, Neuralgia, Neuritis, Lumbago and many other ailments with soothing Infra-Red Rays.

Let Us Send You Our Book on Infra-Red Rays

We have an interesting book on the use of Infra-Red Rays which we shall be glad to send free to any reader upon request. Our book quotes leading authorities as well as users of our lamp. Full directions for use, how to order, our home trial offer, etc., are also explained.

Infra-Red Rays have brought such wonderful results for others you are sure to be interested. Write today for our book telling more about it.

manuscript of a new novel just finished. He asked me to try to sell the American serial rights of this novel. I took it to Mr. Robert Bonner, of the "Ledger." If he accepted it I was to get a commission of five hundred dollars—a lot of money those days.

It was a rather important five minutes in my history that I spent in getting his answer. There was a long panel of ground glass in the partition that ran from the counter back of Mr. Bonner's office. That counter was one of the great sources of cheerfulness and despair for the poets and romancers of the old time.

That little waiting-room was the resort of hunger, hope, and palpitation. A caller sent in his name and waited for Mr. Bonner to come out. He had not long to wait.

The celebrated humorist James L. Ford used to say that he would watch the ground-glass panel for the shadow of the approaching editor and that he could tell by the look of the shadow whether he was to get cash or the dreaded manuscript. If the shadow expressed animation, it was cash. What would it say to me?

Anxiously I watched for it. I saw it coming. Then the genial face of Mr. Bonner at the counter!

He had decided to take the novel and would pay three thousand five hundred dollars for it.

With my commission of five hundred dollars as a backing, I gave up my work in Brooklyn, hired a small office in New York, and set out to assemble and serve the first American newspaper syndicate with a long series of vivid interview sketches written by Joseph Hatton. Their subjects were Gladstone, Ruskin, Irving, Abbey, Miss Braddon, Thomas Hardy, William Black, and other distinguished Britishers. My contracts at once began to pay me a comfortable income.

SUDDENLY a master craftsman captured the imagination of the world. Arthur Conan Doyle had created the fascinating character of Sherlock Holmes. His name was on every tongue. The leading members of my syndicate urged me to go to London and arrange, if possible, for some short stories by him. I went armed with letters of introduction.

I met the stalwart young physician.

He said: "I am glad to see you but I cannot write for you. Come to luncheon with me and I will tell you why."

We agreed upon a date for the luncheon at the Reform Club. We chose our food from the loaded tables and sat down to eat.

"Everything I write has its appointed destination," he said. "Sir George Newnes takes my output and prints it in 'The Strand Magazine' and is always eager for copy."

"May I ask you the rate you are paid?" was my query.

"Fifteen guineas a thousand words."

"I will double the amount and take all you write in the next two years," I proposed.

Within a week I made a contract with him on those terms. It marked the beginning of high prices for serial rights. More adequate payment to the man of genius for his product was thereafter assured. The news spread through the publishing offices of London. There was then only one great clearing house for fiction in Great Britain. It was that of A. P. Watt. I secured the first call on his best offerings. Among them was the work of Rudyard Kipling, Stanley Weyman, and W. W. Jacobs. It was a fortunate capture. The adventures of the Brigadier Gerard, most of the Jungle Tales, and all the Many Cargoes first appeared exclusively in my syndicate.

If there is any lesson to be learned from my humble history it is that luck prefers to run with the man who sees his way clearly and is prepared to act quickly when approaching decisive moments. Luck is no laggard nor waster of time.

PERHAPS New York has never known a greater constructive genius than Dean Alvord. It was he who years ago built the beautiful suburb known as Prospect Park South, Brooklyn. I always had a keen admiration for his business ability and sagacity, but after his purchase of the Shinnecock Hills, Long Island, I understood why he had so many lucky breaks. He knew that luck had to be intelligently pursued.

For many years the Shinnecock Hills had been in the possession of an English syndicate. They were, it was supposed, out of the market. Just by chance, one day, Alvord met a man who had lately arrived on a steamer from England. The man told of a fellow passenger who had said in his presence that he was coming over to sell the Shinnecock Hills. He and his friends had grown weary of the investment, for it paid no income. They were ready to take what they could get and unload.

"What was the gentleman's name?" Alvord asked eagerly.

"I did not learn his name," the other answered.

"You give me a difficult problem," said Alvord. "How am I to find a nameless Englishman in this great city?"

"I can give you a clue. He was often playing on the deck with a New York lawyer by the name of Brown. I do not know his first name."

Alvord went to work on the problem of finding Lawyer Brown—not an easy matter in New York. After many failures he was found in a law office downtown.

Yes, he remembered the Englishman with whom he had played on the steamer. His name was Mallinson. He did not know what had become of him.

Now the problem was to find Mr. Mallinson. Alvord judged that he would go to some hotel with an English name like the Prince George, the Marlborough or the Brunswick. He made a list of such houses of entertainment, but got no trace of him. His name had not been on the lists of the "Daily Hotel Reporter." He must have gone to some one of the lesser hotels, whose arrivals were not reported, of which there were many. In the list of The Wellington—a little inn on Seventh Avenue—named for the famous Duke. There he found his man.

He made a deal with him for more than three thousand acres, which gave the English stockholders a larger sum than they expected in cash. It was one of the best speculations he ever made.

One of the most dramatic lucky breaks of which I know was connected with the tragic death of General Grant on Mount

Digitized by Google
Original from UNIVERSITY OF IOWA

McGregor. I heard the story some years ago told by its hero at The Aldine Club—the setting of many like recitals in the old time. The name of the man who told it has slipped from me, but who that has heard it can ever forget the story? This is my recollection of the incident:

He was a young man sent by a New York evening newspaper to the big camp of reporters which surrounded the cottage on Mount McGregor where the great hero of the Civil War lay dying. His was a trying assignment. Like many of the kind, it was a chance for distinction or extinction. There is much peril in an assignment of that character.

The climax might arrive at any moment of the day or night, with the news of it filling the wires while most of the reporters were ignorant of the fact that they were beaten and disgraced. A thousand newspapers in leading cities had their forms ready to go on the press the moment the news flashed into their offices. Within five minutes their papers would be rushed to the streets.

This young man had his spurs to win. He was up against a keen-minded, alert, eager lot of newspaper veterans.

The old General in his fight with death was surrounded by his family and intimate friends. The reporters were never admitted to the cottage. Every day some person of the household met them at an appointed place and gave them the news.

One day, while a member of the General's family was out for a walk—it was General James Grant Wilson, if I remember rightly—our young man met him and had a fortunate moment in his company. The reporter told of the great fear in his heart that the end would come and the news of it go out while he was ignorant of the truth. There was, no doubt, a convincing look on his face when he said:

"It would disgrace me and I would lose my job."

"I sympathize with you. It's a hard game," said the man.

"The worry of it is enough to kill a horse," the boy answered.

The man turned and looked at him. Then he said:

"Don't worry, boy. I'll do what I can for you. The moment the General dies I'll come out of the front door, walk to the railing, and raise my handkerchief to my mouth."

"MY NERVE tension was relieved," said the story teller. "Either I or my helper kept our eyes on the front door after that. I sent a messenger to the office warning the city editor that when a certain commonplace phrase arrived on the wire he would know that General Grant had passed away.

"We waited a week or so. One day the historic moment arrived. We saw our friend come out of the front door, walk to the railing, and raise his handkerchief to his lips. I knew what it meant.

"I put that little phrase on the wire while a messenger was calling the boys to the cottage door, and got a jump of several minutes on the whole crowd. While the others were running to the wires my story was being sold and read on the streets of New York."

Every human being has a number of lucky breaks scattered through his life. Some people never recognize them. Others recognize them vaguely, but never fully take advantage of them. The really lucky man is he who knows good fortune when he sees it and then pushes it to the limit.

Taking My Own Medicine

(*Continued from page 40*)

in seeing just how well I could do it.

Living, as I said before, in a sawmill town, we burned pine wood in the kitchen stove. Huge loads of it were dumped into our back yard. When split, it had to be piled in little open square towers, so that it would dry out. If all these pine towers I piled in my childhood could be set up, one upon another, they would be taller than the Woolworth Building.

THAT, I suppose, was work. But I loved it, because I took pride and interest in doing it perfectly.

Incidentally, I loved it for two other reasons: It was outdoor work. And I liked horizons and skies better than walls and ceilings! Moreover, it was the sort of thing that boys did; and, curiously enough, the shy little girl that was myself yearned passionately to be a boy.

The whole range of being and of doing was open to boys. To be natural and free, like a boy, was a glamorous dream, a dream which never can be realized by a girl or by a woman. That is a note of real tragedy in a woman's story. We don't say much about it; but it is always there.

In these childhood tasks, such as piling wood, I began to learn the joy of craftsmanship, the satisfaction of trying to do a good job no matter what the job may be.

Not that one always succeeds! That isn't the point. But even the *trying* makes work intensely and unfailingly interesting.

As far back as I can remember, I planned to be a writer. As usual, however, I kept my plan to myself. I was afraid people might laugh at me. I couldn't bear that they should know about my dreams and watch me blunder, through failures, toward the thing I dreamed of.

Longing and planning to write, I nevertheless wrote very little. Scarcely at all, outside my school "compositions." But I begged and borrowed every book I could get hold of. Before I was sixteen, I had gone through more books than some people read in the course of a lifetime. Worth-while books, too; and I didn't skip one single word in them.

When I was just past sixteen I was graduated from high school. Meanwhile, scanty as our income was, I had been given both music and drawing lessons. They hadn't amounted to much; but the drawing lessons had at least one result:

From my father I had inherited a love of mechanics. He had very clever hands; and, like him, I enjoyed using tools and instruments, especially delicate ones. So when it came to drawing I could at least handle pen, pencil, and crayon deftly.

Well, I wanted to earn money. It

Solved at Last!!!

What to do with Old Razor Blades!

DON'T throw them away! For old razor blades are worth *real* money—now that KRISS-KROSS rejuvenates them an amazing way—and gives them the kind of edge you have only *dreamed* about until now. And not only that, it can take a *new* blade right out of a fresh package and increase its sharpness almost 100%!

KRISS-KROSS makes blades *last* astonishingly, too. Ten weeks of slick shaves from a single blade is only a *low* average—while any number of cases are on record where one blade has lasted for 365 keen, cool shaves a year!

SPECIAL OFFER NOW

KRISS-KROSS fits *all blades* except Durham—and to make it easy to test it, we are announcing a special limited offer. Right now we are including FREE a new kind of razor never sold in stores. Adjusts 3 ways and is absolutely unlike anything seen before. Find out about it today. No obligation. Clip coupon below for offer. Mail it now!

AGENTS!

Find out how to make $100 a week and more just showing KRISS-KROSS to men in your locality. Full or spare time. R. S. Hopkins (Mich.) made $20 first day. We show you how. It's easy. Check bottom of coupon for details and generous proposition. Mail it now.

Page-Davis School of Advertising
Dept. 1051, 3601 Mich. Av., Chicago

seemed impossible for me to do this by writing. I was conscious of the fact that I didn't know *how* to write. Therefore, something else must be tried, until I could develop writing ability—if I really possessed it.

In the building where my drawing teacher had his very humble studio there was a photograph gallery. Occasionally the photographer allowed the drawing pupils to practice retouching of negatives; and because I liked to do things with my hands, this was easy for me.

The year I left school I got a job as retoucher in another gallery. All day I used to sit with my head under a great pasteboard hood, working on the glass negatives.

Of course, that wasn't all I did. There was tennis sometimes. I went to the extravagance of having a riding habit made and of occasionally hiring a horse at the livery stable. I liked to drive, to ride, to row a boat. I wanted to dance, to go to Europe, to paint pictures, to play the violin, to buy and sell real estate!

In short, I had an insatiable curiosity about every human experience. I wanted to do *everything*—even the things I didn't like to do—because I wanted to understand them. For instance, I went to parties, even though "society" bored me. Anyway, because of that stupid "vanity complex" of mine, I wouldn't stay out, for fear folks would think I couldn't get in!

Half the people at any social function are there for that same reason. It took me a long time to learn to live my life according to my own tastes, not in the fear of what other people might say.

There was another thing I did! I sang in the choir. We had an exceptional leader and teacher who had studied abroad.

All these things count. My drawing teacher had come from Germany; and he opened to me a window through which I saw the world of painting and sculpture. My singing teacher opened another window; this time into the world of music. At those terrible "parties" I did at least learn something of the social world. Through a little tennis and riding and rowing on the river, I became interested in sports. My father and my mother were deeply religious; and thus I unconsciously learned that the spiritual background of life cannot be denied or escaped.

Perhaps it sounds absurd; but all this was part of my plan of learning to write. I wanted to see many aspects of life; to understand all kinds of things. I was trying to turn every available experience into grist for my particular mill.

BUT I didn't use the grist that came to me! I mean, that I didn't write things and send them to editors. Why? Because I was pretty sure they would be returned. People—my family, at least—would know this. And my miserable sensitiveness couldn't face that situation.

Anyway, I wanted to get the experience and discipline of a regular writing job. So I saved a little money; and then, under the pretext of visiting a friend, I went to Chicago and asked for a trial as reporter on a newspaper. I was hired at six dollars a week! During the next few months, the six-dollar stipend was doubled. Salaries then were not half what they are now; but, even so, my pay was certainly nothing to boast of.

However, I didn't care about that. I was "learning my trade." I was acquiring the thing I most wanted—craftsmanship: the ability to handle "the tools of my trade" with greater skill and confidence.

Going to Chicago had been the climbing of one "porch railing;" and before many months, having determined to risk climbing another, I came to New York.

With a definite plan to see and to know as much of life as possible, I naturally had wanted to travel. Already I had been to California. I had earned the money for it and had supported myself for several months in Los Angeles, by retouching. But before I came to New York I never had been farther east than Cincinnati.

For this adventure in a strange city, where I hadn't a single acquaintance, I made only one preparation: I obtained copies of the various New York newspapers, studied them carefully, and decided on my goal.

This was in the days when the morning edition of the "Sun," later merged with the "Herald" and the "Tribune," was considered the best-written newspaper in the country. I didn't know this. But after reading the sample papers I had bought, I did know that the goal I meant to strive for was a place on the "Sun" staff.

ARRIVED in New York, I took a hall bedroom in a boarding house, unpacked my limited possessions, and went straight to the "Sun" office.

The managing editor was Chester S. Lord, a great journalist and, as many another ambitious youngster had found out, an invaluable friend and helper.

Not that he instantly gave me a job! On the contrary, he tried gently but firmly to get rid of me. There used to be a chair by his desk, and I think the casters of that chair were the best oiled in the world. That was his little scheme for hastening the departure of troublesome callers.

Sitting in that chair, one's slightest motion would cause it to glide irresistibly away from Mr. Lord's desk. The result was an almost equally irresistible impulse in the mind of the visitor, to remove himself still farther; and before the average person could check this impulse he would be on his way to the door.

Sitting there myself, I was as frightened as if I had been facing an assassin instead of the kindliest of human beings. The chair moved, but, with a sort of desperate courage, I *wouldn't* move.

"My dear young lady," Mr. Lord finally exclaimed, "I have more reporters on the staff now than I really need."

"Are they *all* so good that they couldn't be improved upon?" I demanded.

"Well—no," he admitted.

"Why not take a chance, then, on getting a better one?" I asked. "And give me the chance," I added, "to show whether I can meet that test or not."

I had no idea whether I could make good on that challenge, but I was determined to find out. Probably I looked as I would stay there indefinitely. At any rate, Mr. Lord at last took my name and address and said he would let me know "if anything turned up."

Inexperienced as I was, I realized that this was only a slender reed of hope to rely on. About as slender as my purse was. I had enough money to pay my board and carfare for only a few weeks. I could

Digitized by Google
Original from UNIVERSITY OF IOWA

afford to wait idly for a possible chance on the "Sun." So I began the rounds of the other newspaper offices.

I managed to get one assignment from the editor of a women's page. It paid me, at space rates, less than three dollars. But the next week the same editor gave me other small assignments. Still, I wasn't sure of enough to pay my few absolutely necessary expenses, amounting to about twelve dollars a week.

A fortnight went by. I had persuaded another editor, of one of the Sunday editions, to try me on some little assignment. If I could hold on long enough, I might earn the money to make both ends meet. But the situation was precarious.

THEN came a letter from Mr. Lord: just a brief note, telling me to go to a certain club meeting and write a little "piece" about it.

The meeting was so unimportant that he could afford to throw my "piece" into the waste basket if I failed. He was simply giving me a chance, without taking any chance himself.

I did at least well enough for him to risk giving me other chances. Two or three editors were doing this. The door to journalism was slowly opening. Very slowly; for at first I earned barely enough to pay my expenses.

That I made any progress at all was due, I believe, to two things: my delight in work and my interest in life. No matter how trivial the assignment given me, I went to it with eager curiosity. And, no matter what I wrote, even if it was only a paragraph or two, I tried to write it as well as if it had been the "lead" of a big story.

Without having anything remotely approaching genius, I began to make an impression on editors. I began also to offer suggestions for special articles; and usually I was commissioned to write them.

Then came the first crisis in my working career: I had been doing some of these page stories for a certain New York newspaper, and after I had turned them in the Sunday editor had adroitly rewritten various paragraphs. I had tried to write *interesting* stories. He turned them into *sensational* ones.

After this had happened a few times I realized that I had a decision to make: If I should go on working for that paper, I could get plenty of big stories to write, would earn a good deal of money, and perhaps would make a reputation.

But what kind of reputation would it be? The reputation of a writer who catered to the baser instincts of humanity, who would necessarily betray the people she wrote about.

I decided I didn't want that kind of reputation. And, having made this decision, I went to Mr. Lord and told him so. I said I wanted to write clean stuff for a clean newspaper; that I wanted to cut loose from everything else; and I asked him to give me enough work on the "Sun" to enable me to keep going.

From that experience I learned something which has been repeatedly confirmed in later years. I learned that men in high position are looking for two things: ability and *character!* And sometimes I am convinced that the more essential, in their judgment, is character.

From the day that I had that talk with Mr. Lord he gave me every opportunity to make good on his staff. Not only that, but I was made welcome in his home. As my "boss" and as my friend, he showed me that *standards of conduct* are of overwhelming importance in the world of work.

The few years that followed were very happy ones. I wrote an enormous amount. In proportion to that amount I earned little enough. We used to be paid eight dollars a column—and there were two thousand words in a column! If you will sit down and try to write two thousand words, you will have a better idea of the mere manual labor involved, to say nothing of the work of collecting the material and of the mental effort required to "whip it into shape."

But the millions of words which I wrote in those years on the "Sun," gave me one thing I always had wanted: training in craftsmanship. Certainly, if words were the "tools of my trade," I was getting ample practice in handling them.

Moreover, no one has a greater opportunity than a newspaper writer has to observe life. And this understanding of life was the other thing I had wanted.

I was too busy, too interested, too absorbed in the satisfaction of my work to have a recurrence of my old "porch climbing" impulse. The column rate of pay on the "Sun" went up somewhat; but, even so, it was not humanly possible to write more than about twelve thousand words—six columns—a week; so I was a long way from getting even moderately rich.

What little I was able to save I spent in travel. I had a few close friends. I had the inexhaustible interest of my work. I had my family; perhaps all the dearer because I could see them so seldom. These were all I had: travel, friends, work, and my family. But they were enough.

Then came another possession. Perhaps that is a strange word to use about sorrow. But I, who have been selecting words all my life, can find no truer one to use now.

Real sorrow was the one thing I never had experienced. Like most people, I had dreaded its coming, had wanted to escape it. And when it finally did come, everything seemed to collapse about me like a house of cards.

After a few black months, a gleam from a light which had been temporarily all but extinguished began to struggle through the clouds in my mind. Perhaps I shall not be understood in what I am going to say, but I believe it is the truth:

For years, ever since childhood, I had been trained, and had trained myself, to try to do a good job at whatever work I was given. One day it suddenly came to me that now I was called upon to meet sorrow—and that it was up to me to make *as good a job of it* as I could.

I CAME back to New York with only a little more money than I had possessed the first time I arrived here. I lived in a little room scarcely larger than my original hall bedroom. And physically I was far from being as strong as I had been before.

But of course I did not have to struggle this time to open the door of journalism. A place on the "Sun" was mine for the taking. I took it, not knowing whether I could write ten lines, or not.

Then work, to which I had given the best I had to give, began to repay the debt! It gave me back my interest in life.

AMERICAN ACADEMY OF DRAMATIC ARTS
Founded 1884 by Franklin H. Sargent
For 44 Years the Leading Institution for Dramatic and Expressional Training
Prepares for
Acting Teaching Directing

What will you be doing one year from today?

Three hundred and sixty-five days from now—what?

Will you still be struggling along in the same old job at the same old salary — worried about the future — never quite able to make both ends meet—standing still while other men go ahead?

One year from today will you still be putting off your start toward success—thrilled with ambition one moment and then cold the next—delaying, waiting, fiddling away the precious hours that will never come again?

Don't do it, man—don't do it.

There is no greater tragedy in the world than that of a man who stays in the rut all his life, when with just a little effort he could bring large success within his grasp.

Make up your mind today that you're going to train yourself to do some one thing well. Choose the work you like best in the list below, mark an X beside it, mail the coupon to Scranton, and without cost or obligation, at least get the full story of what the I. C. S. can do for you.

Write today to

NUMISMATIC COMPANY OF TEXAS
Dept. 384 FORT WORTH, TEXAS
[Established 28 Years]

It reopened my eyes, so that I could see once more the moving panorama of the world about me. It roused my mind from its stupor; fed it and exercised it, so that it became normal and healthy again.

And that was not all. Sorrow, which I had dreaded and longed to escape, now became the greatest possession of all. For it was like a key which unlocked the secrets of understanding. Until then I had not grown up. Unhappiness brought me what I cannot describe except as the ability to comprehend. For years I had been watching life. Now I began to comprehend life.

It is curious how small a thing may change the whole current of existence. One day, the copy reader on the "Sunday Sun" asked me why I never had written for the magazines.

"I've been too busy," I said.

"Well," he replied, "you ought to try it. For one thing, it pays so much better."

This was only a few months after my return to New York. Because of the break which sorrow had made in my life, I was like one who, psychologically, had been born again. And, just as when I really was a child, the old "porch-climbing" impulse suddenly took hold of me.

Inside of twenty-four hours I called on Albert A. Boyden, then managing editor of THE AMERICAN MAGAZINE, and offered several suggestions for articles. He told me to go ahead and try the one which most appealed to him. Three days later, I turned in the article, and it was accepted.

That sounds as if it were an easy victory. But back of the acceptance of that first article were years of preparation: years of learning my job; years during which I had handled thousands of newspaper stories.

During my call on Mr. Boyden I had been introduced to John M. Siddall, then editor-in-chief of the magazine. We talked for only a few moments. I do not think I saw him again until six months later.

MEANWHILE, I had written three other articles for the magazine, all of which had been accepted. This had involved some correspondence with Mr. Siddall, for I had been out of town most of the time. In November of that year, 1917, I went to Washington to get material for two articles; and on the second day after my arrival I received a long-distance call from Mr. Siddall, asking me to return immediately, as he wanted to see me. I took the night train for New York and was in his office before nine-thirty the next morning.

He told me that Mr. Boyden was going abroad on war work; and, to my amazement, he offered me the position of managing editor of the magazine.

"But you don't even know me," I said.

"I think I know what I need to know," he replied.

"Do you know that I am practically without editorial experience?" I asked.

He had been walking up and down the room; but at that he stopped short, gave me a piercing look, and said, "Experience can be acquired. But there is one thing which is more important than experience and which *cannot* be acquired. I'm gambling on my belief in character! Don't for a minute think I haven't been watching you. I'm willing to take the chance. Are you?"

I was silent so long that Mr. Siddall finally said: "Try it for a few months. Then, if you don't like it—"

"No!" I interrupted; and my old dread of humiliation flamed up. "People would say, 'Well, she didn't last long, did she?' If I take the position at all, it will be with the purpose of making good in it—if I possibly can."

Half an hour later it was all settled. I sat down at a desk and went to work. I had become what I never had dreamed of being: the managing editor of a magazine. And it was simply because I had been brought up to love work, to try everlastingly and enthusiastically to do *a good job* of work, and to have regard for the essentials of character which my father and my mother had believed in and had taught me to respect.

SUCH as it is, that is my story. For six years I sat at that desk, helping to edit what I think is the most human and most vitally interesting magazine in the world.

It was a great experience. Yet I could not have been contented if it had forced me to give up writing. Fortunately, I did not have to do this. By working from fourteen to sixteen hours a day, I could do the editorial work and, in addition, write so many articles that I had to invent half a dozen "pen names" with which to sign them.

And here is my final tribute to work: For six years I never took a vacation. I lived within a ten-minute walk of the office; and at noon, when other people went to luncheon, I went home and worked! At night I would sit at my desk until long past midnight, writing my own articles and editing the work of other writers.

My friends said I was killing myself. But work does not kill! Not if it is the work you love and which you are happy in doing. You get tired—yes! For six years I was tired *all the time*. But I never reached the breaking point. Somehow the joy and satisfaction I found in my work always gave me new strength and new enthusiasm.

Incidentally—for most people are curious on this point—work brought me the money rewards which no one despises. In a month I could earn more than I used to earn in a year.

But this is the way I look at it: The money I receive today I *began* to earn when I was back on the "Sun," apparently being paid only eight dollars for two thousand words. I am getting my deferred payments now!

To some people it may seem that the payments were a long time in coming. Perhaps, if I had been chiefly concerned to get money, I should have felt that way myself. But my real satisfaction was always in the work itself. To depend for that for your reward is to make you almost invulnerable.

The rest of the story can be told in few lines: After six years of working night and day at two jobs, I realized that the work, as a life preserver, has its limitations. I had to give up one of my jobs. To give up writing would be almost as impossible for me as to stop breathing, so there could be only one choice. I took that one—and am still writing.

Her Own Money

Every woman has use for it. And more than ten thousand girls and women are earning it here with us.

JUST a year ago she came tapping at our door for entrance. It was a timid little rap, as she lacked confidence in her venture and feared she would find very little help within. She knows now, this little friend of mine, that she should have marched up confidently to that door, for a wonderful opportunity was awaiting her within.

You see, soon after graduation she had married and naturally became absorbed in her home and its duties. The greater part of those seventeen years, so she told me, were lived on a farm and she had not the chance to participate much in Club work or women's organizations. But she did join the Pin Money Club and her own money quickly grew to over $90.

* * * * *

HER name doesn't matter—she probably would prefer I did not mention it here in The American Magazine. I will, however, tell you she lives with her fine family, in one of Michigan's small towns.

Now if you have been thinking you'd like some extra money of your very own, to buy new clothes for yourself or family—or to pay some bothersome bills, you'd better look into this money-making department at the beginning of 1929! You are sure to enjoy our work and make money too. I'll be watching for your letter—send it addressed to

Margaret Clarke

Secretary, Pin Money Club

These Children Mind Their Mother

(*Continued from page 43*)

Art as being opposed; rather is Nature the effect of the most divine and exquisite Art. I saw the night mists rise in ghostly delicate bloom. I saw the first star gleam above the mountain-crest. Against the rose-and-amethyst of the evening sky, I saw a long jetty line of crows going to roost. From a dewy pinewood came the glimmering anthem of a hermit thrush. All was order and repose.

To the eastward of the road was a broad mountain meadow through which ran a spring-fed stream. Into this misty green wilderness I saw two shadows come, melting out of a birch thicket—veritable spirits of the mist. I could recognize them; but I could not follow them with exact observation. Yet so long have I studied wild deer that I knew exactly what they were doing, even though they were but faintly discernible. After resting all day in the coolness of the laurel thickets—a repose broken only by a habitual wariness that is really second nature to a wild thing—a deer will come forth at twilight to browse delicately on tender buds and leaves, on grass, on all kinds of dewy greenery. He will drink deeply from the cold stream. Quietly he will roam for miles the solitary country of the night—never in haste, never gluttonous, never riotous. He does not carouse, then complain next day of a headache. As day dawns, he will retire to the green stillness of his covert, there to abide in quiet contentment until night once more calls him forth upon his wanderings. Not even when sorely tempted will a deer forget fastidiousness that really is the soul of temperance.

I REMEMBER what a cotton planter told me about some deer that had been raiding his fields by night. Perhaps if I give the story in his own words it will be better understood.

"My fields, you know," he said, "run right up to the fence of the Club, on the preserves of which the deer are very plentiful. Finding that they had been getting over a low place in the fence and had begun to eat up my cotton, I tried in several ways to keep them out of the field. I raised the low panel of the fence; I tied an old hound at night near their place of crossing; I hung a big bell in an oak, and every hour or so during the night I would ring it by the long rope that stretched to the house from the tree. But the deer simply wouldn't scare. The original discoverers of my cotton not only returned but they invited all their friends to the picnic.

"At last a neighbor said, 'Try Paris green. Sprinkle a half-acre next to the Club fence, and you will have no more trouble.' I hated to do this; but I reasoned that it was my last chance, and that the deer might get only enough of the poison to make them lose their appetite for cotton-leaves. With great care I sprayed the half-acre, the work being done in midday, when everything was dry, so that the Paris green took well on the plants.

Be A Radio Expert

Trained Men Needed-Earn Fine Salaries

Men, here's a new, big, live-wire field brimming over with opportunities to make big money. Amazingly rapid growth of the Radio industry has astounded the world. Big and little fortunes are coming out of Radio every year. It's your big chance for quick financial progress. How to "cash in" on opportunities in twenty different branches—Radio manufacturing, selling, servicing sets, in business for yourself, to travel all over the world without expense as an operator on board ship, operator in a broadcasting station, and many others are explained in my book "Rich Rewards in Radio." Get a copy. It's FREE. Clip coupon.

Easy to Learn at Home, This Practical, Fascinating Way

I'll train you in your spare time. My practical system with Six Big outfits of Radio parts, makes it easy, fascinating. You can build and experiment with practically every type of receiving set known. Nothing else equal to it. High School education not necessary. Boys 16, men up to 65 have mastered Radio this way. This course has put thousands of dollars in other fellows pockets. Money back if not satisfied upon completion.

$10 to $30 a Week in Spare Time While Learning

That's what many of my students make. No need to pinch pennies, scrimp along, and deny yourself good things. Pay your tuition out of spare time earnings, and have plenty of money left to bank. G. W. Page, 1807 21st Ave., Nashville, Tenn., writes: "I picked up $935 in my spare time while studying." K. W. Griffith, 2320 Maple St., Little Rock, Ark., made $894.

64-Page Book FREE

Send for it. Clip the coupon. It has shown hundreds of men and young men how to make big money in Radio. Find out what Radio offers you before undertaking anything else, and how my Employment Department helps graduates get good jobs. There's no obligation.

BOYS

Shoot Straight for Money and Prizes

It's lots of fun and you need no experience

It's easy. Thousands of boys are making their own spending money every week, selling three of the best loved magazines in America. All of them started without any experience. We supplied everything and showed them how to make money the very first week.

You, too, can do this. Join the Crowell Junior Salesmen and have the greatest fun in the world selling these great magazines—The American Magazine, Woman's Home Companion, Collier's, The National Weekly. It takes only a small part of your spare time after school each week and you will be repaid many times over.

Besides a regular weekly income you will win wonderful prizes. Everything for camping from a flashlight to a scout uniform. Bicycles, radios, big league baseball outfits—all without cost.

Write me to-night and I'll send you full instructions, supplies and a big catalogue of prizes. Don't delay. Don't hesitate. Take the first step on the happy road of money and prizes NOW.

Jim Thayer
Chief Junior Salesman
Department A-16
The Crowell Publishing Co.
Springfield, Ohio

"Early next morning I went down to the field, fearing that I might run into a shambles. Instead, I merely discovered how indifferent a sprayer I had been; for the deer had been over the entire half-acre, had taken every leaf that I had failed to spray, and had utterly ignored every leaf that had on it even a drop of the poison! They had given particular attention to the lower parts of the plants, so that the field had a peculiar undressed look. If those deer in my field had had no more restraint about eating than some people have, not one would have recrossed the Club fence."

THIS story, I think, demonstrates what appears to be, in natural life, the close relation between obedience and wisdom. These deer came to wisdom through obedience. From fawnhood each of them had been taught to abhor certain scents, to forego certain kinds of greenery, to reject as food whatever had upon it the taint of artificiality. Eventually, their obedience saved them a miserable death.

Not long ago, one very windy afternoon, I was on the edge of an oak forest, beyond which lay some rolling fields from which the grass had been mowed, leaving them green and smooth-shaven. Along one of these ridges I saw a farmer walking, literally fighting the wind. It blew off his hat; it shrilled through his coat and shirt; it made him bend low in order to overcome the opposition of its force. Apparently, the wind was a natural enemy that he did not know how to manage.

A few moments later, the farmer's collie followed him. But he was not on the man's track. He kept low in one of the hollows between the ridges. He defeated the wind by evading it. Then, for it was late afternoon, I saw flocks of robins, of starlings, and of boat-tailed grackles coming into the oak-wood to roost. This place being an old rookery, I had often watched the birds come in and had noticed that they were usually about fifty feet in the air. But now every individual of every flock was flying close to the ground—hardly more than a foot above the smooth grass. And not only that, but they kept close to the earth, regardless of its undulations. Their flight undulated too so that the wind would not catch them. They skimmed over the little hummocks and dipped with eerie, unerring grace into the hollows, arriving at the wood on time and undisheveled. They came serenely home, whereas the farmer, reaching home with all the good nature blasted out of him, probably kicked the cat and said something disrespectful about his wife's supper biscuits.

This observation may appear a simple one; yet it taught me to know that birds are aware of the folly of fighting against Nature's laws and forces. They fly with the wind whenever they can; and whenever they are obliged to face it, they either take advantage of the help offered by the natural rises and falls of the land or use all manner of resource in the arts of tacking, veering, and otherwise making the hostile force aid them.

I was talking not long ago with a United States forester. When I raised the question with him of the power of Nature's laws, he said, "We have learned that we can never beat Nature. We do not write in a book the laws for a tree's growth and then go out and try to make the tree live up to our specifications. We try to discover what the laws are, by watching trees grow; then we report our discovery. Every time in our work we run counter to Nature's way, we get the worst of it. Nature's laws seem always to be the laws of reason; they are irresistible; but they are beneficent and kindly. I can think of nothing more important in life than to discover what they are, unless, of course, it is to obey them when discovered."

One of the genuine beauties of this matter of obedience to law dawns on us when we realize that, among wild things, it is a long inheritance. A little wild thing is trained by its mother; in time, it trains its own young. And this training has all the zeal of live religion. We rather negligently obey certain tenets, believing thereby to save our souls from immortal death; wild creatures obey instantly and vehemently in order to save themselves from immediate death.

On one occasion I caught a family of little raccoons, and from them in their captivity I learned a profound lesson on the subject of Obedience. They were large enough to get around; they appeared excessively intelligent; they eyed me with a certain quaint forgiveness. But for several days they would not eat.

In order to keep the pen clean, I had placed the water-pan outside, to be reached through a small hole in the wire. The morsels of food in the pen lay untouched. One morning, early, when I was down at the pen, troubled about my elfin philosophers, I saw one of them pick up a lump of sugar, amble sedately with it toward the pan of water, and, taking it in his right paw, push it through the hole in the fence, submerging it in the water. His paw was remarkably like a miniature black human hand. He tried to get the left hand through so that he could give the sugar a thorough washing before he ate it, but the aperture was not large enough.

Then the whole trouble about their appetites dawned on me: these babies were too well schooled to eat food without first washing it. They had been minding their mother. And the poor youngsters had been ravenous for days! Their tin sides seemed caved in. At once I brought a big pan of clean water and set it in the pen. Yet even then the raccoons were about their repast gently and politely. But I never saw anything much more comical. As soon as the water was available, each one of the five little philosophers picked up a morsel of food, headed for the pan, sat down, washed it thoughtfully and then ate it daintily. These babies had been terribly obedient to a law—far more obedient than human children would have been.

THERE are those, of course, who will say that a wild creature's behavior is purely a matter of instinct—as if there were nothing of which it might be proud.

Granted that it is instinct, if it leads to obedience, it is a powerful and virtuous force. We too have instincts; and a disregard of them is constantly leading us into difficulty. Indeed, the proud mark of civilization does not permit us to let these instincts behind. Instinct seems to mean our awareness of the laws of Nature. It is a primal virtue.

Having, on one occasion, made up

Digitized by Google Original from UNIVERSITY OF IOWA

mind to watch the behavior of a covey of quail for a whole day in order to ascertain the birds' exact routine, I located a covey at twilight, in a stubble field. They were just huddling together for the night when I left them. Before sunrise next morning I was again with them. It was a frosty morning, with all the grasses and the wheat-stalks rimed with gleaming crystals of ice. The birds had not moved. On cold mornings they often stay on the roost until the sun has begun to warm things up.

I watched them clustered on the ground, saw their bright black eyes blinking as the level sun-rays touched them; noticed with what nice discrimination of judgment they stayed comfortably huddled instead of strolling with naked feet through the icy grasses. But the moment the sunshine began to feel genial, they did move—a wary, joyous band, a highborn family.

A game bird or animal can be excessively cautious, strangely timid. But it is never cringing. When in secretest hiding, it maintains to the last a certain aristocratic distinction. The birds fed in the stubble from eight o'clock in the morning, by actual timing, until half past eleven. Then, withdrawing from the field, they wandered in their skittish, bickering fashion down to a little stream flowing between ditch banks. Here they drank. Then they straightway retired for a long siesta. Nature seems to demand for most of her children a long rest in the middle of the day. The supposed lords of creation are the only ones that spare themselves but thirty minutes for luncheon. The bob-white gives himself three hours.

From the stream, the birds went into a sheltered clump of briars on the sunny and leeward side of the ditch bank, where they literally lay down, fluffed themselves out, utterly relaxing. They made little beds in the soft warm sand, dusted themselves thoroughly, drowsed, blinked luxuriously, loafed gloriously. For three solid hours they were in those briars, while I watched them, reading a book to pass the time.

At about half past two, they wandered back into the stubble, trooping with immaculate grace through the tattered cover—alert, trim, ever ready for instant effacement, or for instant flight. They fed quietly until the sun was almost down. They then grouped themselves for the night near the same spot where they had roosted the night before. On the roost they form a compact body; all their tails are together. All their heads are out, so that through the lonely dark hours every bird is a sentry.

When those birds were tiny youngsters—mere balls of fluff—the mother taught them the best routine of life. And those wild children had the grace of art, the genius, to obey. Surely it takes more sense to obey than to disobey. To disobey is unnatural. *Wild* things are, of all the creatures of Creation, the most fallibly docile to the teachings of their elders, the most persistently obedient.

This routine that I have described is habitual with the quail; it is normal, admirable, enviable. Always there are two periods for feeding, with the long intervening siesta; and in general it is the common scheme of life of most birds—nocturnal ones, of course, maintaining

All hands

seek the Sundstrand when there is quick figuring to do

WHEREVER the Sundstrand is introduced, it instantly makes warm friends. In fact, it soon becomes the most popular machine in the office . . . preferred to all others because of its surprising simplicity and speed.

The Sundstrand has only ten numeral keys, and these are so logically arranged that the touch system is naturally acquired. With a few minutes' practice the most inexperienced operator can operate the machine without taking eyes from books or papers from which the figures are being taken.

With the Sundstrand you merely touch the keys in the same order in which you would write the figures. No worry about columns. Column selection is taken care of automatically. But most surprising of all is the versatility of the Sundstrand. It subtracts directly. It will even subtract a larger figure from a smaller and give you a true balance . . . an invaluable operation when figuring credit balances.

Wherever you use the Sundstrand, it quickly pays for itself. Employees like to use it not only because they can do faster and better work, but because the machine is so simple to operate. No matter what your business, if there is figuring to do, there is a place where the Sundstrand will save you time and money. Let us send you full information. Use the coupon below to secure illustrated literature fully describing the Sundstrand line of adding, figuring, bookkeeping machines and cash registers.

a different schedule—but never staying up all night and all day too, as some mortals do. I have often watched, with some amusement, a nighthawk on the branch of a weeping willow in my yard. The whole day long he crouches flat on a limb, deigning once in a while to blink, and sometimes even uttering a queer, drowsy note; but literally lying in bed snugly, with all the covers tucked in, until the coming of twilight summons him forth to hunt his food.

To observe how many of these wild things live does us good, because their way of life suggests to us many improvements in our own. Sane, tolerant, deliberate, happy things they are. Their quiet approval of law appears more like a calm acceptance of a hateful restriction. And this obedience makes them safe and contented.

We surround ourselves by scores of man-made laws, which are good enough, I suppose, for certain purposes. But in trying to obey them (or to evade them), we are often in danger of forgetting those lordlier principles by which the Universe itself is tirelessly run. Infallibly recognizing many of those great laws which control life—laws such as temperance in all things, the requirement of rest, calmness of spirit, contentment with quiet and natural joys—wild creatures are law-abiding citizens of the Universe. They do not appear dependent on excitement for happiness; they do not jazz their way along from one thrill to another. Their satisfactions are sane and durable, and they have no use for novelty, which, after all, in its highest form, can afford man only the most fleeting pleasure.

And because the children of the wild mind their mothers, because they are not excessive, because they repress with extraordinary self-control whatever riotous instincts they may have, they are never jaded.

IN NATURAL life, the strict observance of law is really a matter of life and death. Human laws are infinitely more tolerant and evadable. But natural laws are inexorable. Infringement of any one of them may be a capital crime. For example, the wild thing that is not forever in training, that neglects for a single day the restrictions imposed by the laws of temperate living, is in danger of his life. The gorged lion falls an easy prey to the hunter. I remember seeing one day in the woods a pretty sight that illustrates this point of the absolute necessity for obedience in the realm of wild life.

One morning after a fearful cold wave, brought from the north by a wind of cyclone speed, I went into the mountains near my home in Pennsylvania to see how many wild turkeys of a favorite flock had survived. During the night I had thought of them on their freezing perches, tossed here and there on the creaking frozen branches, icily holding on while the wind tore through their tattered feathers. How many did I find? All of them; and a more contented and preeny flock I never saw. They were no more disheveled nor discomfited than if they had slept in a warm barn. They had been safe because their physical condition had been perfect; and it was perfect because they had lived according to law.

It appears that the Bible not infrequently reminds us that we can correct our conduct by observing the ways of Nature; that we can heal our spirits by returning to the ancient hearthstone, there to rest on the Old Heart of our common mother, in the Old Home. One passage from the New Testament has always appealed to me as especially suggestive. "And he was with the wild beasts," we are told of Christ's sojourn in the desert; "and the angels ministered unto him." May this not mean that the Maker was ministered to celestially because he was close to Nature? I do not think it too daring to say that the passage may mean, "Because he went far away from the distractions of life, where only wild creatures were, strength returned to him, and grace, and clear vision, and the courage to face even death." Our chief business in this life is to try to discover Nature's laws, God's laws, and to obey them.

OUR friends of the forest and stream, of the wastelands and wildernesses, have apparently long since discovered that to obey these laws is life and joy, and to disregard them is sorrow and death. They seem to know what we do not: that mortal things on this earth can never make bargains with the Almighty.

It assuredly is not difficult for one to adduce out of the wisdom of the wild a certain philosophy of conduct. For example, he learns that liberty comes through obedience to certain essential laws, and in no other way, so far as we can see. And it is not only liberty that is thus achieved, but safety, joy, quietness of mind, life itself. Anarchy, a system of no government, might be desirable if our natures were perfect; but constituted as we are, law for us is imperative, and obedience to it vital. Providence has decreed eternal statutes, and to obey them is our best wisdom. Says Dante, with all the weight of thought and none of the weight of expression, "In Thy will is our peace."

To me it is very appealing to discern this same principle of Obedience, by which the planets are sceptered, controlling likewise the babes in the woods. Not long ago I was walking down an old road that was bordered by a rail fence overgrown with vines. A movement on a distant top rail caught my sight. In a moment I had made out a red squirrel. With customary temerity this sprightly elf kept on coming toward me. I paid no particular attention to her until I saw what followed her. There were five little ones, rather absurdly like their mother. One of these was as white as snow—a pure albino, that I later captured and kept for some weeks. But what interested me now was the extraordinary behavior of these fluffy little infants, apparently out for their first journey.

They were heading toward some good-sized, safe-looking trees; and possibly for other reasons as well, the mother did not wish to turn back. Neither did she want her tiny treasures discovered. Seeing me, she swiftly stopped behind a post, giving at the same time a warning chatter, at which her brood froze fast exactly where they were when the sudden word of warning reached them. The mother peered out at me nervously, fixing me with bright eyes. Every little squirrel crouched breathless on the rail, hardly daring even so much as to look. Indeed, I distinctly remember that one clung valiantly to the rail, his eyes closed tight! A second one had been rather too close to the edge of the rail when his mother had called back to them. Now he literally hung, one back leg down limply—so obedient to be still that he even let that leg hang, incontinently and perilously, in space.

I advanced a few steps. Again came the warning chatter, this time in a different tone. It meant, I suppose, to emphasize the first warning. At any rate, the already obedient and effaced babies further diminished themselves, shrinking against the rail until they appeared growing on it like patches of lichens. Then, at another call from the nervous mother, every one faced about, performing the maneuver deftly and simultaneously. A moment later, the mother leaped to the ground where the grass was long. Every little squirrel leaped too. The white one was the last to go. I think he had never taken such a jump before. But he was too obedient not to follow the others.

Nor are wild children ever too young to obey. I recall with what amusement I one day saw a brood of quail that were not quite hatched. As I came upon the nest, the last chick was struggling through the shell. Two other wee ones had half snowy shell clinging to their backs. Then when the old mother called from the dense shelter of the foxtail grass, every chick obeyed. The last one to get into the safety of the grass was one of the ones carrying a house on his back!

OBSERVING the obedience of these things, the reflective mind cannot escape the conclusion that these children are aware of the wisdom and the goodness of their great mother, Nature. The reflective mind will sense more: it will become aware that there must be a sky beyond the reach of any mortal wing, music past the silence of the world.

For the lover of Nature, life is a inheritance of loveliness; an increasing garden of spiritual springtime, full of perfume and falling waters. He will with wonder; and if his heart is made accept agony, his reaction to the pain will be a noble exaltation of spirit, tinting his character and his work with the radiance of consecration. The man watches with what certainty and of heart wild things mind their n has opened for him another door mystic and beautiful House of Life what he views there infallibly strengthen his faith in God. For t his vision, being human, will be d will have palpably manifested to physical senses, and explicitly obv his spirit, the majesty of Creation.

"THEY are your feet," says Dr. William S. Sadler, "but that is no reason why you should abuse them!" In one of his definite, down-to-dots articles this popular physician tells you, in an early issue, how to prevent foot troubles, and how to cure them.

They Found the SECRET

HENRY T. BROCKELMAN

ANTONE F. BROCKELMAN

ARTHUR B. BROCKELMAN

In 13 years the BROCKELMANS *ran their corner grocery into a* $2,500,000 *business*

THE BROCKELMANS of Fitchburg, Mass., built a $2,500,000 grocery business in the short space of 13 years. Now 15,000 farm families have the habit of trading regularly at their store.

They found the secret of winning the farmer's trade. In fact they have discovered at least a dozen major rules in merchandising that any small-city retailer can profitably follow today if he is interested in expanding his business.

They Tell FARM & FIRESIDE

In an interview with FARM & FIRESIDE, these successful dealers tell frankly about the business secrets they discovered in retail food selling—starting from the day they only ran an average corner grocery, up to the present time when their sales are more than $8,000 a day.

Their Ideas Free

Would you like to know, for instance, what the fundamental idea was that marked the turning point in the Brockelmans' business 13 years ago?

Also why the Brockelmans suddenly decided to bend every effort toward getting a big volume of farm trade? And what plan they hit upon to favorably introduce their store to farm customers?

Why they have specialized on nationally advertised brands?

And whether a merchant should expand his own store—or bring his store to the customer's door-step?

Information You Can Use

These are just a few of the interesting points that the Brockelmans discuss with FARM & FIRESIDE. Points in selling that you will find valuable no matter what line of retailing you are in. Especially valuable if you happen to be in a grocery business in a small city yourself and looking for a bigger opportunity.

Send This Coupon

This interview with the Brockelmans is published in folder form—a copy of which will be sent free to any small-city retailer. Just fill out the coupon—and mail today.

No obligation to you. FARM & FIRESIDE's established recognition among small-city dealers places on us the obligation of this service, especially designed for your help.

FARM & FIRESIDE'S Service to Small-City Retailers

This is another interview in FARM & FIRESIDE's series—which makes available to retailers the tried and proven methods for building farm trade, as used by outstandingly successful merchants.

And this work is just a part of the service FARM & FIRESIDE renders in meeting the obligations of leadership in the farm field.

As every dealer knows, the advertisements in this magazine are a real force in influencing more than 1,200,000 farm families to buy. And a glance through any issue immediately shows why this is so—for here is a hundred-per-cent-*personal* magazine—edited straight to the *individual* and read with *warmer interest* than any other farm publication.

That's why dealers are finding it so profitable to feature and push products advertised in FARM & FIRESIDE—and why manufacturers' advertising in this magazine shows such steady growth.

Keeps Cars Beautiful In All Weather

WINTER storms, snow and sleet have no terror for the Simonized car—it is "weather-proofed." This really means that beautiful cars will look just as new in the Spring as they do now—if they are Simonized—Simoniz protects the finish, makes it last longer and keeps colors from fading. That's why hundreds of thousands of wise motorists say "Always Simoniz your car."

New or dull looking cars, high priced or inexpensive . . . all need Simoniz.

Simoniz Kleener comes to the rescue of the owner who has a dull looking, smudgy car. It quickly and easily removes all stains, blemishes and traffic grime. Then apply Simoniz for that lasting brilliant protection—it's so easy to keep a Simonized car beautiful; just wipe the finish with a soft cloth.

Insist on Simoniz and Simoniz Kleener and you will always drive a new looking car.

Apply with a cloth

THE SIMONIZ COMPANY

Chicago, U. S. A.

THE FAMILY'S PROBLEMS

It's Hard to Make a Decision That May Hurt Your Husband's Pride

I AM thirty-two years old and have been married seven years. We have two children, a boy of four and a baby girl a year old last Christmas. We named her Christy. I lost my first baby. My husband is a good man, kind, helpful, industrious, but he never gets anywhere in a business way. He isn't earning a cent more today than he was earning the day we were married. I knew, then, that his salary was little enough for two to live on, but I loved him and trusted him and thought he would climb right along. He hasn't. Moreover, I know, now, that he never will. It just isn't in him.

He has reached his limit; I know instinctively. He is a plodder, not a pusher. The tale of the tortoise and the hare may have been all right in Æsop's day, but it won't work in this present age. Nowadays, the bosses just let the plodders plod and the jumpers and pushers jump and push their way to the top. This is no age for a man to wait for honest, faithful service to be rewarded. He must push and fight for his reward if he gets it. And Jim can't do that.

I do all of my own work, take care of the babies, and make both ends meet. But what a struggle it is! I am growing old and nervous and cross, with never a minute to lift my nose from the grindstone and look at the world. If I say anything, Jim doesn't like it. He gives me all of his salary and wonders what more a sane woman could expect. He is handy about the house and works all day Sunday to give me a rest; but we both need a mental rest. When he has his vacation, we haven't money enough ahead even to go to the next town. A bus ride to the park and a picnic supper is our most exaggerated definition of a vacation.

We need pleasure and we need the comfortable feeling that we are "making the grade" as other young couples are doing. At least, *I* need that feeling. Jim is not one to take anxious thought of the morrow. He doesn't have to do the worrying and the planning and the stretching to make his salary reach from the first to the thirtieth, inclusive. (How I hate the thirty-one-day months! How I love February!) As long as it does reach, he can enjoy the present and let the morrow take thought for itself. But I can't.

WHEN we were married I had a good position and I wanted to hold it for a while. Jim, however, wouldn't hear of it. If he couldn't support a wife, he wouldn't get married, he said. He came from the South. Southerners have notions about letting their women work. Jim hasn't many notions; but when he has one, he is pretty set. He knows, too, that I can go out, now, and earn as much as he can, and do it with more pleasure and less effort than I am expending on my housework. That hurts his pride, and he doesn't want to believe it.

I don't think Jim's ancestors were simians. I think they were ostriches. Whenever he sees anything unpleasant, he likes to hide his head in the sand and play it isn't there. When I mention taking a job he goes right up into the air "What would people say?" "He'd be ashamed to face his friends!" "His mother would disown him!" etc., etc.

The discussion usually ends with my saying, "If you don't want me to do it dear, I'll try to forget it." And he answers cheerfully, "I have a hunch, honey that the boss is going to give me a raise next month." But the boss never does.

Of course, the children must be considered. Neither of us would choose to leave them in the care of hired help all day. On the other hand, neither do we want them to grow up without any of the advantages that other children have whose parents do not live from hand to mouth as we are compelled to do. If I go to work, I can pay a maid to do all that I do now, and still our income would be nearly doubled. If I should save half of what was left after I paid the housekeeper it would get us ahead.

THIS is my problem, then: Shall I seek employment and make my husband unhappy? or shall I do without half that makes life worth living in order that he may enjoy what seems to me to be a false paradise? If I didn't love him, didn't care whether or not I hurt his feelings and his pride; if he weren't good and kind and thoughtful, doing his level best to earn enough to give me what I want, to give me all what we need, my problem would be easier to solve. If I take the bit in my teeth and do as I want to do and set on our financial feet, will he ever forgive me? Shall I have given his self-esteem a mortal wound?

Ordinarily, Jim is reasonable; but when you bump up against a wall of prejudice and false pride and, above all, inherited tradition, you can never be sure that the wall may not be harder than your head.

Who can answer this question: Should I stay at home and rear my children under the circumstances I have mentioned, or injure my husband's pride by joining him as a wage-earner in our family, and be a housekeeper?

MORE THAN 2,200,000 CIRCULATION

When *we're through* Changing We're Through

By BRUCE BARTON

Illustrated by SYDNEY FLETCHER

THERE were five men at the luncheon table, ranging in years from thirty to sixty-five, and all of them millionaires. One was president of a Chicago bank, another a partner in a private banking house, and the other three were owners of their own businesses. They had participated together in a dozen different ventures, and their operations had been so successful that a sick business was a new experience to them. Yet, at this luncheon table they were gathered to discuss a business which was very sick indeed. Only a few years before it had been a proud leader in its industry, selling its product all over the country and making many fortunes. These five men had bought stock in those days and been elected directors; now they were met to look sadly at red figures and try to discover a cure.

The conversation started haltingly. It was evident that each of them was holding something back. They discussed the company's advertising—perhaps a different advertising agency would do the trick. They talked about a high-priced sales manager; about more economies in production, or the addition of a new product to the line. Finally the oldest man in the group leaned forward and cleared his throat.

"Why do we beat about the bush any longer?" he asked. "We all know the truth. You are waiting for me to speak because you are afraid of hurting my feelings. I appreciate your courtesy. . . . It is true that for thirty years I have been Joe Hilton's friend."

"We're all his friends,"

Do You Suffer *from* Neophobia?

NEOPHOBIA is fear of the *new*—fear of a change from the old order, that has prevailed for years, to something different and modern.

C. F. Kettering, the brilliant engineer (writes Mr. Barton in this article), has a game which he calls "going into mental competition with ourselves." It is played after this fashion: You say—"Suppose I were to lose my job today and take another with our competitor who is across the street. I should look back at this company then and say, 'There are certain weaknesses in it; certain things ought to be changed.'"

"Why wait to lose your job?" says Kettering. "Why not strengthen the weaknesses right now? Why not make the changes at once?"

Original from UNIVERSITY OF IOWA

said the private banker. "That's the devil of it," he complained.

"Yes, yes, I know. Still, I am older. I am the one to speak first. There is just one trouble with that company—Joe Hilton. The man who built it, who loves it as much as he loves his own children, is slowly putting it to death."

There was a painful minute of silence and then, with obvious relief, they all began to speak at once.

"His designing department is two years behind his competitors'," said one.

"He could put in machinery that would save the work of forty men in the packing department. . . "

"I sent him a famous production engineer who had a good suggestion. He refused to talk with him; said his own engineers knew more about production than any men in the world. . . "

Again there was silence, and a second time the older man spoke.

'I'm his best friend. I'm the one to do it," he said. "I'd rather lose an arm, but we're traitors to our stockholders if we let the thing go on. It isn't that he's too old in years, but he's let himself get old in mind. A whole new world of business practice has grown up about him. Conditions are changing, not every year but every month, every week, every day. And Joe goes on unchanged. . . ."

Thus it was that a grand old business was given a new young president a few years ago.

HERE are two other stories. The first is about boats.

If you will ride downtown in New York and get out near Brooklyn Bridge, you may still see some of the Brooklyn ferryboats crumbling to death in their docks. Only a few years ago they throbbed with energy, striding proudly back and forth across the river. Shrewd financiers put money in them, for they foresaw that both Brooklyn and Manhattan were sure to grow. Conservative bankers invested the trust funds of widows and orphans in them—and why not? Always there would be Manhattan on one side of the river and Brooklyn on the other; and always people must go back and forth, more people year after year. Real estate might fluctuate; manufacturing concerns and railroads have their ups and downs; but nothing could happen to the ferries. . . . So the wise men argued. . . . And one day there came an engineer named Roebling and put a bridge across the river. . . . Then other engineers, with other bridges . . . still other engineers, with tubes running under the river. And the ferryboats—the business to which nothing could happen—crawled into their docks to die.

THE other story has to do with railroad cars. In a middle-western city there is a factory almost a mile long—even in these days a very big plant, but when it was constructed, a seven days' wonder. It had to be huge, for a large proportion of all the railroad cars were manufactured in it. For years it prospered, and poured millions of dollars into the laps of its owners. Then there began to be a rumbling in the world of railroads. Somebody somewhere had built a car out of steel. . . . Absurd idea, to build cars out of steel. . . . Who would want to ride in a steel car? . . . The men in the big plant sniffed at the thought. . . . Didn't they know more about building railroad cars than anyone else? The steel cars were a fancy that would soon disappear. Meanwhile, they would stand pat.

But there were accidents on the railroads, in which both wooden cars and the newfangled steel cars were involved. People in the wooden cars were killed. There began to be a public demand for the steel cars. Legislatures passed laws.

Still the proud old factory stood firm; and standing firm it is today. But the wheels long since ceased to turn inside its dingy walls; the glass in its windows is broken; the stockholders have written off their losses, which were total, and the bondholders received only a few cents on each dollar. All because a new idea appeared in an old established industry and a business was too proud to change. . . .

Years ago, in one of the first interviews with Henry Ford which ever appeared in any magazine, I quoted him in these pages as saying: "There is only one thing in business that is certain and that's change. I don't know what tomorrow is going to be like, but I do know this—it's bound to be different from yesterday and today."

An interesting statement, which I remembered and used more than once during the next few years. But a curious thing happened. Mr. Ford, who had seen so clearly the inescapable law of change, got the idea that somehow he might escape. He had announced that all business is subject to change, yet he seemed to think his business could be an exception. The public began to ask for more life and color in their automobiles.

"They can have any color they want so long as it is black," said he.

When somebody wondered why he was building airplanes, he replied: "To give my engineers something to play with so they will quit trying to monkey with the Ford car."

His dealers came to complain that competition was destroying them. He rejected their suggestions and increased their quotas. The Model T had lasted unchanged for fifteen years; it would last for fifteen more.

Each year the quality of competing cars rose and prices dropped. Each year more purchasers were lured away from the Model T, until finally the handwriting on the wall was so large that Mr. Ford could not possibly shut his eyes to it.

Another couple of years and his great plants would have become very sick. He had to change.

I WAS taking out some additional life insurance the other day and while the agent was filling in the blank he murmured something about my present "expectation" of life, as figured by the actuaries. It was a shock to realize that my time is probably more than half over. After he was gone I began thinking about this article I had promised to write and exercising the old man's prerogative of looking back. It doesn't seem to me that I have lived a very long time, and yet, when I summon up the memory of the home in Ohio where I spent my boyhood, I realize that practically every detail of life has been altered in the in-

UNIVERSITY OF IOWA

vening period. And every single little alteration has meant an enormous change in American business.

There was no running water in the rambling old house where I was born. We had a well under the kitchen and a good old pump at the sink. There we used to stand in line and wash for breakfast, and after breakfast we were lined up again, according to age, to brush our teeth. Now I am fixing over a house to take care of a family no larger than my father's and at last count there were to be five bathrooms in it—though my wife may add one or two more before we get through. Some wise man saw the change that would come through the piping of water into American homes, and great industries arose to supply plumbing fixtures.

My mother did her baking on Saturday, and the whole house was filled with the fragrance of fresh bread. Other wise men foresaw that women would be unwilling to continue home baking forever, and the great baking industry arose. . . .

With the coming of the first cold weather we were fitted out with red, scratchy underwear. How well I remember it! It makes me itch to think about it now. . . . But later on there was a tough boy in town who boasted that he went through the whole winter wearing his "athletic underwear." All the rest of us envied him and finally talked our parents into letting us try the same experiment. Some of the manufacturers of woolen underwear thought it was just a boyish fad which would amount to nothing, but the textile industry today knows that it was no fad. American men will never again wear as much wool as they used to.

My father wore whiskers, and so did many other men in town. A few shaved every morning with the old-fashioned razor or lined up in the barber shop, where hair-cuts were a quarter and shaves a dime. One day, when I was in college, my roommate showed up with a newfangled contrivance called a "safety" razor. The rest of us made fun of it, but one by one we sneaked it out of his bureau drawer and tried it. Promptly, our old-fashioned razors went into the discard—and the barbers of the country, who had every right to expect a steady annual income from our chins, would have been hit hard except for another and most amazing change—the women cut off their hair.

GIVEN only a little more brains I might have made a fortune out of any of these changes.

Take the movement of population from the country to the city. The census figures indicated that it was beginning more than half a century ago, and each new census has shouted the story louder. If I had taken my first thousand dollars and made a payment on property anywhere near the center of Chicago or New York, or Cleveland or Detroit, and just let it lie, I should now be one of those writers whose photographs you see in the Sunday gravure sections, spending their winters on the Riviera.

One of my first magazine assignments was to write a piece about this dangerous new social phenomenon known as moving pictures. I went down to the penny arcades and saw some of the movies, which were terrible. I talked with the police sergeant who had been entrusted with the duty of censoring all the films for the city of Chicago. He showed me the notebook in which he kept a record of the portions he had cut out of the pictures. It was a gruesome record—murder scenes, drunken scenes, indecent scenes. Surely, this new business would never amount to anything: the pictures were too vile to attract any but the very lowest of the population. More than likely the state legislatures would take notice and have them all suppressed. But wiser men saw that the pictures would not always be crude; that through them the love of the theater, inherent in folks, might be satisfied. So another great industry grew.

I was around when the automobile started, when the motion picture was in its infancy, when radio was only a creaking toy; and I was too blind to see and too timid to believe. . . . My only defense will be that all the rest of the race, with few exceptions, have been in the same situation. I know a man, for example, whose father once owned the corner of Broadway and Forty-second Street and sold it for a couple of hundred thousand dollars because he thought inflation had pushed the price up too high. He might have received even more for it if he had been willing to take a part of the purchase price in stock of the newly organized telephone company. But he was too wise to be loaded up with such worthless stuff as that.

Looking back, it seems as if every one of these great developments was clearly evidenced in advance, as indeed it was. The future is always partially clear to those who look earnestly enough ahead. Even in such mercurial matters as women's fashions, as Goode and Powel point out in their recent book on advertising, "changes without notice are as rare as storms without clouds. Irene Castle was wearing the 'Castle bob' before the World War. Irene Rooney of Seventh Avenue admitted that Mrs. Castle looked cute and comfortable long before following her example. Irene Higgins of Dubuque hesitated even longer."

THE manufacturers of wines and liquors complain that prohibition was sprung suddenly on the nation under the patriotic smoke screen of war. But "Frances E. Willard was the red flag that foreboded the prohibition wave. In her own strange way, Carrie Nation was another. Maine went dry in 1858. By the turn of the century dry towns were well-nigh as common as wet ones. When national prohibition finally came, ninety per cent of United States territory and seventy-five per cent of its population were already dry by local law. . . .

'A New Jersey textile manufacturer complains that women have cut down their clothes from eighteen to four and one-half or less yards apiece, and have caused thirteen out of twenty woolen mills to fail. A Wisconsin hosiery man laments that in six years the number of types of women's stockings his mill must keep in stock has jumped from 480 to 6,006 styles. Yet the sheath skirt with its slitted side was in evidence everywhere in 1913. And as early as 1909 Annette Kellerman had made public appearances in the skirtless bathing suit which bears her name. Confronted with such portents, any manufacturer, if he were willing, could realize how likely were the present changes in women's apparel. . . ." (*Continued on page 123*)

A story of mystery and intrigue

The Vanished Man

By MELVILLE DAVISSON POST

Illustrated by W. H. D. KOERNER

IT WAS a mere courtesy that brought Colonel Braxton into the Berkley case.

Mr. Evert Brewster, who had come from Fort Pitt on the matter, was not familiar with the country, and when he asked Colonel Braxton to go with him to the Berkley farm, the attorney could not well refuse. It was some miles out of the little city. But the day was fine and the roads under the summer sun were hard.

It was the disappearance of Captain William Berkley that had brought the Fort Pitt attorney down. He had his bag beside him in the carriage, for he would return north on a river boat directly from the Berkley place.

The landing could be seen, at some distance, from the point where the turnpike crossed the hilltop above the house: a mere platform from which a rowboat took one out to the steamer in the river. The main channel at this point was perhaps the deepest on the Ohio, but the long slope to the shore was shallow, and the river boats could not come in.

It was a model stock farm that the two lawyers looked down on from their carriage: clean and well fenced, with flocks of sheep at pasture.

It had been practically abandoned land when Berkley bought it; grown up and waste. What it now was represented what the will and vigor of one man could do. Berkley had got it for a small sum when he came with his strange companion from the South.

He was, Colonel Braxton thought, a gentleman adventurer at the end of his resources and also at the end of life.

The person with him he could not precisely classify.

He seemed neither an equal nor a servant. Colonel Braxton remembered when the two persons had come in to see him: a dapper, little aged gentleman with a military manner, and a big, dark man, sturdy and powerful in the vigor of a youth that remained.

The latter looked like a sort of overseer, common in the South. He had the color of an octoroon; but the usual negroid markings were not about the man. His hair was straight and his features, in a manner, aquiline. There was force and determination in him, and one could see that he managed for the two in all practical affairs.

He towered over Berkley, as if he interposed, in his strength and vigor, to care for the aged gentleman against the world. It was a strange and intriguing relation, that could have no other than some dramatic adventure for its origin.

THEY had come in, soon after their arrival, to see Colonel Braxton about the title to the land.

Berkley had bought it with no thought for a lawyer's service, and it now appeared, from the wording of the deed, that he had got only a life estate. Upon Berkley's death, the property would revert to the former owner.

The transaction had been with an agent for the owners at Fort Pitt, a fello passenger on the boat North, who h somehow managed to discover wh Berkley sought.

It was a willful and premeditated d ception.

The owners held the land in fee, a there was no reason thus to convey the l estate only. But the house was unoccupi the lands grown up, and the price p down by Berkley, small.

WHEN Colonel Braxton pointed the deception in the deed, the b belligerent creature with the little capt had wished to fight, to go into the cou to force a title.

But the dapper little captain had o laughed.

What did it matter! He wished lands only for his life. He had no on consider. Whither the property pa after he was dead was of no importa

But a little later he seemed to h acquired a somewhat changed intent. sent for Colonel Braxton and asked to draw a paper putting the conduc the property, legally, into the hand Horton (for thus was the big creature Berkley named), making over to hin the returns from it during Berkley's except what the little captain shoul quire for his personal use. It was a prehensive sort of deed, vesting in H all control and authority and all p from the land. It had puzzled C Braxton when he drew it.

UNIVERSITY OF IOWA

"The wash of the steamer overturned Horton's boat, and he had to be fished out of the river, with his wool"

Out of what motive did this act issue? Colonel Braxton had reflected on the matter while he sat in the parlor of Berkley's house to formulate the paper. And it was for this reason, perhaps, that he had noticed with such care all the details about the place.

THERE was clearly no quality that one could call foresight in the dapper little captain, standing before the fire in that room, on the brick hearth, between the two big andirons.

And about the room there was no article, no picture, no bit of heirloom that seemed related to a former family, or a former status or manner of life. For such evidence, Colonel Braxton had searched the room. But there was nothing except the ancient furniture that had passed with the unoccupied house to its new owner.

Yet Berkley had uttered one significant remark that day.

Colonel Braxton now recalled it, sitting in the carriage on this summer afternoon with the Fort Pitt attorney, Mr. Evert Brewster. When Berkley signed the legal paper turning over the property to Horton, he had made a gesture as of abandonment; as of one going free of a thing he loathed.

"The earth depresses me," he had said. "It contains for me, sir, the only element of dread in death. To be covered in the earth! It is the whole horror in the idea of dissolution. If one could be exposed to the vultures, in the manner of the ancients; or sent out to sea, like the Vikings, in a sinking ship; or burned in a great pyre of spice woods and his ashes scattered to the winds . . . death, sir, would be a thing to laugh at!"

He got up laughing at it, himself. But Colonel Braxton felt that behind the laugh the speech issued from some primordial feeling.

And the remark had remained in Colonel Braxton's memory.

THERE was, however, a commonplace, practical side to that legal paper. Horton had gone to work on the run-down property with a tireless energy. He had put the old house in order, maintained Berkley in it like a gentleman. And he had a care for this that the solicitude of a woman could not have equaled.

The old gentleman remained—the dapper little captain, elegant and careless—and the house he lived in was kept up to the standard of that manner. The lands, too, were cleared of brush, fenced, and stocked with sheep. The wool was sold down the river. The immense industry of Horton was inconceivable. And he managed thus to make a waste, worn-out property that would not yield its taxes support the house, with evidently some considerable return beyond it.

There was a bit of money, too, for Captain Berkley's foibles.

That gentleman sought no acquaintance. He did not go about the town, nor to any house. He kept apart. But once in the year he went South on a river boat.

Neither Horton nor the little captain discussed their plans with anyone. It would be discovered that Captain Berkley had gone South, and later on it would be discovered that he had returned.

There was little, then, for the Fort Pitt lawyer beyond this general gossip of the countryside. He had seen the legal contract, of record, which Colonel Braxton had drawn up, and on this drive, out to the Berkley farm, he had interviewed the only person who seemed in possession of any collateral fact.

Digitized by Google
Original from
UNIVERSITY OF IOWA

That person was Sylvanus Betts, but what he knew was a cloud rather than a light on the affair. He had come out from his house when the carriage stopped, and stood in the road to talk to the two lawyers.

Betts was a wool buyer in a small way for a local manufacturing concern that wove coarse blankets, and he had endeavored to purchase the few bales of wool that Horton was sending down the river, about the time of the journey from which Captain Berkley did not return.

HE HAD made an offer, which Horton had refused, and he had followed to the river landing in an effort to obtain the wool. He had raised his offer as Horton was about to take the bales off to the steamer in a rowboat.

But the stubborn manager for Berkley would not sell to him. Betts thought the man had a regular purchaser for the wool he grew, perhaps at a stipulated price, and did not feel that he was at liberty to dispose of it to another. Besides, as the neighbors said, the careless little captain, when he went on these mysterious excursions, had always to have additional money to get home, and Horton was accustomed to send it by a boat captain, or to ship a few bales of wool to provide the funds.

"You will remember it," Betts said, addressing Colonel Braxton, "for you were on that steamer. Horton nearly lost his life taking the bales of wool out to it. The wash of the steamer overturned his boat. Horton was for some time imprisoned under it. He had to be fished out of the river, with his wool."

"Yes," replied Colonel Braxton. "I remember I was looking on from the deck of the steamer. It was the 'Dolly Madison of Memphis'."

"It was," said Betts.

And then he turned about on the Fort Pitt lawyer. He was a big man, bluff and aboveboard with his words.

"You ought to know all about this thing," he said. "It was your client who tricked Berkley. Their crooked agent sold him this land in fee simple, and then made him a deed that conveyed only a life estate. It was a piece of confounded knavery!"

"That, sir," said the attorney, "is a matter with which I have no concern."

"Well," replied Betts, "it's a matter with which God Almighty will have a concern. It's a strange world, sir. No man ever gets any actual benefit out of a wrong. Somehow, in some unexpected manner, the Providence of God evens it."

And so, turning on his heel, he had gone back into his house.

As the carriage went on, the attorney made some apologies in form to Colonel Braxton. He knew nothing of this earlier transaction, he said. He had been recently retained for a specific purpose: to recover the land if Berkley's death could be established. It was purely a legal matter. There was no moral question in it.

Colonel Braxton did not reply.

The man was within the technical ethics of his profession. But human affairs were on a larger plane. There was always a moral right under every legal right if the latter ought to stand. And as the moral right was, so would the legal right be also. The law was to establish justice. There could be no justice in the absence of a moral right. And there seemed to him a

strange turn toward a sort of equitable balance in this affair.

If Berkley did not return, Horton, under his contract of record, would hold these lands for seven years. If one disappeared, passed out of human knowledge, he was not thereby accepted by the law as dead. The law presumed a life tenure of seven years, unless the death could be established, either by the finding and identification of the body, or some direct evidence of violence that would result in death, or circumstantial evidence tending to establish the fact of death.

The presumption of life must be overcome.

Men disappeared for various causes. They concealed themselves; they went surreptitiously on a journey. This was a common experience of life; too frequent in its occurrence to be passed over by the law. All this Colonel Braxton had explained to Berkley and his companion, as a sort of history appertaining to a life estate.

AND he recalled now the further details of that day when Horton had brought the little captain in to consult with him about the deception in the purchase deed. It was the annoyance of a suit in chancery, he felt, that had held Berkley back. His unconcern of what came beyond his death was not, for all the man's dapper manner, the controlling motive.

"I am sorry, Horton," he had said, somewhere in that talk, "to limit your inheritance, for you are my heir. But I will not be entangled in an endless lawsuit; I have had enough of that!"

And, strangely, at the words Horton had fallen silent, and the consultation had closed.

Colonel Braxton had assured Berkley that a court of equity would correct th deed, for the evidence of trickery was co spicuous. But he could not assure hi that a suit in chancery in the circuit cour of Virginia would not run on. There we too many shifts and subterfuges in the la One could get a jury trial to an issue. B a suit in chancery might go on for yea

IT WAS the one great wrong about o human devices to do justice—this dela

In his experiences he had met wi many another who, like this man, dr back from going into court to correct so defect in a land title. And who preferr like Berkley, to suffer the ill he kn rather than the law's delays and all worry and costs of lawsuits.

And so Colonel Braxton had no v high regard for this Fort Pitt lawyer for the mission he was on. But the myst that lay about the matter puzzled profoundly. In every direction, at the tance of a single step, the whole af ended in the dark.

Every detail was in itself a mystery

Wherefore the strange relation betw Berkley and this man Horton? And what race was the latter? Why had t come here, as though to be out of world? What were they endeavorin conceal, to cover up, to escape from? these periodic disappearances of Berk On what journey did he go, and for purpose and to what destination? had Horton wished to get the legal p giving him the returns from this es during Berkley's life?

One might understand why Ber would make that indenture.

Horton had, in fact, charge of e

It was some moments before Horton, on his knees in the great fireplace, endeavored to reply, as though he required that interval for control

ng; a sort of manager, in every direction, this careless, swaggering old man. d Horton might wish it, knowing that kley was no person to handle practical irs.

That would be explanation enough if kley had returned. But when he had returned, it bore the aspect of a paper wn for a foreseen event.

And why had he not returned?

That was the culminating mystery! Every explanation that Colonel Brax- formulated seemed presently to nega- itself. Had Berkley gone on some enture? He was, from every evidence, rly of that type. But he was old now, ing to the end of life, and surely also ing to the end of such adventures. ut one could not tell.

OMETIMES, as the curtain was com- ng down, such men went out on a last erate affair; with no hope, with no , perhaps, that they would win out with the worthless fragment of life. r was he dead?

ad, if so, had Horton killed him?

he thing looked strange, either way, in contradiction. The marked attach- t of the man to Berkley would nega- this last conclusion. Horton was like ther and caretaker to him. He moved very direction apparently with this t.

hy, then, should he make away, in t, with him?

And yet, here was this caretaker to gather everything into his own hands. Here was this contract, drawn with a concern to make it legal and to get it of record, like a deed. But under such a paper, on the other hand, the continued life rather than the death of Berkley ought to be his concern, for there was only this life estate to look to.

The mysteries about the thing, in any direction, brought one up against a wall.

THE carriage stopped before the house, and Mr. Brewster and Colonel Braxton entered. They saw no one about. But a knocking on the door brought Horton. And again, as always, Colonel Braxton was puzzled by the man. He was big, muscular, and young; in the neighborhood of thirty, one would say; and he was swarthy, like an octoroon. But his features, as I have written, negatived that estimate.

He opened the door and stood aside, and they went into the one big room the house contained. The man indicated the empty chairs, as a courtesy to the guests. But he remained standing. His manner, Colonel Braxton thought, was that of a host who does not wish to be familiar rather than any convention of a servant.

Mr. Brewster sat down beside a table, placed his top hat on the floor, and began his interrogation, as in a criminal trial to a hostile witness.

And while the questions volleyed, Colonel Braxton looked about the room. He noted the details carefully and compared them in his memory with the details of the room at his former visit. And several items in that inventory intrigued him: trivial clues about this mystery, and pointing like vague signboards toward its solution.

One was the daguerreotype of a woman, in a simple frame. A young woman, evidently of the race from which Horton himself had come. But of a less rugged type. There was something finer about the face. This picture was on the table. And on the mantel there was a miniature in an oval frame, apparently of Berkley when a mere lad. These were new additions to the detail of the room. And there was a further considerable change about the fireplace.

But Colonel Braxton made no comment. He did not wish to include himself in Mr. Brewster's mission.

That lawyer got little from his interrogation.

THE big, inscrutable witness was in no sense hostile. His answers were clear and accurate, and he was frank and plain-spoken, like one willing to tell all he knew about an obscure affair. But when the explanation was ended there was nothing new. Captain Berkley had gone South, as was his custom on occasion, and had not returned.

One could not say what had happened to him.

The witness, as on former occasions, had shipped some bales of wool to his regular consignee at Memphis, to be a credit to Captain Berkley when he should call for it. The wool had been received, unbaled, sold, and the credit had not been drawn on. He produced the receipt of that consignee for the wool, and the credit to the account of Captain Berkley.

Brewster looked over the receipt and passed it to Colonel Braxton. Then he put two or three confirmatory queries, and Horton answered them.

"You took Captain Berkley to the boat?"

"Yes."

"And he has not returned?"

"No."

And then the question important to his mission:

"What do you intend to do, sir?"

Horton made a sort of gesture when he answered that, as of one who is asked a foolish and unnecessary question.

"I shall remain here," he said, "and take care of the house and lands, as I have always done. Captain Berkley has entrusted them to me. Shall I fail him in that trust merely because of the fact that he is absent?"

"And if he does not return?"

"I shall remain."

"How long?"

Again Horton made that curious gesture.

"How long, sir," he said, "shall a steward remain when he is left behind to care for his master's possessions in a land of strangers?"

"Well," said the attorney, in his crisp, sharp voice, "you might remain for seven years under the law, if Berkley does not turn up."

Horton made a sweeping gesture with his extended arm.

"For seven years then," he said.

It was drawing (*Continued on page 112*)

George Washington — *Business Man*

By NEIL M. CLARK

IT IS customary to think of Washington only in his rôles as soldier, statesman, and President; Washington, the man of business, the successful farmer, builder of lines of transportation, engineer, pioneer, and promoter of large commercial undertakings, looms but a shadowy figure in his historic background.

And yet Washington, from birth to death, was a man of broad commercial vision and rare business ability. In fact, his business sense was comparable to that of great pioneer initiators like Astor and Hill, whose fortunes arose from aiding and leading in the commercial development of vast, empty regions.

Indisputable testimony to his business genius may be found in the fact that Washington was able to spend practically one fourth of his life, during the most productive years, in extraordinary public service, giving practically no attention to his private affairs, and yet leaving behind him a record of business achievement and a fortune that entitle him to be called our first millionaire.

Like many present-day business geniuses, Washington started life with but a few cents of his own. His keen business acumen, however, secured the foundations of a fortune before, at his brother Lawrence's death, he inherited a considerable amount of property. And before he met and won the delectable, amply financed widow, Martha Custis, his business and financial operations had made him one of the leading rich young men in his part of the country.

Martha Washington's fortune was no doubt a welcome addition to Washington's capital, but it did not "make" him, as so many people seem to think. As a matter of fact, only part of it accrued to him, and in the whole of his eventual fortune that part represented a very small percentage.

Where and *how* did Washington get all his property and his wealth? That was the question that so intrigued Eugene Ernst Prussing, a lawyer of Chicago and Los Angeles, that he spent thirteen years in exhaustive research of Washington as a business man. Some of the facts Mr. Prussing unearthed are new; but even the old ones have been put in a fresh perspective, enabling us to see the Father of Our Country in another light and to appraise and interpret his great abilities anew.

When he died, the land and other investments that Washington directed to be sold were worth, by his own conservative estimate in his will, $530,000, and this did not include some of the most valuable portions of his estate.

The keenest question that can be asked about a man, particularly a public man, is, where and how did he get his wealth? The answer usually involves his whole character. Mr. Prussing set out to answer this question in regard to Washington in the hope that a new and truer picture of the *man* might emerge. It did.

Mr. Prussing was tireless in his research. He made special journeys to seven states and fifty counties, visiting every known place where Washington owned real property at the time of his death. He engaged in correspondence and personal interviews with hundreds of individuals. He spent weeks patiently exploring yellow and faded handwritten records in the dim vaults of courthouses and libraries.

In August, 1917, in the bitterest and busiest days of the war, he successfully enlisted the help of President Wilson, Ambassador Page, Secretary Lansing, and high officials of Great Britain and the Bank of England, and had one-hundred-and-eighty-year-old files opened and records carefully examined which threw light on the research.

A lengthy, dry procedure. But out of it emerged a new, sharp, clear, thoroughly human, and understandable portrait of America's greatest man as he really was, a man whose character has been so clouded with misstatements, which were meant to do him honor, that several years ago a famous historian said despairingly: "George Washington is an unknown man."

MR. PRUSSING has described his researches in two recently published books, "The Estate of George Washington, Deceased," and "George Washington in Love and Otherwise." It was after immersion in these books that I went to see Mr. Prussing, to get at first hand the story of George Washington, Man of Business.

"To many of us," he said, "Washington is a mythical figure hidden behind fab like that of the self-righteous little b and the hypothetical cherry tree. A matter of fact, he was a very different s of person. He was a man who would h been perfectly at ease in a group of m ern big business men around the directo table. And he enjoyed fox hunting dancing, as the modern man enjoys g

"In his ideals, his sense for giving va as well as getting it, his insistence on ex statistics, his zeal for big construc undertakings, for striking into vi fields, seizing opportunities, opening nues to development, his instinctive ing-up of the possibilities of profit deal—in all these matters and others them, his attitude was strikingly sim to that of the best of modern business did not definitely formulate any rule money-making, but he followed ce basic principles throughout his caree

WASHINGTON'S apprenticeshi business started soon after father's death, which occurred whe boy was twelve.

"From that time," Mr. Prussing "he was pretty much on his own, an always faced with the problem of m a living. His father had been a mer and farmer, a vigorous, thrifty mar captained his own vessel on the hig and was the proprietor of iron-m properties in Virginia. He left qu estate, but George's share did not b him much, either as boy or man.

"The elder brothers secured imm possession of their inheritance. Law for example, received the land at

Vernon, then an estate of about twenty-five hundred acres. But Mrs. Washington had the use during her lifetime of all the property left to George, and as it happened, she lived to a ripe old age. Indeed, Washington did not receive a penny directly from his father's estate until he reached the Presidency and was almost sixty years old.

"Like most boys, he was undecided what career to follow. He considered the sea with favor, and Lawrence encouraged him in the idea; but his mother made such serious objections that he gave it up. However, the giving-up led to the career that he did adopt.

"Lawrence Washington had built a home and was living on the Mount Vernon estate. It was suggested to George that it would be just as well if he got away from his mother's immediate influence, if she was trying to shelter and soften him, as the seafaring incident indicated. So at fifteen he went to live with Lawrence. Here his career began in earnest.

"You learned in school about Lord Fairfax and the vast grant of land he owned between the Potomac and the Rappahannock Rivers, stretching west to the sources of these rivers in the Allegheny Mountains. The Fairfaxes were near neighbors at Mount Vernon, and related by marriage, and this connection led to George's first job. He went with George William Fairfax, only five years his senior, to the Shenandoah Valley as an apprentice surveyor.

"The Shenandoah was wild and sparsely settled. The two Georges crossed the mountains on horseback, hunted and cooked their own food, and enjoyed themselves as only boys can. But they did,

Washington's plan of his farm

withal, a good, honest job of work, as shown by the plats and surveys that have come down to us.

"And they did it in a region superbly beautiful. For sheer, soft loveliness, for its blue distances, its mountains, river, and rolling, rich land, I know of nothing to compare with Shenandoah, twenty miles wide, two hundred long. And there is evidence that it was Washington's view of this valley when he was sixteen, while his mind was impressionable and the wilderness was new to him, that helped permanently to fix the direction that his career was to take. For always, thereafter, his eyes and mind and business activities were directed westward, to the Shenandoah, and far beyond. 'The rising empire' he began calling it before he had grown much older; and it was in the development of this rising empire that he sought, and chiefly found, his business career and his fortune.

"As assistant to young Fairfax, George Washington received, at least part of the time, a doubloon a day, or the equivalent of seven dollars. This was good pay. But as one of his biographers remarks, 'Washington was always a good hand at making money.'

"The work lasted two months. When it was finished, Washington took a brief course at William and Mary College, in order to pass the examinations and secure a license as surveyor. He was successful and sought, and obtained, the job of county surveyor of Culpeper County.

"THIS was his first public office and his first important job undertaken on his own initiative. It was not a sinecure, but required a real man to hold it down. The county surveyor was responsible for hiring and overseeing the necessary helpers. Occasionally survey lines were run through land with rival claimants and it was the surveyor's duty to settle the disputes; and not infrequently the claimants argued with guns and knives. So at seventeen the boy was handling men and mastering the essentials of diplomacy—an excellent preparation for a business career.

"At this time, too, he was beginning modestly to stake out his fortune. He had the thrifty idea of not taking all his pay in cash. He knew where the best acres were located—he had a canny eye for them as he surveyed—and believing that settlers would come rapidly and prices would rise, he began putting his extra pay into good land. By this means he acquired considerable property before Lawrence died and he became the owner of Mount Vernon.

"Washington came into the Mount Vernon property when he was twenty-one. It consisted then of twenty-seven hundred acres. Until his death forty-six years later, Mount Vernon was his home and headquarters, the center from which his engineering and business projects were directed, and though he made many trips and was away for long periods during the Revolution and the Presidency, Mount Vernon was the place he thought of as his business address. His ownership of the estate brought him actively into the larger affairs of the community.

"Six years later, Washington met and married Martha Custis. It has been generally assumed that her fortune was added whole to what he had; and historians, and to some extent people of his own time, believed that 'the widow' made Washington a rich man. Nobody knew exact amounts. But people gossiped. And a testy Scotchman is said to have remarked to the first President's face:

"'Now what would ye ha' been had ye not married the widow Custis?'

"Washington's accounts with the Custis heirs, for whom he acted as administrator, were supposed to have been lost. In April, 1918, I went very carefully through his ledger 'A,' which is preserved in the Library of Congress. I found three accounts referred to in the index as follows:

	Page
Estate of Colo. Custis, dec'd	5
Custis, Patsy, Miss	5
Custis, Jno. Parke	6

"But when I turned to these pages, they appeared to be missing.

"Now, Washington's method in his ledger was to number facing pages alike: that is, both a left-hand and a right-hand page would be numbered 57. But I found that all three of the pages mentioned in the index, 57, 59, and 64, seemed to be gone. What could have happened?

"Puzzling over it and fingering through the neighboring pages to be sure there was no mistake in indexing, I happened to notice that some of the pages were of unusual thickness. I then suspected, what later proved to be true, that the pages had been very cleverly pasted together. Reporting my discovery to the librarian, the repair man was called in and soon separated the pages. When this was done, it was plain to a dull eye just how much Washington 'got with the widow.' The total cash and currency accruing from the Custis estate was a little more than one hundred thousand dollars, which was divided three ways between the widow and the two children. George Washington, as the law then stood, became owner of the widow's share.

"But that was all. In other words, he 'married' something like thirty-three thousand dollars. It was a goodly sum, especially for those days, but as for 'making' Washington in business sense, the idea is ridiculous.

"WASHINGTON administered the shares of the estate belonging to the children. John Custis, in addition to his cash inheritance, received fifteen thousand acres of land. After John's death Washington continued the administration for John's children, with such satisfactory results that one of the

A sketch made by Washington showing some tributary water and portage routes which would feed into the Potomac River at Cumberland, Maryland. This plan to link inland points to the coast was one of the several important enterprises in which Washington was interested. It was undertaken by the Potomac River Company, of which he was president. This company was succeeded by the Chesapeake and Ohio Canal, and the Baltimore and Ohio Railroad

George Custis, upon coming of age, was one of the richest young men in Virginia."

In the fifteen years following Washington's marriage, up to the time he was called to head the Revolutionary forces and during the five-year interval between the Revolution and the Presidency, he engaged in a considerable variety of enterprises.

"His interests," Mr. Prussing continued, "were primarily agricultural. This was natural, since he lived in a new country before the advent of modern machinery and the factory system; had he lived a century and a half later, it is fair to guess that he might have been a great pioneer in industry.

"At Mount Vernon, Washington added much land by purchasing neighboring farms. This estate grew from twenty-seven hundred to more than eight thousand acres at the time of his death. It was his most cherished possession, and on it he lavished endless care, labor, and expense—and as long as he was free to oversee it, he usually made a fair farming profit. He had his good seasons and bad, but his returns, on the average, may be reckoned somewhere between ten and fifteen thousand dollars a year.

"Here also he ran the gristmill his father established. He conducted fisheries at wholesale along his nearly ten miles of water front. And the product of these industries (flour, and salted shad and herring) he shipped to England and the West Indies in annually increasing quantities. He maintained a ferry across the Potomac. This paid a profit and was a great convenience to the public. And of course he also had general oversight of a small army of slaves and superintendents who operated these various enterprises.

WASHINGTON was shrewd and aggressive in acquiring land elsewhere, whether by purchase or other means. During the French and Indian War he was authorized by Governor Dinwiddie to raise a body of troops. It was crop time when they were needed and he had difficulty in getting his quota of eight hundred men. Washington urged the Governor to offer a bonus in western lands to the volunteers. Dinwiddie consented, offering a total of two hundred thousand acres on the western waters—that is, on the Ohio and its tributaries. But before the campaign was over and the lands allotted, Dinwiddie was recalled and his successors were doubtful of the deal, or unwilling to go through with it. Washington, as leader, was kept busy from 1759 to 1772, writing letters and exerting his influence to get the lands assigned according to promise.

"He finally succeeded. His own share was ten thousand acres; but since the region was unsettled and more or less dangerous, many of the soldiers and officers preferred a little ready cash. Washington, taking a longer look, bought up many of the certificates, thus adding to his holdings.

"He also had an agent locate many claims for him in Pennsylvania, Ohio, and what is now West Virginia. Eventually he owned fifty-three thousand acres of the best bottom lands on the Ohio, Great Kanawha, and Little Miami Rivers.

"There were other ventures.

"IN 1763, and for five years thereafter, Washington was actively engaged on the Dismal Swamp project. This involved the drainage and lumbering operations on forty thousand acres of 'spongy' forested land below Norfolk, in Virginia, and required the building of a number of miles of canals, maintenance of yards and docks at Suffolk, building roads and camps, directing timber-cutting and shipping on a large scale. To this enterprise Washington devoted the greater part of six years as managing director of a company of twelve 'adventurers.' It was always a profitable venture. Even today the entire tract is owned by one company and held as a timber preserve.

"Another great project in which Washington was a prime mover was the Potomac River Company. He was chosen president. The object was to bring about long-distance navigation of the river. The plan was to clear the Potomac of rocky obstructions, build canals and locks around its several falls, and connect the headwaters in Pennsylvania by a portage or road with the headwaters of the Ohio River. In this way, Pittsburgh and the tidewater towns were to become next-door neighbors.

"Washington devoted money, time, and energy to this enterprise for four years after the Revolution, doing everything from beginning to end to make it a success. He planned the work, traveled up and down the valley to mark its location, employed the superintendents, attended meetings of directors and stockholders: in short, was the active executive of a great project. Up to the day of his death Washington believed that the project would ultimately prove a (*Continued on page 106*)

Tick-Tock!

By W. O. SAUNDERS

Drawings by NORMAN PRICE

THE clock on the mantelpiece is making itself heard. How ominous are its measured beats and how they haunt me! That same old clock has been beating off the time there for years and years and I never noticed it until yesterday.

And the canary over by the window drools, drools, drools. He used to trill. For years the now almost sepulchral beat of that old clock was never heard above the laughter and lively discourses of many voices in the house. But one by one the cherished voices are departing. Just last summer Mamie left us; then the boy went off to college early in the fall.

Already things were beginning to look different around the house. And then Billie married all of a sudden; Billie, who was so cheerful, so full of laughter, so full of fun, and, with it all, so considerate of her daddy. I only had to raise my head and look around and Billie would guess my want and hasten to find the matches for me, or fetch my slippers.

Elizabeth, twenty-two, already staid and sophisticated, is left, but Elizabeth just seems to be sitting around awaiting her turn or her opportunity to move out and on.

And there's Mary Byrd, just sixteen and still our baby, but already so particular about hose and shoes to match and already looking forward to college or conservatory. And so the clock and the canary are making themselves heard now and their notes seem to convey a sorrowful anticipation of a not far distant day when they will be alone in the house with an aging couple who have lost their children.

I know now that I am getting old. I am forty-three years old, going on forty-four, and they say that at this age a fellow is in his prime. Liars, all who say it. Old Age has got me cornered. I know it for a certainty. For years I have waged a losing fight against it and have kidded myself right much. But it's no use kidding any more.

A fear of Old Age crept upon me many years ago. I was conscious of it when I looked at my first baby. I put the fear away and it reasserted itself with chilling positiveness when that little one became of age to go to school and I set out to buy her first grade school supplies. Again I put it away, only to be fetched up with a consciousness of the thing rooted deep in my heart when the little daughter grew up apace and put on her first "growny" frock. I met her on the street and didn't recognize her as my own grown-up daughter at first sight. Again I put the thought away. I refused to admit the passing of youth and the approach of Old Age for some years after that.

I wouldn't admit the coming of Old Age when I was thirty-seven and my health broke down. I tried to kid myself with the notion that I had worked overhard that summer and would be my old self again as soon as I could get my work in order and take a little rest. I wouldn't see a doctor. I know now that I was afraid; that I didn't want to know the truth, that I wasn't young any more and could never more hope to be full of pep and vigor again.

I planned a vacation. The great day came and my wife accompanied me on a trip to Washington and New York and Niagara Falls. It was the trip we had planned for our honeymoon years ago but didn't take because when our wedding day came I didn't have the price.

I KIDDED myself a lot on that belated honeymoon trip. I affected all the airs of a youthful bridegroom and got a great kick out of the sly winks fellow travelers gave one another when they observed my attentiveness to my wife. And the wife did look very like a bride. A little new appareling and a railroad ticket in the good old summertime will take ten years off any woman's age—if she has that much to spare.

I say I cut a lot of capers on that trip. But in the afternoons if there was no sight-seeing to be done I was much relieved and found much comfort lounging in hotels. At night I was all tired out. But I would be myself again in a few days, so I thought. But I haven't been what I was pleased to call *myself*. I am simply another self now, living in an entirely different world from the one I started out in, and faced with the necessity of making new adjustments and making most of the new order of life to which the years have assigned me.

"Gee! You are looking fine; I don't think you have shown better color for years; you are on the threshold of the most useful years of your life, looking fit to carry on." So I am greeted by old friends who drop in to see me. They may be kidding themselves, but they are not kidding me.

THEY tell me I am now in what the world considers the glorious "roaring forties." The world doesn't call that Old Age at all; but the world is a schoolboy with puckered lips whistling to keep up its courage as it passes a graveyard. I have done my share of whistling; but it's no use; the doors of all the halls of youth have closed upon me and I find myself in other halls with new alignments to make or I am lost.

When does Old Age begin? I have an idea it begins with most men around thirty. I have come to this conclusion from having noticed that the average man around the age of thirty responds to your morning inquiry or salutation with the words: "Feeling pretty good for an old man, thank you!" And he will invariably straighten up his shoulders, expand his chest, and laugh, as if to assure you that he is only kidding. But he isn't kidding. He knows he isn't young any more.

Women are never so flippant; discreet, resourceful, tactful women never admit Old Age, even in jest. Women take things more seriously than men, except, of course, the husband's complaint about the limitations of the family income.

I think my most shocking recognition of the coming of Old Age was experienced

Blue eyes, looking up at me,
I wonder what you really see.

'Tis very quiet in the house
When children come not home at all.
The day goes stiller than a mouse;
Gulls and the sea-winds cry and call:
And two old shadows by the flame
Talk of the days when children came!

—*Katherine Tynan Hinkson*

around the age of thirty-five. I had drifted into what turned out to be a cheap burlesque playhouse on Pennsylvania Avenue in Washington. A platform led from the stage right down through the center of the house and just above the seats. On this platform beefy chorus women pranced and did their stuff over the heads of the audience, engaging in cheap banter with the male spectators. I had already looked around for a side-door exit, hoping to sneak out of the place without being seen, when one of the fat soubrettes with rouged knees stooped low, patted me on the head, and said: "Ain't he the Sweet Daddy!"

Everything inside me seemed to turn upside down and I was sickened with shame and nausea. I don't know how I got out of the place, but I got out; disgusted with cheap burlesque and disgusted with myself for having put myself into it.

Those words, "Ain't he the Sweet Daddy," fairly sung in my burning ears. To be called a Daddy by a horrid old soubrette probably several years my senior was disconcerting. I looked myself over in the mirror that night. What was there about me that suggested the opprobrium of Daddy to a woman old enough to mother me?

AND the mirror told me the story; the mirror had been trying to tell me for several years, I guess, but I had ignored it. Now I beheld myself as others probably saw me: bald, fat, shoulders inclined to stoop, a wrinkled forehead, drooping mouth, double chin, fillings in many teeth, a tired look in eyes that were once full of fire and laughter; truly a spectacle to be derisively "Daddied" by an aging soubrette. Gad, how my feelings were hurt!

I straightened my shoulders up a bit, sucked my paunch in, brushed the dandruff off my coat collar. When I dropped into a barber's chair next morning and the presiding genius suggested a facial massage, I fell for it. The manicurist caught my eye and smiled benevolently. I submitted to her ministrations. I carried my head a little higher all that day and found a lot of interest in ten polished and pointed nails.

BUT it was bothersome keeping my lungs inflated and holding my waistline in. I bought one of those instruments of torture, an abdominal belt, guaranteed to reduce the waistline four to five inches. It did; it also taught me why emancipated women abandoned their corsets.

I had to get rid of that torture device and let the paunch have its way. But I bought myself a gay necktie; a red tie. My wife protested when I brought it home, but the youthfulness and screaming audacity of the thing appealed to me immensely. I wore it. I also bought a fancy hat band for my panama and turned the brim of that panama down all around. I admit it gave me a sporty look. Then it was that I took to white flannel trousers, sport shoes, handkerchiefs with colored borders.

And I even bought spats. I let a salesman in a Madison Avenue, New York, shoe shop stick them on me and I got away with them in New York in fine shape. But when I came home to my own little elm-shaded Main Street in my old home town down here in Dixie, I had to brace myself for an ordeal. My fellow townsmen just didn't want to stand for those spats; no one in Elizabeth City had ever worn spats before; they were freak appurtenances to be worn by dudes and city chaps with little waxed mustaches. Small-town folks hate spats with a genuine hatred; I don't know why. I was never permitted to get much enjoyment out of my spats.

But I did not abandon my gay defiance of coming Old Age and its telltale markings. Old Age must have smiled devilishly at the puny devices which I employed to thwart her. She knew that there comes a time at last when we may no longer ignore her; whether one be forty-three or sixty-three doesn't matter; when one has raised a family and that family begins to break up and leave one in solitude, Old Age can't be ignored any more.

Ticknor met Oliver Wendell Holmes feeling his way along the walls of the hall of his home, very feeble and almost blind. He recognized Ticknor by his voice and said to him: "Do you recollect asking me for a definition of happiness many years ago, and do you remember my answer? It was, 'Ten feet on the fender.' Now I want to give you a definition of misery. It is, 'Two feet left on the fender.'"

I haven't come to the two-feet-on-the-fender stage yet, but I am on my way. Three young ones have gone out of my home within a few months. Three vacant chairs at the table. Two young ones still left; but they are only awaiting their opportunity to try their wings too.

Presently all of the young voices will have gone out of the house and there will be little conversation. A married couple have so few things to talk about; having lived together many years and raised a family, most things are understood or go without saying. And then, too, the art of conversation is not easily encouraged in man and wife.

AND what have become of all my plans for making over the old house, adding more rooms, enlarging the living-room, and putting in another bath? I have deplored the fact for years that we didn't have enough space; now we have a surplus. We used to dread company overnight because we had no place to put them; now we wish company would come. I feel sometimes like meeting the night train, grabbing the first passengers that get off, and imploring them to come home and spend the night with us.

To think that I have spent so many years complaining about the room the kids took up in the house; and they *did* take up an awful lot of room. At times you couldn't find (*Continued on page 86*)

And the song has been sung
And the story been told.

My Memories of the

By
DON MARQUIS

ONE of the gayest dogs of the Gay Nineties was the Drummer.

I speak of the Gay Nineties as they appeared to Massillon, Ohio; Griffin, Georgia; Plumville, Pennsylvania; Walnut, Illinois; Clay Center, Nebraska; and not as they impressed London and Paris and New York City.

It is true that in many localities the Drummer lingered well into the Twentieth Century, but it is the Drummer of the Gay Nineties whom I remember best. He was in his most fragrant efflorescence then . . . at the period when tan shoes with toothpick points were being worn by Dudes, when Captain Adrian C. Anson still played first base on the Chicago ball club, when Free Silver was an issue, when "Annie Rooney" was going out of fashion and Horseless Carriages were coming in.

The Drummer, as he was then, is gone forever; and the type of country hotel waitress with whom he coquetted for a second piece of pie is also an extinct mammal. He has been replaced by the Salesman. The Salesman of today is a standardized product of modern efficiency, and he sells billions of dollars' worth of other standardized products without telling a single funny story or attending a single lodge meeting. He has been shot full of the psychology of business relations; he is as rapid as an airplane, as far-reaching as the radio, as self-contained as a tin of tuna fish, and he dresses and eats his soup as quietly and inconspicuously as the other millions of members of the hundreds of thousands of country clubs to which he belongs. There isn't a face ache in a barrel of him; nowhere do his customers and their friends gather round when he comes expansively into a store and hang upon his words with expectancy and admiration, waiting for the cue to laugh. He has cut out the vaudeville; he sells, and rushes on, and sells again.

The old sailing-ship reached its highest point of usefulness and beauty just before it was superseded by steam. And the old-fashioned Drummer bumped the zenith of his era—making the welkin ring, as the saying used to be when William Allen White was a young man and George Ade was writing his Fables in Slang—in the last years before the Salesman came. Not that the old-fashioned Drummer wasn't a good salesman himself. He sold everything that was sold. But how?

To those of us who lived in the little inland towns in the Gay Nineties the Drummer was not primarily interesting in his capacity as salesman. He was a brilliant bird of passage ever flitting to and from unknown regions. He was a connecting link with the great outside world. He visited habitually such far-away, prodigious, and fabulous centers of the universe as Chicago, St. Louis, and Cincinnati.

My memory still retains a picture of myself, as a barefooted, freckle-faced boy of twelve, standing on a plank sidewalk in a prairie town—one of those towns which, as George Ade once put it, "prop two cornfields apart"—and looking up at one of these magnificent beings, while I gathered the courage to ask him:

"Do you really *know* Captain Anson?"

"Yes, kid," said the Drummer, smiling down at me.

BUT this assurance wasn't enough for me. Lots of people said they knew people, when they had only seen them, or maybe spoken to them once or twice. I said, not wishing to seem impolitely incredulous:

"I know four or five people who have been to Chicago, and have seen him play ball. And yelled things when he socked out a two-bagger. And spoke to him when he sat down on the bench again. But that isn't *knowing* him."

"Kid," said the Drummer, "he and I buy our cigars at the same place; and when I'm at home we often meet up there and play a game of pool in the evenings, and talk over the game. He ain't much of a pool player."

I didn't quite believe him, and I resented his saying that Captain Ans wasn't much of a pool player. I carr one of his heavy bags to the hotel, I member, and he gave me a dime; but wasn't the dime I was after. I wanted associate with him a little and make my mind whether he had lied. It did seem possible to me that I was really the presence of a man who actually kn Adrian C. Anson, the greatest base player of All Time. (I still think of that way; Babe Ruth is only a pas sensation to me!)

I watched him through the scree window of the hotel as he ate—tal three fried eggs and at least a poun ham onto his plate with one noble, sw ing gesture and establishing friendly lations with the red-haired waitress a single kick of his eye—and trie make up my mind about him. I felt if he had lied to me, I should hate forever. On the other hand, if it coul true, he was something that I should keep stingily to myself. It was my to gallop down the street and find Joh Knight and Clarence Fuller, pals of at the time, and share this find.

While I was debating what to this crisis, and digging my big toe a knot-hole in the hot sidewalk, came Colfax Wolf, a boy several older.

"Col," I whispered, breathlessly, Drummer in there is a friend of Ca Anson's!"

Old-Fashioned DRUMMER

Illustrated by
DAVID ROBINSON

As he sat and told the Latest Ones in Uncle Ben's store, gradually the disengaged portion of the village came in and gathered round and listened

Colfax's father ran the hotel, and Colfax was more frequently in touch with greatness than I. He looked through the window with but little emotion, and then he said, with an astonishing calm, considering the wonder of his words:

"I got acquainted with a Drummer last week who knows John L. Sullivan."

I would have given anything I possessed at that time, including a third interest in a .22 caliber rifle, to have traded lives with Col Wolf, who habitually conversed with Drummers, almost upon terms of equality.

PEOPLE didn't get around much in those days. The Mississippi River was only thirty or forty miles west of the village where I lived; but to me it was as unreal and fabulous as the Amazon or the Nile, or any other river on a school map that I had merely read about and dreamed about. And these Drummers—why, they crossed it every week or so! They were in contact with the world. They traveled clear over into I'way! Anything more than twenty or thirty miles away was hard to realize; out of that unknown beyond might come anything; a Drummer who told me that he had met Sindbad the Sailor would have been hardly less credible than one who said he knew Adrian Wilson.

When the Drummer got off the Passenger Train and lugged his sample cases over to Uncle Ben Wilson's general store, and sat down on the counter, and began:

"Say, Uncle Ben, didja hear the new one yet about the Swede and the Irishman? . . ."

Why, then you knew that you and the other people who had followed him into Uncle Ben's store to listen were really getting the Latest One.

Probably at that same moment men in stovepipe hats and Prince Albert coats were telling each other that identical Latest One about the Swede and the Irishman in the Palmer House in Chicago. This very Drummer had heard it there only day before yesterday. Or maybe—thrilling speculation!—he had introduced it there.

Yes, he had traveled. He was a man of the world. Today, he was here. Tomorrow—next week at the latest—he might be way up in Wisconsin, sitting on another counter, telling an even Later One about a Colored Man and a Horseless Carriage; or the one about the Boston Schoolma'am and the old-fashioned high-wheel bicycle. For he knew them all. What a gay and knowing dog he was! Raconteur, globe-trotter, sport, he had been everywhere and he knew everybody and he had seen everything! Herald of the latest fashions—but never the Dude. He was always careful to indicate that he despised the Dude; he had seen a good many Dudes in the Big Cities. He knew some pretty good ones about Dudes, too. You felt that he was decidedly on Your Side, with regard to Dudes; superior to them. And, generally, his heart was in the right place—you felt that about him, with all his sophistication.

AS HE sat and told the Latest Ones in Uncle Ben's store, gradually the disengaged portion of the village came in and gathered round and listened. Hennery Waters, the drayman and City Marshal, who always wore a large star, the badge of his authority, pinned to his galluses in front, came in and accepted a good five-cent cigar and gave the meeting a sort of semi-official standing. Peter Babcock, the barber from next door, contributed his presence and the clinging fragrance of his craft. Clem Salters, who drove the village sprinkling cart, sat down on a box with his mouth open as if to gulp down (*Continued on page 152*)

How to Make Your Mind Behave

An interview with Frederick B. Robinson

President of the College of the City of New York

By M. K. WISEHART

TO BEGIN with, I think you will be interested to know how it happens that I am writing this article, which deals, to some extent, with how your mind behaves, but chiefly with *how you can make it behave.*

Some months ago, in company with a friend, a musician, I visited one of the country's best known exhibits of etchings, that of the Brooklyn Etchers' Club in the Brooklyn Museum. In particular, my attention was drawn to two items, and for the simple reason that one of them was of a subject with which I am very familiar. It was a dry point depicting the apse of the College of the City of New York; while the other, hanging in close proximity, was a graceful study of trees.

Having examined them from a distance, I stepped closer, and, to my surprise, discovered that the signature penciled in the lower left-hand corner was that of a man I know. Though I have known this man for years, I had not until that moment the slightest inkling that he was an etcher.

"See here!" I remarked to my companion. "Look at this signature!"

"Frederick B. Robinson!" exclaimed my friend, in astonishment.

And then, for a moment, we talked about this remarkable man, our common friend, his distinguished position as an educator, his wide, idealistic sympathies as a human being, his versatility as a sportsman.

"I had no more idea than you," observed my friend, "that Robinson had gone in for etching. But it is not surprising. He has recently become a fair amateur musician." And my friend gave the following highly revealing account:

A self-taught etcher, Dr. Robinson succeeded in having his work hung with professionals, thus proving his theory that a man can succeed in any undertaking within limits, if he will but apply himself. Both the etchings on this page were made by him as examples of "concentration"

"One night a year or two ago, beside the fire in his camp on the Narrows of the Fulton Chain of Lakes in the Adi dacks, Dr. Robinson expressed the b that, within certain limits, a man accomplish anything he sets out to A number of well-known persons, cluding some musicians of note, present. A number of objections raised at once. Having explained mo detail exactly how he would limit sweeping statement, Dr. Robinson a 'Now don't you agree with me?'

"'No!' was the emphatic chorus most of those present.

"'And it all seems so reasonable obvious to me,' returned the doctor. see it happening around us all the t

"'Try it out,' observed one of the emphatic skeptics, who then turn Mrs. Robinson, asking her to name subject about which her husband the least.

"'He knows nothing about mu musical theory,' she said, 'and he d play any instrument.'

"'All right!' exclaimed the sk 'We'll ask the learned doctor to pro assertion by learning to play some ment. What instrument shall it b

"The discussion was then taken u by the musicians. It was agreed th cause of the ear training essenti because of the great part contribu the player himself in producing true the stringed instruments are the difficult to learn and that possib cello might be even harder to than the violin.

"'All right,' (*Continued on p*

Frederick B. Robinson

WITHIN sixty days, and without previous musical training to help him, Dr. Robinson learned to play the cello. In his spare time one summer he became a capable etcher. "There is nothing miraculous about this," he says. "The explanation is very simple—I concentrated my interest and my efforts." Dr. Robinson is President of the College of the City of New York and one of the foremost students in the fascinating and practical realm of mental training. In the accompanying interview he reveals the secret for getting the greatest possible results from your mind. Born in Brooklyn in 1883, he has been for twenty-three years associated with the college he now guides.

Konrad Bercovici

MR. BERCOVICI writes about the Gypsies from the inside out. He speaks their language; he has lived with various tribes as they wandered here and there in many lands. He is a native of Roumania, and when still a boy he left home to live and sing and dance with the colorful bands of wanderers who scorn permanent homes. Mr. Bercovici came to America as a musician, but soon began to write, and is now one of the widely known authors of this country. He recently completed "The Story of the Gypsies," a book which interprets these mysterious, gay, and romantic folk as no other work has done. His fiction, written around the gypsies, has long been eagerly read by the American public. Mr. Bercovici now lives in New York and Connecticut.

The Romantic Gypsy

"He is the irrepressible youth of the world;
he has in his language no word for DUTY, and none for possession;
he is the one man who is free!"

By KONRAD BERCOVICI

Illustrated by HOWARD McCORMICK

THE odor of burnt wood floated on the breeze of a moonlit summer evening while I was resting after a earty meal earned by pitch-ng hay on a New Jersey farm. Thin olumns of smoke curled upwards leisurely rom behind a clump of bushes in the val-y a few hundred feet away, and a thin, iercing silver voice, an outdoor voice, dmonished a child. That odor and that oice awakened in me memories of youth-ul nights spent in tents and around camp res in the company of swarthy, noisy, ay friends who sang when others would ave wept and danced when others would ave cried out in despair.

When I was a boy in Roumania, there ere always gypsy encampments about ar home on the shores of the Danube. ecause my father was friendly toward em, gypsies came and went about the use as if it had been their own home, nd frequently came to have Jacquot, my ther, settle quarrels for them. I was ought up on the breast of a gypsy nurse, d Mamma Katinka was more than other to me. She fed me her milk and lulled me to sleep with gypsy legends, lullabies, and songs. At the age of ten I spoke *Calo*, the gypsy language, as well as anybody and when I had decided at the age of twelve to follow one of the bands, there was hardly any interference from the parental side. Neighbors shrugged their shoulders, because I confirmed by my behavior their suspicions of our origin. "What is born from a cat catches mice," they said.

I have spent weeks, months, and years with gypsies, unable to resist the call of the road; unable to resist the urge in my blood and the charm and haunting beauty of the life more appropriate to my temperament than life between walls in a city. A trace of gypsy blood is sufficient to govern and rule all the impulses of a human being.

And now, years later, the gypsies at my door again! I forgot my fatigue, my house, my home. An invisible, irresistible power carried me towards them.

Four camp wagons in a row. Four camp fires. Four small groups of men, women, and children, talking, eating, laughing, and singing at the same time. The iron kettles were steaming over the tripods on the fires, the dogs were barking, and the tethered horses were disputing with the hairy goats every mouthful of grass.

"SARASSAN!" I greeted loudly, approaching the first fire and addressing myself to the "daya," the oldest woman of the family, who was measuring me from head to foot while cutting a thick slice from a five-pound loaf of bread. The dogs sniffed at my legs. The younger women rearranged the folds of their innumerable colored skirts. The men wiped their mouths with the backs of their black, nervous hands, but no one answered my greeting before the "daya" had spoken. And the "daya" cut that slice of bread slowly, looking at me the while all the eyes were on her.

Had I not greeted her in her own tongue, she would not have been ceremo-

UNIVERSITY OF IOWA

nious. The women would then have been tearing at my hands to read my fortune. The men would have offered me their horses for sale, and I would have been in the thick of it in the twinkling of an eye.

But I had called out, "Sarassan!" and spoken to the "daya" first, in real "Rom" style.

Finally, the wrinkled, squinting, parched earth-brown witch put the bread loaf aside, pushed her few gray hairs away from her forehead, and, leaning heavily on her knotted stick, came toward me. Straightening herself out as suddenly as a jackknife in a clasp, when her feet were only a few inches from me, the old woman bored her eyes into mine for a brief second, then, bending again over her stick, she answered: "Sarassan Bre."

COUNTING women and children, there were about forty gypsies, but they moved about so fast, talked so rapidly, and questioned so eagerly on a thousand topics, one could have thought two hundred whirling dervishes had been let loose.

I was the guest of the first fire because it was the one I greeted first. I had to break bread with the "daro," the father of that fire. But before I knew it, the four fires were thrown together and thick, black pillars of smoke and dark red tongues of flame, hissing and crackling, leaped playfully in the air. And the solemn gypsies became like children released from school, like puppies in a wheatfield.

I forgot we were within earshot of a peaceful, staid, well regulated and ranged Jersey suburb, one of New York's bedrooms; a suburb where one knows one another's family affairs and income and counts the bottles of ginger ale the ruddy-cheeked grocery boy leaves at the kitchen door on a Saturday morning. The 7:59 train I was to take the following morning departed from my tortured memory when one of the girls, a honey-brown-faced, black-eyed beauty, looked at me and began to sing, between puffs at a cigarette, a song about a red dress, a red flower, and a long-legged boy she loved.

"Loli sucknyia, loli gat."

The old witch had answered my greetings with "Sarassan Bre." They were either Serbian or Bulgarian gypsies. Had they been Roumanians, she would have said "Sarassan pralo." Had they been English gypsies, she would have questioned "San tu Rom?" Are you a gypsy? Gypsies take on many of the characteristics of the people they live with. The English gypsies are snobbish. The Serbians greet you as a "mate." The Roumanians call everybody brother, whether friend or foe.

"Belgrade?" I finally questioned the long-bearded, broad-shouldered "daro," the oldest of the tribe, as I sat down beside him after a puff at his pipe.

"Belgrade, yes; Serbia," he answered, turning his bushed eyes toward me.

I noticed that most of the children and the youngsters, who had already forgotten my existence and were absorbed in their own play, were interlarding their language, the "Calo," with American slang.

"We left the Danube eight years ago this coming fall," the daro informed me. "The daughter of Stan, that Rom sitting there, married a 'cobzar,' a fiddler, who took her to Paris. Then her 'daya' had a sudden 'dor,' longing, to see her daughter, so we set out to find her. When we got to Paris, the cobzar was gone to England. When we reached England he had crossed the sea, and so here we are, trying to find him. It may take us many years, Bre, for this is a big country and the Roms one meets are few and far between, and they have forgotten the old custom of leaving 'patterans,' signs, at the crossroads to indicate whence they come and where they go. And so many travel now in the 'gajo,' the white man's manner, by train."

He said all this in an even tone. To have traveled eight years with forty people on unknown roads, in strange countries, to satisfy the whim of one of the women was an ordinary thing to do; as good an excuse for travel as any other one. The whole world belonged to the gypsies i only because they were willing to tread it. I have known gypsies to travel ten year from Turkey to the Pacific Coast becaus one of them had brought back a tale of curious sunset effect on Halfmoon Ba at San Francisco.

Strange countries. Only "gajos," whit people, thought that only the land the had a right to fence in belonged to then Only white people believed in borders an frontiers and invisible lines which divide countries on peaks of mountains and water waves. The gypsies knew bette The whole world belonged to him who h nothing to fence in.

Presently the mother whose daught had married the fiddler came to ask whether I knew a "cobzar" by the na of Dan. Four winters ago he had be in New York, had some trouble with police, and left for another town, Chic or Boston, she did not know which.

"No, I have not heard of him."

"This is such a large country. We sh never come to the end of it. But our cl dren, or children's children, will br back the tale of its rivers and people our tents in Serbia."

TEARS were running down her wrinkled face. The daro, the cl called upon the fiddler to play a "Dan and upon the youngsters to throw n wood on the fire. The old lady dragged into the center of the dan circle and pepped up by kisses and sh and cajolery to dance.

"Do your stuff!" the young girls in American, clapping vigorously hands. "Do your stuff! Do your Daya; do your stuff, liuba."

UNIVERSITY OF IOWA

Because she had shed tears she must dance.

"Look at her. . ." the daro said to me. . . . "Look at her when she dances. She is beautiful when she dances. U si nashela Kate terne tschave. Young men's hearts melt at the sight of her. Even now, yes, even now." The woman's face was lit by the laced light of the moon that filtered through the thick foliage of a maple tree. Her whirling bronzed limbs, naked to the knee, were caressed by the light of leaping flames. The fiddler was playing. Forty lusty throats were singing. Forty pairs of vigorous hands were clapping. Forty pairs of nervous feet were beating out the rhythm of that dance.

"Jeyk his Kalou."

"Jeyk his parnou."

"Triton his Jou."

"Miro luvakano."

"We learned that in England," the daro informed me.

What mattered that they had traveled eight years, freezing in the winter, blistering in the summer! They were Kalou, free people. What mattered what they were! They *were* wherever they were. "Jeyk his Kalou. Jeyk his parnou." One is black. One is white.

The world belonged to people who sing, who laugh, who dance. Look at that old woman dancing! "U si nashela Kate terne tschave. Yes, yes, even now."

THE guest was dragged into the dance. Didn't he know a new song? When they shall go back, home to the Danube, Roms will ask, "What's the new song?"

What about that 7:59 train? flashed through my mind. What about your cornfield? What about that editor to whom you have promised to return the proofs of your story? Well, what about all this? My mind answered, while my feet struck out to a dance. What is there in life that is worth a night with gypsies with whom you can share the odor of burnt wood, a pipe, a song, and the feeling of freedom.

At that moment, Uncle Sam, as we called the village constable, appeared in our midst, stick in hand, thunder in his voice, threatening to lock us all up for disturbing the peace and a hundred other violations of the law. Upon recognizing me, he softened somewhat, but did not fail to upbraid me, a peaceful citizen, for doing that sort of thing. May my neighbors forgive me what I thought of them when I saw their stern faces behind the constable. Presently a bank clerk's wife spoke very sweetly to Uncle Sam.

"Let these people be. They are doing no harm. Maybe they are celebrating a wedding or some such thing," and then other women helped pacify the constable, who desired nothing better than to stay. There is a gypsy spirit in every good woman. Between a diamond ring and a trip somewhere, a woman will always choose the latter.

"No fires are permitted," Uncle Sam repeated as a last argument, and laying hands on a pail of water, he emptied it over the burning wood. How many fires were extinguished at that moment? It was all over in a minute. My good neighbors returned to their porches. But the old gypsy mother ran after the bank clerk's wife, took her hand, looked at it rapidly and said: "You be very rich, much, much money. Much, much luck."

(That happened six years ago. The bank clerk is now a multimillionaire and his wife is certain it all happened because of the gypsy woman's well wishes.)

In France I met gypsies on their way to Spain who had been on the road fourteen years, from Teheran, Persia, searching the world for the grave of one of their tribe. In England I met Russian gypsies who had come to convince themselves that they had "Brothers" in the land of the "Ingleze," and Ignacio Zuloaga, the famous Spanish painter, told me he knew a tribe that had gone from Spain to India and back in twenty-five years, because they were told a black herb that cured toothaches grew there.

But who are these people who travel, year in, year out, such tremendous distances on such trifling causes? Where do they come from? Where do they go?

They go nowhere in particular; because they go everywhere. They are at home nowhere and everywhere.

WHERE do they come from? From India. Some two thousand five hundred years ago the first batch of gypsies left the shores of the Ganges, their faces set towards Persia. Why? Perhaps because part of India was already becoming settled by staid agriculturists while this group was grazing water buffaloes and raising horses. The reason may also have been the same as that advanced by the tribes I met in Jersey for leaving the banks of the Danube. Perhaps a mother had a "dor" to see her daughter again. Who knows?

After that first exodus, of perhaps a hundred people with their cattle and two-wheeled low carts, another group left in the same direction; because another mother had a "dor" to see her daughter. Ever since, groups of gypsies have traveled on foot or horse, moved by love of kin and by beautiful old customs, until today there are over a million of them in Europe and the Americas; tribes, families, caravans, speaking all the languages and knowing none, with the dust and dirt of a thousand roads on their heels and the winds of a thousand mountains swelling their deep lungs.

Why do they wander? Why don't they settle in one place?

Ask a gypsy and he will answer you: "Why don't you wander? Why do you stay in one place?"

He wonders as (*Continued on page 146*)

The story of a strange conflict between a town's richest man and its poorest

The

IF YOU happen to visit the town of Denton you are sure to be shown the public library, the gift of Japheth Strone to the town, and there you may see his portrait, as done in oil by Vance Wilbur, one of Chicago's best painters. The portrait was done after Japheth Strone's death, from a photograph, but so many were able to explain to Wilbur just how high Japheth Strone's coloring was that the portrait is an excellent likeness. Eddie Blankenbergh, the house painter, for instance, painted a small slab of wood to show Wilbur Japheth Strone's facial complexion as he remembered it. That was after Wilbur had made his first sketch, which was too pale.

The Denton public library is a structure of which any town the size of Denton might be proud, but the Denton Free Hospital is even more remarkable. It woul not be out of place in a city, for not onl is the building a perfect specimen of i kind but the entire affair is remarkab modern and complete. The X-ray roo the operating-room, and all other parts the hospital are the best that mode science could suggest and money bu Japheth Strone gave the hospital to t town of Denton and, just as he had e

Each time he entered the Smoke Shop, Japheth's jaw was set harder and his glare at Flin was accompanied by a redder face and neck

Gnat

By ELLIS PARKER BUTLER

dowed the public library, he endowed the hospital so liberally that all its future needs were cared for.

Presently, if you remain long in Denton, you find the name of Japheth Strone cropping up continually. You find that, although some others insisted that they be permitted to give a part, Japheth Strone gave five sixths of the money for the building of the Y. M. C. A. He gave the town the Denton Athletic Field outright, land and grandstand and endowment. He built and presented the new First Presbyterian Church to that congregation. He gave Denton the park that stretches along the river front where formerly were unsightly dumps.

Each day you remain in Denton you hear of some other worthy gift Japheth Strone gave the town. He gave the Martha Strone Old Ladies' Home and the First Ward Playground. He gave the drinking fountain for horses and dogs that stands at the corner of Main and Ellicott. You find that it was his money that made possible the new Hotel Denton, always a surprise to strangers because it is so much superior to what they expected to find in a town of only twenty thousand. Even if you go a mile up the river, you'll

UNIVERSITY OF IOWA

find the Denton Bathing Beach was given by Japheth Strone.

He built and gave the charming little Denton Municipal Opera House, and he gave its fund to insure good music to Denton's people. It was Japheth Strone who gave the bandstand in the park. If you admire the Community House, you will be told that it is a memorial to the World War soldiers and that when the subscriptions dragged, Japheth Strone gave the balance that was needed to put up and outfit that memorial. And then you will be taken to be shown the monumental marble group representing "Denton Weeping for Her Dead," which Japheth Strone gave the town because he believed that sort of memorial should be erected in honor of the town's twelve World War dead.

"BUT, my word!" you may exclaim, "what was there in this town before this Japheth Strone began giving?"

"Well, nothing much, and that's a fact," the answer may be. "He certainly did do a lot for his home town."

"I suppose there's a statue of him somewhere?"

"No; that's one thing he was dead set against, and, so far, we've sort of obeyed his wishes about that. Well, he was a fine man. He was a big-souled and big-hearted man—a splendid man! Why, friend, you don't know half about Japheth Strone yet. You see all these things, but, by hecky! mighty near every man, woman, and child in this town is what you might call a monument to Japheth Strone. Do you know about elm and maple?"

"No; what about them? I know they're trees."

"They made this town, mister. Around about this town was most all low land grown up in elm and maple, and it was Japheth Strone invented the 'peeler.' That's what he called it—the 'peeler.' It made strips of maple and elm. Thin strips for chip hats and baskets and thick strips for sort of openwork barrels and boxes. All sorts of things. That was this town—an elm and maple town. All kinds of little factories using elm and maple strips. And Japheth Strone owned most of them. That's how he got all his money—the start of it anyway."

"I never heard of Denton being—"

"No; it played out. All the maple and elm got used up, and the town was on the rocks sure enough. And what would you or me care, stranger, if it was like that, if we had all Japh Strone's money? He had all he needed. He didn't want any more; he was giving it away for these hospitals and libraries and things. But what does he do?"

"You tell me."

"Why, he up and financed the Denton and Western Railway and hooked us onto the Interocean and Lakes. He put close to a million into that. And that gave us an outlet, and he started in getting factories to come here. And they came too. He bought the land and gave it to them, and bought some of their shares to get them going. Yes, sir; they ought to call this town Stronesburg, I'm telling you."

If you then went back and studied Vance Wilbur's portrait of old Japheth Strone you would not understand how it could be. You would see nothing in that grim and rather scowling face to suggest the philanthropist. You would think the face that of a stern and selfish old man, somewhat soured on life, with a hard mouth and heavy, hard eyes.

"Is that a good portrait of Mr. Strone?" you might ask the librarian.

"It is exactly like him," Miss Gatlett would say, and then you might look at Miss Gatlett more closely, caught by something a little unusual in her voice or tone, something not said.

MISS GATLETT is now a woman of forty or more, and her position in the library is a good one and is assured for life by the terms of the endowment trust written by old Japheth Strone. The words of the endowment were, in part, "and that during the continuance of her life Miss Mary Gatlett shall be librarian-in-chief, with a salary of not less than three thousand dollars per annum." The trustees had, the third year after the opening of the library, made the salary four thousand dollars per year, feeling that Mary Gatlett was well worth it, for if ever a job fitted a woman and a woman fitted a job, to the full happiness of everyone concerned, Mary Gatlett was the right person to be librarian in Denton.

For one thing, Mary Gatlett knows everyone in Denton. When her father had his accident, losing his right hand in one of the machines in Japheth Strone's ripper shop, and likewise losing his job and his livelihood, Mary Gatlett tried to keep things going by doing plain sewing. Those who hired her were, quite naturally, those who read more or less, and Mary had always been a great reader and liked to talk of what she read. She came to know everyone's taste in books. In the library she was happy. Her days had fallen in a pleasant place.

Still supposing you are a visitor in Denton, there is one man no one would bother telling you about. Before prohibition he drank more than was good for him, and about once a year he got himself into the lockup for being drunk and noisy on the street, but he was a harmless and good-for-little character, working as little as possible and loafing all he could. His favorite loafing place was Bud Meyer's Smoke Shop, and Bud allowed him to loaf there because he cleaned up and swept out once or twice a day.

The Smoke Shop is a cigar and tobacco shop. It is all one room; but in the rear part are chairs and a table or two for the patrons who want to sit and chat and smoke a while. In the forward part is the show-case for cigars and pipes, with Bud Meyer behind the case, and the cash register and stacks of cigarettes and smoking tobacco behind Bud. Bud has a sort of bench that he half sits and half rests on, and he is probably the most good-natured man in Denton. He likes to have the Smoke Shop full of Denton humanity, because he likes to hear the news and gossip of the town.

There, sometime during the day, you'll find Doc Clavering, Billy Smits, Joe Brant, this and that merchant, the cashier of the bank—most of the smokers of the town. The Smoke Shop is a temple of tobacco and talk, and you can imagine the talk that goes on there, all the gossip and rumors, comments on male and female, the new and old jokes, joshing and discussion.

Old Japheth Strone used to drop into the Smoke Shop once or twice a week. He neither smoked nor chewed, but he was just about Denton's last user of snuff, and Bud Meyer kept a jar of this snuff on his shelf behind the show-case, where old Japheth could fill his snuffbox when it was low. It was an olivewood snuffbox worn to almost meerschaum beauty by many years' handling.

The bank, of which old Japheth was president and which he made a sort of headquarters, was next door to the Smoke Shop. Once each week day at least, one could see his chunky form mount the two steps to the bank's door, his frock coat greenish on the shoulders from age, his silk hat as rough as a kitten in an adverse wind, and his stout, black stick with an ivory knob in his hand.

He seemed to represent solid stolidity and immovable setness of purpose, the sort of man who would never put into circulation again a dollar he had once gathered in, and he represented just that. He had neither irony nor sarcasm nor satire nor humor when he was asked for money for a charity or for the town's good. His refusal was a blunt, heavy "No!" and that ended it. Or, if some overly hopeful beggar persisted, he said, "No! I won't do it! Leave me alone!" If some poor idiot still persisted, old Japheth would grasp his cane by its neck and his face would redden more than normal, and that was a good time to get away from there.

Bud Meyer's Smoke Shop had been in existence some years and the crowd that hung out there had become rather well known as the Smoke Shop Bunch, and old Japheth Strone had grown accustomed to stopping in to fill his snuffbox, when the automobile began to be useful otherwise than as a joke and two livery stables in a town the size of Denton became one too many.

Tolly Rogers, who ran one of them, had a "sale" and got rid of his horses and rigs and, being an automobile enthusiast, opened a car agency on South Main. It was this change that drove Flin Werster, the man no one will bother telling you about, to the Smoke Shop as a loafing place. John Tanner, who ran the other livery, refused to have him around; Flin Werster was never without a pipe in his mouth, and once or twice he had set Rogers's livery stable afire, and Tanner had a great fear of fire.

FOR years Flin Werster had made Tolly's stable his home. He had a cot there and did some hostler jobs and some odd jobs, and it was said that Tolly paid him two dollars a week, but not everyone believed that. It is more likely that Tolly handed Flin a quarter or a fifty-cent piece once in a while. To give Flin two dollars at one time was pretty sure to mean that Flin would get drunk.

The finish of Tolly's livery business drove Flin to the Smoke Shop. He probably never made any actual dicker with Bud Meyer. The chance is that one day he asked Bud where the broom was and swept out, but Bud was so good-natured he never turned anyone out of the Smoke Shop unless he became actually obnoxious, and from the time Flin became one of the Smoke Shop Bunch he was never that.

In most ways Flin Werster was the least important of Denton's citizens. I

Mary Gatlett came flying at them with rage in her eyes

simply did not amount to anything at all. He was a thin little dried-up man, not over five feet two inches tall, and even his muscle value was almost nothing. You might go into the Smoke Shop and out again a hundred times, and not notice him at all, not know he was there. He kept back out of the way. If, some day, he had failed to show up no one would have known he was missing—except perhaps Bud Meyer—and no one would have ever again mentioned his name.

His name had been a nuisance to Flin. His father, before he failed in business and killed himself, had been considerably interested in antique lore and he had given his son the name of the celebrated Egyptologist, Flinders Petrie. It might almost be said that Flin's downfall began the first day he went to school, when he announced with pride and in a loud voice that his name was Flinders Petrie Werster. This was greeted with a howl of laughter, and Flin never amounted to much after that. It cut his pride in two. It killed everything.

AFTER the noisy buffeting he received at the first recess of that first school day Flin Werster became a worm—a worm with a rabbit's heart. His face usually had a pained and apologetic grin, as if he expected to be kicked. Usually he was. In this way he reached what would have been manhood in anyone else, and with only one memory that was pleasant. That one memory, however, he did have, and it was a memory of Mary Gatlett, the same one who is now the librarian.

The memory dated from one day when Flinders Petrie Werster was twelve and Mary Gatlett was ten. Mary was a big girl for her age, just as Flin was a miserable little shrimp of a boy, and two full-sized boys had begun to pick on him before they were out of the schoolyard. This was nothing unusual. Flin Werster had come to expect maltreatment sometime during each day, and he bent his back and covered his head with his arms, and made ready to take what was to come.

But Mary Gatlett came flying at them with rage in her eyes. She piled into the two young ruffians with her fists, and then got them by the hair and used her knee on them, and they let Flin go and scooted to safety. When Flin straightened up Mary Gatlett put her arm around his shoulders. She was panting.

"The great big beasts!" she cried. "Don't you cry, Flinny; I won't let them hurt you. Just let them dare try to hurt you! Come on, Flinny, I won't let them touch you."

Her arm against his neck was soft and warm, and her body was warm and comforting as they walked out of the yard and homeward, and Flin never forgot the feel of her. He never forgot the day. He never forgot Mary Gatlett. What had made her rush thus to his aid no one can know; perhaps it was the first stirring of the maternal instinct that was never to find full fruition in her. It does not matter much why she rescued him and put her arm around his shoulders, but Flin never forgot it. For some days she made herself his protectress, and then she forgot him in the crowd of other things that filled her days. But Flin remembered.

By the time Flin Werster was of age Mary Gatlett was a full-blown young woman. Her father had worked his way up in Japheth Strone's factory and was quite a citizen of Denton, and Flinny Werster was well down the path of a ne'er-do-well. By that time Mary had almost forgotten that such a person as Flin Werster existed. He was ashamed of himself and kept out of her sight, but he worshipped her. When he saw her coming he got out of her way, just as a worshipper of Diana might hide from his goddess when he was stained with the marks of a debauch. But always he had left—the only fine thing he had left—his gratitude to Mary Gatlett.

BY AND BY, all the news being public property in Denton, he learned that George Gatlett had lost his hand in Japheth Strone's factory and that he had also lost his job, that being Japheth Strone's way. He learned that Mary Gatlett had begun earning a living for herself and her father and that she was having a hard time of it. Everything is talked over in livery stables. Flin heard all there was to learn.

He hated it, but there was nothing he could do to help Mary Gatlett in any way; he was too insignificant and low-down to help anyone, even himself. He thought it was a shame that Mary Gatlett had to work for her bread because Japheth Strone had discharged her father, but all that seemed to result from that thought was that he took an extra dislike to Japheth Strone. Then Tolly Rogers closed the stable and Flin went to loaf in the Smoke Shop. (*Continued on page 126*)

S O S

The Call *that is always*

By
MARY
B.
MULLETT

THE shortest drama that has ever been written is contained in one little group of three letters—S O S. Eighteen years ago, this alphabetical trio had no more meaning for us than C. O. D. had for a Hottentot. But today S O S carries a thrill which touches every imagination.

We have adopted it into our everyday speech, often using it lightly. But when we think of the real S O S—a cry for help across a boundless waste of waters—it is stark tragedy. Fortunately, the tragedy often has a happy ending, for almost invariably that despairing cry does bring help. And so the drama which is implied in S O S is both sinister and beautiful.

On July 5, 1912, at the third Radiotelegraphic Conference in London, delegates from almost fifty governments signed what is known as the London Convention, containing important radio regulations. This Convention was ratified, the following January, by the United States Senate; and on July 8, 1913, it was "proclaimed" by the President.

One clause of this Convention specified the form to be used as a radio signal of distress. Previous to that time, C Q D had been the Marconi call for help. These letters were popularly supposed to stand for "Come Quick, Danger." But, like many popular notions, this was a mistake.

In the code which is used in sending wireless messages, the letters C Q D are represented, in dots and dashes, like this: (C)- . - . (Q)- - . - (D)- . .

The first two letters, C Q, were then and still are simply a "general inquiry call"; merely an operator's way of getting attention, or of asking whether other operators have messages for him.

But there is nothing imperative in the C Q call; no indication of an overwhelming need of immediate attention. Consequently, for the distress signal, the letter D was added. Not because it was the initial letter of Danger; but simply because it made a good combination.

When this was done, in 1904, radio was in its infancy. There were only a few companies in the field and there was intense rivalry among them.

Because of this rivalry, radio signals were not uniform—not even the distress signal. So an American company, which is no longer in existence, chose S O S instead of C Q D. The importance of having only one such signal was not realized then. The only vessels carrying wireless equipment were ocean liners; and for a long time after radio was introduced none of these vessels had any occasion to call for help.

Jack Binns is said to have been the first wireless operator to send out a C Q D. This was in January, 1909, when the steamship "Republic" was rammed by the "Florida," during a foggy night, about sixty miles east of Nantucket.

If this really was the first experience with a radio distress signal, it was also one of the most thrilling that have occurred. After the crash, the "Florida" drifted away into the fog but was located by a small boat sent out from the "Republic." The bow of the "Florida" was crushed. But as the injury to the "Republic" was far more grave, her passengers were transferred to the other vessel.

THE "Florida" had no wireless equipment. With between two and three thousand of her own passengers aboard and more than a thousand from the "Republic," her condition was a serious one.

The collision occurred at about four o'clock in the morning. Binns was the only wireless operator on the "Republic," for this was before at least two operators were required on liners. He was awakened by a tremendous shock; and, as he jumped out of bed, the wall of his cabin simply crumpled up and disappeared. The lights went out and the ship was left in darkness.

Groping his way to the wireless sending instrument, he found that the key was broken off. He tied it together and began giving the C Q D signal, hoping to reach the Siasconset station on Nantucket Island.

Answered

The rescue of the "Antinoë's" crew by the "President Roosevelt" of the United States Line. This is one of the most famous of the S O S dramas

The accident had put the ship's dynamos out of commission, but there were storage batteries for use in emergencies. However, he could get no response to his calls, so he suspected that the storage batteries also were not working. He had been on the "Republic" only a few months. The previous operator had neglected the batteries and so had he. You must remember that wireless was just at the primer stage.

Feeling his way into the adjoining cabin, Binns got a pitcher of water, which he poured into the storage battery cells. Then he again tried to get his C Q D signal to Siasconset. He finally succeeded; and, what was more important, he succeeded also in communicating with the steamship "Baltic," then about thirty miles away.

SINCE that time, wireless has progressed tremendously; and one of the most important developments has been the *direction finder*, by means of which an operator can determine the exact point of the compass from which a radio message comes.

In 1909, however, a message simply came out of the air; and the only way in which the "Republic" and the "Baltic" could locate each other was by giving their respective positions in latitude and longitude. But the "Republic" was actually drifting, so it was impossible to be minutely accurate as to her position; and the fog was so thick that even the two injured vessels soon lost sight of each other.

The "Baltic" came to within about ten miles of the scene of the disaster, then began to zigzag back and forth, hunting for the "Republic." This continued hour after hour, all through the day; for the fog did not lift. The "Baltic" was forced to steam slowly and cautiously, as there was constant danger of a second collision.

Darkness came on late in the afternoon and still the search was fruitless. Binns sent a message to the "Baltic," asking them to watch and to listen, as the "Republic" was going to set off its rockets and detonators. But the entire supply was used up without getting any result.

Then word came that the "Baltic" would set off its own detonators. Before each one was used, warning was given of the exact second it would be fired; and the group of officers on the "Republic," consulting the ship's chronometer, would hold their breath and listen.

Finally the "Baltic" sent word that it had only one detonator left. Up to that time, the attempt had failed. Not a sound from either ship had reached the other vessel. To the men on the "Republic," straining their ears for this last chance, the situation seemed hopeless. Years later, when Jack Binns told me the story, he said that this was the most dramatic moment of his adventurous life.

They were standing in a circle, each man facing outward, so that if the signal was heard they might perhaps be able to determine the direction from which it came. And as they stood thus, every nerve strained to listen, a faint "Boom!" was heard through the fog and the darkness.

Instantly, Binns ran to his wireless instrument and again got into communication with the "Baltic." He was still there when he heard a faint cheer. His cabin, the wall torn away, was open to the night; and, looking out into the dark, he saw the lights of the "Baltic" and knew that rescue was at hand.

To find the "Florida," with her thousands of passengers on board, was even more important. But as she had no wireless, success would have been almost a miracle if the fog had not lifted at about seven-thirty that evening, making her lights visible.

IT WAS not until ten o'clock the next morning that all her passengers had been transferred to the rescuing steamship. The "Florida" managed later, although with difficulty, to reach port. The "Republic" sank at sea. Six persons were killed at the time of the collision. But, thanks to wireless, no other lives were lost. (*Continued on page 133*)

Detective Guilfoyle

The BISHOP Murder Case

S. S. VAN DINE'S *Baffling Mystery Serial*

Illustrated by H. M. STOOPS

PART V

XVII

AN ALL-NIGHT LIGHT

(*Saturday, April 16th; 9:30 a. m.*)

WHEN Heath had got rid of Quinan with promises such as would have gladdened any reporter's heart,* there were several minutes of tense silence in the office. "The Bishop" had been at his grisly work again; and the case had now become a terrible triplicate affair, with the solution apparently farther off than ever. It was not, however, the insolubility of these incredible crimes that primarily affected us; rather was it the inherent horror that emanated, like a miasma, from the acts themselves.

Vance, who was pacing somberly up and down, gave voice to his troubled emotions:

"It's damnable, Markham—it's the essence of unutterable evil. . . . Those children in the park—up early on their holiday in search of dreams—busy with their play and make-believe . . . and then the silencing reality—the awful, overpowering disillusion. . . . Don't you see the wickedness of it? Those children found Humpty Dumpty—*their* Humpty Dumpty, with whom they had played—lying dead at the foot of the famous wall——a Humpty Dumpty they could touch and weep over, broken and twisted, and never more to be put together. . . ."

He paused by the window and looked out. The mist had lifted, and a faint diffusion of spring sunlight lay over the gray stones of the city. The golden eagle on the old New York Life Building glistened in the distance.

"I say; one simply mustn't get sentimental," he remarked with a forced smile, turning back to the room. "It decomposes the intelligence and stultifies the dialectic processes. Now that we know Drukker was not the capricious victim of the law of gravity, but was given a helpin' hand in his departure from this world, the sooner we become energetic, the better, what?"

Though his change of mood was an obvious *tour de force*, it roused the rest of us from our gloomy apathy. Markham reached for the telephone and made arrangements with Inspector Moran for Heath to handle the Drukker case. The he called the Medical Examiner's offic and asked for an immediate *post-morte* report. Heath got up vigorously, an after taking three cups of ice water, stoo with legs apart, his derby pulled far dow on his forehead, waiting for the Distri Attorney to indicate a line of action.

Markham moved restlessly.

"SEVERAL men from your depar ment, Sergeant, were supposed to keeping an eye on the Drukker and D lard houses. Did you talk to any of the this morning?"

"I didn't have time, sir; and, anywa I figured it was only an accident. But told the boys to hang around until I g back."

"What did the Medical Examiner ha to say?"

"Only that it looked like an accide and that Drukker had been dead ab ten hours. . . ."

Vance interpolated a question.

"Did he mention a fractured skull addition to the broken neck?"

"Well, sir, he didn't exactly say skull was fractured, but he did state t Drukker had landed on the back of head." Heath nodded understandin "I guess it'll prove to be a fracture right—same like Robin and Sprigg."

*It may be recalled that the "World's" accounts of the Bishop case were the envy of the other metropolitan newspapers. Sergeant Heath, though impartial in his statements of facts to the press, nevertheless managed to save several picturesque *bonnes-bouches* for Quinan, and permitted himself certain speculations which, while having no news value, gave the "World's" stories an added interest and color.

Vance halted on the threshold, and I saw Markham, who was just in front of me, give a start

"Undoubtedly. The technique of our murderer seems to be simple and efficacious. He strikes his victims on the vault, either stunning them or killing them outright, and then proceeds to cast them in the rôles he has chosen for them in his puppet-plays. Drukker was no doubt leaning over the wall, perfectly exposed to such an attack. It was misty, and the setting was somewhat obscured. Then came the blow on the head, a slight heave, and Drukker fell noiselessly over the parapet—the third sacrificial offering on the altar of old Mother Goose."

"What gets me," declared Heath with fierly anger, "is why Guilfoyle*, the fellow I set to watch the rear of the Drukker house, didn't report the fact that Drukker was out all night. He returned to the Bureau at eight o'clock, and I missed him. —Don't you think, sir, it might be a good idea to find out what he knows before we go uptown?"

MARKHAM agreed, and Heath bawled an order over the telephone. Guilfoyle made the distance between Police Headquarters and the Criminal Courts Building in less than ten minutes. The Sergeant almost pounced on him as he entered.

"What time did Drukker leave the house last night?" he bellowed.

"About eight o'clock—right after he'd had dinner." Guilfoyle was ill at ease, and his tone had the wheedling softness of one who had been caught in a dereliction of duty.

"Which way did he go?"

"He came out the back door, walked down the range, and went into the Dillard house through the archery-room."

"Paying a social visit?"

"It looked that way, Sergeant. He seems to spend a lot of time at the Dillards'."

"Huh! And what time did he come back home?"

Guilfoyle moved uneasily.

"It don't look like he came back home, Sergeant."

"Oh, it don't?" Heath's retort was ponderous with sarcasm. "I thought maybe after he'd broke his neck he mighta

*Guilfoyle, it may be remembered, was one of the detectives who shadowed Tony Skeel in the Canary murder case.

come back and passed the time of day with you."

"What I meant was, Sergeant—"

"You meant that Drukker—the bird you were supposed to keep an eye on—went to call on the Dillards at eight o'clock, and then you set down in the arbor, most likely, and took a little beauty nap. . . . What time did you wake up?"

"Say, listen!" Guilfoyle bristled. "I didn't take no nap. I was on the job all night. Just because I didn't happen to see this guy come back home don't mean I was laying down on the watch."

"Well, if you didn't see him come back, why didn't you phone in that he was spending his week-end out of town or something?"

"I thought he musta come in by the front door."

"Thinking again, were you? Ain't your brain worn out this morning?"

"HAVE a heart, Sergeant. My job wasn't to tail Drukker. You told me to watch the house and see who went in and out, and that if there was any sign of trouble to bust in.—Now, here's what happened: Drukker went to the Dillards' at eight o'clock, and I kept my eye on the windows of the Drukker house. Along about nine o'clock the cook goes upstairs and turns on the light in her room. Half an hour later the light goes out, and says I: 'She's put to bed.' Then along about ten o'clock the lights are turned on in Drukker's room—"

"What's this?"

"Yeh—you heard me. The lights go on in Drukker's room about ten o'clock; and I can see a shadow of somebody moving about.—Now, I ask you, Sergeant: wouldn't you yourself have took it for granted that the hunchback had come in by the front door?"

Heath grunted.

"Maybe so," he admitted. "You're sure it was ten o'clock?"

"I didn't look at my watch; but I'm here to tell you it wasn't far off of ten."

"And what time did the lights go out in Drukker's room?"

"They didn't go out. They stayed on all night. He was a queer bird. He didn't keep regular hours, and twice before his lights were on till nearly morning."

"That's quite understandable," came Vance's lazy voice. "He has been at work on a difficult problem lately.—But tell us, Guilfoyle, what about the light in Mrs. Drukker's room?"

"Same as usual. The old dame always keeps it burning in her room all night."

"Was there anyone on guard in front of the Drukker house last night?" Markham asked Heath.

"Not after six o'clock, sir. We've had a man tailing Drukker during the day, but he goes off duty at six when Guilfoyle takes up his post in the rear."

There was a moment's silence. Then Vance turned to Guilfoyle and questioned him again:

"How far away were you last night from the door of the alleyway between the two apartment houses?"

The man paused to visualize the scene.

"Forty or fifty feet, say."

"And between you and the alleyway were the iron fence and some tree branches?"

"Yes, sir. My view of the door was more or less cut off, if that's what you mean."

"Would it have been possible for anyone, coming from the direction of the Dillard house, to have gone out and returned by that door without your noticing him?"

"It mighta been done," the detective admitted; "provided, of course, the guy didn't want me to see him. It was foggy and dark last night, and there's always a lot of traffic noises from the Drive that woulda drowned out his movements if he was being extra cautious."

WHEN the Sergeant had sent Guilfoyle back to the Bureau to await orders, Vance gave voice to his perplexity:

"It's a dashed complicated situation. Drukker called on the Dillards at eight o'clock, and at ten o'clock he was shove over the wall in the park. As you ob served, the note that Quinan just showe us was postmarked 11 P. M.—which mean that it was probably typed *before the crim* The Bishop therefore had planned h comedy in advance and prepared the not for the press. The audacity of it is ama in'. But there's one assumption we can t to—namely, that the murderer was som one who knew of Drukker's exact wher abouts and proposed movements betwe eight and ten."

"I take it," said Markham, "your th ory is that the murderer went and turned by the apartment-house alley

"Oh, I say! I have no theory. asked Guilfoyle about the alley merely

Drukker was very much upset, and Professor

Digitized by Google

UNIVERSITY OF IOWA

illard suggested that the discussion be postponed

ise we should learn that no one but rukker was seen going to the park. In at event we could assume, as a tentative ypothesis, that the murderer had man-ed to avoid detection by taking the al-yway and crossing to the park in the iddle of the block."

"With that possible route open to the urderer," Markham observed gloom-, "it wouldn't matter much who was n going out with Drukker."

"That's just it. The person who staged s farce may have walked boldly into park under the eyes of an alert myr-don, or he may have hied stealthily ough the alley."

Markham nodded an unhappy agree-nt.

"The thing that bothers me most, however," continued Vance, "is that light in Drukker's room all night. It was turned on at about the time the poor chap was tumbling into eternity. And Guilfoyle says that he could see someone moving about there after the light went on—"

HE BROKE off, and stood for several seconds in an attitude of concentration.

"I say, Sergeant; I don't suppose you know whether or not Drukker's front-door key was in his pocket when he was found."

"No, sir; but I can find out in no time. The contents of his pockets are being held till the autopsy."

Heath stepped to the telephone, and a moment later he was talking to the desk sergeant of the Sixty-eighth Street Precinct Station. Several minutes of waiting passed; then he grunted and banged down the receiver.

"Not a key of any kind on him."

"Ah!" Vance drew a deep puff on his cigarette and exhaled the smoke slowly. "I'm beginnin' to think that the Bishop purloined Drukker's key and paid a visit to his room after the murder. Sounds incredible, I know; but, for that matter, so does everything else that's happened in this fantastic business."

"But what, in God's name, would have been his object?" protested Markham incredulously.

"We don't know yet. But I have an idea that when we learn the motive of these astonishin' crimes, we'll understand why that visit was paid."

MARKHAM, his face set austerely, took his hat from the closet.

"We'd better be getting out there."

But Vance made no move. He remained standing by the desk smoking abstractedly.

"Y' know, Markham," he said, "it occurs to me that we should see Mrs. Drukker first. There was tragedy in that house last night: something strange took place there that needs explaining; and now perhaps she'll tell us the secret that has been locked up in her brain. Moreover, she hasn't been notified of Drukker's death, and with all the rumor and gossip in the neighborhood word of some kind is sure to leak through to her before long. I fear the result of the shock when she hears the news. In fact, I'd feel better if we got hold of Barstead right away and took him with us. What do you say to my phoning him?"

Markham assented, and Vance briefly explained the situation to the doctor.

We drove uptown immediately, called for Barstead, and proceeded at once to the Drukker house. Our ring was answered by Mrs. Menzel, whose face showed plainly that she knew of Drukker's death. Vance, after one glance at her, led her into the drawing-room away from the stairs, and asked in a low tone:

"Has Mrs. Drukker heard the news?"

"Not yet," she answered, in a frightened, quavering voice. "Miss Dillard came over an hour ago, but I told her the mistress had gone out. I was afraid to let her go upstairs. Something's wrong. . . ." She began to tremble violently.

"What's wrong, Mrs. Menzel?" Vance placed a quieting hand on her arm.

"I don't know. But she hasn't made a sound all morning. She didn't come down for breakfast . . . and I'm afraid to go and call her."

"When did you hear of the accident?"

"Early—right after eight o'clock. The paper boy told me; and I saw all the people down on the Drive."

"Don't be frightened," Vance consoled her. "We have the doctor here, and we'll attend to everything."

He turned back to the hall and led the way upstairs. When we came to Mrs. Drukker's room he knocked softly and, receiving no answer, opened the door. The room was empty. The night light still burned on the table, and I noticed that the bed had not been slept in.

Digitized by Google
Original from UNIVERSITY OF IOWA

Without a word Vance retraced his steps down the hall. There were only two other main doors, and one of them, we knew, led to Drukker's study. Unhesitatingly Vance stepped to the other and opened it without knocking. The window shades were drawn, but they were white and semi-transparent, and the gray daylight mingled with the ghastly yellow radiation from the old-fashioned chandelier. The lights which Guilfoyle had seen burning all night had not been extinguished.

Vance halted on the threshold, and I saw Markham, who was just in front of me, give a start.

"Mother o' God!" breathed the Sergeant, and crossed himself.

On the foot of the narrow bed lay Mrs. Drukker, fully clothed. Her face was ashen white; her eyes were set in a hideous stare; and her hands were clutching her breast.

Barstead sprang forward and leaned over. After touching her once or twice he straightened up and shook his head slowly.

"She's gone. Been dead probably most of the night." He bent over the body again and began making an examination. "You know, she's suffered for years from chronic nephritis, arteriosclerosis, and hypertrophy of the heart. . . . Some sudden shock brought on an acute dilatation. . . . Yes, I'd say she died about the same time as Drukker . . . round ten o'clock."

"A natural death?" asked Vance.

"Oh, undoubtedly. A shot of adrenalin in the heart might have saved her if I'd been here at the time. . . ."

"No signs of violence?"

"None. As I told you, she died from dilatation of the heart brought on by shock. A clear case—true to type in every respect."

XVIII

THE WALL IN THE PARK

(*Saturday, April 16th; 11 a. m.*)

WHEN the doctor had straightened Mrs. Drukker's body on the bed and covered it with a sheet, we returned downstairs. Barstead took his departure at once after promising to send the death certificate to the Sergeant within an hour.

"It's scientifically correct to talk of natural death from shock," said Vance, when we were alone; "but our immediate problem, d' ye see, is to ascertain the cause of that sudden shock. Obviously, it's connected with Drukker's death. Now, I wonder . . ."

Turning impulsively, he entered the drawing-room. Mrs. Menzel was sitting where we had left her, in an attitude of horrified expectancy. Vance went to her and said kindly:

"Your mistress died of heart failure during the night. And it's much better that she should not have outlived her son."

"*Gott geb' ihr die ewige Ruh'!*" the woman murmured piously. "*Ja*, it was best. . . ."

"The end came at about ten last night. —Were you awake at that time, Mrs. Menzel?"

"All night I was awake." She spoke in a low, awed voice.

Vance contemplated her with eyes half shut.

"Tell us what you heard?"

"Somebody came here last night!"

"Yes, someone came at about ten o'clock—by the front door. Did you hear him enter?"

"No; but after I had gone to bed I heard voices in Mr. Drukker's room."

"Was it unusual to hear voices in his room at ten o'clock at night?"

"But it wasn't *him!* He had a high voice, and this one was low and gruff." The woman looked up in bewildered fright. "And the other voice was Mrs. Drukker's . . . and she never went in Mr. Drukker's room at night!"

"HOW could you hear so plainly with your door shut?"

"My room is right over Mr. Drukker's," she explained. "And I was worried—what with all these awful things going on; so I got up and listened at the top of the steps."

"I can't blame you," said Vance. "What did you hear?"

"At first it was like as though the mistress was moaning, but right away she began to laugh, and then the man spoke angry-like. But pretty soon I heard him laugh too. After that it sounded like the poor lady was praying—I could hear her saying, 'Oh, God—oh, God!' Then the man talked some more—very quiet and low. . . . And in a little while it seemed like the mistress was—reciting—a poem . . ."

"Would you recognize the poem if you heard it again? . . . Was it

Humpty Dumpty sat on a wall;
Humpty Dumpty had a great fall . . . ?"

"*Bei Gott, das ist's!* It sounded just like that!" A new horror came into the woman's expression. "And Mr. Drukker fell from the wall last night. . . !"

"Did you hear anything else, Mrs. Menzel?" Vance's matter-of-fact voice interrupted her confused correlation of Drukker's death to the verse she had heard.

Slowly she shook her head.

"No. I heard nothing. Everything was quiet after that."

"Did you hear anyone leave Mr. Drukker's room?"

She gave Vance a panic-stricken nod.

"A few minutes later someone opened and shut the door, very soft; and I heard steps moving down the hall in the dark. Then the stairs creaked, and pretty soon the front door shut."

"What did you do after that?"

"I listened a little while, then I went back to bed. But I couldn't sleep. . . ."

"It's all over now, Mrs. Menzel," Vance told her comfortingly. "There's nothing for you to fear.—You'd best go to your room and wait till we need you."

Reluctantly the woman went upstairs.

"I think now," said Vance, "we can make a pretty close guess as to what happened here last night. The murderer took Drukker's key and let himself in by the front door. He knew Mr. Drukker's quarters were at the rear, and he no doubt counted on accomplishing his business in Drukker's room and departing as he had come. But Mrs. Drukker heard him. It may be she associated him with 'the little man' who had left the black bishop at her door, and feared that her son was in danger. At any rate, she went at once to Drukker's room. The door may have been slightly open, and I think she saw the intruder and recognized him. Startled and apprehensive, she stepped inside and asked him why he was there. He may have answered that he had come to inform her of Drukker's death—which would account for her moans and her hysterical laughter. But that was only a prelimin'ry on his part—a play for time. He was devising some means of meeting the situation—he was planning how he would kill her! Oh, there can be no doubt of that. He couldn't afford to let her leave that room alive. Maybe he told her so in as many words—he spoke 'angry-like,' you recall. And then he laughed. He was torturing her now—perhaps telling her the whole truth in a burst of insane egoism; and she could say only, 'O God—O God!' He explained how he had pushed Drukker over the wall. And did he mention Humpty Dumpty? I think he did; for what more appreciative audience could he have had for his monstrous jest than the victim's own mother? That last revelation proved too much for her hypersensitive brain. She repeated the nursery rhyme in a spell of horror; and then the accumulated shock dilated her heart. She fell across the bed, and the murderer was saved the necessity of sealing her lips with his own hands. He saw what had happened, and went quietly away."

Markham took a turn up and down the room.

"The least comprehens ble part of last night's tragedy," he said, "is why this man should have come here after Drukker's death."

Vance was smoking thoughtfully.

"We'd better ask Arnesson to help us explain that point. Maybe he can throw some light on it."

"Yeh, maybe he can," chimed in Heath. Then, after rolling his cigar between his lips for a moment, he added sulkily: "There's several people around here, I'm thinking, that could do some high-class explaining."

Markham halted before the Sergeant.

"The first thing we'd better do is to find out what your men know about the movements of the various persons hereabouts last night. Suppose you bring them here and let me question them.—How many were there, by the way?—and what were their posts?"

THE Sergeant had risen, alert and energetic.

"There were three, sir, besides Guilfoyle. Emery was set to tail Pardee; Snitkin was stationed at the Drive and Seventy-fifth Street to watch the Dillard house; and Hennessey was posted on Seventy-fifth Street up near West End Avenue. They're all waiting down at the place where Drukker was found. I'll get 'em here *pronto*."

He disappeared through the front door and in less than five minutes returned with the three detectives. I recognized them all, for each had worked on one or more of the cases in which Vance had figured.*

Markham questioned Snitkin first.

*Hennessey had kept watch with Doc Drumm over the Greene mansion from the Nicoss Flats, in the Greene murder case. Snitkin also had taken part in the Greene investigation and had played a minor rôle in both the Benson and the Canary case. The dapper Emery was the detective who had unearthed the cigarette stub from beneath the fire logs in Alvin Benson's living-room.

Digitized by Google Original from UNIVERSITY OF IOWA

the one most likely to have information bearing directly on the previous night's affair. The following points were brought out by his testimony:

Pardee had emerged from his house at 6:30 and gone straight to the Dillards'.

At 8:30 Belle Dillard, in an evening gown, had got into a taxi and been driven up West End Avenue. Arnesson had come out of the house with her and helped her into the taxicab, but had immediately returned indoors.

At 9:15 Professor Dillard and Drukker had left the Dillard house and walked slowly toward Riverside Drive. They had crossed the Drive at Seventy-fourth Street and turned up the bridle path.

At 9:30 Pardee had come out of the Dillard house, walked down to the Drive, and turned uptown.

At a little after 10:00 Professor Dillard had returned to his house alone, recrossing the Drive at Seventy-fourth Street.

At 10:20 Pardee had returned home, coming from the same direction he had taken when going out.

Belle Dillard had been brought home at 12:30 in a limousine filled with young people.

Hennessey was interrogated next; but his evidence merely substantiated Snitkin's. No one had approached the Dillard house from the direction of West End Avenue; and nothing of a suspicious nature had happened.

MARKHAM then turned his attention to Emery, who reported that, according to Santos*, whom he had relieved at six Pardee had spent the early part of the afternoon at the Manhattan Chess Club, and had returned home at about four o'clock.

"Then, like Snitkin and Hennessey said," Emery continued, "he went to the Dillards' at half past six and stayed till half past nine. When he came out I followed, keeping half a block or so behind him. He walked up the Drive to Seventy-ninth Street, crossed to the upper park, and walked round the big grass bowl, past the rocks, and on up toward the Yacht Club. . . ."

"Did he take the path where Sprigg was shot?" Vance asked.

"He had to. There ain't any other path up that way except along the Drive."

*Santos was one of the two detectives who followed Sibella Greene to Atlantic City.

"How far did he go?"

"The fact is, he stopped right about where Sprigg was bumped off. Then he came back the same way he'd gone, and turned into the little park with the playground on the south side of Seventy-ninth Street. He went slowly down the walk under the trees along the bridle path; and as he passed along the top of the wall under the drinking fountain, who should he run into but the old man and the hunchback, resting up against the ledge and talking. . . ."

"You say he met Professor Dillard and Drukker at the very spot where Drukker fell over the wall?" Markham leaned forward hopefully.

"Yes, sir. Pardee stopped to visit with them; and I naturally kept on going. As I passed 'em I heard the hunchback say: 'Why ain't you practicing chess this evening?' And it sounded to me like he was sore at Pardee for stopping, and was hinting that he wasn't wanted. Anyhow, I ambled along the wall till I got to Seventy-fourth Street where there was a couple of trees to hide under. . . ."

"HOW well could you see Pardee and Drukker after you'd reached Seventy-fourth Street?" interrupted Markham.

"Well, sir, to tell you the truth, I couldn't see 'em at all. It was getting pretty misty about that time, and there isn't any lamp post at that part of the walk where they were confabulating. But I figured Pardee would be along pretty soon, so I waited for him."

"This must have been well on toward ten o'clock."

"About a quarter of, I should say, sir."

"Were there any people on the walk at that time?"

"I didn't see anybody. The fog musta driven 'em indoors—it wasn't no warm, balmy evening. And it was on account of there being nobody around that I went as far ahead as I did. Pardee's nobody's fool, and I'd already caught him looking at me once or twice as though he suspected I was tailing him."

"How long was it before you picked him up again?"

Emery shifted his position.

"My figuring wasn't so good last night," he confessed, with a weak grin. "Pardee musta gone back the way he came, and recrossed the Drive at Seventy-ninth Street; for a half-hour or so later I saw him heading home in front of the apartment-house light on the corner of Seventy-fifth Street."

"But," interposed Vance, "if you were at the Seventy-fourth-Street entrance to the park until a quarter past ten you must have seen Professor Dillard pass you. He returned home about ten o'clock by that route."

"Sure, I saw him. I'd been waiting for Pardee about twenty minutes when the Professor came strolling along all alone, crossed the Drive, and went home. I naturally thought Pardee and the hunchback were still gabbing—that's why I took it easy and didn't go back to check up."

"Then, as I understand, about fifteen minutes after Professor Dillard passed you, you saw Pardee (*Continued on page 154*)

Does BUSINESS *Give*
Women a Square Deal?

It does, says MARY DILLON, *except that a woman, to reach the top, must work much harder than a man*

By HELEN CHRISTINE BENNETT

THE Sixth Annual Convention of the American Gas Association was in progress. In the hall were assembled the officers and managers of practically all the gas supply companies of the country. As the chairman announced the new speaker, there was a rustle, a sudden stiffening of backs and raising of eyes.

"First time a woman ever spoke on this platform," said the general manager of one of the biggest companies to the official who sat next to him.

"She's been coming here for years, though," replied his companion. "Ought not to mind us."

He stopped to listen. The small, trim-tailored, very feminine figure upon the platform was apparently not "minding" them. She stood easily, naturally, while her well-modulated, resonant tones filled the room. But despite her outward composure, within her lurked an anxiety born of great responsibility. Upon this platform Mary E. Dillon was making history. No woman had before occupied the position of general manager of a gas company, no woman had ever spoken at this convention. The twenty-one years of service to her company had made her a "good gasman."

How could she demonstrate that women belonged in this broader field?

She spoke briefly, in pithy sentences, for she was talking upon the newest and most urgent problem of the gas industry, the exact relation of a public utility company to its consuming public. And she spoke from the standpoint of what she herself had done. When she had concluded and the warm round of applause had subsided, the first man turned to his companion.

"That girl knows more than gas; she knows people," he said. "Bet you they make her president some day."

"A woman-president!" exclaimed the other. "Not in our day."

It was exactly two years later that the first speaker's prophecy came true.

In the field of public relationship Mary Dillon is recognized as a leader. Her interpretation of the place of a gas company in the lives of the citizens it serves is unique and far-reaching. It has also been successful in the practical administration of the affairs of the Brooklyn Borough Gas Company. The name of the Company may be a bit misleading. Its headquarters are at Coney Island. From the incubator babies on the Boardwalk and the Bowery, kept warm by gas heat, to the smoke of the sham Battle of Château Thierry, the great amusement centers of the famous resort present unusual service problems. But the bulk of the work is in furnishing gas to homes and industries and it is in this routine service of a public utility that Miss Dillon has made her record.

On my first trip to see her, I walked past the building which houses the offices of the Company, and then past again. I was looking for a gas company's building. The building I had passed and repassed bore no resemblance to the usual structure given over to such a purpose. Finally, convinced by a not too conspicuous sign that this *was* the building, I stopped on the pavement and gave it a thorough looking over before entering. If you are growing a bit impatient and want to get to Mary Dillon, be satisfied. For this building is Mary Dillon. It was planned by her when she was general manager, its every detail is hers, and its unique character is indicative of her distinctive beliefs and methods in the conduct of her business. This low, red-brick building, colonial in feeling, with its balconied window boxes filled with flowering plants leaning out from the second floor, is a beautiful, friendly contribution to the appearance of the street.

AS I entered, I again stopped to observe. Apparently almost the whole first floor is in one large, tile-floored hall, which rises to a height of three stories. Near the top, are many-paned large windows with green shutters decorated with a cut out, lighted torch. Below these windows more balconied boxes filled with flowers. On the floor about me stood the display of an up-to-date gas company, immaculate stoves, refrigerators, irons, heaters, and halfway down one side rose a curved white marble staircase, with a landing upon which real ivy grew up a trellis to balcony. Off that balcony lies the president's office. By the time I arrived there I was prepared for the wicker furniture, the Martha Washington sewing table, the shelves of books. Among these stood the usual executive desk. From behind it stepped a small figure, five feet exactly attired in a smart tailored dress, and a hand found mine, while a pleasant contralto voice bade me welcome.

Mary Dillon's whole appearance is unassertive, but there is strength in the unusual forehead, very wide at its top, the straight nose, in the mobile and beautiful mouth. She has two big dimples and these transform her face into that of a laughter-loving girl.

As we lunched upon simple, well-cooked food that is served every day to the employees of the Company, she spoke, with the dimples again in evidence, of the difficulties of a gasman of Coney Island.

"When I am traveling," she said, laughing, "and tell folks that I'm from Coney Island, I am prepared for a start and delighted (*Continued on page*

A Good Many of Us Suffer from this Complaint

"It is torture," says Mary Dillon, "for many men and women to meet people and make acquaintances and friends, or to be thrown with large groups. I lived through much of this in my early years of work. A sort of stage fright based on 'What will they think of me?' The cure lies in trying to realize that in all probability the other people are suffering from the same fear and are not thinking about you, but about themselves."

Mary Dillon

MISS DILLON, President of the Brooklyn Borough Gas Company, is the first woman in this country to head a big public utility corporation. She began her career at the age of eighteen, when she got a job filling inkwells, sharpening pencils, and making herself generally useful around the offices of the gas company. In three years she was office manager. When the general manager resigned thirteen years later, everybody agreed that she was the one to step into his shoes. But at that time a woman in such an important post was unheard of. For five years Mary Dillon did the work and drew the pay of the general manager. Then she found herself with the title and a vice presidency as well. Another year, and she was president of the company.

Miss Dillon was born and grew up in the old Greenwich Village section of New York.

"SOLITUDE has brought me to certain conclusions," says Mr. Rutledge. "The beauty and the wonder of the world cannot, I believe, be a mere matter of chance; nor yet can they be the result of the operation of blind mechanical laws. The utter silence and loneliness of moss-draped trees in a lagoon; the flare of a sunrise, the glow of a sunset; the tumult and the challenge of the storm; the fragrance and the beauty of the wild flower—such things are more than chemistry and they come from a higher source than chance."

SOLITUDE

By ARCHIBALD RUTLEDGE

Drawing by HERMAN PALMER

I ONCE knew with a considerable degree of intimacy a wild stag that I presumed to christen Old Clubfoot. His identity was not difficult to establish, for his horns were decidedly freakish in the form of their architecture, and he walked and ran with a limp. His right hind foot had in some way been injured—possibly in a steel trap—and the track made by that particular foot was like a hole punched in the ground. As sagacious as any buck I ever encountered, he could be depended upon to do the unexpected. He postively refused to run to regular stands and crossings.

But what rendered Old Clubfoot truly fascinating to me was the fact that this great wildwood personality was solitary I never saw him with another deer, and his track showed that he always traveled alone. Repeatedly, in the woods where he roamed, I started small groups of other deer—sometimes as many as seven in a drove. But this stag selected himself for company. Here, then, was a wild creature that had become solitary.

Without feeling certain of the real cause of his self-imposed isolation, I conjectured that because he had been injured while in the society of others of his kind, he associated his misfortune with the business of traveling in a crowd. It seems undoubtedly true that one deer is more truly alert than a herd of deer; for an individual, having all the looking and listening to do, does them to perfection.

Old Clubfoot appealed to me as a genuine personality, chiefly because of his apparently deliberate choice of solitude. Indeed, such expressions as "the lone eagle," "the lone wolf," and others of similar import have their origin in nature and in truth; and a correct understanding of what they connote leads us to consider thoughtfully the whole matter of solitude, both as it concerns wild creatures and as it concerns human beings.

The great House of Life has many rooms, many halls, many corridors, many secret stairways. To me, Solitude seems that Other Room into which we can retire whenever we radically need a change from present company. It is a bourne of solace and reflection.

We human beings love to steal away into solitude for no other purpose sometimes than to rest; designedly to relax; luxuriously to do nothing. It is a sanctuary, spacious, silent; or if there be music, the airs are of nature's own ancient motherly making. When the Master said, "Come unto me, all ye who are weary and heavy-laden, for I will give you rest," surely He must have known that as we retire to solitude, to us may come stealing unaware spiritual insight as well as the more obvious physical refreshment.

One of my friends is a delightful companion, partly because he has a humble, self-mocking estimate of himself, and partly because his view of life is as refreshing as a sea breeze to a Kansan. Not long ago, eying me with his whimsical and affectionate glance, he said, "Well, I've found it at last."

"What?" I asked, mistaking his mood; "the Lost Chord or the Missing Link?"

But his tone had an almost wistful tenderness as he replied—

"I'm serious this time. I've discovered the highest social circle in the whole universe. It isn't at Newport, nor yet at St. James' Square, nor anywhere along the Riviera, nor in any proud city. It's in solitude. You see, the only people there are oneself and God. Solitude is a mystic association of souls. Anyone may belong, but each communes with God alone. I know nothing that would bring more people more swiftly to God than the habit of cultivating the romantic and fascinating society of Solitude."

Yet there are many people who fear solitude, confusing it, no doubt with loneliness. But in solitude, as nowhere else, there is always, or there can be, divine companionship. To be solitary is to be in communion with God. Solitude is an escape from life's wild noises, wild lights, wild shadows; it is a refuge where silence dwells, and quiet luminance, and spiritual radiance; it is a rendezvous with Love Eternal.

OF MY solitary friends who have taught me much by their views of life, their opinions of human nature and of human destiny not the least remarkable is Richard Manigo, a negro of the aboriginal type, who for many years has been the watchman of a wild sea-island, which, though a most regal game preserve, is seldom visited by its owner. There Richard lives alone; there, when I have visited the island to study its wild life, I have walked and talked with him. To begin with, he is as religious as the peasants with the bowed heads in "The Angelus." Belief is to him as easy as breathing. I asked him how he could live in that offshore wilderness, far away from his kind. He said:

"Livin' one place is just the same as livin' another if a man loves God. And He's been good to me."

"Do you read the Bible, Richard?" I asked.

"I can't read," he confessed; "but it don't seem to make no difference to my Maker. He takes care of me just the same. I like to visit the mainland, but I like to stay here too."

Then he said something that gave me the kind of thrill that comes only when my mind, or the mind of another, manages to pierce with a ray of perception the far depths of life's shadows:

"On the island here, 'ceptin' the deer and things, ain't nobody but me and God. If I walk on the beach, or down in the woods, or go fishin' at the inlet, He's gwine be there too. So I never does get lonely, seein' as how I got somebody to look out for me, and somebody to tell all my troubles to."

SOLITUDE has brought me to a certain way of regarding nature; a certain philosophy of the creation and the continuance of things. To me it appears that the natural world, spiritually discerned, has so much of the supernatural about it that we perceive in it immediately the hand of God. Moreover, the beauty and the wonder of the world cannot, I believe, be a mere matter of chance; nor yet can it be the result of the operation of blind mechanical laws. There is something more behind it.

I affirm, chiefly because my entire reason and my instinct reject any other explanation, that this beauty and this wonder were deliberately *premeditated*. And if there are many things in the vast, momentous scheme that we mortals do not yet comprehend; if apparently there are irreconcilable elements; if sometimes the shadow seems more than the sunshine, I believe the hour will come when barriers shall fall, and we shall stand as in a world of light. Through long years, assailed by grievous doubt, acquainted with sorrow, I have come at last to feel with all my heart the immediate presence of God; I know that He predetermined every physical and spiritual blessing that we enjoy; and I am certain that He finds through the medium of solitude access to these wayward hearts of ours that He loves so long and so well.

I recall walking one sundown on an old upland road that ran over the ridge of a long-deserted mountain orchard. It was a place I was very fond of visiting, partly because of the fine view to be had there of the far-shining valley; partly because of its solitude; partly (*Continued on page 128*)

HUGH MACNAIR KAHLER'S *great story of a girl . . . who lifted up her eye*

Illustrated by STOCKTON MULFORD

AT EIGHT o'clock, when Margie Wayland came out of the low, weather-gray house that clung to the slant of the brown hill, lamplight followed her from the kitchen window, as if it had been early dusk instead of the sulking, reluctant dawn of winter. Behind the low, coppery clouds the sun made only a pale brightening in the east; there was a sullen, pushing wind that smelled of snow and muttered in the naked, swaying maples of the suga bush; the ruts of the road had frozen to spitefully uneven stone, so that walking was a labor, and the schoolhouse at the crossroads seemed a longer mile away than ever.

Margie Wayland's lips were tight and there was a sharp vertical line between her brows; she walked against the slope and the wind with a kind of enmity, as if the weather and the road were personal and hostile and she fought and hated them like people. The mackinaw coat and knitted cap and gloves protected her against the cold; even the sting of it against her face was no more than a minor, trivial discomfort; there was strength in her straight, slender body for ten times the distance, ten times the weight of books and lunch box in the bend of her arm. Her mood had none of the self-pity of the vanquished; it was a conqueror's hatred that she felt toward the bleak, enclosing hills and the sullen, lowering menace of winter that overhung their wooded crests.

She did not turn at the sound of wheels and ringing hoofs behind her. The line between her brows deepened a little and her lips drew more straitly flat, as if the approaching clatter angered her, and she stepped aside into the dead weeds that flanked the cart track as if to let the team pass. It stopped, however, and Neil Rintoul's voice, deliberate and affable, compelled her, against her will, to look up at him without the frown.

"Climb in," he said. "I'm going past the schoolhouse."

She wanted to refuse. There was in her, as part of her hillwoman's inheritance, an abiding unwillingness to lie under even trivial obligation; beholden was a hateful word. And a heritage still more ancient warned her unmistakably that this man was dangerous.

IT WAS the warning that decided her. Danger, this morning, wore a shining face. She climbed up over the heavy wheel to the blanketed spring seat, pleasantly conscious of fear, a fear she could not account for by any reasoned logic. There was nothing formidable about Neil Rintoul's lean height, the wind-bitten face of him, hawk-nosed and rugged, like a weather-carved rock, the wide-spaced blue eyes, dimly embarrassed, the apologetic friendliness of his grin. And yet Margie Wayland was afraid of him, more afr than she had ever been of anybody e

"I won't have you driving me to sch this way, Neil," she told him, her vo edged by the knowledge of that base panic. "I'm perfectly able to walk."

"I had to drive down to the village, said. "Just happened to be going y way."

"It happens too often," she decla "The next time it won't be any use— keep right on walking."

"You've got better sense," he said

The word stung. "Sense! If I had I wouldn't be here!"

"I don't know about that. It isn' foolish to stick by your father, I gu People have been believing quite a v that it's a pretty good notion to h fathers and mothers. Maybe it's on the old ideas that seem to be going o style, but—"

"It's foolish to let him stay up working himself half to death, whe could both be comfortable and h down there—" She moved her hand to suggest the hidden lowlands beyon rim of hills. "If I went, he'd have to along. It's my fault that he's up he

"It's your fault," he admitted, he's living where he wants to live, what he wants to do. Don't know as y got any call to blame yourself for th

"You're worse than he is," she

"We ought to keep together." She stopped. "The others will get lost if—"

Unto *the* Hills—*whence came her strength*

sharply. "It's too late for him to begin over; he's set in his ways and he'll never change, but you could get away if you had spunk enough. You—"

He twisted on the seat so that the blue eyes dwelt briefly on her. Something in the face made her think, absurdly, of an eagle.

"Do you think that's what's the matter with your father? Do you figure it takes more spunk to quit the hills than to stay alive in 'em?"

SHE moved her hands again in the gesture of impatience. "Of course it takes grit to hang on. I didn't mean that—I meant sense, I suppose, sense enough to realize how silly it is to choose a hard life when you can just as well have an easy one; to keep on fighting against things that are bound to beat you in the end, when you don't have to fight them—things like hill winters, hill work—"

"It looks foolish, sure enough." His look reminded her of little Joey Slater, impenitent under rebuke for having picked a fight with a bigger boy. "Only I'm not satisfied that those things have got us licked. It looks to me as if we beat 'em."

She shook her head. "That's just because you're young enough not to mind cold and work. But you can see that they've beaten my father. You don't believe that they'll beat you the same way; you think you're always going to be strong and young."

"I know better." He slapped the lines down on the broad, shaggy backs of the horses. "I'll wear out, same as everybody does, everywhere. But I won't be licked, not any more than your father is. By the time I'm through there'll be somebody else to start. You talk as if it was a kind of war between folks and weather. All right. But it isn't a one-year war, nor a one-man war. It goes right ahead. Notice, don't you, that there's still people living up here, after two hundred years of it? I guess there'll be some left after a couple of hundred more, too."

"Not at this rate!" She moved her hand in a circling gesture. "There are fewer of us every year. You can find twenty deserted farms within five miles of where we are. I'm teaching six children this winter. Last year I taught fourteen."

He nodded. "The soft ones get sieved out," he said. There was something like complacency in the tone. "I guess that happens everywhere. You got to show cause why you should stay alive."

"That's what drives me frantic!" She spoke hotly. "That stupid idea that there's something clever about being hard! That just because you choose to live in a meaner climate and work with your hands you can look down on people who choose to be comfortable and warm and happy."

He chuckled. "Maybe that's so. It's kind of easy to get in the habit of looking down on pretty near everything, up here." She saw his shoulders move back as if he drew in a deep, contented breath. "Maybe that's what I like about it. It's one kind of high living, anyhow."

SHE did not answer. They had reached the crossroads where the ugly little schoolhouse squatted in the brown weeds. Rintoul drew rein, glanced up at the coppery, racing clouds.

"Snow back of that wind," he said. "A sight of it too. Might let school out early if it comes on to storm. I wouldn't wonder if it'd be hard walking for some of the young ones by four o'clock."

She sprang down lightly. "All the better for them, according to you," she said. "It'll harden them, won't it, instead of spoiling them, like the unlucky children who ride to school in heated busses?"

His eyes rested placidly on hers. "You walked over here to school yourself," he said deliberately. "I don't know as I wish you hadn't, Margie."

She took refuge from the tone and look in flippancy:

"You like your women tough—is that it?"

There was no answering levity in his face.

"Yes. Just as tough," he said, "as you."

UNIVERSITY OF IOWA

She turned away, forcing a laugh. It was the nearest he had come to putting into words what she had always known since the days when they had climbed this same long, frozen road together to this same ugly little school. It had the quality, now, of a quiet threat, deadly earnest, and, behind her anger, it frightened her.

She kindled a fire in the sheet-iron stove. Joey Slater evidently wasn't coming to school today or he would have had the fire going before this. She thought resentfully that it couldn't have been the menace of the impending storm that had kept him away—he floundered through the drifts all winter. Work was the reason; they needed his young hands at home, and there wasn't any truant-officer in the hills to make trouble about it. Joey would be hard enough, when he grew up, to suit even Neil Rintoul!

The room heated quickly. She took off her mackinaw and the thick, clumsy rubber overshoes, busied herself with the routine of preparing for the day's session. Children appeared, the last one carrying yesterday's mail and newspaper from the box at the state road, a dust of snow whitening his patched overcoat. The flakes hissed softly against the windows, and there was hardly light enough for books and blackboard; but lessons, nevertheless, went grimly on, with the sullen, jeering mutter of the rising wind for background.

Before noon, however, Margie Wayland knew that it was time to let the children go. Already drifts had deepened in the hollows; the temperature had fallen swiftly, and the wind that stabbed in past the edge of the door, as she glanced out, was like a thin-edged blade of ice. It would be dark long before the end of the school day, and even these hill children would make sore work of getting safely home. She kept them long enough to eat their luncheons and watched them scamper off, joyously, through the swirling snow.

ON THE point of starting home herself, she hesitated. It was pleasantly safe and warm in the schoolhouse and she was suddenly, desperately tired of plodding through deep snow. Neil Rintoul would be coming back presently from the village; she could ride home, warm and untoiling; it was no more than animal intelligence, she told herself impatiently, to choose the easy course. If Neil didn't come she could walk; she'd done it, often enough, through worse blizzards than this one.

She fed the fire and drew her chair beside it, slitting the wrapper of the newspaper. As always, it gave her a wistful sense of contact with the huge, invisible, beckoning world beyond the high hills that walled her prison. She read it hungrily, even the pages given over to mysterious talk of sports. Down there people had time to be interested in such things; so much time that the means of killing it became important. Here, merely to stay alive from one day to another needed all the strength of mind and body. There wasn't anything but survival as the price; survival till weather and work, at last, inevitably won.

Listlessly she read the account of a gangster's burial. Tony the Gyp had lain in state, guarded like a dead king, in a silver coffin that cost fifteen thousand dollars; a hundred policemen gave him a guard of honor to the grave, thirty motor-cars were needed for the hothouse flowers left to freeze above him.

There was a condensed story of his life and death; it was evident that the man who wrote it had found nothing very remarkable in the tale of an ignorant immigrant who had made himself serenely rich by robbery and murder; an undertone, indeed, of indignation warmed the account, indignation against the rival racketeers who had shot him coolly into tatters in a crowded, daylit street, against the police for not having yet avenged him.

Margie Wayland laughed. Men like her father wore themselves out, here in the hills, without earning in all a lifetime the price of that murderer's coffin. Down yonder, wealth was so plentiful that nobody got very much excited when a man with a gun helped himself in a moment to more money than would buy a hundred years of bitter, dogged labor on an upland farm!

A grim, sardonic humor led her to read on. The police knew all about the three men who had turned their machine gun on Tony the Gyp; they were looking for them: Frankie Lizeri, otherwise Lizard; Little Joe Scapo and Scarface Mo Borowitz, whose photograph explained the brevet; the wide weal that slanted down from brow to jowl gave his face a quality of placid deadliness that sent a little thrill of terror through Margie Wayland.

She studied it, curiously fascinated. It was almost funny to remember that Neil Rintoul had taken credit to himself, claimed it for her, too, only this morning, because they were both hard! She smiled at the word. Hard, yes, like a tree or a horse. Against a man like this calm-faced killer that kind of hardness wouldn't count for much!

She saw, with sudden clearness, that it was this other kind of hardness that the world demanded of a man today, hardness against other men, not mere resistance to the stupid malice of wind and winter and the weariness of driven muscles. Neil Rintoul, her father, she herself, all the lean breed of the hills, were anachronisms in a world that had learned the futility of standing up, toe to toe, to fight with nature; a world that belonged to cleverness instead of to brute strength.

SHE went to the window and rubbed away the rime to look out at the storm. The wind still rose, driving the sullen march of snow almost horizontally; she could barely see the road through the swirl of it. A sudden anger rose in her; she discovered that she was still silly enough to find a kind of satisfaction in the storm, the knowledge that when it pleased her to go out to face it she could stand up against the wind, endure the cold, tramp through the drifts.

That was what she had spent her life to gain—that useless hardness; that was what she had bought with twenty years of schooling. And there wasn't any market, any more, for the ability to face a blizzard; it came home to her that the world paid you, roughly, what you were worth; for Margie Wayland's kind of hardness it paid, not too willingly, six dollars a week; for Tony the Gyp's its wage had run high enough to buy that silver coffin when there was no other way of wasting easy money!

The thought determined her to wait no longer for Neil Rintoul's return. She'd paid enough for what she had; at least she'd use it. Her kind of hardness wasn't good for anything else, but it would bring her safely home without accepting another favor at Rintoul's hands, without exposing herself again to the danger that would always threaten her, for all her enlightenment, when he was near.

She opened her lunch box. She was not hungry; but habit had taught her to eat before going out into a storm. It was fuel, she thought, rather than food: thick buttered slices of home-baked bread; a russet apple, hard as stone, a lump of last spring's maple sugar. She laughed at the whimsical thought of what Tony the Gyp would have said about such a meal.

THE door swung inward suddenly and a jet of snow spat across the room almost to where she sat. A man huddled in a fur-collared coat stumbled in after it; another followed him, and another; the three of them made for the stove, paying no heed whatever to her, and leaving the door open. She crossed the room to shut it.

Turning, she saw a gloved hand reach out, almost snatching, to her bread. She did not greatly resent it; hunger, as she knew it, went deeper than surface manners; something, however, in the movement of the hand caught and held her attention—it had darted, a motion as swift as a snake's and queer'y like a snake's. It almost prepared her, before the man's head twisted sidewise to glance at her, for the broad, ugly scar that told her, unmistakably, who and what he was.

She stopped abruptly, not from fear, but as she would have stopped at the whirr of a rattler's warning; she was not afraid of snakes; it puzzled her dimly to discover that she wasn't afraid of Scarface. Danger, to be sure, was near, near and real and deadly; she seemed to see past the calm of the scarred face, to know the thought in the brain behind those opaque eyes. She knew, with complete certainty, that the man needed less reason for a killing than for snatching at her lunch box; that he would kill a woman as willingly as a man, more willingly, perhaps, because it would be easier and safer; she even fancied that the idea of killing her had already proposed itself behind the quiet, unblinking gaze.

He swallowed deliberately. "What you scared of, sister?" The voice was like the eyes—heatless, as if it had been a machine that spoke. She saw the other faces turn toward her, utterly unsimilar and yet horribly alike in the contemplative fixity of gaze. Remotely she identified the one the thinner one must be the Lizard, the short, blunt-featured man would be Little Joe. She heard her voice:

"Scared? Why should I be? What happened? Did you lose your way?"

Borowitz ignored the questions: "How far to the nearest place where we can hire a car or get a train?"

She caught, somehow, an intuitive warning against the fiction that instantly suggested a means of getting rid of them. They had been this way before, she seemed to understand; they knew, roughly, at least, where they were. The question was a trap.

There was just the thousandth chance that she could get the door open, the paper on the flame, before—a hand closed on her wrist

"It's six miles to Union Corners," she said truthfully. "That's the nearest town; but I don't know whether you'd be able to get out of it—not till the roads are dug out, anyway. Mount Heber's four miles farther; but it's on the state road, and they keep that plowed open."

There was a little silence. "Any way to get there?" Borowitz demanded. She shrugged her shoulders.

"You'd have to walk. Nobody could get a team through the drifts right now, and they'll be a good deal worse before they're better."

Scapo laughed, showing two gold-capped dog teeth. "There's your short cut! Twelve miles from nowhere and no way to get there!"

Lizeri's head twisted toward him—like an owl's trick, Margie thought, of swiveling head without moving body.

"That's right—beef. I knew it was going to snow, didn't I? And maybe it was me that wanted to get across to the other pike, huh? At that I had the dope to find a hot stove for you, didn't I?"

"No use chewing the fat," said the flat voice of Borowitz. "We're sitting pretty. All we got to do is wait till it quits snowing and they get the roads open. No hurry, is there?"

Scapo laughed again. "Oh, no—nothing like that! We—"

"I said there was no rush, didn't I?" The tone was almost gentle. Margie saw Scapo's face change, saw the gleam of the gold teeth in a fawning grin.

"Sure you said it—no rush at all. We got all the time there is."

Borowitz turned back to Margie. "How far away do you live, sister?"

"About a mile," (*Continued on page 119*)

They're *Your* FEET

By
WILLIAM S. SADLER, M. D.

IF I were asked whether we abuse our stomachs or our feet the more, I would unhesitatingly say, "Our feet." And that isn't because we've two of them as against one stomach.

Fortunately, we have had a little sense knocked into our heads about overeating and wrong eating, but precious little regarding the feet and their care.

Just what percentage of the American people suffer more or less from aching feet, corns, calluses, bunions, fallen arches, and other foot troubles, it is hard to say, but I'd hazard a guess that it is around ninety per cent.

Many people think because the feet are "protected" by hose and shoes that the wear and tear on the skin is negligible. That is where they make their first big mistake.

The very fact that the feet *are* so thoroughly encased causes a high degree of breakdown of the skin. The ventilation is poor and there is a tendency to accumulate sweat and other excretions, which, if not frequently removed, are very detrimental to the health of the skin.

Cleanliness, therefore, is of prime importance in foot hygiene. Nevertheless, I do not advocate the *daily* use of very hot foot baths. Tepid water and a mild toilet soap are all that the feet require under normal conditions; abnormal conditions I shall speak about later on.

Cleanliness, however, isn't going to be of much avail if you put your feet into ill-fitting shoes and stockings.

It is surprising how many people will go to a great deal of trouble to get a well-fitting shoe and then will wear it over badly fitting hose.

Socks and stockings that wrinkle cause blisters and abrasions, while those that are too tight or too short pull the toes out of normal alignment.

Heavy woolen stockings are a good clothing for the feet if you are going to be out of doors in a low temperature for a considerable time, while for ordinary winter wear two pairs of cotton or lisle hose, or one pair of cotton worn under silk is to be preferred. But should you happen to be one of those mortals who suffer from cold feet, wear a mixture of silk and wool.

I advise this course because I have found heavy woolen hosiery to be a prolific cause of foot sweating—and that is something, as I shall explain later, that we should avoid.

PHOTO FROM CULVER SERVICE

The funniest feet in the world. Yes, that's right, they're Charlie's

And, in passing, let me suggest a change of hose every day. This is both for the sake of hygiene and the sake of the hosiery, which will wear much longer if frequently changed.

When I pass shoe stores, with their array of shoes with narrow, pointed toes and stilted heels, I wonder whether we shall ever learn shoe sense.

How can we expect such a complicated structure as the foot, with its twenty-six bones, with all its ligaments, cartilages, nerves, to be happy and well in the wrongly fitting shoes that most of us wear? And women aren't the only offenders in this respect. I had hoped that when the war was over and three or four million men were returned to civil life who had received army instruction concerning the care of the feet and properly fitting shoes —made on the "Munson last"—we should see a nation-wide shoe reform. But evi- dently fashion is stronger than reform

The natural foot toes in a bit wher walking. Who ever heard of a slew-footec long distance runner? But the majority o the shoes worn are entirely too narrow a the ends to permit of the free function o the toes in either walking or running; thus after years of misuse, we get foot strain fallen arches, bunions, and misshapen fee that cause no end of misery and pain.

The proper shoe should have a sole a broad as the *expanded* weight-bearing foot If the sides of the shoe check this free ex pansion, the big toe is gradually force over and upward.

When the big toe is free to press squarel on the ground, it helps to support the arch When its function is restricted by a to narrow shoe, the muscles of the foot ar hampered, the ligaments weakened, an we have arch trouble and other complaint

Another error that people make whe buying shoes is to get them too short, s that when they walk their toes touch th end of the shoe.

THE overly high heels on many women shoes are very harmful; they not on throw the foot forward, causing a crampe unnatural walk, but they strain the mu cles of the whole leg. However, I do n advise women who have worn high hee most of their lives to change suddenly very low heels. Low heels, to a person u accustomed to them, also put the fo under a strain. The reduction of t height of the heel should be a very gradu process.

Of course, in a genuine health shoe t heel should be but a trifle thicker than t sole, and then only to provide for a lit

The four toothpick toes to the left of the picture were fashionable in 1897. The slipper at the top and the two high shoes at the right are what we liked in 1918

but Stop *Abusing* Them

more wear. But as few women can or will wear flat-heeled shoes, it is left for me to recommend that they avoid the ridiculously stilted heel and see that their shoes are wide enough to admit of free expansion of the foot and that the heels are of a medium height and proper width.

I have found that sometimes the wearing of two or three different kinds of shoes gives relief by distributing the foot strain, but in general the best plan is to find out the style of shoe that gives you the greatest *walking* comfort and stick to it. Moreover, if your pocketbook will stand for it, buy two or three pairs at one time and change them every day. It is better economy in the end, as shoes last a great deal longer if they are allowed frequently to air out.

THE commonest minor ailments which afflict the feet are, first corns and calluses, and then blisters, abrasions, bunions, and ingrowing toe-nails.

Corns are simply localized and irritated callosities due to long-continued pressure from ill-fitting shoes. Naturally, the first thing to do is to remove the cause—get a pair of properly fitted shoes—those that are neither too tight nor too loose.

The old-fashioned way of trimming corns with a razor blade is simply palliative and is accompanied with danger of infection.

A better way to attack small corns is the following process: Apply tightly over the affected area a piece of adhesive plaster, which should be worn for one week. At the end of this time the corn is usually so soft that it may be removed with little difficulty. After the removal of the corn the area should be painted either with tincture of iodine or mercurochrome.

Larger corns and callosities usually require the use of some stronger agent in the form of a salve or paste, such as:

Salicylic acid	40 parts
Vaseline	30 parts
Lanolin	30 parts

This ointment is smeared immediately over the corn, which is then covered with a strip of zinc oxide plaster. Every night wash the foot with soap and warm water and re-apply the ointment (*Continued on page 142*)

A boy discovers his father . . .

PARD

By MARGERY LAND MAY

Illustrated by GEORGE BREHM

"She may pet and she may kiss,
She may be that and she may be this—"

AS JUNIOR'S voice, breaking on a note meant to be falsetto, floated down the stairway, Mary Whitby glanced at her husband across the breakfast table and gave vent to a half-whimsical sigh.

"Edifying ditty!" She laughed. Then, "Just think, Bru, we weren't so very much older than he is now when he came. Remember how awed we were by him? I can see you now with that terrified look on your face when I first put him in your arms. And yet I sometimes think he's more of a problem now than he was then!" Her lovely hands, white and tapering, busied themselves with the silver coffee service.

Whitby's clean-hewn, forceful face surfaced a frown.

Whitby, with Junior at his side, set forth again at his flying pace

"Yes, I know. To handle a boy wisely in this day is something of a twister. Fred Banning and I were discussing the matter yesterday at the Club. Poor old Fred! I don't agree with his methods, of course. And yet I can't help feeling sorry for him. What a time he has had with those two young hoodlums of his!

"Charlie, his eldest—who is only a year older than Junior, by the way—has just got a divorce from that little chorus girl he eloped with last spring. Fred tells me that she thought the boy had money, and left him flat when she found out she was wrong.

"And now Jim, his youngest, has announced that he's given up the idea of returning to law school in the fall in favor of touring the country with a jazz orchestra.

"Jim is quite a saxophonist, Junior says, but of course Fred doesn't think much of *that* as a career!"

"I should say not," Mary agreed. Then on a graver note, "But what of Junior Of course he's nothing but a baby, jus nineteen. But I worry about him dread fully, Bru. I don't like the harum-scarun crowd he runs with, nor the hours h keeps. I'm not so sure that I should hav had the courage to bring him here if I ha ever dreamed of the way things were goin to change. And all the mothers I kno are just as bewildered as I am. We simp don't know what to do.

"The standards that were set for as children don't exist any more. Licen seems to be in the very air. And irr sponsibility! You know that Junior tak nothing seriously. He and all the rest the young jelly beans and flappers he go with evidently have nothing in mind b the present moment and a hilarious tin And they simply won't stand for any ki of authority.

"There's Fred Banning again. Lo what a tragedy his attempts at discipl have brought about. But, on the ot hand, is our policy of non-interference a confidence any better? I'm sure"— voice broke on a note of appealing anxio ness—"I don't know!"

"Well, at least Junior doesn't lie to u Whitby comforted. "And we have satisfaction of knowing that he co home for meals and sleeps in his own be

MEANWHILE, blissfully unconsci of anything save the pleasant jun of his own fragmentary thoughts, Ju stood before the mirror, carefully plas ing down with a toilet concoction truculent locks of his dark brown hai

As he applied the gloss to his shaped head, the happenings of the n before passed disconnectedly, like a ored kaleidoscope, through his m Mazie. Pretty little kid. But no nec "Ta-de-te-tum."

Digitized by Google
Original from
UNIVERSITY OF IOWA

Old Jimmie Banning sure could tickle that saxophone. Corn whisky. Nasty-tasting stuff, but he couldn't very well refuse when an old hooch hound like Charlie, who had been divorced by an actress, had offered him his flask.

Mazie. Cute. "Didn't you know kissing went out with bustles?" Mazie had said. "Da-te-do-dum." How the monkey's eyebrows did that step go, anyway?

THE lacquered, "well-groomed look" having been pasted on his hair, Junior stepped back from the mirror to survey himself. Careful carelessness was the note that he and his fellow collegiates were affecting sartorially now—a studied nonchalance manifesting itself in floppy, overlapping trousers, garterless socks, and belts three inches wide.

"Might see Mazie," he mumbled, as he thrust a handkerchief in his breast coat pocket and adjusted it so that the bright plaid border showed over the edge.

Then, collecting some pieces of loose silver from the bureau, he stood jingling them together in his hand. As he did so, his thought went to his father—his "Pard," as he had learned to call him in those long-ago days of horses and hunting and hounds, before Charlie Banning came to mean to him the measure of both hero and man.

"My old governor is sore as the deuce with me," Charlie had complimented him by confiding the night before, while they stagged out one of the intermissions of the dance. "Watches me and Jimmie like a hawk. Won't let us have the car but two nights a week. And, Holy Whiskers—" tapping his hip significantly—"if he smelt any of this firewater on us it would be good night!"

Sympathetically Junior had responded, "Gee, that's tough! My p— my old governor," he corrected hastily, "isn't anything like that. I come and go pretty much as I please. No questions asked. And this June, when I graduated from V. M. I., he had the old bus painted over and gave it to me."

AND perhaps it was because he came and went as he pleased, no questions asked, that Junior felt no qualms of misgiving as he gazed down at the nickels and dimes glistening in his palm. Despite the fact that this chicken feed represented the last of the touch he had made after having already spent his month's allowance, he had confidently announced to Mazie that when the "bunch" went to Lake Charles on Friday for the Kappa dance he would be among 'em.

Fifty dollars would cover the trip and a night's stay at the hotel and, judging from past indulgence, he had no doubt that Pard would advance this sum.

"Have a good time last night, son?" Whitby asked as Junior finally put in a belated appearance at the breakfast table.

Sugaring his oatmeal, "Oh, rather," Junior said, in a blasé imitation of Charlie's phrase, manner, and tone.

Across the flaming marigolds that made the centerpiece, Mary sent her husband a look of despair. "There, you see! He's just like all the rest of these odious little jelly beans," her look said, plain as words.

But at Whitby's cautioning frown she turned to Junior with, "And whom did you take to the dance, June?"

"Mazie Hunter," Junior grunted, grabbing three pieces of toast at once.

Pleasantly surprised at his choice of a companion, Mary said, "Oh, yes. She's a charming little thing. I know her mother."

Old Jimmie Banning sure could tickle that saxophone

Digitized by Google
Original from UNIVERSITY OF IOWA

Draining his coffee cup in one gulp, Junior answered, "Oh, she's all right."

And then, seeing that his father was about to rise, he addressed himself to that which he felt to be the pressing business of the day. Sheepish, though assured:

"Say, Pard, will you let me have fifty dollars? There's a Frat dance at Lake Charles Friday, and I want to go down," he said.

For a moment and with an expression of reflective gravity, Whitby stood regarding his son.

"WELL—yes." He hesitated. "But this time there's a condition: If I give you fifty dollars for this dance, will you give me a day at the office? I could use you very well today. How about coming down with me this morning?"

Though he and Freddie Collins, his pal, had planned a swim and a set of tennis at the Country Club, Junior looked up with a grin of amusement.

"Sure thing. I'm on. But what's the joker?" he asked, scraping back his chair.

As Whitby bent over to kiss his wife, he murmured, "Don't worry, darling." Then, to Junior, "There isn't any joker. I'm closing up a little deal I've been working on for some time, and I should like to have you along with me," he said.

"Sure thing," Junior repeated; but despite this auspicious beginning he lapsed into silence during their ride to town.

For, though he was aware of his father as a kindly atmosphere of comfort and security, as one is aware of the solid ground underfoot or the sheltering roof overhead, the focus of Junior's consciousness was filled with other and far more vivid figures.

As he applied the gloss to his well-shaped head, the happenings of the night before passed disconnectedly through his mind

Mazie of the flying feet, and Charlie, who was "on" to the mysterious thing called "Life," were to Junior far more real than the lean, sunburned man who sat beside him, expertly guiding the car through the traffic of a congested thoroughfare.

"You see, son," Whitby's deep voice brought him back with a start from his own rapt contemplations, "business is as much of a game as baseball or soccer. There're skirmishes and feints and kick-offs in business, just as there are on the gridiron. And it isn't always the spectacular chap who piles up points in the game. More often the goal is won by the fellow who keeps on running when the enemy is on the ten-yard line and the score is five to zero with three minutes to play."

He brought the car to a halt before the plate-glass windows of the Whitby realty firm. "But you'll see for yourself," he said. "After I've read the mail we'll start out, and as we go along I'll explain the fine points of *my* game."

Into Junior's eyes there shot a momentary gleam of interest. As he followed Whitby into the ground-floor offices occupied by the firm, he was remembering that this father, who now seemed to him such an alien figure, was something of a legend at V. M. I., where he had won his pigskin spurs under the sobriquet of the "Galloping Ghost."

"No use bothering with the car. It's so hard to get a parking place downtown that I find it simpler to go on foot," the one-time center said as they emerged a half-hour later from his office to commence the business of the day. "You see, Junior, I'm trying to close a deal, and I've a few details to attend to before I can complete it," he explained.

Though not at all understanding why he should be dragged into the affair, Junior quickened his step to keep pace with Whitby's long, quick stride. That a man named Bronson had a lot which a man named Watkins wanted to buy, and that his father, as agent, was trying to engineer the transaction, Junior learned during the swift five blocks' walk to Bronson's office.

"Well," with a grin that was very like Junior's own, "that much is settled, anyway," Whitby said, as he emerged from a conference with the owner and rejoined Junior, who was waiting in the entry hall. "Bronson's original price was twelve hundred; but I've persuaded him to take a thousand dollars for his lot. And now for Watkins."

"And where is his office?" Junior asked as the elevator shot them back to the ground.

"Six blocks down, in the Acton Building, Commerce Street," Whitby told him, and with Junior at his side set forth again at his flying pace. "You see, son, it takes good legs as well as a good head to earn money in this realty game," he added smilingly. And two hours later, when they sat down to snatch a hasty bite at a marble-topped lunch counter, Junior felt as well as saw the force of his remark.

"Gee whiz, Pard, do you *have* to run around like this?" he asked, as he sank down on the stool with a sigh.

Whitby chuckled.

"I'll say I do. But this isn't a circumstance to some of my deals. I've only been dickering with this one a couple of weeks. Some of them take months. But hurry up with that hamburger, boy," he added, glancing at his watch. "Now that Watkins has arranged to pay five hundred cash and five hundred in notes, we'll have to trot back to Bronson to see if he'll take seven per cent interest instead of eight on the balance due."

By this time, sore though his leg muscles were, Junior was thoroughly interested. From the shadowy fringes of consciousness, his father came out once more to stand within the focus of his thought, as he had in those earlier years when he had taught Junior how to ride, to swim, to throw a ball, and shoot a gun.

Again, as they strode along together, the enthusiastic interchange of thought passed between them, as it had in the old times when Pard's return from work had been the highlight of Junior's day.

Only, now it was as the Galloping Ghost that Junior saw him—the pigskin hero bucking the line to gain his yards on a field where one passed deeds instead of a ball.

"Hold 'em, Pard!" he said once, as Whitby, coming from the lawyer's office, told him that a minor hitch had been discovered in the title, and that it would take an affidavit from a man named Clements to clear it up.

Whitby laughed. The genial assurance of his "Oh, I'll hold 'em all right. They'll never crash this line!" brought a sense of relief to Junior, who, in watching this game, was beginning to experience some of the same tensity which had so often thrilled him in the last heat of the play.

INDEED, as the day wore on and they walked the hard pavements from courthouse to office building, and from office building to bank, and back to the courthouse again, it became a matter of vital concern to Junior that all should go successfully with his father's deal.

"Gee, Pard, *now* what? Will Bronson take seven per cent? Or, "Is the mortgage certificate O. K.?" Or, "Will the lawyer approve the deed, now that you've got that affidavit?"

These were some of the questions with which Junior, awaiting his father in the corridors, would pelt him as he emerged from the various conferences that were necessary to complete the sale.

With his hand on the boy's arm in the old gesture of comradeship, "It's all right, old man," Whitby would say. "Just matter of gathering up loose ends."

But Junior was uneasy. As tense and watchful as he had ever been during the strife of the last quarter, he was not quite assured that something might not go wrong at the moment to defeat his Pard's dash for goal.

"Do you think it's really going through?" he asked

Digitized by Google Original from UNIVERSITY OF IOWA

iously as, at four that afternoon, they made their way through the doors of Whitby's office.

"You bet it's going through," Whitby said. "In fifteen minutes Bronson, Watkins, and Mr. Pendle, the lawyer, are going to meet me here for the final flourishes."

"And how about you? Will you get your commission?" Junior pressed him.

Placing his hand on Junior's shoulder, Whitby indicated an inner room.

"Ah, there's Watkins now. You just go in yonder and wait until they've gone, will you, son? Yes, yes, I'll get mine." He laughed gently. "You needn't worry!"

It seemed to Junior, as he entered the empty office and threw himself in a swivel chair before the flat-topped desk, that he had never been so tired in all his life. It was not the actual walking that had tired him. It was the mental tension; the eternal waiting; the endless standing around.

He could dance all night to jazz, or drill all day to the soul-stirring boom and blast of a military band. But this was different. This climbing stairs and treading pavements, with no drum or trombone or uke to spur you on, was entirely another thing.

And the thought came: "Holy Whiskers, Pard does it every day!"

Swaying back in the chair, Junior clasped his hands behind his head and stared up at the ceiling. And suppose, after all, the thing should fall through? Pard had told him that he never considered a deal closed until he got his commission. And—Junior asked himself, as he strained his ears to catch the voices in the outer room—wasn't there a mighty lot of jawing going on in there for fellows who had nothing to do but put their fists to a bill of sale?

AT LAST, however, the voices ceased, and there was the sound of quick, familiar steps as Whitby crossed his office and opened the door.

"Well, son," he announced, waving a pink check in air, "we've got it at last. Here's the old commission!"

Springing to his feet, Junior heaved a sigh of genuine relief.

"Gee, Pard, that's great! How much did you get?" he asked him.

Taking out his fountain pen, Whitby leaned down and wrote his name across the back of the check.

"Five per cent of the purchase price is the regular fee. Here, son," pushing the slip toward him, "this is Bronson's check, but I've endorsed it over to you. Fifty dollars is what you need for that dance at Lake Charles, isn't it?" he asked.

Junior started. For an instant his eyes went to his father, and then dropped swiftly to the check that lay before him on the desk.

Fifty dollars! All that walking and waiting for fifty dollars! A whole day's work, so that he could go to a dance! Suddenly his eyes stung and there was something hard and funny in his throat.

He stood for a moment, blinking. Then he looked up, and in a flash of complete understanding the eyes of the boy met the eyes of the man.

"Say, Pard, I hadn't any idea—" He broke off. Then tried it again, "Say, Pard, you must have walked at least five miles today. And"—flushing—"I've been thinking that I ought to get started at something. And—well—this is it: if you'd take me in down here for the summer, couldn't we split the old leg stuff fifty-fifty?" *(The End)*

If You Ask Me:

Daymares Make Cowards of Us All!

DAYMARES. . . . The expression was invented a century ago by Charles Lamb, that quaint conjurer in words, whose whimsical mind was forever enriching the English language. But Charles Lamb did not invent the flights of morbid fancy to which he was referring. They are our race's heritage from the dim dawn of time—and only clear-thinking, audacious souls have risen above them.

Daymares. . . The brood of fears that fetter our minds and inhibit our acts! Grotesque images of what-might-happen! Dread of consequences if we desert the rut of routine! Spiritual paralysis that makes us play safe instead of playing hard!

"My greatest victory," a business leader once said to me, "came when I conquered fear and worry. From childhood I had been fussing and fretting about the future. Danger was always flying its red flag before me. I worked hard, but so timidly that much of my best effort was frustrated.

"When I entered business my progress was painfully slow. I dared not face unfamiliar consequences by doing anything original. A young-man-afraid-of-himself, I was always riding a rut, just as big city street cars ride their trolley slots.

"One summer I left on my vacation, half sick and wholly discouraged. The doubts in my head weighed more than the duds in my trunk. I went away to fish—but I remained away to think. And out of that mental turmoil I came at last to the clear conclusion that fear and worry are as unnecessary as they are debilitating.

"In the quiet of a starry night I sat on a cliff above the lake and made three resolutions:

"1. Any time I had a disagreeable situation to meet, I would meet it *immediately*. Better to have a few unpleasant minutes and get the whole thing over with, than to spend several devitalizing days and nights in trying to figure out some way to dodge the issue.

"2. If some frightening prospect loomed ahead, I would call myself and all the facts into an executive session. When I had sized up the situation I would determine if there was anything I could do that I had left undone. Yes? Then I would straightway do it. . . . No? Then I would stand firmly on the fact that I had done my best and leave the issue in the hands of Providence.

"3. When a carefully considered plan promised success I would never hesitate to take the chance. . . .

"Mental reform is not easy. Mine was no exception. But gradually I won the victory. And from that day my progress was more rapid than I had ever dreamed."

Daymares! The hobgoblins of timid minds! Nightmares may affright our sleep, but their evil power vanishes with our waking. They sink back into the deeps of subconsciousness and matter little to us. But Daymares sap us when we should be at our best. They tether our visions and paralyze our efforts. Happy the man who has evicted the ugly brood. Then only can he put his house in order and set about the real business of life.

The Trail Eater

A story of Love and the Reckless Hardihood of Youth

By BARRETT WILLOUGHBY

Illustrated by GEORGE GIGUÈRE

BACK to Nome, after a summer of prospecting, came Kerry Wayne—back to a Nome that was a new and magic city because he found there little Barbee Neilan. She was home at last to stay, after her years of schooling in the States, and on that very first evening—at the Malamute Club dinner which celebrated the opening of the dog-racing season—Kerry lost his heart to her. Lost it, only to find that she was engaged to Rance Herrington, of the Gray Wolf Mine, Kerry's one-time best friend, and the richest man in Nome.

As if this were not bad enough, he had not been many hours in Nome before he began to hear disturbing rumors. Rance was flirting outrageously with Dr. Kramer's wife, Kitty; Rance was drinking and carousing too much for his health and his appearance; Rance was tying himself up with Luce Barton, shrewdest and crookedest lawyer in Nome. All these things Kerry learned from Lim Phayden, dispenser of water and gossip to the town—from Doorknob Balsh, who helped him look after his dogs—from Tolovana Belle, true product of frontier life, with her roughness and her capacity for undying friendship.

Kerry was deeply troubled. Three years before, he and Rance had come on the same steamer to Nome and "bached it" together until Kerry had found himself doomed to a year's exile in the hills because of his lungs. He came back cured of his illness, but not of his fear that there was in him a yellow streak. It was partly to test this that he had entered his dogs the year before in that famous race which made him forever the "Trail Eater" to all of Nome. He had run the race with outcasts from the "Kashim," a retreat he had set up for dog waifs.

His team was a joke—all except Duna, the leader—and Kerry checked in at Nome three weeks after the four-hundred-mile course had been covered by the last of the other teams.

Now another Sweepstakes was at hand. Rance and Barton had formed a Syndicate, with the best dogs cornered—including Tokon, greatest and most lawless husky in all Alaska.

Kerry refused Rance's proposal that he join the Syndicate, and announced his intention to enter his own team again. This so stung Rance's pride that the gold king swore he would drive one of the Syndicate teams himself, with Tokon in the lead—he would tame the brute or kill him. And Rance lived up to his word. In his first battle with Tokon he held the dog down and with the bolt cutter broke off his lower tusks at the gums. The next encounter was witnessed by Kerry, who passed by the Syndicate kennels at the moment when Rance, in a towering rage, was offering the magnificent animal free to anyone who would drive him.

Rance insulted Kerry, challenged him to take up his offer—and Kerry accepted that challenge. He hitched Tokon to his sled, with Duna as spike leader, and drove the team as far as the crowded public square of Nome. There Tokon turned upon Kerry. In the terrible fight that followed the man seemed momentarily to be victor. Then, a woman screamed—without warning, the great tawny beast had hurled himself straight at Kerry's throat!

"Community singing—what?" Tolovana Belle's voice broke in on the bedlam

PART III

LIKE a fighting wolf Tokon came through the air, scissors jaw lashing for the jugular vein. Kerry ducked—whirled. The killer cleared him, and landed with a snarling thump on the snow. A swift recoil, a turn, and the dog was menacing him again, head low, eyes a-flame with fighting lust. Kerry, poised for another throat strike, set his hands to grab the jaw. A roaring *grrrrrrrrrrr!* and the husky lunged, tackled low—and got him by the ankle.

Staggering, stamping, Kerry regained his balance, and, with legs braced, doubled to break that terrible hold. He crossed his hands and clutched the loose skin below the animal's ears. When the teeth relaxed for a deadlier grip on the tough leather of his mukluk, he heaved with sudden, twisting force. The jaws let go, the head swung; then—a lightning movement of the strong, lithe body—skin stripping red-hot from Kerry's hands—and a second later the snapping jaws clamped on his left hand.

They stood deadlocked in the fog of their own breath. Kerry's right hand fumbled for a hold on the dog's muzzle. He got it—tried to break the tightening grip—failed. Then, swaying from side to side, he forced the animal backward to a huge snowpile in the middle of the Square. On the edge of the drift, struggle again—gasps—half-choked wolfish snarls. And in the end a wrestler's trick that sent them both plunging to the snow—Kerry uppermost.

The husky's teeth came loose with a yank that shredded the leather sleeve. In a flash Kerry had the dripping jaw in a two-hand hold, and with all the strength in him he shoved the lean fighting head deep into the drift. He held it grimly, his body wrenched this way and that while the powerful beast thrashed the snow. Then, slowly, the dog began to weaken . . . the air cleared . . . and in the stained, trampled snow Tokon lay half smothered.

Kerry relaxed his hold and wobbled on his feet to await the dog's recovery. He was breathless, shaken. With hands that smarted from a dozen moist-red scars, he swept the damp hair from his eyes.

Tokon dragged his long body from the drift, shook himself, and edged around his trailing traces until his eyes found Kerry. His head was up, his hind quarters slightly drooped, his brush twitched stiffly

UNIVERSITY OF IOWA

"Come here, Tokon!" Kerry extended a hand, throwing into his voice all the kindness, all the admiration he felt for this proud fighting creature with the fierce eyes, the deep, golden chest, the slender, steel-muscled legs. "Come here, old man!"

The dog's nose wrinkled. His teeth clipped defiance. Then he came—in another deadly leap for the throat!

Kerry had only time to jerk his body sideways. As the husky in mid-air lashed in for a hold, he flung an arm over him and got him by the flank. Tokon doubled and grabbed for his wrist. A lightning shift, and Kerry's right closed on the husky's muzzle, his left, clutching for the lower jaw, caught in the harness, missed, seized instead on the jowl. Then man and dog struggled again on the edge of the snowpile.

KERRY'S feet were shifting for a wrestler's stance when he slipped on a buried can, his ankle turned, and, quicker than thought, he was on his back trying to hold the raging dog from him. . . . Hot, fetid breath in his face—dripping, saber-toothed jaw slashing at his throat—his desperate grip tightening to agony as he threw himself on his side trying to get a leg over the tawny demon.

He held on. Snow filled his eyes, his mouth. Blood rushed to his head. He was smothering. Every arm muscle was a taut, burning wire. His hands were fire, his hold was slipping . . . slipping. . . .

One last racking effort, and he felt the wolfish body between his knees, a thrashing thing of living steel. He was holding it . . . he was thrusting its head deep into the snow. When the dog lay still, he started to relax his hold; but, quick as a rattler's strike, Tokon had him by the front of his leather jacket. It was a last ferocious gesture, one that gave Kerry a perfect hold. He downed the animal again, and lay flat upon him.

Some minutes later, when he came to his feet, the husky did not move. Kerry lifted the limp head free from snow and stood up wearily, brushing the hair from his eyes.

He waited.

"Guess you finished him that time!" came a voice from the crowd that was now moving forward. Kerry shook his head and waved them back. The dog twitched convulsively, opened his eyes, and after a while slowly got up on his feet.

"Tokon, old fellow—come here!" Kerry held out a hand. The dog looked at him. He was shivering. His muscles were jerking spasmodically, yet his ears were erect on his high-held head. The flame in his eyes had died, and there was something like bewilderment in them. His head turned in a listening attitude. Indecision crept into his manner. He took a faltering, sidling step forward, as if his wild heart had responded to that voice calling him. But his old distrust of man overcame him. He stopped, of a sudden, alert for treachery.

"Tokon, fella, everything's all right. . . . We're friends. Come. . . ." Kerry talked on in that mellow tone-language of his, the words of which meant nothing, the inflexions all. The husky's ears came up again; into his side-turned face came a look of wistfulness, a dawning desire for friendship. Foot by foot he advanced until he stood in front of Kerry, his eyes raised, his sensitive nostrils quivering.

Then slowly he brought his proud head to rest on the young man's outstretched hand.

AFTER his arm had been bandaged Kerry drove to the Fort and back, with Tokon hitting the towline in harmony with the rest of the team. The crowd, feeling that the excitement was at an end, at least for that day, gradually dropped away, and he swung into the Syndicate yard unaccompanied except for Luce Barton and Slim. These two disappeared while he was settling his team for a wait, and Kerry passed into the kennel-house alone.

He went on past the dog quarters to the harness-room, which Herrington used also as a kennel office. The gold king, still in his torn parka, was sitting before a table viciously smashing the lighted end of a cigarette against an ash tray already overflowing with cigar and cigarette butts.

At the sound of Kerry's entrance he looked up and came scowling to his feet. They faced each other in a silence electric with the bitter, leashed enmity of two who have once been friends.

"Well?" Herrington's tone was an insolent challenge.

"I've driven your dog. Now I'll have you explain that remark about my trying my luck with your girl."

"Explain? Huh!" Rance stepped forward, his dark face twisted with jealousy

Kerry was whanging out a chorded accompaniment to a song he was half singing, half talking to an appreciative audience of half a dozen favorite dogs

and suspicion. "You make me sick! You were too good to join my Syndicate, weren't you? But not too good to hang around my kennels waiting for a chance to show me up before the crowd! Not too good to spend your afternoons with my girl in that dump of yours out on the tundra! Not too good to sneak off with her—"

Kerry flung a chair aside and came close to Herrington, his hands clenched, his eyes slits of blue fire. Then suddenly he relaxed and his hand went out in a quick gesture of appeal. "What's the matter with us, Rance? It's that cursed mine of yours that has changed you. You never were this way when we camped together—turning against your friends."

"My mine!" Herrington's anger only flared higher. "My mine hasn't made any difference with me. It's you who have changed. I wanted to make you foreman out at the mine; I asked you to come and bunk with me in the best place in Nome; I offered you an interest in the Syndicate, with a chance to make a clean-up—and what thanks do I get? You turned me down on every count as if I were a dirty crook! Don't tell me there's nothing behind it! Even before Luce began to put me wise, I could see a few things. And now—why, you Sweepstakes clown, I could give you—"

"You—can't—give—me—anything!" There was a deadly, final quality in Kerry's voice. "Tokon is mine by the terms of your fool challenge—and I'm going to keep him. But you'll get my check for two thousand dollars in the morning." He turned and started from the room. Midway his glance fell on Luce Barton, who had entered unnoticed sometime during the altercation. He stopped and eyed him narrowly. "I'm going to drive that dog in the race," he added. "And I'm going to clean you both!"

A DAY later Herrington was sitting alone in the Syndicate harness-room thoughtfully turning Kerry's check over and over in his fingers. Kerry had put a second mortgage on his place to pay for Tokon—a mortgage on the old building in which he had fitted up a room for Herrington in the days of the latter's poverty. . . . The gold king raised his eyes to a faded snapshot pinned on the rough wall back of the table. The picture showed the little tent on the beach in which he and Kerry had bached that first summer in Nome. He cared a lot for Kerry then. Such a gallant kid, such a loyal, generous friend, sharing everything he had with a fellow. . . . He'd be darned if he'd cash the check! He'd tear it up and say nothing about it. And some day, when he and Kerry were—

"Ho! ho! ho! That woman will be the death of me yet!" Luce Barton strolled into the office, his shoulders shaking to his oily laugh. "She has Catherine the Great backed off the boards! I was watching her in the Square yesterday when the Trail Eater tackled Tokon. I knew then that he'd be the next one! Ho! ho! Look at them, Rance!"

Along the road dashed Kerry Wayne's dog team, with Tokon hitched behind Duna stretching leather in his best manner. Kerry swayed on the runners behind the handlebars. On the basket sled, wrapped in the priceless white-fox robe Herrington himself had given her, was Kitty Kramer.

Barton hooked his thumbs in the pockets of his waistcoat and glanced at Herrington out of the corners of his eyes. "By Jove, Rance," he chuckled, "the Trail Eater seems to like your lady friends as well as he likes your dogs. And I'll say this for him—it looks as if he's a winner with both!"

Herrington watched in smoldering silence until the team had vanished. Then he looked down at the check in his hand. His fingers trembled slightly as he folded it and placed it carefully in his wallet.

FOR Kerry the days grew swiftly into weeks; each waking hour was filled with work that would fit him and his team for the April race. Doorknob had charge of the dog feed and attended to the daily weighing of the racers; but it was Kerry who groomed them every night, examining feet, trimming claws, checking corns and calluses.

By February the dogs were nearly all outfitted with collars, blankets, harnesses, and padded moccasins. In addition, Kerry had evolved something new in the way of racing equipment—a flank protector of rabbit skin. On the Sweepstakes Trail he would have to be ready for al' kinds of weather, from thaws that turn the trail to mush, to polar blizzards with the mercury far below zero.

Kerry himself was in the pink of condition. The fifteen-mile runs with which he had begun his training had lengthened to thirty and fifty miles, with hundred-mile jaunts once a week. On these long runs he was now able to trot easily behind the sled for a mile at a time, the handlebars just within reach. There would be little riding of runners on that four-hundred-mile course for which he was preparing; he would not only be obliged to run most of the way, but to take every possible ounce of weight off his dogs by helping the sled up hills and over heavy trails.

The most difficult part of his training was preparing for the sleepless nights of the big race; but he had now reached the stage where he could stay up for fifty or sixty hours without closing his eyes.

On these white nights he kept open house at the Kashim. While Doorknob cooked dog feed, friends from town and trail dropped in to talk "dog dope," or to spin yarns, or even to play cards in the big shadowy, barnlike room. These gatherings embraced men of many callings, and from each one Kerry learned something that furthered his training.

Of Rance Herrington he had but brief glimpses, generally when they passed on the trail, each behind a dog team. One afternoon, when Kerry went into the Fifty-mile Roadhouse down the coast of Nome, he found Herrington and Barton eating lunch with the people who ran the place—Bart Pelkie and his Eskimo wife. As he entered the room, the expressions on their faces gave him the impression that his arrival had interrupted a discussion of himself. Luce had recently bought the roadhouse, and Kerry concluded that Bart Pelkie was being instructed to get his time; but since Kerry never took his racers over any part of the Sweepstakes Trail during training, he was not disturbed.

It stood the Syndicate in hand to get Kerry's time. His crossbreeds, led by Duna, were showing a speed that filled him with confidence. True, he had been having all kinds of trouble with Tokon. But finally he had hitched him teammate with the peerless Duna, and a strange and unexpected friendship had sprung up between these two thoroughbreds, a companionship of equals.

Yet at the back of Kerry's mind there was always that doubt of Tokon. Would he, in the great race, quit at Death Valley, whence he had always been hauled ignominiously back to Nome? Or would Duna's influence overcome this trait?

And with his doubt of the dog there came always the old doubt of himself.

One evening, in his living quarters adjoining the Kashim, he was resting after a hard day behind his team. He was half sitting, half reclining against the cushions of a couch, one knee over the other, his banjo in his hands. From the kitchen, where Doorknob was getting supper, came the good smells of broiling reindeer steaks and coffee.

Kerry was whanging out a chorded accompaniment to a song he was half singing, half talking to an appreciative audience of half a dozen favorite dogs. Duna lay flat on the foot of the couch, nose on paws, adoring eyes fixed on his master's face. On reindeer rugs close to the couch other dogs sat or lay in various attitudes of attention. Off in a corner near the table laid for supper stood Tokon, his hind quarters slightly drooped, his wolf-like head raised, his proud eyes, with the golden spots above them, fixed on Kerry with level regard—an aloof, wild thing still, gravely considering this man creature he had accepted as master.

KERRY had waited in vain for some show of affection from the husky; but Tokon had none of the friendly, lovable, nose-snuggling ways of the other dogs. Never once had he come voluntarily to show fondness for his master.

Kerry leaned his dark head back against the cushions and began a ballad entitled "*Hydrophobia*," the timely contribution of the town bard:

"What is—that most—persis-tent sound
Nome hears—from morn to n-i-g-h-t,
In of-fice, shop or—on the street
Where snow—flakes glis-ten bright,
A sound—as of a—million bees
A-swarm—a-round—their h-i-v-e;
A swirl—ing flood—of talk that seems
To grow and thrive?
It's DOG, Duna, old chap!
It's D-O-G!"

Duna's name, interpolated in deep bland tones, brought the dog to his feet. The young man stopped playing long enough to pat, then adjusted the banjo so that Duna might sit up beside him, while the others sat expectantly erect, their tails thumping the floor. Only Tokon remained unmoved.

Kerry sat bolt upright, plunking vigorously, his head nodding, his serio-comic blue gaze commanding every animal in the room.

"It's Dog, Mukluk!
It's DOG—Bow! Wow!"

He yelped the last two sounds after the manner of a yell leader, and the squatting circle pointed their noses to the ceiling and broke into a fervent discord of glee.

"Community singing—what?" Tovana Belle's voice broke in on the bedlam. Kerry glanced up to see her in the door

Tokon doubled and grabbed for Kerry's wrist

way. In her mittened fingers she held a basket, and she was laughing at him out of her parka hood rimmed with frost.

"Oh, don't let me disturb the evening hymn. I'll slip into the kitchen. Brought you boys a peach cobbler, and I'm going to stay for supper and help eat it."

"Party's over, boys," said Kerry to his canine chorus. He took them back to the Kashim and settled them in their stalls for the night. He tarried long enough to see if all was well with his other racers, most of whom were dozing. Two of the animals were sniffling, and he stooped to pass a gentle hand over their muzzles. They raised filmed eyes and licked his fingers with hot, dry tongues that brought a line of worry between his brows.

WHEN he returned to the rough comfort of his living-room he found the lighted lamp in the middle of the table set with steaming vegetables and meat. During his absence Lim Phayden had come in and Doorknob had persuaded him to have supper.

Lim, as usual, was full of information, which he retailed between huge mouthfuls of food. In all his life, he declared, he had never hauled so much bath water as today, for 'twas Valentine's Eve, and the social event of the year, a fancy-dress ball prepared for months in advance, was coming off at the Fort tonight. And everywhere additional preparations were in full swing for the coming Sweepstakes Carnival, an annual festival held in the skating rink to raise funds for the race. But the most important and exciting feature under discussion was the choosing of the Queen of the Sweepstakes, a sovereign elected by votes purchased for a dollar each.

"An' you'd niver guess who's in the runnin' forninst each other!"

"Oh, that's easy," drawled Tolovana. "Dollars to doughnuts, Lim, it's the crimson rambler, Kitty Kramer, who's running, and—let me (*Continued on page 70*)

UNIVERSITY OF IOWA

Dr. Harry Wegeforth, a practicing physician of San Diego, California, runs a menagerie in his spare time

Harry Wegeforth Longed for an Elephant And Got a Whole Zoo!

"WHO'S the most important man in town?"

Any San Diego schoolboy has the answer:

"It's Dr. Wegeforth, the Zoo Man."

The boys don't think of him as The Doctor, however, but as The Zoo Man, who brought the lions and tigers and elephants to town. Almost single-handed Dr. Wegeforth has built up in San Diego, California, a zoo that is recognized as one of the three greatest in the United States.

The idea started down in Baltimore thirty-five years ago, when there could be found in the back yard of the Wegeforths owls and rabbits and prairie dogs and squirrels and snakes and pink-eyed white rats and almost any other living creature that could be caught, bought, begged, or borrowed. They were housed in boxes and cages, homemade and concealed carefully in brush ingeniously arranged after a small boy's idea of the African jungle.

But Harry Wegeforth always wanted to own an elephant. The wise men of the town predicted that he would run away with a circus some day. He fooled them. He went to college along with his brothers, and all three emerged as doctors.

Harry Wegeforth moved west, settled in San Diego, built up a fine practice, and prospered. Then, about ten years ago, he felt that he could at last afford to have a real zoo, with a live elephant in it. The only change in his scheme was that he abandoned the idea of keeping the zoo in his back yard and looked about for a bigger and better place.

The search took him to Balboa Park, close by the heart of the city, much of which was a wild area of mesas and canyons, undeveloped in any way. Here was a real jungle, needing only a few more large trees, and elephants, lions, tigers, and all sorts of wild life.

Dr. Wegeforth then formed a zoölogical society and spent a night and a day receiving telephone calls from other San Diegans who, like himself, had long nursed secret ambitions to start menageries. They pooled their mutual aspirations, raised money to build corrals, grottoes, and tanks, and then instructed Dr. Wegeforth, who had been named president of the society, to proceed with the purchase of the elephants and other animals.

He bought three elephants in all, bought them in India, too! When they arrived, one of the pachyderms was accompanied by a donkey. This was somewhat out of harmony with the jungle picture, but the donkey refused to leave the elephant and the latter refused to part with the donkey. They were inseparable pals who insisted on living in the same quarters, even after the humane society made complaints about the cruelty of making a donkey live with an elephant.

This was but one of a series of strange friendships which Dr. Wegeforth was to encounter in the course of building up the zoo. A tiny bantam rooster became the bosom companion of a sea lion. The bantam sat by the seal's tank, gravely watching his friend dive and swim, and ignoring the other bantams in the zoo.

Maggie, the orang-outang, adopted two little Malayan honey bears, and then added to her affections "a boy friend," as the saying goes, in the form of a bewhiskered elderly keeper of the zoo. A group of native wild birds came and established an entente with the African lions, making their nests in the lions' den.

"A zoo is just about the most fascinating place in the world," remarked Dr. Wegeforth, as we strolled past the grottoes of the great cats, as the lions and tigers are called. "It is like a big family. A strange family too."

Dr. Wegeforth's grottoes for the lions and tigers have served as models for zoos all over the world. Abandoning the idea of cages, he dug great pits in the hillsides. Inside the pits are terraces, tree trunks, caves and runways. The cats bask under the open skies, surrounded only by walls, over which the visitors to the zoo look down at the animals.

"It takes a little time usually to find out just what the animals want," Dr. Wegeforth explained. "When the polar bears first came we thought they wanted fish to eat more than anything else. In fact they were on a fish and meat diet exclusively. They soon became mangy and their fur came off, and we could not understand it.

"One day we gave them some bread. They ate it as if they had had no food for weeks. After that we put them on a bread diet, and their fur became thick and smooth and they were healthy. Now they have fish and meat about twice a week. Bread is the universal food. Almost every animal in the zoo likes it. Every bakery saves old bread for us. We buy it by the ton."

The visit to the hospital was one of the surprises of the zoo. It is no ordinary veterinary establishment, but a modern hospital, equipped with X-ray machines, laboratories, operating-rooms, and all the paraphernalia of a regular hospital. Only the wards are different. Instead of the customary rows of beds, there

Digitized by Google
Original from UNIVERSITY OF IOWA

cages of all sizes, shapes, and descriptions. Everything about the place was spotlessly clean.

In one cage a parrot was standing on his head, squawking.

"He's beginning to show some life," remarked the Doctor.

"Yes," replied the nurse, "he's going to get well."

The nurse wore the customary hospital uniform.

"We discharged the polar bear," she continued. "His ear is all right. You should see the grateful look on his face as he got better. He was a good patient and seemed to know what we were doing."

The polar bear was operated upon for an infection. The cages are so made that they can be collapsed to hold the animals rigid while operations are in progress.

Instead of the usual professional man's luncheon, noon finds Dr. Wegeforth perched on a stool at the zoo lunch counter, eating a sandwich and dictating to a secretary at the same time. This is when he transacts the business of the zoo, buying and selling to build up a more representative collection of wild life. Then he hurries back to his practice.

"Doesn't this routine wear you out, Doctor?" I asked him.

"The work never does," he replied. "I'm just as thrilled about animals as I was when I was a boy. I like to work with them. And I don't mind going out and raising money to build a new pool or a cage," he added. "I'm all right until I have a disagreement with some of the critics of the zoo about the way we manage things. Then I have to get away for a while."

He laughed.

"But then a little change," he said, "is good for all of us." FRANK J. TAYLOR

She Teaches Main Street to Roll Its Own Plays

PHOTOGRAPH BY THE MISSES SELBY

Mrs. Elizabeth Hines Hanley, who gave up a stage career to teach dramatic art

DOWN in Greenville, Florida, the members of the Episcopal Church were preparing for their annual Christmas play. They needed an angel in the cast—a single cherub, who would be suspended in mid-air over the stage by a strong, unseen wire. It was unanimously decided that the rôle would be given to three-year-old Elizabeth Hines because of her pretty blue eyes and bright golden hair.

But at the first rehearsal, Elizabeth decided that she did not like the stage at all. She was too high up in the air, for one thing. And for another, she didn't want all those people staring at her. So rebellion flared in the celestial ranks, and the fate of the play trembled in the balance, for there was no other child in Greenville who suited the rôle of angel as well as Elizabeth. Most of them were sun-warmed brunettes, and who had ever heard of a brunette angel?

At this point Elizabeth's mother came to the rescue. "Dear," she said to her little daughter, "would you like to have that doll we saw in the Racket Store window?"

"I'd love to have it!" exclaimed Elizabeth.

"Well, if you will play the angel and stay up on the wire and smile, Mother will buy the doll for you."

The outcome was that the mother agreed to buy the doll and bring it to the church the evening of the entertainment and hold it behind the scenes where Elizabeth could see it.

On Christmas night, the curtains parted, and Elizabeth behaved just as a little angel should, except that she held her chubby face slightly to the right where she could keep her eyes on the doll. But somebody remembered to tell her that in case of an encore, she was to remain perfectly still; so, when the curtains parted a second time, Elizabeth was found wriggling and screaming inelegantly at the top of her baby lungs: "Gimme the doll, Mamma, gimme the doll." Nor would she stop, despite the roars of the audience, until her wire was lowered and the doll was placed in her arms.

That was forty years ago. For those four decades, Elizabeth Hines—now Elizabeth Hines Hanley—has kept her eyes on one goal, with the result that today she is a recognized authority on plays, festivals, pageants, and recreational dramatics for churches, schools, playgrounds, camps, and social settlements. Although her work has taken her to many large cities, Elizabeth Hines Hanley's real job and real interest consist in bringing the footlights to Main Street.

Elizabeth Hines was born in Quincy, Florida; but when she was two years of age her parents moved to Greenville, Florida, to settle on Plantation Number Thirteen, which her mother had inherited from her grandfather Griffin. The only instruction she received was from her mother, who was her tutor until she entered a convent in South Carolina. Here she delighted in the dramatic performances which the nuns gave and invariably she played the leading rôle.

At nineteen Elizabeth was graduated, and the next summer she became the wife of the oldest son of a neighboring family. She had but three short years of happiness, when her husband was injured in an automobile accident and became an invalid. Elizabeth was forced to go to work. She resolved to make a marketable asset of the emotional and dramatic instinct which had always stirred within her, so, with a friend, she toured Georgia, Florida, and South Carolina, giving plays and concerts. They made a little money and a tiny margin of profit, but they were finally forced to give it up. People in those days didn't understand two girls traveling alone.

"And so I decided," Mrs. Hanley said, "to go back home and teach elocution until something turned up. I formed a little class and was almost happy. But just before Christmas I received an invitation to go to New York."

Arriving there, she finally got her opportunity through friends to start her experimental school. Everything except arithmetic was taught—not by dull rules but by music, acting, and pictures. The ensuing program which reached the children was one they never forgot. Following this, Mrs. Hanley became associated with Grace Griswold in the Theatre Workshop.

"The purpose of this Workshop," she explained, "was to create a place where actors out of work could come and have an opportunity to act and to direct others. From the Workshop we sent out companies to Vassar, Bryn Mawr, and many other colleges and universities, to show them how to produce plays. Everything was incorporated in this instruction—direc-

tion, lighting, make-up, stage settings. This Workshop helped in a large way to create an interest throughout the country in college dramatics.

"With this organization I stayed until the United States entered the war. I then enlisted with the Women's Committee for National Defense and was assigned to the War Community Service, which provided amusement and hospitality for the enlisted men."

At the end of the war the Playground Association of America decided to carry on this amateur dramatic work, and Mrs. Hanley was chosen as Director of Community Drama and Pageantry. She commenced her work of traveling north, south, east, and west, and holding what they termed "Institutes" in large cities and towns.

"Everywhere I found that young people were starving for some form of dramatic expression," Mrs. Hanley said.

"After eight years with the Playground Association, I decided to come to New York and establish headquarters where this necessary instruction in this type of work could be given.

"I started with one pupil, but in a short time the class was overflowing; and now I am looking forward to the day when every town and every hamlet—no matter how small—will be able to give its children trained instruction in the dramatic expression for which I have found they are so hungry." ROSA STRIDER REILLY

Robert Stout's Ideas of Thrift Certainly Started Something

PHOTOGRAPH BY ALJIAN STUDIO, RIDGEWOOD, N. J.

More than four million school children have become regular depositors in savings accounts because of the activity of J. Robert Stout

HIS father was a school superintendent, his mother a schoolteacher, and he, when a boy, read Benjamin Franklin's Autobiography "at least forty times," according to his own estimate. You can guess, from that background, that J. Robert Stout is engaged in work that is connected with schools and with thrift. He is—very decidedly.

Four million five hundred thousand school children in the United States are depositing money weekly in a system of which Mr. Stout is the head, and these children now have more than $40,000,000 to their credit, all of which is drawing interest. "But the interest and the principal combined," says Mr. Stout, "are not comparable in importance to the lessons in saving, in self-control, in knowledge of money that these boys and girls are learning.

"The way for most of us to protect ourselves against debt in case of prolonged sickness and against want in old age, the way for most of us to own houses and to have investments in stocks and bonds, is to save with these things in mind. The man who can save frees himself from one of the biggest causes of worry—lack of money when it is needed."

Mr. Stout is president of Educational Thrift Service, Incorporated, with headquarters in New York. His job is to go to the public school authorities of various cities, persuade them to give him a franchise to operate in their schools, and then go to one of the safest banks in town, or to more than one, and make an arrangement with these banks to handle the deposits of the children who fall in line with his plan.

The bank that agrees to act as depository for the school children's accounts pays Mr. Stout so much per pupil enrolled in its city's public schools. That's how he gets his living. The bank is willing to do this because the method is an easy and cheap way to build up good will, and to secure depositors for the future.

"When I started eleven years ago to inaugurate this work," Mr. Stout explains, "the banks were slow to join with me. Naturally, and properly, they are conservative institutions, and so they do not rush eagerly into an innovation. My scheme, as a matter of fact, was not an innovation, but it never has been widely in vogue until within the past ten years.

"But today I have no trouble in getting the banks, and mighty little in getting the franchises from the school authorities, for the idea upon which I am working is intensely practical."

This thrift organization operates in forty-one states. The whole country is divided into eleven districts, and in each one there is a staff of workers. They visit the schools, enlist the aid of teachers, talk to the children, drill in the benefits of thrifty habits. They teach the children to save toward some definite thing. Most of them are saving to pay for high school or college education, but some of the put down lesser objects as their goal such as bicycles, skates, suits, clothes, footballs, baseball gloves and the like.

If a child wishes to withdraw money he must have the endorsement of his teacher, and a grammar school child must be accompanied to the bank by one of his parents or his guardian. If he is in high school approval by the teacher and a parent or the legal guardian is all that is necessary, the depositor being old enough then, we think, to go alone to the bank and establish his identity.

Mr. Stout's own story is full of interest. As I have said, he started with a background that places him logically, where he is today. Nevertheless, he was a long time getting where he is. He was born in Seymour, Indiana, of Quaker stock, years ago, but when he was in his teens the family moved to a farm in Kansas, and he undertook to run the farm.

"I was a terrible farmer!" he says. "I spent more time reading than I did plowing, and the result was disastrous. I came east, worked as a haberdasher's clerk, a factotum in a department store, a window dresser, an instructor in salesmanship, a writer, and didn't set the woods on fire at any of these jobs.

"A casual remark dropped by a friend of mine started me to thinking about school savings. 'There should be some system,' this friend said, 'that will teach practical thrift to children. You are free, Stout, why don't you do something about it?'

"That clinched my wavering will. I start a savings system. I *did* do something about it this time. For three years we lost money, but since then the sleigh has been fine!" JAMES C. DERIE

Francis Albert Burdett, a blind man of Wayne, New Jersey, and the seven-room house he built for himself and his wife

He's Blind, But He Built His Own House

DURING the past few months the little township of Wayne, New Jersey, has come into considerable fame, for within its borders is located what has been appropriately called, "The House That Was Built in the Dark."

From many parts of the United States and even from foreign countries have come people to see this two-and-one-half-story Dutch Colonial structure, which is the only building of its kind and size in the world known to have been erected by a man who is totally blind. That man is Francis Albert Burdett. With his wife, he now lives in the dwelling which he, without assistance, labored patiently for more than two years to build.

Recently I had the pleasure of making a careful inspection of the blind man's house. As Mr. Burdett led me through the various rooms, he told me some interesting things about his life and how he came to undertake the tedious task of erecting his own home, as well as a few of the many difficulties he encountered during his work.

"I was born sixty-six years ago in Birmingham, England," he said. "My parents came to this country when I was two years of age, and settled at Trenton, New Jersey. Later, we moved to Providence, Rhode Island, where my father, a jeweler by trade, went into partnership with another man and opened a small shop."

In 1884 Mr. Burdett married Mary A. McInnes, and for many years worked as a goldsmith. Later he conducted a jewelry store in East Providence where, in his workshop, he made watches and fashioned delicate rings, brooches, and other ornaments from his own designs.

One day, a few weeks after he had celebrated his fiftieth birthday, he was struck by a moving-van. As he could walk home and attend to his regular duties, no serious consideration was given the accident at the time. It was not long, however, before it was seen that the injury had affected his optic nerve and that he was rapidly losing his sight. Even as darkness closed about him, he refused to abandon his shop, but it was a struggle against the inevitable.

He at once began seeking something else to do, and his ability to use tools, accompanied by a supersensitive touch, prompted him to construct small chairs, dressers, fancy trays, bird houses, tables for children, and many serviceable articles. These he either sold or gave to his friends.

"But this did not bring in sufficient money to maintain a home," he told me. "Consequently, my wife found it necessary to go out nursing. Often I would not hear her voice for a whole month. Left at home alone, I soon learned to build and control a fire, bake bread, prepare meals, and do the general housework.

"After the Armistice, we moved to Wayne, making our home with a married daughter. Four years ago, Mrs. Burdett and I felt the need of having our own home once more. With what little money we possessed, we purchased a lot and the necessary materials. In several months, working alone, I built a two-room shack.

"This experience gave me confidence that I could erect a larger and more substantial house—one patterned after the Dutch Colonial structure in which we had resided in Rhode Island before my sight left me. Blindness and semi-deafness were not the only obstacles that confronted me. My trade was that of a jeweler and not a carpenter; and I had to start without a dollar, for all we owned was the lot bought on time payments. No one would lend a blind man money with which to build, particularly when I had no plans and specifications to file."

None of these handicaps, however, deterred him from his course. After establishing a credit account with a good-natured lumber dealer, he began forming his plans.

"After I had acted as my own architect, cutting out the plans in cardboard and storing away on the shelves of my mind all of the details of construction, I made three ladders and a sectional tool house," Mr. Burdett continued. "I was then ready to begin the actual work on the dwelling, which, when completed, was to be thirty-five feet long, twenty-eight feet wide, and thirty feet high, and contain seven rooms, a bath, and a large attic."

Every morning, for more than two years, his little grandson led him to the building under construction, where on more than one occasion, the blind builder remained on the job long after the neighbors had retired. That he has an almost infallible memory will be seen in the fact that he was able to remember the progress of the house in its various stages of development.

Day after day he labored as unconcernedly on the roof as he did on the ground; leaned over the eaves; walked over open floor beams; climbed up and down long ladders; put up scaffolding; carried and placed all the heavy timber and planks

Digitized by Google
Original from UNIVERSITY OF IOWA

that were needed, from the sills on the foundation to the rafters on the roof; in brief, he did the entire job, except the masonry and plumbing. Just one misstep or a moment's forgetfulness might have meant his death.

"While laboring on the house, I met with all sorts of difficulties," he said. "One particularly hard and perilous job was the Dutch Colonial roof. I had cut out a cardboard pattern for this and, therefore, had a definite idea of what was to be done. I ran my fingers over the edge of the form and found where the ridgeboard was connected. I realized that it was going to be a very high place to reach.

"Finally, after much thought, I hit upon a plan. I took the center stud down and cut it off six inches; then I nailed a piece of two-by-four on each side, thereby forming a pocket. While I had this stud, I fastened on it a length of one-by-two, which extended several feet above the pocket. To this I connected a rope and pulley. I did the same with the rear stud, replaced them in position, tied the rope to each end of that long board, and alternately pulled each end until both were above the pocket. I then lowered them in. After I had things more secure, enabling me to work around those parts with a degree of safety, I nailed both ends fast and removed the sticks and pulleys.

"When I had finished hauling all of the heavy beams up to the attic floor, I cut the lumber. I nailed the rafters to the ridgeboard and to the hips."

Save for six shingles which were laid wrong side out on the south section of the roof, the house is a perfect specimen of expert workmanship. ALBERT R. BEATTY

Jake Surface is Buying a Town on the Installment Plan

HIS home is a two-room shack set in a garden of burdock, alfalfa, and snakeweed—the only vegetation that will grow on the sun-baked, unfertile soil of an Indianapolis dump. His front door opens on a landscape sprinkled with rusty cans, shapeless automobile fenders, piles of worn-out casings, hopeless inner tubes, broken and bottomless chairs, and empty barrels—all the desolate wastage, in fact, of a prosperous city.

To Jake Surface, however, his dump is far from desolate. It is a source of health, happiness, and profit—a profit that Jake earns by "working" the dump, sorting the trash that is unloaded there and selling whatever part of it is salable to Indianapolis junkmen who, in turn, find markets for it where it is turned into some useful commodity.

The chief "lines" that Jake handles are old copper wire, which, after the insulation is burned off, brings eight cents a pound; aluminum—of which it takes a lot to weigh a pound that brings Jake twelve cents; light brass, worth three cents a pound; heavy brass, which brings four cents; paper, good for thirty cents the hundred pounds; books and magazines, a source of profit at fifty cents the hundred; "common seams" (the trade name for old carpets and dirty rags), sixty cents the hundred; clean rags, eighty cents the hundred; bottles, one cent each; old inner tubes and casings, sixty cents the hundred; and barrels, cheap at ten cents each for the light ones and twenty-five cents for the heavy oak variety.

From this assortment Jake gathers and sorts, in a week, enough material of various kinds to pay the owners of the dump from five dollars a week in midwinter to twenty-five dollars a week in summer. For his work, he earns a regular weekly salary of ten dollars, clear profit—and with this income he's buying himself a town—the little village of Waverly, Indiana, fifteen miles south of Indianapolis.

Already, during the past four years, he has saved enough to buy seven of the thirty houses which comprise the town. At that rate, he figures, it will take him about ten years more to complete the transaction. By that time he will be just seventy-eight years old, and, if his health

Despite the fact that his salary is only ten dollars a week, Jake Surface, of Indiana, is buying a town

is poor, he may consider quitting work.

"I'm not planning to quit, though, unless I'm too feeble to stir," he explains, "because I'd be miserable if I didn't have something like this to keep me busy. I've worked every day as far back as I can remember—cuttin' timber, ditchin', haulin'—good hard work that keeps a man healthy.

"But none of them jobs was as interestin' and pleasant as workin' the dump, though I've only been at this two years. Still, in that time I've stuck around pretty close to home—one time I wasn't off the dump for nine weeks, and I only go downtown once or twice a year. I had a right good time my last trip, though."

The "right good time," it was finally revealed, was the chance Uncle Jake found to play Santa Claus out of season to a group of little street urchins hanging around a neighborhood motion picture show.

"When I asked them how they'd like to see the show," Uncle Jake said, "they looked me over disbelievin' like and accused me of stringin' them, but you ought to have seen them when I bought eleven tickets for the show and sent them all in.

"It's just amazin' the amount of good wearin' apparel folks throw away these days," he went on. "It's a wasteful world we're livin' in, but I'm not complainin'—them that waste keep them that need in comfort—and keep me in a job too." For Uncle Jake collects clothes for the poor from the bundles and boxes thrown on the dump.

Jake Surface has another charity in a dog refuge, where he welcomes strays, homeless, forlorn dogs. Sometimes there are as many as sixteen dogs living in the empty barrels that Uncle Jake provides for kennels. For many of the dogs he finds homes, but those that no one else wants he keeps, and they repay his kindness by hunting rats on the dump by day and guarding the shack at night.

"I don't save money just for the sake of the money," he said. "I just don't have any need of spending it, so I put it away until I have enough to buy another house and then I know it's well and safely invested. I'm able to save at least ten dollars every week. That makes more than five hundred dollars every year, and five hundred dollars will buy a three- or four-room house in Waverly. And with the rents of the ones I have pilin' up, it won't take long to have all the town I can use.

"Maybe, then, I'll pick me out a house near the crick and just sit on the porch and fish—but probably I won't. More than likely I'll just keep right on workin'. The fact is, if I was worth a million, I'd go right on down to the dump ground to see what the newest load of trash had useful in it." LEONORA K. ROSS

Here's a way to get your children to eat and enjoy their vegetables!

This hearty soup is an ideal way to obtain the vegetable foods so vital to health

Some mothers say they don't have trouble persuading their children to eat all the vegetables called for in the proper diet for children. But with most mothers it is a real problem.

Bobby will not eat his carrots no matter how carefully mother follows all the suggestions laid down by authorities on child training. He just won't, and that's that! Or maybe sister won't eat tomatoes, which, as everyone knows, are such a valuable source of vitamins.

But there's no trouble getting the children to eat soup! They just love it. And when you give them Campbell's Vegetable Soup, they receive the benefits of fifteen choice, wholesome garden vegetables.

Here in one delicious soup are the very foods you are so anxious to have the children eat. And by the same token, it's just as healthful for the grown-ups. 12 cents a can.

The CHEVROLET

Outstanding Chevrolet

of Chevrolet History

-a Six in the price range of the four!

Never before has there been such a car as The Outstanding Chevrolet of Chevrolet History! Powered by a sensational new 6-cylinder valve-in-head motor . . . offering the beauty, style and comfort of magnificent new bodies by Fisher . . . available at prices so low as to be within easy reach of everybody everywhere . . . and so economical that it provides an average of *better than 20 miles to the gallon of gasoline*—it stands out as the greatest dollar-for-dollar value ever offered in any automobile. And by every standard of performance—power, speed, quietness, smoothness, comfort, economy and handling ease—it ranks as Chevrolet's greatest achievement. Visit your Chevrolet dealer today. See and drive this sensational automobile.

The Roadster, $525; *The* Phaeton, $525; *The* Coach, $595; *The* Coupe, $595; *The* Sedan, $675; *The Sport* Cabriolet, $695; *The Convertible* Landau, $725. All prices f. o. b. Flint, Michigan

How to Make Your Mind Behave

(*Continued from page 22*)

agreed Dr. Robinson, promptly, 'I will use myself to test my own theory. However, you are overlooking an important factor, that of time. I think you will agree that anyone not physically handicapped can learn to play the cello, for better or worse, with unlimited time at his disposal. How long before you will want me to give my first recital?'

"'Six months!' said one of the musicians.

"Dr. Robinson laughed. 'I was afraid you were going to say thirty days! Under ordinary conditions, thirty days should be sufficient, but it happens that I am very busy just now and I shall not be able to get a cello until my return to the city. So give me sixty days.'

"This was agreed to. Two months ater, in New York, I was present at a gathering including the musicians and others who had participated in the discussion around the camp fire. Dr. Robinson played for us, and he played well. His first recital,' as we laughingly called it, consisted of a number of pieces, including Massenet's 'Élégie,' Pergolese's 'Tre Giorni,' Handel's 'Largo,' and Mendelssohn's 'Spring Song.' All the professionals there agreed that the rendering of these selections was acceptable, and that, so far as the performance of one man could do it, Dr. Robinson had vindicated his theory."

NOW, as many readers of this magazine will know, Dr. Robinson is a noted educator, president of the College of the City of New York. Recently, influenced by the belief that in the way he went about learning to play the cello there might be a valuable lesson for the rest of us, I called at his office and made further inquiries about what I had heard.

"The incident, as you have heard it, is substantially true," he said. "Prior to that occasion I had never drawn a bow across the strings of a violin or cello. Nor there any secret about the small measure of success I achieved within sixty days. *I worked; I applied myself.* I had the great incentive also of feeling that I simply *must* make good. A friend of mine, an excellent violinist, though by no means a professional teacher, showed me the fingering to start with, and he helped me from time to time, giving me in all what amounted to several lessons. Also, of course, I used a method book.

"The important thing is that I have learned to love the cello. I have bought a real 'old master.' I look forward to having the time necessary for study under a professional teacher so that I may become really good player."

"No!" I returned. "The important thing is that you should have gone so far in sixty days. It seems hardly possible."

"As a matter of fact, success in a thing of that sort is comparatively simple to explain," was his answer. "It's a matter of knowing *how to make the mind behave.* I must learn to apply yourself; to fix attention, to concentrate on the project or problem in hand, with all your latent powers."

"How did you come to take up etching?" I asked.

"In March, 1927, an artist friend was painting my portrait. One day we went into an adjoining studio to visit another well-known painter and etcher. Never having seen an etching made, I asked him to show me how it was done. He took a little copper plate, polished it, heated it, and coated it with a waxy substance called 'ground.' Then he smoked the golden-brown ground till it was glossy black. Presently, he put the prepared plate in my hand, gave me an etcher's needle, and said, 'Sketch me!' Pulling an old hat down on his head, he struck a pose; and I scratched the ground with the needle so that the bright copper underneath showed through the scratched lines. He then put acid on the plate, and 'bit' it, so that all the exposed lines were 'etched' on the copper.

"The result of my first etching experiment was, of course, crude and we had a good laugh when the artist printed a proof from the copper plate. But I had become interested in the process. 'How long would it take me to accomplish something in the way of an etching that I might consider worth while?' I asked myself. I bought the necessary materials and took them with me when I went to the woods for my summer vacation. By the time I returned to the city in September, I had become an etching 'fan.' My spare time I gave to it with zest and enthusiasm, and I think I can say that I applied myself with all the powers that I have. It was in a spirit of fun that I sent some of these etchings to the jury for the Brooklyn exhibit. Believe me when I say I was surprised when two were selected for hanging along with the works of real etchers of long experience."

"And this again vindicates your theory that a man can succeed in any undertaking to which he applies himself?"

"Yes! Within limits! *Granted a sound body with normal sense organs, a man can develop in any direction he chooses in accordance with his general intelligence and his power to persist in the undertaking which he places before himself as an objective.*

"AS YOU see, there are in this statement two limitations First, a man must not be barred from undertaking some particular field of endeavor by physical incapacity. By this, I mean simply that a color-blind man cannot become a painter, a tone-deaf person a musician, nor a cripple an æsthetic dancer. Second, a man's success in any undertaking will be in accord with his general intelligence and his will power, or power to concentrate.

"The point I stress is that with most of us what we accomplish is nowhere near what we have a right to expect of ourselves in view of our latent abilities. What most of us chiefly lack is the power of application—concentration!"

"Concentration!" I exclaimed. "For most of us that's only a word! Just what *is* it?"

"I think of concentration as a kind of stamina, or mental tenacity, the result of a definite, consistent purpose. In the larger sense, when we speak of concentration, or the art of making our minds behave, we speak of the basic problem of life itself. For to concentrate requires *choice.* That is, we must fix our mind and energies on *one* thing, or on a few things, to the complete or relative exclusion of everything else.

"To what one thing, or to what few things, then, shall we choose to devote our attention? What things are worth so much that all others may justly be pushed aside, or given second place, that we may for an hour, for a day, for a week, or even for years or a lifetime, devote ourselves more or less exclusively to them?"

"Will you tell me, for the benefit of readers of THE AMERICAN MAGAZINE," I asked, "just what this power is and how one can acquire it?" And after a moment's reflection, Dr. Robinson gave me this answer:

"*The longer I live, the more deeply am I convinced that that which makes the difference between one man and another, between the weak and the powerful, the insignificant and the great, is the ability to choose wisely a few things from among the many that clamor noisily for attention and to pursue these chosen things with a minimum of wasted energy, mental and physical. From that point of view, the story of what I have learned about the right way to go about making the mind behave may be of some value.*"

And so the rest of this story, a careful report of two subsequent conversations with Dr. Robinson on the same subject, is given as follows:

"TO MY mind, the first point which should be emphasized about concentration is this: The men who achieve important positions in life depend less upon their natural special aptitudes or inherited gifts, than on this *acquired ability* to fix the attention upon any specific problem and to hold the mind to that problem until they have seen it through. Any man who gets anywhere has to learn to make his mind behave in the directions which it ought to take in order that he can persist in affairs that are vital for him, no matter what drudgery is involved.

"As for the mental processes involved in the act of concentration, the psychologists still are in the dark. Indeed, we are no nearer a solution of the mystery of the mind, in its ultimate direction and control, than we are, in the final analysis, to the mystery of electricity. Nevertheless, though we cannot satisfactorily explain what the mind really is, we *can* employ certain methods to help us control, develop, and apply our mental powers, just as we employ certain methods to generate, control, and use electricity, though we do not know what *this* force really is.

"Not as a trained psychologist, but as a practical man, I have found four simple principles of great use to me in developing and applying such mental powers as I have to the varied tasks and problems

Digitized by Google
Original from UNIVERSITY OF IOWA

that I have had to face. These four principles may be summarized as follows:

"1. A keen and active interest—zest—in the subject to be mastered or the task to be performed, is of primary importance if the mind is to work efficiently.

"2. We must learn to amass in an orderly way the raw materials necessary for our thinking. *Get the facts!* Stress, in due proportion, those which bear directly upon our problem. Subordinate, or sift out, those which are of minor importance, or irrelevant.

"3. If we want to think and hit hard, we must learn to take it easy! That is to say, the most *efficient* use of our mental and physical energy is likewise the most economical.

"4. There is evidently something in the mind which, after a sustained effort, becomes temporarily exhausted but recovers and goes on trying and trying, so that the ultimate solution of the problem may come in an altogether unexpected way. That is to say, at times our mental processes continue at work subconsciously; and, to a certain extent, we can *make the subconscious work for us.*

"AS YOU see from the above summary, the first principle with which we are concerned has to do with interest. In connection with such abilities as I have acquired as an amateur etcher and cellist, you may say that I was naturally interested in those tasks and made the more rapid progress because of this. Probably that is true. What progress would I have made had I *not* been keenly interested naturally? I cannot say, of course; but in the light of other experiences I have had, I feel certain that I could have found ways and means of stimulating in myself the interest necessary to have made my efforts equally effective.

"In many instances, the real problem involved in the business of life is to acquire and maintain an active interest in the tasks which are necessary to our progress, although they may not naturally appeal to us. So let me explain in some detail the method which I think should be applied when we find it difficult to fix the attention on tasks for which we lack interest.

"Years ago, I was employed as consulting editor to a large publishing house. It was my duty to submit a written report on the merits and the probable market for the manuscripts I read. During the winter, the work was of fascinating interest; but during the summer, when I was on my vacation in the Adirondacks, there were things that appealed to me much more. I found myself postponing my editorial work from hour to hour or day to day; or, if I did tackle the work, my mind might be given in part to other things. The effect of this divided interest on my work, I discovered, was the same as giving a nail ten or a dozen light taps with a hammer, instead of sinking it in to the head with two or three smart blows.

"Moreover, though this tendency to sacrifice my work to my recreational interests never went far enough to bring me a rebuke from the publishers, it left me with the uneasy feeling that I was evading an obligation. In consequence, I faced the situation squarely, analyzing it until I arrived at four important conclusions which I then stated to myself much in the way I am doing here:

"First, I desired to keep my contact with the publishing house because the work was congenial to me (except when it interfered with my vacation pursuits) and because I needed the compensation allowed.

"Second, prompt reading and appraisal of the manuscripts were necessary in order that the author might not be kept waiting and that the publisher's reputation for promptness and fair dealing might not suffer.

"Third, my own integrity was involved; for it was as important to the publishing house to have my best services during the summer months as in winter.

"Fourth, it was my duty to render as prompt and efficient services in the summer as in winter, or else to resign.

"Having presented the matter to myself in this way, I took steps to square my conduct with my conclusions, making my duties as consulting editor the first order of the day, subordinating all other engagements and pursuits. Eventually, this proved to be no hardship at all, but quite the reverse. I became interested, not only in the task, but in observing the efficiency of my own performance. The result was that I did the work better than previously and completed it in a shorter time.

"*Remember that lack of interest is commonly the cause of a kind of mental slacking, procrastination, and evasion of effort. As I have just indicated, we find it easy to fix our attention on those things that we like and want to do, but often these things are in conflict with what we should do for the sake of our greatest good in the long run. How then can we develop and maintain the necessary active interest in the tasks which do not at the outset appeal to us?*

"FIRST, we need a strong stimulus, which sometimes manifests itself in the form of 'ambition,' a keen desire to excel, and sometimes in the form of 'duty.' We can generally provide ourselves with the stimulus if we begin by ascertaining *why* the tasks we are tempted to evade *should* command our best efforts. The way to do this, I think, is for each to answer for himself a series of questions.

"So, if there is some subject or phase of your business to which you find it difficult to give your best energy and attention, consider it in the light of questions similar to those I outline below. Once a man has answered them seriously, fairly, I believe that he will decide the matter concerned is not worth his while and should be *chucked*, or else he will buckle down and pursue it with his best mental resources:

A

"1. Will a study of this subject, or application to this business matter, benefit me financially?

"2. Will it be to my intellectual advantage, making me more capable of dealing with other problems?

"3. Will it be to my moral advantage to face this subject and master it?

B

"1. What to me is the most interesting thing in this subject?

"2. Why is it interesting?

"3. What is the relative importance of this feature to the whole subject?

C

"1. What parts of this subject are hard for me to master?

"2. Are they hard because of my limitations in education?

"3. Are they hard because the subject itself is of no intrinsic importance?

D

"1. If it is to my advantage to master this subject, what steps shall I take to accomplish this?

"2. What competing interests must I shut out because they interfere with my own best ultimate interests?

"3. What courses of study should I pursue, and what experience should I acquire, to prepare myself intellectually for this problem that I have decided to master?

"I assume, of course, that once a man has answered these questions and decided to take up the problem and see it through, he will apply the best resources he can muster toward making good on that decision. As a result of effort, with a clear understanding why this effort is desirable, he will become *interested* in the task and in its efficient performance.

"Here the power of the will is in the ascendant. Now comes the discovery that there is in every man something which enables him to adhere to the execution of a fixed purpose in the face of competing interests and desires. In what at first he may have regarded as an obligation, he will discover—opportunity!

"NOW I speak of a *second* principle which must be observed if the mind is to yield the best results of which it is capable. Many of us, in dealing with the problems that arise in everyday life, in school, at home, in business, seek to reach conclusions and decisions without first adequately informing ourselves of the facts on which a sound judgment can be based. The principle I have in mind can be very simply stated—get the facts! Remember that when the mind is 'going in circles,' over and over the same matter, without new ideas occurring to us, without our conclusions sharpening and prompting us to act, the cause is presumably a lack of that information on which a definite decision could be based.

Successful results cannot be obtained from an effort of the will in a vacuum.

"And here a word about the *third* principle for aiding us to make the most of our mental resources:

"When I was a young man and found myself working under pressure, with a desire to accomplish varied tasks in the shortest possible space of time, I used to rush at them and get into a state of mind which we commonly describe as 'steam up.' Later, I learned that this was not the way in which really effective men handle themselves. Rather, such men are completely at ease even under urgent and distracting circumstances.

"I have in mind a great financier who, calm demeanor at all times, no matter what disturbing news was brought to him, even when he was engaged in digesting important documents and considering important mergers, made a strong impression on me. There is a judge of the Court of Appeals of New York State whose mind I have watched in action. How easily it travels along with the thread of counsel's argument even in the midst of exciting disputes! Never disturbed, he takes things easily, in his quiet, even way, asking a question now and then which shows that his thought has penetrated beneath the surface.

"Suppose you are going to drive a golf ball from a tee. Any golfer will tell you that the body as a whole should be relaxed and the mind serene, but with the eye intent and fixed upon the ball. In other words, in the midst of relaxation there is mental concentration in eye grip. At the right moment, snap goes the wrist and away zips the ball for two hundred and twenty yards!

Buy Later...

First Make This Remarkable Test for 7 Days . . . Prove This Unique Shaving Cream's Supremacy . . . *Buy* Only if Convinced.

Mail the Coupon Now.

GENTLEMEN:

Most manufacturers clamor for immediate sales. "Buy this!" "Buy that!" they urge. But we have found success in urging men *not* to buy. Rather, to find out at our expense if they like our product. For if they do, they'll buy, and they'll tell others.

Such is the basis of the spectacular success of Palmolive Shaving Cream.

More than 80% of the men who make our test become regular users. Remember they, like you, were wedded to some other shaving cream before.

The coupon is for your convenience. Even though you customarily do not use coupons, please send this one in. In fairness to yourself and to us.

How it was discovered

When we set out to make a shaving cream, we asked 1000 men what their wishes were. They gave us four objectives. Our great laboratories set to work. Time after time we tried, 29 in all, before we got the formula that brought success.

To the 4 things men asked, we added a fifth. Today we believe Palmolive Shaving Cream is supreme for shaving comfort. Men tell us no other compares.

These 5 things

The things you get in your 7-day test of Palmolive, are things you have long sought:

1. Multiplies itself in lather 250 times.
2. Softens the beard in one minute.
3. Maintains its creamy fullness for 10 minutes on the face.
4. Strong bubbles hold the hairs erect for cutting.
5. Fine after-effects due to palm and olive oil content.

Now we ask a test

No doubt your present shaving preparation suits you — still there may be a better way. If there is you want to know it. So won't you let us prove, on *your* face, how excellent this unique product is? It's up to us to prove our point, you've lost nothing if we fail. Please mail the coupon now.

PALMOLIVE RADIO HOUR — Broadcast every Wednesday night—from 9:30 to 10:30 p. m., eastern time; 8:30 to 9:30 p. m., central time; 7:30 to 8:30 p. m., mountain time; 6:30 to 7:30 p. m., Pacific Coast time—over station WEAF and 39 stations associated with The National Broadcasting Company.

To add the final touch to shaving luxury, we have created Palmolive After Shaving Talc — especially for men. Doesn't show. Leaves the skin smooth and fresh, and gives that well-groomed look. Try the sample we are sending free with the tube of Shaving Cream. There are new delights here for every man. Clip and mail the coupon now.

"Similarly, when doing our hardest thinking, there should be a general relaxation and serenity of body and mind, but with a deliberate focusing of the mind and a maximum of intensity in *one* direction—that is to say, on the problem involved.

"*When we concentrate intently on any mental problem, the breathing is reduced to a minimum and the muscles are relaxed. If our concentration is complete, there will be absolutely no tenseness in any part of the body; but there will be a great degree of tenseness within the mind itself.*

"Now, the nature of this tenseness I do not know, and, so far as I have been able to discover, no psychologist has been able adequately to explain it. The important thing is that this focused intensity of mind, with complete relaxation in all directions except that of the predetermined goal or problem, is a knack that can be acquired, once a person has got hold of the idea. That is why I have said that if you want to think and hit hard, you must first learn to take it easy.

"In my own experience I have found that some very simple devices suffice to help maintain or restore the relaxed condition that is essential for successful concentration. In conferences, or in the privacy of my own study, when interrupted by disturbing events, or when I have long been working on some particular question and find myself getting high-strung and tense, I pause deliberately in my speech or meditations, relax, breathe deep'y, and do not resume until the tense condition has abated. Likewise, for one's best mental output, all physical conditions, such as a collar that is too tight, a buzzing fly, a desk that is too high or a chair that is uncomfortable (all those things that not only distract, but cause fatigue and hence engender tenseness), should be remedied.

"OF EQUAL importance with this principle of relaxation is another, our *fourth*, which I am going to mention now. Fixing the attention upon one problem for too long at a t me may cause the mind to 'go stale' in much the same way as the athlete's muscles do from overtraining. For relief, the athlete rests completely, and comes back the better for it. Similarly, physical diversion or a change in the form of our mental activity, may pave the way for a solution of the long-pondered problem.

"As students, many of us have had this experience: After working hard at night on a problem in mathematics without being able to solve it, we have solved it with ease on the following morning. Thus, as I have said, *there is evidently something in the mind which, after a sustained effort, becomes temporarily exhausted but recovers and goes on trying and trying, so that when a person sleeps or turns his attention to other things, his mental processes continue at work subconsciously.* Again, the exact nature of this process I cannot tell you, for no one knows. Though we cannot explain it, it is nevertheless something that we can use.

"My attention has been called, in this connection, to a story told by Nikola Tesla in this magazine some years ago. Tesla, as you doubtless know, has contributed to our civilization numerous inventions of great value in the field of electro-mechanics, telegraphy, wireless, telephony, and power distribution. As a young man, he studied engineering at the Polytechnic Institute in Gratz, Styria. During his second year there, a Gramme dynamo was received from Paris. With a horseshoe form of field magnet and a wire-wound armature with a commutator, the machine was of a type now antiquated. The brushes sparked badly while it was being demonstrated by the professor, and it was young Tesla who suggested that perhaps it might be possible to operate a motor without such appliances.

"'That,' exclaimed the professor, 'would be wonderful! Nothing less than the equivalent of a perpetual motion scheme, young Mr. Tesla! I congratulate you!'

"And the whole class laughed.

"FOR four years, over long periods, young Tesla did not cease to ponder and concentrate on the problem of constructing a motor without brushes. Owing to illness, which was in part due to vexation because of his failure to conceive it, he was finally obliged to abandon the task. In 1881, when convalescent after that illness and while in Budapest studying the recently installed American telephone system, he was walking in the city park and discoursing with a friend upon matters far removed from that of the motor without brushes. Reminded of a passage from Faust, he recited it aloud:

"'The glow retreats, done is the day of toil;
It yonder hastes, new fields of life exploring;
Ah, that no wing can lift me from the soil,
Upon its track to follow, follow soaring!'

"And as he spoke these words, this uncanny, latent power of the mind to which I have referred manifested itself. The vision of his long-sought induction motor, complete, operable, flashed upon him. With his walking-stick, he drew diagrams of it in the sand; the very same diagrams which he was to show six years later before the American Institute of Electrical Engineers; diagrams of a discovery known as the 'rotating magnetic field,' an invention which produces a sort of magnetic cyclone that grips the rotable part and whirls it, exactly what the professor had said could not be done. The same principle is employed today in the induction motors that operate our trolleys and subways and furnish electric power the world over.

"In a very small way, events similar to the epoch-making inspiration that happened to Tesla, have happened to me and to numbers of my acquaintances.

"Among my friends are a number of advertising men. They tell me that not infrequently for days they have sought for the pithy phrase that will make famous and sell some new product; and that frequently they have the same experience I have indicated. That is, the happy phrase, the important slogan, comes to them out of a clear sky, not when the mind is intent on the problem, but when the mind has apparently been interested in other pursuits, such as motoring or golf.

"This work, accomplished by the mind without our consciously directing its activities, would appear to be the very opposite of concentration. But remember that without the intense, concentrated effort that went before, such flashes of insight are not apt to occur.

"*Once the mind is trained in working and thinking in certain directions and is stored with the material of accumulated experience, we all may look for flashes of insight in this way. It is a good thing occasionally to let the mind have its own way, to give it a rest and to let the subconscious work for us.*

"Regarding this principle of letting up and giving the mind a chance to have its own way with some problem that has too long puzzled us, there is a conversation recorded in Herbert Spencer's autobiography which, I think, will interest us all. George Eliot had remarked to Spencer that for a man who had done so much thinking and on such profound subjects his forehead was singularly free of wrinkles, and she asked how that came to be.

"'I suppose it is because I am never puzzled,' replied Spencer.

"'That is the most arrogant thing I ever heard,' returned the novelist.

"'Not at all, when you know what I mean,' he returned; and thereupon he gave her a most striking account of his own mental processes:

"'The conclusions to which I have com from time to time have been arrived at unawar and as the legitimate outcome of a body thought which slowly grew from a germ. Som direct observation or fact met with in readi would dwell with me, apparently because of significance. A week later, possibly, it would remembered; and further thought about would lead to the recognition of some wi application than I had at first perceived. Th little by little, in unobtrusive ways, witho conscious or appreciable effort, would grow coherent and organized theory.'"

IT WAS here that I asked Dr. Robins whether he could tell us of pract exercises to be used in developing ability to fix the attention and apply mind.

"Certain forms of activity requir patience and stick-to-it-iveness might of benefit in that way," he answer "Close embroidery is an excellent pur for girls and raffia work or putting c seats in chairs for boys. Mechanical p zles such as opening Chinese boxes getting the pigs in clover are likewis value for both boys and girls, and for same reason. Exercises in multiplicat subtraction, and division accomplis similar purpose.

"One of the best exercises I kno for developing *skill* in concentration young and old, is to read carefully a p graph of a book, then turn the book d and name the essential points cover the paragraph and in the same sequ Once you can state points in a short p graph, practice doing the same wi longer paragraph, then with two p graphs, and continue extending the graphs in length and number.

"There is a form of concentration requires a logical sequence of though this, practice can be acquired by list carefully to a speaker, jotting dow main points of his address when through. With these points memo develop the speech over again in own way.

"Big men in any field of true end are noted for their ability to anal situation and to reduce it to its si terms. This form of mental activ logical analysis, which is the reverse gathering of material and organizi speech of the speaker. In developi

ability we might make judicious use of our daily newspapers. When reading of some situation, domestic, legal, political, international, or, for that matter, scandalous, instead of taking only a passive, curious interest, ponder the matter with care until you can give satisfactory answers to the following queries:

"1. Who are the people involved?
"2. What did they do?
"3. What would be their habitual way of doing and seeing things?
"4. As reported in the news account did they act true to form?
"5. What will be the effect upon them as individuals?
"6. What will be the reaction upon society?

"IN THE daily output of some of our newspaper columnists, we frequently find amusing examples not only of craftsmanship but of a peculiar facility in concentration. Imagine how one of these clever writers proceeds. In conversation he hears someone remark that the early bird catches the worm. He thinks to himself, 'That's a terribly old saw!' and, almost instinctively, he reverses that ancient bit of wisdom and, if the idea is good enough, writes a quatrain to the effect that it's the early worm that gets caught.

"On reading in the news column of an automobile collision in which both drivers were killed and one was plainly in the right, he thinks of something like this:

"'Here lies the body of Thomas Gray,
He died maintaining his right of way;
He was right, dead right, as he rolled along
But he's just as dead as though he'd been wrong.'

"Or perhaps, on a rainy day, some genial person remarks to our columnist that it's raining alike upon the just and the unjust; and, quick as a flash, reminded of a painful experience perhaps, the columnist sees the effect of an opposite statement of the old saying, with amusing results for his readers the following day:

"'The rain it raineth every day
Upon the just and unjust fella,
But most upon the just (they say)
For the unjust has the just's umbrella!'

"Such trifles as these require, to begin with, alertness and humor in possessing yourself of a point that is worthy even of doggerel; and up to the time when one can condense and express the point in a pithy, witty way, the effort involved is a splendid exercise in concentration. Try it with some of the proverbs of the people, such as birds of a feather, rolling stone gathers no moss, never rains but it pours.

"Of course, the very best exercises in concentration spring from practical necessity. One concentrates on acquiring what he wants and needs. Teachers do well by their students if they can set objectives before them which seem real. They should be arranged so that the resulting line of thought to be pursued fits in with the course of study.

"I cannot close this talk without reminding you of what a few of our notable men have said on this subject of concentrated energy. Ponder these sayings and you will see that there is a common denominator of meaning and emphasis in them all; namely, that the great difference between those who achieve and those who fail consists not so much in the amount of time devoted to work by each, but in the degree to which each intelligently applies his powers, mental and physical, to one purpose. First, then, Charles Kingsley:

"'I go at what I am about as if there were nothing else in the world for the time being. That's the secret of all hard-working men.'

"And Carlyle:

"'The weakest living creature, by concentrating his powers on a single object, can accomplish something; whereas the strongest, by dispersing his over many, may fail to accomplish anything.'

"And Emerson:

"'The one prudence in life is concentration. . . . Everything is good which takes away one plaything and delusion more, and sends us home to add one stroke of faithful work.'

"Charles Dickens attributed his own most amazing and phenomenal achievement as a novelist not to any rare quality of imagination, but rather to the thing we have been discussing, the ability to make his mind behave; as witness:

"'The one serviceable, safe, certain, remunerative, attainable quality in every study and pursuit [said Dickens] is that of attention. My own invention, or imagination, such as it is, I can most truthfully assure you would never have served me as it has but for the habit of *commonplace, humble, patient, daily, toiling, drudging, attention.*'

"ONCE a friend asked Edward Bulwer-Lytton, the famous English writer and diplomatist, how it was that he got time to write his books, and also to carry on his public career and get so much other work done. His reply was a remarkable tribute to the value of concentration:

"'I contrive to do so much by never undertaking to do too much at a time [was Lord Lytton's answer]. A man, to get through work well, must not overwork himself; or, if he does too much today, the reaction of fatigue will come and he will be obliged to do too little tomorrow.

"'Now, since I began really and earnestly to study, which was not until I had left college and was actually in the world, I may perhaps say that I have gone through as large a course of general reading as most men of my time. I have traveled much and I have seen much. I have mixed much in politics and the business of life; and, in addition to all this, I have published somewhere about sixty volumes, some upon subjects requiring special research. At what time do you think, as a general rule, I have devoted to study, to reading and writing? Not more than three hours a day; and, when I am at liament is sitting, not always that. *But then during these three hours, I have given my whole attention to what I was about.*'"

"I'M THROUGH," said overalled "Andy" Maloney, as he quit the coal fields of Pennsylvania. "No more mining for me!" Twenty-eight years later Andrew Maloney returned as president of the Philadelphia and Reading Coal and Iron Company—a company with assets of $130,000,000. Next month you'll read what happened in that interval of years which caused this erstwhile miner to be chosen for this high position

The Trail Eater

(*Continued from page 57*)

. . . I have t—that little curse-anointed Nina Bernard!"

"'Tis you who's the mind reader, Mistress!" exclaimed Lim, in tones of admiring astonishment. "Whin I wiz del'verin' wather—" And he was off on one of his long yarns.

As soon as the meal was over Kerry went back into the Kashim to look again at his dogs. He was troubled to find that several others had developed sniffling noses. He decided to consult Doorknob about this as soon as Lim should leave; knowing the old fellow's propensity for gossip, he was always careful to keep from Lim anything he did not want bruited about the town.

Later in the evening the usual crowd began to assemble about the roaring Kashim stove that was successfully defying the outdoor temperature of forty below. Lim, with Crooger beside him, was busy telling new arrivals all about the fair candidates for the Sweepstakes queenship, when the tinkle of harness bells and high-pitched feminine laughter sounded outside. A few minutes later the front door opened with a rush of vapor, and a crowd of hilarious fur-clad men and women came in, stamping and calling greetings.

KITTY KRAMER led the procession, her fresh, cold-whipped face glowing above the mink cloak the doctor had managed to buy her for Christmas. She rushed directly to Kerry, with extended hands.

"Oooooo, Kerry!" she crowed joyously. "We've come to take you with us to the Valentine Ball."

"Noooooo, Kitty!" Kerry mocked her tone, and laughed as he put one of her hands back against her side, and then the other. "You know very well I'm tra and can't go to any ball!" By this tir had become accustomed to Kitty's laying him on the street or in stor coax him to attend some social fun

Kitty pouted and appealed to others, several of whom broke into de protest. Nina Bernard sang out: loose for once, Kerry. All work ar play—well, you know what that do little boys! And besides," she added "Barbee Neilan is going. Yes, Ra actually taking his infant with hin time!" She laughed, shooting a mal glance at Kitty. "You knew that, da didn't you?"

"Oh yes, dear!" Mrs. Kramer thr friend an ingenuous smile. "I s know it. 'Twas I that talked myself in the face persuading Rance and Neilan to let her go."

PLYMOUTH

Still the biggest *dollar value* in the lowest-priced field

ll-Size and Comfort—Plymouth actually the only full-size car in its ice field, offering generous head om, leg room and elbow room for e adult passengers.

arked Economy—Modern, high-pression, 4-cylinder, L-head en-e gives marked economy of opera-and upkeep. Longer engine assured by exclusive torque re-on neutralizer, rubber engine untings. Modern positive pressure l oiling system.

draulic Brakes—Chrysler light-n internal-expanding hydraulic her-proof four-wheel brakes are by Plymouth—a feature pos-d by no other car near its price.

ressive Power—45 h.p. engine characteristic Chrysler power, and acceleration coupled with lievable smoothness of opera-Speed with greater safety due ger crankshaft bearings, inher-alance and general ruggedness struction.

WHEN all is said and done the greatest value a motor car can hand back to the buyer for his dollars is the comfort he gets out of every minute and every mile of driving and riding.

This greater degree of hour-by-hour, day-by-day and month-by-month comfort depends first upon that certainty of performance which Chrysler engineering has always given—and gives in superlative measure in the Plymouth.

But it also depends upon the riding and driving *proportions* of the car—the ease and restfulness of the seats and springs, but above all the *size,* which in Plymouth enables every one of the five passengers to relax and stretch without being cramped.

Plymouth owners appreciate further the safety of hydraulic internal-expanding weather-proof 4-wheel brakes which give instant and always positive stopping in any weather.

In action, the Chrysler-built Plymouth is a gem of soft, velvety roadability with a modern, scientific power plant such as you can always count upon from Chrysler engineers.

And a model of economy—not merely in gas and oil mileage of its simple, sturdy, 4-cylinder, L-head engine, but in freedom from complications and a strong simplicity of parts which holds the upkeep costs down to a minimum throughout the year.

Give yourself the enjoyment of half an hour behind the Plymouth wheel today.

Tolovana sat quietly sewing by the table. Kitty had greeted her upon entering, and now, catching a glimpse of her through the crowd, she crossed the room to seat herself sideways on the edge of the table near her. After a few commonplace remarks, she suddenly leaned down with a gay, friendly air of secrecy.

"Mrs. Ballinger," she whispered behind her hand, "under our wraps we're all in the jolliest costumes you ever laid your eyes on. Wouldn't you and the boys sitting around here like to see us before we go on to the Fort? We could fix ourselves up in a jiffy!"

An understanding smile quirked the corners of Tolovana's mouth. She was sure that Kitty in this instance was prompted solely by a desire to display her charms in a way that would bring her votes in the coming contest. But Kitty's eager smile was disarming, Kitty's warm white hand lay confidingly on her shoulder.

Tolovana sent a quick glance toward Nina Bernard, who had ignored her. There was a malicious little glint in her eye as she looked up into Kitty's glowing, friendly face and nodded her head.

The cloaked merrymakers were herded into Kerry's living-room to remove their wraps and complete their costumes. The floor in the Kashim was cleared, while spectators perched themselves on boxes, barrels, and tables backed against the walls. Lim put Crooger beside the phonograph to get him out of harm's way, and then took charge of the instrument. He wound it up and turned it on. The battered tin horn blared out the popular syncopated tunes of the day, the door leading from the Kashim to Kerry's living quarters was thrown open, and Midas Bernard came capering out.

The watchers broke into a delighted roar.

The banker had got his pudgy figure into dangerously snug brown silk tights. Attached to his back so that it seemed part of him, was a huge, fuzzy, brown caterpillar. The round-eyed, simple face nodded high above his head with the ludicrous solemnity of the inanimate. The other end of it curved up behind him like a tail, and it was plain the little man delighted in every waggle it made as he cavorted to hand the others in through the doorway. He announced them one by one, waving them grandly to their places on the floor for a coming Virginia Reel.

THE sourdoughs clapped and Crooger barked with varying degrees of intensity. Then, with a lull in the music while Lim changed a record on the phonograph, a silence which made Midas's next announcement doubly effective:

"Ladies and gentlemen—'The Golden North'!"

Kitty Kramer glided into the doorway and stood there, a big, laughing woman with her head thrown back, holding before her from a cord about her neck a frost-white gold-pan heaped with simulated lumps of gold. Her unbound hair waved in a red-gold mass about her bare shoulders. Nugget chains encircled her head, her throat, her beautiful white arms. They cascaded over the sheathing slip of snowy velvet that outlined her round breasts and ended at her gold-clad knees in a slashed fringe glittering with mica frost. White deerskin moccasins gave her a lynx-like gait as she came swaying into the Kashim.

Every man present came to his feet in a salvo of applause, seeing in her the personification of that white and gold lure which has drawn to the North the adventurers of all times.

The revelers swung into the Virginia Reel. Midas called off from the top of the table, and the delighted sourdoughs sitting against the walls clapped out the dance rhythm as they stamped their mukluked feet. Kitty did not take part in the Reel. She had put aside her decorative but hampering gold-pan and was passing along the line of spectators listening avidly to their compliments.

But her brilliant eyes followed Kerry. Ever since the day she had watched him fight the wolf-dog in Barracks Square he had possessed a growing appeal for her. She saw him make his way through the gathering toward the back of the Kashim, where his racers were quartered, and she quietly followed him, ignoring the sign that prohibited visitors from entering the racers' stalls.

Kerry was kneeling beside Duna, anxiously feeling the leader's muzzle for signs of fever, when he glanced up to find Kitty in the dimly lighted stall. Surprised, he got to his feet, wondering what caprice had prompted her intrusion. She laughed softly and with confident step came close.

AS THE music, the laughter, the thump of dancing feet emphasized the intimate security of their retreat behind the partition, her childlike naïveté slipped from her. She reached for his hand and held it between her smooth, firm ones, looking at him, silent, provocative, her face so near his own that he was aware of the perfume of her hair, the scent of wine on her mouth.

"Oooooo . . . Kerry . . ." The caressing tone put Kerry on his guard. In a hearty voice calculated to dispel any moment so weighted with amorous possibilities, he inquired, "Well, Kitty, what do you want from me now—my votes for Sweepstakes Queen, my leader, or—"

"No, no!" She backed him impatiently against the side of the stall, and holding him there at arm's length measured him appraisingly—his dark, disheveled hair above his lean brown face, his throat rising firm and bare from the turned-in neck of his blouse. There was no mistaking the look in her eyes. "Kerry—let's drop this pretense! You know very well why I want you to come to the Fort ball tonight—" With a quick intake of breath she crushed his hand against her warm, soft body, where the rapid beating of her heart pulsed against her velvet gown.

"Now, now"—he laughed as he put her gently from him—"don't try to rush me that way, Kitty. You've got plenty of men for your party."

"I don't want them! I want you—I want *you*—" Her hands were at the neck of his blouse, moving along his bare throat. "Oooooo . . . Kerry . . . You *are* coming . . ."

Though Kerry was not unmoved by the sheer physical appeal of her, he grasped her wrists and drew away her clinging fingers. "Get this straight, Kitty. I'm not going with you."

"Oh, oh, oh!" With a low wail, she was in his arms. "Why won't you ever do anything for me, Kerry? . . . Don't shove me from you. D-o-n'-t—" She relaxed against him, and twining her bare arms about his neck tried to draw his face toward her seeking mouth.

None too gently he broke her hold. For a moment he looked at her; then the incongruous and farcical aspect of the situation struck him—what a scene to happen in a dog stall! He laughed.

The laugh did what words could not accomplish. "You fool!" Her voice was a furious quaver. "I hate you! I hate you!"

Blind to direction, she backed away and stepped flat on Duna's outstretched paw. The dog's yelp brought a vicious kick from her moccasined foot. With a vindictive glance at Kerry, she swept from the stall, grazing past Luce Barton, who at the moment sauntered inquiringly into view.

The lawyer watched her pass, then turned a knowing eye on Kerry.

That young man, alternately swearing and murmuring endearments to Duna, was on his knees examining the dog's trodden foot. When he became aware of Barton's presence he glanced up, his lips tightening, his eyes narrowing. Without taking his gaze from the lawyer's face he came slowly to his feet. Barton returned his look while he drew the smoke of a cigarette into his lungs and exhaled. Then he turned and strolled nonchalantly back to join the noisy party on the other side of the partition.

Under the low-hanging stars of the Arctic night the Kashim yard was clamorous with departing revelers. When the last sleigh had gone, Kerry stood alone at the Kashim gate watching the noisy cavalcade dash down the moonlit trail. . . . Barbee would be at the Valentine Ball tonight. . . . Little dark-haired Barbee with her uptilted laughing face, her eyes shining behind the fringe of her lashes, and the tiny wrinkle coming adorably across the bridge of her nose. . . . He was seized with a sudden longing to go there, to see her, dance with her, be care-free and happy with her. But that was not for him.

WHEN he went back into the Kashim he found only Tolovana and Lim. Lim knob before the big stove, and he went directly to the racers' stalls. A few minutes later he called to Doorknob.

Tolovana sauntered into the living room to put on her parka. When she turned the men were still behind the partition with the dogs. Their voices came to her—low, worried. She listened a moment, a look of apprehension growing in her eyes; then she walked quickly toward the racers' quarters.

The two men were kneeling in the middle of the floor. Ten out of fifteen racers were huddled about them—dispirited, dull-eyed, sniffling. "Distemper!" Doorknob was concluding in slow, unbelieving tones.

Kerry, with eyes grown glazed and unseeing, came to his feet and stood leaning against the end of a stall. Here was a calamity undreamed of—ten of his dogs with distemper, and the Sweepstakes only six weeks away. Ten of the young dogs he had trained so patiently and so well were done for, so far as the race was concerned, and the Syndicate had made it impossible for him to pick up another team before April.

"That finishes us, my boy!" Doorknob said miserably.

Kerry's dull eyes passed over the

You must meet these cold weather demands if you want winter lubricating

Quality

With Gargoyle Mobiloil Arctic in your engine during cold weather you notice *immediately* the quick, easy starting which it gives. But unlike many so-called "winter" oils, Mobiloil Arctic has rich lubricating quality as well. So—

1 Mobiloil Arctic distributes freely to every friction surface—whether your engine has four, six, or eight cylinders—thereby protecting against wear and tear.

2 Mobiloil Arctic has a fluidity which permits free movement of the pistons—whether cast-iron or aluminum alloy—thereby preventing oil-drag or loss of power.

3 Mobiloil Arctic is sufficiently rich to give a tight piston seal—thereby protecting your engine against excessive gasoline dilution when you use the choke.

4 Mobiloil Arctic resists to a marked degree the congealing action of freezing weather even though your oiling system is exposed directly to the cold air.

5 Some of the cars which require Mobiloil Arctic in winter are: Buick, Cadillac, Chevrolet, Dodge, Essex, Ford (Model A), Hudson, Hupmobile, LaSalle, Marmon (8-cyl.), Nash, Oakland, Oldsmobile, Overland and Overland-Whippet, Packard, Reo, Studebaker, Willys-Knight. If your car is not mentioned here see the complete Mobiloil Chart. Mobiloil dealers have it.

You are always sure of correct cold-weather lubrication with

FREE: A week's better shaves. Just mail the coupon below.

Can you get by with one shave a day?

Or do you feel at five that you really ought to shave again?

A LONGER-LASTING SHAVE—because it's a closer, smoother shave—is possible. We willingly prove it. Colgate chemists have achieved a unique lather. Different because of small bubbles. A scientific way to intensify the moisture content of lather. A principle which prepares the beard for closer, cleaner shaving. Hence a longer-lasting feeling of being well-groomed.

Two vital facts—easily proved

Millions of men prefer Colgate's because they've found—as you will—that as soon as you lather up with Colgate's small-bubble lather, two things happen: 1. The soap in the lather breaks up the oil film that covers each hair. 2. Billions of tiny, moisture-laden bubbles seep down through your beard....crowd around each whisker—soak it soft with water.

Instantly your beard gets moist....easier to cut ....scientifically softened right down at the base ....then your razor can do its best work.

Ordinary big-bubble lathers have more air, less moisture. A comparison will prove Colgate superiority. Note our coupon offer of a week's free trial. We will send also, a sample of After Shave, a new lotion—refreshing, delightful—the perfect shave finale.

COLGATE LATHER

Colgate's lather (greatly magnified) showing moisture contact with beard and minimum air. A common-sense principle scientifically authenticated and proved out practically by millions of men.

ORDINARY LATHER

Ordinary, big-bubble lather (greatly magnified). Note air-filled bubbles which can't soften the beard efficiently. Only water can do the job. Only small bubbles permit sufficient water.

COLGATE, Dept. B-1708, 595 Fifth Avenue, New York

Please send me, FREE, the seven-day trial tube of Colgate's Rapid Shave Cream; also a sample bottle of "After Shave."

still occupied. Duna and Tokon were left to him. Mukluk, Tong, and Karluk also showed no symptoms of the disease; they were all older dogs and practically immune. Yet he never could win a place in the Sweepstakes with only five dogs. . . .

Then something stern and indomitable within him scored him: "*You could not win a place; but you would run anyway—if you were not afraid.*"

"Finishes us—nothing!" he snapped, with a sudden, determined setting of his jaw. "I'll run the five we have! And now," he directed sharply, "let's get these sick pups out of here and—"

"Put 'em in my empty kennels," finished Tolovana, coming forward and placing a sympathetic hand on Kerry's shoulder. "I'll help you take care of 'em, boys."

He pressed her fingers in silent gratitude.

BUSY hours followed. The sick animals were all taken to Tolovana's kennels and made comfortable. Kerry, in the meantime, was back at the Kashim thoroughly disinfecting the dog quarters and arranging temporary beds in front for the pitiful remnant of his team.

The night was far gone, and he was still busy when Tolovana and Doorknob came back to the Kashim. The two wore an air of pleasant conspiracy. Tolovana began bustling about, brewing a pot of tea. She poured this for the men as they sat resting before the Kashim stove, then she announced in a businesslike way: "Kerry, let's get down to hardpan. You're a game kid"—she nodded her cropped head sagely—"but you can't run five dogs in the Sweepstakes. Now then . . . wait a minute, Kerry. W-a-i-t a minute—Wally is on his way home at last. He should be here in ten days. When he comes, take the pick of our team, put them with your five, train them together for the time that's left you, and—"

"Tolovana!" With one bound he was beside her, his hands on her shoulders, eager eyes searching her face. "Tolovana, do you mean that?"

"Sure, I mean— Look out for my t[illegible] you idiot!"

But her cup went flying as Kerry caught her under the arms, lifted her exuberantly into the air, and then set her down again on the table. He bent over and kissed both her rough little hands. "Tolovana, you're—you're an angel," he said huskily.

"By heaven!" blurted Doorknob, "I don't know the female of the species until you live with her in Alaska! Belle"—he thrust out his freckled paw—"put there. You're one of God's own women."

Kerry began eagerly to outline his plans.

"Wait a minute, kid," drawled Tolovana. "You've got Luce Barton to fix on yet. He'd just as soon lose his right as see you get a string of fresh pups; we've got to keep our scheme under cover until Wally shows up. Of course we can keep the camp from knowing about the distemper; but we've *got* to keep 'em from knowing you're going to use Wally's dogs. If Luce once gets wise to that—"

"And you don't want to forget," interrupted Doorknob, "that it's the middle of February. By the first of March you've got to have your new dogs registered, your name, on the books of the Club.

Wash Wounds

with soap and water

When an accident happens, the cut whether shallow or deep should be washed clean as quickly as possible. Put enough soap into boiling water to make the water sudsy. When the water cools sufficiently wash out the wound with a sterilized gauze-pad or cloth. Cover with sterilized gauze.

© 1929 M. L. I. CO.

NO wound is so slight that it may not become infected and cause death.

If a wound which breaks the skin is not promptly and correctly treated, there may be immediate infection from germs that are found anywhere and everywhere—streptococcus, staphylococcus and saprophytes.

It should be assumed that all accidental wounds may be infected.

During the World War medical science discovered that by using pure soap and boiled water, fresh wounds, big and little, could be thoroughly cleansed, thereby reducing to a minimum the danger of infection. In other words, the germs were literally washed out of wounds.

Small wounds, immediately cleansed and properly covered with sterilized gauze will, as a rule, heal very promptly without further treatment. But if germs are covered over and bound into wounds, or are sealed in by drawing the skin together, infection is almost certain and serious complications may result.

In applying soapy water to a new wound, it is best to use a pad of sterilized gauze. Any pure soap will do—liquid, soft or hard—but a liquid soap as free from alkali as may be obtained is best. Otherwise the wound may sting or smart. But the slight temporary discomfort caused by a liberal application of soap and water is of little consequence when compared with the protection afforded by a thorough cleansing.

Common sense must determine how long a fresh wound should be washed. But remember always, the washing must be *thorough* so that the soap bubbles may do their part and lift the germs away from the flesh. The water carries the germs away. The wound must be clean before healing begins.

Warm water that has been sterilized by boiling is safest and the utmost care should be taken to keep the fingers from coming in contact with the surface of the wound.

Wash big or little wounds with soap and water at once—as First Aid before the doctor comes.

According to the latest available United States Census figures, septicemia (blood poisoning) was the direct cause of 1,178 deaths in the year 1925; and a contributing cause in more than seven times as many deaths.

The Metropolitan Life Insurance Company will be glad to mail to each family one copy of its booklet, "First Aid in the Home". It tells how to sterilize cotton or linen cloth when sterilized gauze is not available and gives many other valuable First Aid directions. Ask for Booklet No. 29-A. It will be mailed without charge.

Bubbling love of fun—how mothers harness it

to guide their youngsters

"MAKE a game of important habits and children respond readily," says Professor Michael Vincent O'Shea, famous writer on child guidance.

How helpful to mothers—these new, better ways of child guidance, approved by psychologists. Any day is so full of problems! By the time her youngster's tucked in bed a mother has made as many decisions as the president of a corporation. Striking the balance between being too "easy"—and not forgetting children's love of fun.

One of the first problems is at the breakfast table. Mothers are anxious to see their children start off with a *hot, cooked* cereal. Nation-wide tests have shown the importance of this habit. Eating hot cereal in the morning often determines children's success, at work and play. That is why this rule hangs in more than 70,000 classrooms:

"Every boy and girl needs a hot *cereal breakfast"*

And because no mother wants her child at a disadvantage, many take the joy out of the morning by saying, "Hot cereal is so *good* for you!" If they said that of candy the same thing would happen. The child decides that hot cereal—his bowl of Cream of Wheat—or—of oatmeal or whatever it may be—is the last thing on earth he wants.

Then begins coaxing and cajoling. And all the while thousands of other mothers are getting results in a far pleasanter way!

That way is an ingenious plan—the H. C. B. Club—devised to help mothers. This Club arouses youngsters' enthusiasm for their hot cereal breakfast. It appeals to them with colored wall charts, gold stars, badges—all free.

Eating Cream of Wheat is just part of a fine game at first. But soon spoons fly and every bit of *hot, cooked* cereal disappears!

FREE — *Mothers say this plan works wonders*

A club—called the H. C. B.—that children work out for themselves. A plan that arouses children's interest in a *hot, cooked* cereal breakfast and makes them want to eat it regularly.

Badges and a secret for members, gold stars and colored wall charts. All material free, sent direct to your children, with a sample box of Cream of Wheat (if desired). Children cannot resist it! Mail the coupon now—watch the club idea work.

CREAM OF WHEAT COMPANY DEPT. P-20
MINNEAPOLIS MINNESOTA

Gentlemen: Please send my child the free material for the H. C. B. Club as described above.

Child's name.....
First name *Last name*

Street..... *City*..... *State*.....

To get sample box of Cream of Wheat, check here....

Recommended by authorities for 32 years

Reasons why child specialists have long considered Cream of Wheat an ideal *hot, cooked* cereal:

1. Because it is so rich in energy.
2. Because with every harsh part of the grain removed, Cream of Wheat is exceptionally easy to digest.
3. Because its creamy goodness is so easily varied by adding prunes, figs or dates while cooking.

Give your children the chance to do their best. Start them off in the morning with Cream of Wheat.

you can't run 'em. And if anythin
happens to hold Wally up—"

"Believe me, something will happen i
Luce finds out what we intend doing,
declared Tolovana.

"That means we can't wire Wally.
Kerry spoke thoughtfully. "Not with
bunch of wire tappers listening in every
time a key clicks on the line."

"That's the deuce of it!" agreed Tolo
vana. "But—oh, *now* I see a way! When
Wally left Valdez he wired me that h
would spend his last night before reaching
Nome at the Solomon Roadhouse, and
telephone me from there. Now, about th
time he's due, Kerry, you and I can run
out and wait for him at Solomon, and w
can give you a bill of sale for the dog
right there!"

"Hurroo! 'Tis a grand scheme entirely!"
approved a fourth voice heartily.

Startled, they all turned, and behel
Lim, with Crooger behind him, coming
forward from the back part of the shadow
Kashim.

"Oh—my—lord!" groaned Tolovana
"How long have you been here, Lim
How'd you get in?" demanded Kerry.

"Sure, didn't you see me standin' ther
this long time?" Lim stopped short i
surprise. "Ah, me boy! It's broke m
heart is for you this night! But w
Tolovana's team, you'll be after maki
'em sit up and take notice! An' if me pl
Crooger will be of use to you, lad"—
indicated the mournful morsel of dog
"'Tis you who's welcome to the loan
him!"

There was nothing for it now but to ta
the Irishman into full confidence a
pledge him to secrecy. Lim grew eloqu
in his promises for silence. Might
blessed saints forsake him—might hun
and rags be his portion—if so much a
whisper of their secret escaped him!

THE day following the Valentine
was one of intense interest. K
Kramer, as usual, was the chief sourc
comment. It was said that she was unq
tionably the handsomest woman at the
yet she seemed like one possessed. N
had she so flaunted her power over
never had she flirted so openly nor wi
many at once. Rumor had it that he
tions with Rance Herrington had bee
flagrant that little Barbee Neilan had
home with her father early in the eve

The excitement caused by the Vale
Ball had scarcely begun to die away
the news of Kerry's misfortune broke
the town. At the same time, other ov
of racing kennels reported single cas
distemper among young dogs. But
Wayne was the only one hard hit.

Lim Phayden, during his peregrina
with the water sled, was question
every kitchen as to Kerry's plans.
to his word, the Irishman said not
but he did it with such a knowing
secrecy that speculation ran high,
cially at the Kramer house.

Kitty Kramer herself never failed
to be in the kitchen when Lim deli
water. She always had something
for Crooger and for Lim—and wh
ate, she chatted with him.

At first she didn't mention Kerry
dogs; and Lim, garrulous about ever
else under the sun, carefully avoid
subject. Then came a frigid, gray
noon when the coffee was uncom

Here is some common sense about toothpaste

Read what this authority says on a subject that has become confused in many minds.

"The only function of a dentifrice is to aid in the mechanical cleansing of the teeth without injury to them . . . the antiseptics and drugs incorporated in many of the widely advertised dentifrices are valueless, neither curing nor preventing disease."

From an article in "Hygeia" —the health magazine of the American Medical Association.

DENTISTS and physicians recommend a dentifrice for one purpose only—*to clean teeth safely.*

That is the one thing *you* can do for your teeth. If you think your mouth needs treatment, see your dentist at once—that is *his* job. Don't rely on a dentifrice to correct conditions of teeth or gums—its function is simply to *clean.*

Teeth kept thoroughly clean are likely to be healthy teeth in a healthy mouth. And healthy teeth are apt to be pretty teeth.

This is directly in line with modern thought. Today leading authorities on the care of skin, hair, teeth advise that the most effective means of safeguarding natural beauty lies through utter cleanliness.

For that one purpose—to clean—Colgate's was designed, on a formula suggested by members of the dental profession.

Made as Dentists Advised

Before we decided upon this formula, we went to the dentists and asked the question: "What kind of dentifrice would be best for dental health and beauty?" Their answer was: "Make a toothpaste that really cleans. If a dentifrice cleans thoroughly, it does not need to do anything else. Drugs, strong antiseptics and harsh abrasives are all unnecessary and sometimes dangerous."

Upon this fundamental principle, we created a dentifrice of maximum cleansing power—yet so mild and pure that it cannot harm even the most delicate teeth.

So scientifically correct has this formula proved that more dentists now recommend Colgate's than any other dentifrice. As a result of their expert advice to patients, Colgate's is today the largest selling dentifrice in the world.

Why Colgate's Cleans Better

Colgate's contains the most effective of all cleansing agents—in a special, mild, pure form . . . combined with calcium carbonate and aromatic oils.

As you brush Colgate's upon your teeth, the cleansing agent forms a bubbling, sparkling foam. This cleansing foam penetrates between the teeth, reaches inaccessible surfaces, purifies and stimulates the gums . . . the entire mouth.

And carried by this searching, foaming wave, the fine calcium carbonate powder helps to clean away mucin and food deposits . . . polishes tooth enamel to shining smoothness . . . sweetens all the mouth surfaces. The mildly antiseptic aromatic oils add refreshing action to the thorough cleansing.

Constant research and continuous testing of all new theories have failed to show a way to make a more effective dental cleanser than Colgate's Ribbon Dental Cream!

—and Only 25c

Colgate made the original 25c tube of dentifrice. It today the largest selling toothpaste in the world. Due to this enormous volume production, and to the resources of a hundred-million-dollar business, Colgate commands the finest materials and the widest dentifrice research to safeguard *quality.* And, as far as have been able to find out, Colgate puts *more* dentifrice into the famous 25c tube than is found in any other tube priced at a quarter. That's *value!*

Try it—FREE

We have a trial tube of Colgate's for you. Fill out and return the coupon and it will be mailed promptly. We will send also a copy of an interesting new booklet on care of the teeth and mouth.

Colgate, Dept. B1600, 595 Fifth Ave., New York
Please send me the booklet, "How to keep Teeth and Mouth Healthy" and a trial tube of Ribbon Dental Cream, free.

Mothers For many years, Colgate has been permitted to help in the splendid efforts of dentists, physicians, educators and health officials to teach the children in the schools to brush teeth regularly. The results of this work—in promoting the general bodily health of children—have been outstanding.

It is natural that Colgate should cooperate in this work, because Colgate's Ribbon Dental Cream is the ideal dentifrice for children—safe, pleasant-tasting, free from drugs, strong antiseptics and harsh abrasives.

If you are interested in helping in this great health movement in your own community, write us for full information.

"I use it every day. It sails with me on every voyage," says CAPTAIN THOMAS *of the S. S. Paris*

"This skin bracer sails with us on every voyage"

.. the Captain and the Purser of the famous S. S. PARIS say

IMPECCABLE appearance—perfect grooming—is as much a part of the job of officers of a great liner as their knowledge of the sea.

"In port and out there's nothing keeps your skin so ship-shape as Pinaud's Lilac," they tell us.

Pinaud's Lilac rouses circulation; sends the blood rushing to feed sagging tissues; checks pouches and wrinkles; keeps the skin young looking.

Pinaud's Lilac is a famous antiseptic, too. It sterilizes razor scrapes and nicks—absolutely prevents after-shaving infections and blemishes.

Shake some into the hand and slap it over your face. Not only after every shave, but whenever you feel fagged. Instantly your skin feels toned—invigorated! You will enjoy its fresh lilac odor.

You can get Pinaud's Lilac at any drug or department store.

FREE: ***good-sized sample bottle of this*** famous skin bracer. Write today to Pinaud, Inc., Dept. M-4, 220 East 21st St., New York, N. Y. (In Canada, 560 King West, Toronto.)

Host to thousands of the most distinguished people in the world, E. Mallet, Purser of the S. S. Paris, must look his best all of the time. He finds Pinaud's Lilac invaluable. "Nothing keeps your skin so ship-shape!" he declares.

Look for Pinaud's signature on every bottle

PINAUD'S LILAC

Copr. 1928, Pinaud, Inc. THE FAMOUS SKIN BRACER

hot and good, and the fruit cake extraordinarily rich and moist with brandy. Lim had consumed several large wedges of this when Kitty mentioned Kerry's misfortune, with such a wealth of sympathy, such a show of distress, that the sentimental Lim was touched. And before he knew how it happened, her naïve interest, her ingenuous questions had drawn from him the essential details of Kerry's plans.

When he left the house and mounted his sled, it was with the panicky conviction that he had talked too much. And his uneasiness was not diminished when he saw Luce Barton and Rance Herrington entering the doctor's office as he drove away.

BUT it was not until he met Kerry, who greeted him with his usual cheery kindliness, that the full import of what he had done struck him like a thunderbolt. On the instant, he cast to the winds all thought of continuing on his water route, and turning his team, drove down among the lonely white hummocks of Bering Sea. There on his tank he sat, huddled beside Crooger, his misery-dulled eyes staring vacantly at the garbage heaps dotting the ice. Remorse, devastating, cataclysmic remorse took possession of him. With a groan his arms went about Crooger, and he sank his grizzled face against the back of the little dog's neck.

He had betrayed the trust of Kerry, the best friend he had in the world, the lad who had been like a son to him; who had picked him up, a drunken derelict in the streets of Nome, and set him up in a fine water business, who had furnished him a cabin near his own. He had betrayed the boy like the blab-mouthed Judas he was.

"Wurra! Wurra!" The little dog turned a ragamuffin face and dabbed consolingly at Lim's ear with his bit of tongue. "O, wurra! wurra!" If only he had never lingered in the kitchen of Mistress Kramer nor taken a sup of her coffee or a morsel of her cake. . . . Still—what cake—'twas as if she had but steeped it in the liquor that very afternoon—so fresh it was! And a rare bit of spirit she'd used for the job. . . . One drink of brandy like that would help him in his terrible trouble now.

He raised his head decisively. "We'll be afther takin' just one, Crooger. Just one, mind, to put the heart into us again."

He picked up the reins, turned Lim and Rose back toward the snow-banked ugly town, and headed for the Golden Sands.

When Doorknob and Kerry returned to the Kashim after several hours of duty at the dog hospital, Lily and Rose stood steaming and impatient in front of Lim's but the Irishman himself was nowhere to be found. A few minutes' conversation on the telephone confirmed their fears. He had, in the vernacular, fallen off the wagon, and in his own mournful way was painting the town.

He continued to do this. Doorknob took over the task of driving the white sled, and in his spare moments, which were very few, pursued Lim, trying to persuade the delinquent to go home.

But the days lengthened into a week with no sign of Lim's recovery, and the time came when Kerry and Tolovana left Solomon to wait for Wally Ballinger. Left alone with the care of the sick dogs and the responsibility of the water sled, Lim

The Story of a Wise Wife

For a long time she had realized that coffee was thieving the sleep of the family. But she hated even the thought of giving up the drink they all liked so much. And as for her husband, John—she knew *he'd* never agree to the idea of a coffee substitute!

One day she read an advertisement — and that night a new brand of coffee came to dinner. It was delicious coffee—so good everybody took a second cup.

And next morning, wonder of wonders! Even John remarked on the good night's sleep he'd enjoyed! She, like a wise wife, said nothing. Not until a week later did she tell about the new coffee. It was Kaffee Hag Coffee—the coffee that lets you sleep because it has 97% of the drug caffeine removed.

Perhaps there's someone in your family whom coffee makes nervous. Try this wonderful coffee. Kellogg's* Kaffee Hag Coffee is a blend of the world's finest coffees. Exceptionally mellow and delightful. With all the flavor and cheer you love. Real coffee! But it will not keep you awake nor affect nerves.

Order a can from your dealer. Comes ground or in the bean. The original caffeine-free coffee. Try it at hotels, on diners. Or let us send you a generous sample can. Mail the coupon.

KAFFEE HAG CORPORATION

KAFFEE HAG COFFEE

The coffee that lets you sleep

knob determined to bring matters to a climax.

It was in the red-and-gold splendor of the Golden Sands that he overtook Lim.

In a corner of the mirror-walled main saloon he was seated before a table, on top of which stood a bottle of champagne. Virgie, queen of Nome's dance-hall aristocracy, was perched on the farther edge, foot swinging to the rhythm of the song she was singing. Lim, his arms on the table, regarded her with vinous gravity.

Ignoring Virgie, Doorknob clapped a determined hand on the Irishman's shoulder. "Here, Lim—this has gone far enough. You're going home right now!"

Slumberously Lim resisted, holding up a gentle, conciliatory hand. "Don' be axin' me, Doorknob dear. Don' be axin me now. Crooger an' me is wishful to hea the—the lady sing another—"

"T-h-a-t's right, dearie! T-h-a-t' right!" crooned Virgie, leaning over to pa the Irishman's arm. "Hey, Kelly!" Sh hailed a bartender. "Another quart o Mum's. Now, Lim, where were we, dearie Oh yes—"

When Kelly put the full champagn bottle down beside that already empti the enraged Doorknob indicated both wi a bellow of rage: "Sixty dollars! S-i-x-t dollars in one gulp—and me freezing m ears off driving his blasted water wago That settles it! I'll see that you waste more money. D'you know what I'm goi to do with you?" He impaled Lim wit fiery eye. "I'm going to have you washed! By the Holy Mackinaw, I going to the judge tonight, and fix it you'll never get another drink in t town!"

THE next morning—Saturday—a S dicate sharpshooter reported to L Barton that Kerry Wayne and Tolov Belle were at Solomon Roadhouse, thi six miles out of Nome. The lawyer Rance were sitting in the latter's ap ment. When the man had gone, L lighted a cigar and turned with a chu to Herrington.

"Well, old man, we can thank K for that little tip. It's really worth ermine wrap she's so set on."

Rance answered Luce's remark wi scowl.

The lawyer shrugged his plump sh ders. "Lord, but you're a merry com ion these days. I infer from your glad mien that your fiancée is still incomm cado."

No reply being vouchsafed him, he a wry face. "Ah-ha! He doesn't ca talk, either. Very well;" he cleare throat ostentatiously and proceede carry on the conversation with hin "Yes, Luce, old pal," he quavered, in sonating the gold king. "Tantru could understand, accusations I refute, but silence—what can a ma against silence in a woman? Ouch!" last was called forth by a flung cu which Herrington landed smartl Luce's ear.

As the big fellow stalked from the and slammed the door behind hin lawyer laughed. Then, sauntering t telephone, he called up Bart Pelk Fifty-mile Roadhouse.

The ensuing telephone conver appeared on the surface to be but a monplace interchange of trivialitie

Baby's Health *demands*

that foods be kept at those temperatures provided unfailingly by Frigidaire

How carefully you watch and guard the foods your baby eats. But what about refrigeration? It is one of the most important and vital factors in baby's health.

Physicians everywhere agree that safe refrigeration means temperatures well below 50 degrees. Frigidaire provides these temperatures . . . unfailingly. It is powered to meet every emergency in the hottest of weather or the warmest of kitchens . . . powered to hold safe temperatures day after day, month after month, and year after year.

Cleanliness, too

This surplus power means the difference between certainty and doubt, the difference between absolute protection and worry. And this is one reason why there are more Frigidaires in use today than all other electric refrigerators combined.

Still another safeguard to health is provided by the New Frigidaire . . . cleanliness. The shelves are removable. The lining is of seamless porcelain enamel. Inside and out the entire cabinet is as easily cleaned as a china plate. There is *nothing* to catch dust or dirt.

Consider these features

See the New Frigidaire. Only then can you appreciate all that it offers. See the beauty of the cabinet. Note the simplicity of operation. Listen for the sound of the motor. You don't hear it start, stop, or run. Get the facts on low prices and the liberal G. M. A. C. partial payment plan. Call at the nearest Frigidaire display room at your first opportunity.

Write for this book

May we send you a copy of our book on healthful refrigeration? Photographs taken through the microscope tell an interesting and convincing story of what happens to food at different temperatures. A copy will be mailed on request. Frigidaire Corporation, Subsidiary of General Motors Corporation, Dayton, Ohio.

Many a peaceful household *harbors a costly conflict*

George M. Burrell routed the enemy from his heating system. Read the amazing results

THE trouble in Mr. Burrell's Shelter Island home was within the pipes and radiators of his steam heating system.

The trouble maker—Air, the enemy that fights steam's quick entrance into radiators. These heated slowly when the fire brightened, and quickly lost their heat when pressure faded. The cooling process was hastened as air rushed back through radiator air valves—steam's heat was destroyed. Each cold day his home was hot—then cold—then hot—then cold.

Mr. Burrell had these air valves removed, replacing them with Hoffman No. 2 Vacuum Valves.

"Since then," says Mr. Burrell "on *very cold* days, with steam up only three times a day, morning, noon and evening, my radiators remain hot constantly. When steam is raised they heat in *15 minutes* (instead of an hour). When steam pressure fades they are hot for *three hours* (instead of 30 minutes). Naturally my home is more comfortable and my bills for fuel are materially less."

This simple, inexpensive change to Hoffman No. 2 Vacuum Valves automatically vacuum-izes the one-pipe steam heating system. They let air out of the system the first time steam rises—Then *lock it out.*

Steam, formerly condensed and robbed of its heat, is concentrated on the job of heating your home. Radiators quickly gain full heat—and then hold it for hours after steam pressure recedes.

Let your local heating man perform this same miracle on your steam heating system. Phone him today. Ask him about Hoffman No. 2 Vacuum Valves.

THIS BOOKLET TELLS THE STORY

"How to Lock Out Air—the Heat Thief" tells with word and picture how and why Hoffman No. 2 Vacuum Valves can give new life to your steam heating system—save ⅓ your fuel. Your name and address on the margin of this page brings you the booklet and the name of a reliable nearby heating contractor. Hoffman Specialty Company, Inc., Dept. P-17, Waterbury, Conn.

HOFFMAN
No. 2 VACUUM VALVES

AND HOFFMAN CONTROLLED HEAT

because of it Bart Pelkie and his squaw immediately began taking turns watching from the window for Nome-bound travelers. And because of it, just before noon that day Bart was out in the middle of the trail to meet Wally Ballinger as he drove his string of dogs down off Topkok Hill.

Wally, as he had informed his wife by wire, had intended going on to Solomon Roadhouse, fifteen miles nearer Nome; but the day was gray and cold. Bart's welcome was hearty, his big, rough room warm with a crackling fire, and there was also a savory reindeer mulligan on the table and a bottle of old whisky. Wally stayed for the noonday meal, and afterward he stretched himself out in an easy-chair to smoke in drowsy content, while Bart attended to his team.

An hour later, when he roused himself and tried to call Tolovana on the telephone, his efforts met with dead silence. And Bart informed him that the line between Fifty-mile and Nome was down.

LEFT to himself, Wally would have stayed the night in comfort at Fifty-mile; but Bart pointed out that a storm was imminent—and snow would make heavy traveling. Bart himself had business in Nome and was leaving that afternoon. He would be glad to take the lead on the trail and pace Wally's team.

Wally considered this. He had one dog on his towline, a pointer named Cultas, that was giving him trouble. With Bart's fresh team pacing him on a clear trail he could cover that fifty miles to Nome in seven or eight hours with little exertion to himself. . . . And it would bring him in on Saturday night instead of Sunday. . . . He'd do it, by Jove; and surprise Tolovana by walking in on her unannounced!

They started. The day was murky and gray, with a rising temperature. There was a sinister hush over the land, as if the North were holding its breath, bracing itself for the coming blizzard. Bart took a short cut that put Solomon Roadhouse off their route, and shot on, eating up the miles. Wally followed, his leader's nose not ten feet from Bart's runners.

Past Port Safety they sped in the dusk; past Cape Nome in the dark; past the lighted barracks of the Fort. Then, far up the dim coast the silver glow of Nome, with the electric cross flashing out a welcome from the church steeple! A few minutes later, Bart swung his dogs into Barracks Square, shot down Front Street, and led Wally to a halt before the twinkling jovial lights of the Golden Sands, which was in full Saturday-night swing.

On the right, an archway framed a vista of the gambling-room. And off to the left, shedding the glamour of the exclusive, with the door of the famous Dog Room, over whose threshold only powers in the dog racing world might pass. Pervading all was the scent of expensive cigars, beer, wine, liqueurs, and a love-of-life atmosphere made up of warmth, hilarious friendliness, abundance, success.

It was into this humming hive of good fellowship that Bart led Wally Ballinger. A shout of recognition from the crowd, and he was plunged into a pleasurable swirl of welcome that allowed no time for thought. Greetings . . . handclasps . . . friendly laughter. A couple of rounds of drinks in quick succession, another round at the bar—then Luce Barton and Rance Herrin

NEW DEPARTURE BALL BEARINGS

NOTHING ROLLS LIKE A BALL

Before ball bearings became the accepted answer to problems of reducing friction, the story of transportation and industry was one of excessive wear—overheating—low speeds and waste of power—short machinery life—high upkeep expense, for ball bearings follow the natural law—*that nothing rolls like a ball.* For nothing is more friction free or nothing is stronger, mass for mass.

And because New Departure has carried the ball bearing to its highest state of development, it was inevitable that the makers and users of motor cars and all types of machinery should come to regard New Departure as a superior anti-friction device. In automobiles, electric motors, machine tools, farm machinery—New Departure Ball Bearings conquer friction, whatever the speeds or loads. They never need adjustment; they reduce power waste—and assure the utmost performance for any type of machinery.

Troubled With Sleepless Nights?

Accept, Then, This Unique Test

Now an Utterly DRUGLESS *Way to Instant Sleep—Boundless Energy the Next Day*

If you are troubled with restless nights, we urge you to accept the test offered here. Doing so has made a great difference in the lives of thousands of nervous people.

On doctors' advice, millions are employing this new way. For it is as free of drugs as the bread you eat or the milk you drink. And does far more than simply induce sleep! It rebuilds your wasted tissues while you sleep!

What It Is

It is called Ovaltine; a scientific food-concentrate developed in Switzerland by a scientist of world-fame. You take it in a cup of warm milk at bed-time; a super-delicious drink.

First it induces sleep; sound, natural sleep. The kind that rebuilds and rejuvenates.

Then while you sleep, Ovaltine re-supplies your system with the energy lost the previous active day. For it contains practically every building element necessary to life and energy, in a form which the human system can easily absorb while you sleep.

You can take it night after night and not only not form a habit, as with drugs, but build up your health as well.

Do you wonder, then, that people are flocking to its use? New to America, Ovaltine is being recommended by over 20,000 doctors. Used over 30 years in Europe, its use has spread to over 54 different nations. It marks one of the most important scientific findings of its time.

Accept Test

Doctors urge it not only for sleeplessness, but for all nervous and run-down conditions. They recommend it, too, for nervous, underweight children. Thousands of busy people take it during the day to relieve fatigue. A few weeks' use will make an amazing difference in the way you feel.

Believe or not what people claim for Ovaltine. Try it. Obtain at any drug or grocery store, or use coupon for special 3-day test.

MAIL FOR 3-DAY SUPPLY

Make this experiment. Drink a cup of hot Ovaltine before retiring, for three nights. Note how quickly you go to sleep; how refreshed you feel when you awaken; your unlimited energy next day. Mail coupon with 10c for a 3-day introductory package.

(One package to a person)

ton, one on either side of him, laughing, slapping him on the back, ushering him into the Dog Room, with its easy-chairs, its intimate round table bedecked with bottles and glasses.

Later, in a genial, alcoholic haze, Wally listened with what attention he could bring to bear to what Luce was saying. But, try as he might, he could get only part of it: Talk of the Syndicate with its three teams. . . . Talk of the twenty-thousand-dollar first prize. . . . "A cigar, Wally, old boy!" . . . Talk of other prizes. . . . "Want you to come in with us—fourth team in the Syndicate—furnish you a driver—crackerjack man, Harry Dunn from Dawson. Register your dogs under Syndicate name—just time to do it before register closes. Never mind whether you win or not. If any Syndicate team comes in, you get ten per cent. Hey, Rance! Pour another for Wally! . . . Now then, blanks all ready to be filled—time's short, must hurry. Here—Syndicate Team Number Four—Harry Dunn driver; Walter Ballinger, owner. Now the names of your dogs. Then your signature Wally. First line for your leader, what's his name—"

The lean, blond Wally favored Luce with a befuddled smile. "Jolly kind of you boys—give me this op-portunity. Hadn't thought of—of entering pups this year. Ripping idea! But—but I think I'll wait. Perhaps my wife—"

"That's right, Wally. Perfectly right. Always consult the wife. It's safer in the end!" Luce was laughing. "But, say—why not call her up now? That's the ticket. No; sit still, old man. Sit still. I'll do it for you myself. Have Mrs. Ballinger on the line in a minute!"

Luce called at the wall telephone in the Dog Room, but he didn't get Mrs. Ballinger on the line. At that moment Tolovana was seated on Kerry's sled, muttering imprecations on her husband as she sped back to Nome through the blizzard.

The lawyer, with a great show of impatience, made two more attempts to get the Ballinger house. Meanwhile Wally, in a genial blur of nonresistance, had swallowed several additional glasses of whisky and had achieved a beatific state of altruism in which he would have trustingly signed away his life. When Luce again approached him with the blanks, which once filled in and signed, would make his team irrevocably a Syndicate unit, drew back his sleeves, and took the pen the lawyer handed him.

"Ah, now, le' me shee. . . . Name of the leader on this line? Quite so—quite so. Rupert—" With inebriate deliberation, he put pen to paper and began to form the letters as he spoke the name: "R-U-P—"

CRASH! *Bang!* Pandemonium broke loose in the main saloon. Thunderous stampeding feet, hoarse yells, shouts, the crash of overturned chairs and tables. The door of the Dog Room pressed inward—crack—gave way. Men sprawled in, scrambled to their feet, and began fighting their way out again.

"Get out! Ramble!" a wild-eyed miner shouted. "He's crazy— D. . . . Blow us all to hell!"

Luce, Rance, and the sobering Wally pushed their way to the door and stood looking out into the main saloon.

THE MOST IMPORTANT

ANNOUNCEMENT

made by the

ALEXANDER HAMILTON INSTITUTE

in 10 *Years*

THE present hour sees a great change taking place in business. Small businesses are being gathered together into great institutions. The position of Vice-President in charge of Production, or Sales or Finance, in one of these great institutions is a larger responsibility than the presidency of a small business used to be. There has come an increasing demand for an expansion of the Institute's program to meet these changed conditions.

Beginning immediately, therefore, we shall offer to business executives a four-fold service, incorporating the results of two years of work with leaders of business management and business education. From this four-fold service, executives may now choose any one of the following courses, depending on their own particular business requirements:

1. The Complete Course and Service for General Executives.
2. A Special Course and Service in Marketing Management.
3. A Special Course and Service in Production Management.
4. A Special Course and Service in Finance Management.

THIS enlarged program is too important and far-reaching to be set forth in an advertisement. Its value to executives is admirably summed up in the words of Percy H. Johnston, President of the Chemical National Bank of New York, who considers it "the most significant step taken in business education in the past ten years."

We have prepared a special booklet describing the entire program, with particular reference to the new features. We should like to circulate this widely and to the following groups of men:

—*The heads of businesses* who recognize that the training of competent associates is their major problem.

—*Executives* interested especially in Marketing, Production and Finance, who want to concentrate their efforts along one of these branches of business.

—*Younger men* who desire definite training in the management of the particular departments of business in which they are now engaged.

For convenience, a coupon is provided below. We invite you to inform yourself on this great forward step in business education by mailing it at once.

To the ALEXANDER HAMILTON INSTITUTE, 747 Astor Place, New York City

Please send me the facts about the Institute's new four-fold service.

Powder

"Cleans Teeth Best"

Just ask your dentist

When you go to your dentist to have your teeth cleaned . . . what does he use?—POWDER!

If, like your dentist, you are interested in really clean teeth—and safety—use what your dentist uses . . . for he knows best.

There is nothing known that will clean and polish teeth so quickly, and leave them so gleaming white—as POWDER.

Powder—is the one thing that all forms of dentifrice must depend upon for cleaning.

As powder is the essential cleansing part of any dentifrice; a dentifrice that is . . . ALL POWDER . . . just naturally cleans best.

In use over 60 years

Established 1866

For over SIXTY YEARS, since 1866, dentists everywhere have prescribed Dr. Lyon's Tooth Powder, because—teeth . . . simply cannot . . . remain dull and film coated when it is used. It cleans off all stains and tartar, and polishes the teeth in a harmless and practical way that gives them perfect whiteness.

It cannot possibly scratch, or injure, the softest enamel . . . as SIXTY YEARS of constant use has shown. Dr. Lyon's is the only dentifrice old enough to prove it can be safely used for life.

Dr. Lyon's Tooth Powder keeps your teeth REALLY CLEAN, and clean teeth mean firm, healthy gums and the least possible tooth decay.

Brush your teeth with it regularly—consult your dentist periodically—and you will be doing the very utmost to protect your teeth.

Once you use tooth powder, you will never be satisfied to use anything else.

Tooth powder leaves your teeth feeling so much cleaner, your mouth so refreshed, and your breath so sweet and pure.

Dr. Lyon's Tooth Powder is not only more efficient, but it costs . . . much less . . . to use. A 35c package lasts over three months.

Bartenders in flapping white aprons were leaping over the bar into a chaos of men and girls struggling from dance hall and gaming-room. There was no shouting now, only the grim stamping of feet and a splintering of glass as the throng charged for exits through windows and door.

The three bewildered men watching the thinning crowd suddenly saw the cause of the exodus:

The door of the big pot-bellied stove near the end of the bar was wide open—a maw of yellow flames—and dancing beside it was Lim Phayden, his hair standing wild above his erstwhile mournful eyes, now gleaming with a crazy light. In each hand he held an object indistinguishable because of the frantic flourishes he was making toward the mouth of the stove. Crooger beside him was barking an accompaniment to the maledictions Lim was yelling at the trembling Kelly, the last bartender left behind the board.

"Siwash me, will you, and keep me from my liquor? By the saints, I'll be afther showin' you, you towel-flapping stiff!" His arms ceased their windmill flaying for a moment, and the three watchers saw that he held a stick of dynamite in each hand. He made a swift movement, as if to toss one into the roaring stove. "Mush! Or I'll blow you to—"

Kelly cleared the bar like a rocket. At the same instant, Luce and his two companions leaped across the empty saloon and sprinted for the front door with Lim's war cry ringing in their ears: "Siwash me, will you? Siwash me—"

(*To be continued*)

Tick-Tock!

(*Continued from page 19*)

a chair to sit on, every chair being cluttered up with their books and wraps and things. Access to the bathroom during their hours awake was almost out of the question. Funny, how much water it takes to keep these young girls clean. They look so fresh and dainty always that one would think a men sponge bath would suffice them; but no they just have to soak and soak, one afte another, morning and night.

The cosmetic bills they piled up a the drug-store were appalling, but as sut as I tried to change from pyjamas t undies, one of them would have to bur into the room to use the mother's atomiz or borrow her face powder. I had abo as much privacy as the man in the moo I was glad when one of the girls left hon for a few days at a time; happy when pair of them were away for a week-en Now, at last, I have the privacy a seclusion I have been yearning for these years—and it isn't so desirable.

I look wistfully at the vacant cha at the table. I would take a leaf out the table and move the vacant cha back, but Margaret will not have it Margaret is our colored maid, and here the South the colored woman who st long enough in one household rules t household.

Margaret's way is to keep the vac chairs at the table. "As long as I st here, them chairs stay," is Margar

···WORLD AUTHORITY ON SKIN DISORDERS···

Dr. Edvard Ehlers

says "*I invariably prescribe yeast*"

Municipal Hospital, Copenhagen, where Dr. Ehlers is chief physician of the dermatological department

"IT IS MANY YEARS *since my teacher and friend, Dr. L. Brocq of Paris, taught me to use fresh yeast for staphylococcic infections of the skin. Since then I have invariably prescribed yeast in all cases of boils, as well as in rebellious cases of acne. The effect of yeast upon boils is surprising and incontestable. It is often slightly laxative.*"

Dr. Ehlers

DR. EDVARD EHLERS, OF COPENHAGEN

THE most romantic figure in Danish medicine—Dr. Edvard Ehlers. Hazardous medical research in the tropics has brought him decorations from half the governments of Europe.

Hospitals, established by him in Denmark for children born sick, have almost eliminated infant deaths from one dread disease.

Holder of degrees from the universities of Paris, Strassburg and Copenhagen—what Dr. Ehlers says of the health properties of yeast is drawn from years of experience as a skin specialist of world wide fame. Many doctors now agree that unsightly, embarrassing and unpleasant skin eruptions are associated with clogging of the intestinal tube.

"In furunculosis (boils) the effect of yeast is incontestable," Dr. Ehlers says, and advises, "the yeast treatment should be continued for several months, until the elimination of harmful bacteria is complete."

In a recent survey in the United States, half the doctors reporting said they prescribed fresh yeast. Fleischmann's Yeast is fresh. Unlike dried or killed yeast it contains millions of living, active yeast plants. As these pass daily through your intestinal tract they combat harmful poisons, purify the whole system. Eat three cakes daily, before or between meals. To get full benefit you must eat it regularly and over a sufficient period of time. At all grocers and many leading cafeterias, lunch counters and soda fountains. Start today.

Write for latest booklet on Yeast in the diet—free. Health Research Dept. J-61, The Fleischmann Company, 701 Washington St., New York, N. Y.

90 per cent of ills start here . . . Here is where yeast works

As this picture shows you, the alimentary tract is one continuous tube from throat to colon. Poisons caused by clogged intestines spread swiftly through your body. By eating Fleischmann's Yeast you can keep this entire tract clean, active and healthy. You can insure the flawless, healthy complexion which comes only from a clean, active colon.

A STEAK is JUST MEAT

It is SEASONING like this that makes it — SAVORY

This man's seasoning—racy, spicy savor that makes him smack his lips and settle down to business. When he comes up for breath, a beaming smile lights his countenance. But his wife, the creator of the marvelous steak, she knows—who knows better?—what spell is on him. A spell more potent than any magic potion or love philtre of the Middle Ages—the spell of wonderful food flavor. Flavor from the slender bottle that holds sway over all the seasonings in her kitchen cabinet. The flavor is A.1. Sauce. Sprinkle some on your meats before cooking—more at the table. Then see how savory your meats can be.

Before cooking steaks or chops, sprinkle a few drops of A.1. Sauce on them. You'll be delightfully surprised with the chef-like flavor it gives to meats.

edict. "No sir," says she, "I just ain' going to think of the children as bein gone to stay; I'm going to think abou 'em just as if they were coming home ever day, and have their plates all set an everything ready for them."

I think the wife and mother feels ver much as Margaret does; the breaking u of the home goes particularly hard wit the mother. First and incidentally woman is a wife, but with the coming o the first child she is a mother firs last, and all the time. I recall vividl now the far-away look in the eyes of m wife and her reminders that the childre would some day be leaving us, years b fore I gave such a thing a serious though

I have indulged in a lot of self-pit these past few months. I felt a grea heartache when Mamie left us. Mam was only a niece, but she had lived with u since she was a little curly-head seven years and had grown to your womanhood as one of the family. H going was like the going of an offsprin I felt a very real fear and sense of lon liness when my boy went off to colleg And when Billie married and left us tried to appear reconciled to the b reavement, but tears came to my ey that night and my heart felt as if it wou break. I say I have indulged in a lot self-pity these past few months. But am getting a grip on myself; the rosea years of youth are far behind me a their hilarious joys I shall know no mo but there are wonderful years ahead i but employ them rightly.

Death has no terrors for me; I do know any more about the whys a wherefores of life now than I knew wh I first came into it, but I have, after ma years of doubts and misgivings, of v questionings and fruitless researc resolved that the end of this life can be involved in more uncertainty terror than its beginnings, and that great guiding force of this marve universe will order all things right in ultimate.

CONCERNED for years with the mate affairs of a numerous housel I have paid too little attention to folks. I have only begun to discover the greatest joy in life and the secr that charming attribute we call sonality is an interest in other peop find the most fruitful lives are those have been most friendly. The world to be interested in you and in exact measure of your interest an interest in the rest of the world.

Here in North Carolina lives a m the name of Julian Price, head of siderable insurance company. He high among successful North Carol and his keen business judgment is in the councils of his home city a state. Although more than sixty old, Julian Price is one of the most vi and vivacious men I have ever met fellow is radiant with cheer and joyf I got a great line on life from him.

"How do you explain your ener enthusiasm?" I asked him.

"I never get tired," he replied.

"And how do you manage to off fatigue?" I asked him.

"By never permitting myself bored," said he.

"And how do you escape bor

ANNOUNCING THE NEW SUPERIOR WHIPPET

THE STYLE CREATION OF MASTER DESIGNERS
GREATER BEAUTY · LONGER WHEELBASE · LARGER BODIES

INTRODUCING THE NEW

"FINGER-TIP CONTROL"

THE MOST NOTABLE ADVANCE IN DRIVING CONVENIENCE SINCE THE SELF-STARTER

IN modish design, the new Superior Whippet is as far ahead as the first Whippet was ahead in engineering advantages. With longer bodies, higher radiator and hood, low graceful lines, one-piece full crown fenders, mechanical 4-wheel brakes, rich, harmonious colors — the new Superior Whippet establishes an ultra-modern style trend for Fours and light Sixes.

Larger, Roomier Bodies

More spacious interiors, with 3 inches added leg room, together with longer springs both front and rear, and form-fitting seats, insure maximum riding and driving comfort.

"Finger-Tip Control"

The Superior Whippet is the first car to offer the "Finger-Tip Control"; a single button, conveniently located in the center of the steering wheel, controls the starter, the lights and the horn. Illustrations at the left clearly explain its operation.

Mechanical Improvements

The Superior Whippet's higher compression engine gives more than 20% added horsepower, with resultant increase in power, speed and flexibility. Higher second gear speed gives faster pick-up. Low consumption of gas and oil, results in marked operating economy. An immediate order will aid in early delivery.

Whippet Four Coach $535; Coupe $535; Sedan $595; Roadster $485; Touring $475; Commercial Chassis $365. Whippet Six Coach $695; Coupe $695; Coupe (with rumble seat) $725; Sedan $760; Sport DeLuxe Roadster $850 (including rumble seat and extras). All Willys-Overland prices f. o. b. Toledo, Ohio, and specifications subject to change without notice.

"What would I do if I LOST MY JOB?"

WHAT *would* you do? What would your wife and children do?

Suppose your employer notified you tomorrow that he didn't need you any longer? Have you any idea where you could get another position?

You wouldn't have to worry if you were a trained man. You wouldn't have to spend your mornings reading the "Want Ads" and then trudging from place to place, meeting rebuffs and discouragements, piling up bills, finally willing "to do anything" if only you could get on somebody's payroll.

Don't have this spectre of unemployment hanging over your head forever. Train yourself to do some one thing so well that your services will be in demand. Employers don't discharge such men. They *promote* them!

Decide today that you are going to get the specialized training you must have if you are ever going to get a real job and a real salary. It is easy if you really try.

Right at home, in the odds and ends of spare time that now go to waste, you can prepare for the position you want in the work you like best. For the International Correspondence Schools will train you just as they are training thousands of other men—no matter where they live — no matter what your circumstances.

At least find out how, by marking and mailing the coupon printed below. There's no cost or obligation, and it takes only a moment of your time, but it may be the means of changing your whole life. Do it now!

MAIL THIS COUPON FOR DESCRIPTIVE BOOKLETS

INTERNATIONAL CORRESPONDENCE SCHOOLS, Box 7455-F, Scranton, Penna.

"By making it a point to find interest in everything I am compelled to do and in every situation in which I find myself. If the rest of the crowd want to dance, I dance with them. If it is a prayer meeting, I pray with them and tune in with their prayers. There is nothing in life that is not interesting except the fellow who shuts his eyes and his mind to the interest in all things."

I got another great line on life from Franklin D. Roosevelt. Mention the name of Franklin D. Roosevelt in any worth-while group anywhere in America and instantly someone will speak of his charming personality. He has won millions of admirers with the inexplicable charm of that thing called "It." The secret of his resplendent character, it was my good fortune to discover, is an unquenchable interest in the common things of life.

See how it has worked: Here was one of the most vigorous and whole-hearted outdoorsmen in America. Yachtsman, swimmer, canoeist, golfer, sprinter, horseman, tennis player. Suddenly, at the age of forty or thereabouts, he was stricken down with infantile paralysis, the use of both legs denied him. Most of us would have been broken-hearted in a similar plight. Not so Franklin D. Roosevelt. He couldn't sail a yacht nor paddle a canoe any more; no more golf, no more horseback riding, no cross-country runs. You would think that he had been deprived of every interest in life. Nothing of the sort.

Denied participation in outdoor sports in which he had previously reveled, he immediately sought other interests. He cultivated new hobbies: became a stamp collector; a collector of prints of old ships; applied himself to the study of the neglected subject of early Dutch architecture in New England; became interested in the rehabilitation of other cripples and established a Foundation at Warm Springs, Georgia, where Nature has provided springs of warm water in which paralytics may disport themselves and regain the use of their limbs by exercises in water. And if Franklin D. Roosevelt has had an unhappy moment in the three years since fate knocked him off his underpinnings, those most intimately associated with him have never noted it. I learned a great life lesson from Mr. Roosevelt.

IN MY own town lives a youthful personality who is seventy-three years old this year. He doesn't look it; few guess it. For more than fifty years Dick Creecy has been a teacher of backward boys in our town. In the public schools where everything is cut and dried and where they try to run all timber through the same mill, forcing round plugs into square holes and trying to fit square plugs into round holes, many youths fail in their studies and drop out as misfits and nincompoops—if indeed, they don't get kicked out.

Professor Creecy has been grappling with these unpromising students for more than half a century. Taking a personal interest in each individual case, he has discovered much valuable human material that was ignored in the schoolroom because by mass standards it wasn't recognized. And with an interest like that in life Professor Creecy, seventy-three years old, has but one concern about Old Age

MODISH, BEAUTIFUL — and FINE THROUGHOUT

De Soto Six, despite its most moderate price, has been singled out as a fashionable car. It is fit companion for the larger, costlier cars in the most exacting homes. It rides with a richness of ease unknown in its class. It is not merely amply powered but magnificently so, and it is fine throughout. In the De Soto Six, at last high quality and moderate price are joined together.

Visit De Soto Six exhibits at Chicago Automobile Show and Congress Hotel, January 26-February 2.

Her tooth paste bought her galoshes

You'll be delighted to find how many little things you can buy with that $3 that Listerine Tooth Paste saves you every year as compared to dentifrices costing 50¢ and up. Galoshes, for example. Handkerchiefs. Hosiery. Perfume. Gloves.

A remarkable dentifrice

—*yet but 25¢*

IT takes a great deal of money to prepare and introduce a new tooth paste. Unless the product is of exceptional merit and priced right, its chance of success is slight.

Four years ago Listerine Tooth Paste was produced by the makers of Listerine. It was the final expression of years of study. Today, sweeping toward leadership, it has reached and passed some of the excellent dentifrices that sell for 50¢ or more.

Millions are delighted by that refreshing sensation of mouth invigoration you associate with Listerine. They're enthusiastic about the quick, safe way Listerine Tooth Paste attacks deposits and leaves teeth white and gleaming.

We can offer no more convincing proof of its merit than this eagerness on the part of the public to buy—and keep on buying.

And think of paying but 25¢ instead of 50¢. That's a saving of $3 per year per person. Worth while isn't it? Particularly when a family is large. Lambert Pharmacal Company, St. Louis, Mo., U. S. A.

he only wishes for more years of it.

And so, with all that I have seen of life and all that I have learned about life from those who have lived most happily, I see no reason to let Old Age have any terrors for me. I fought it and lost a foolish fight. I hope to readjust myself to it and conquer in the end. This is an interesting old world we're living in and I have only begun to explore it.

Modern Science has changed the whole aspect of Old Age. Not so many years ago there was but little recreation or amusement for one grown old. The old man sat by the fireside in winter or on the shady side of the house in summer, sucked his pipe, and indulged in memories. The old woman sat in a rocking-chair and rocked incessantly, darned stockings, knitted things, and indulged in memories. There wasn't much else they could do. Their greatest solace in life was a worn leather-bound book that promised them a care-free home in the land of Sweet Bye and Bye. Old eyes grew heavy and suffered much pain in the gloom of nights illumined by smoky little oil lamps. They went to bed too early, exhausted their sleep before the night was done, and were up and puttering about a lonely house in the early hours of the morning before the rest of the world was up to keep them company.

Science has made great changes. Science has made comfort possible for Old Age: electric lights that make night as cheerful as day; gas heaters to take the chill off the rooms for those too feeble to fetch in wood and make a fire; running hot water in the house; iceless refrigeration.

There is the telephone now that old folks of other years didn't have; with so little effort one confined to his room may carry on conversations with his friends all over the town or countryside, or even with friends and loved ones in remote places.

And there is the radio. I've put one in my home now, the best that I could buy, for I have found satisfaction only in the best. And again I am filling the house with voices: the voices of great singers, great musicians, great speakers, and the country's fun-makers. The best bands, the best orchestras, and the best soloists of America—all over America—play for me. The tick-tock, tick-tock of the old clock is drowned in the dinner music of one of the highest-priced orchestras in New York City or the martial strains of the United States Army Band in Washington. I laugh with Will Rogers, Al Jolson, and the two Black Crows.

I do not like to go to church. What of it? That little walnut cabinet with six trembling electric lamps in it brings me the chimes of a carillon on Park Avenue, in New York, the organ music of a great cathedral, and the voice of a Fosdick or a Cadman.

But Science is not done yet. The thing they call television is on the way. I shall not only have notable voices in my house, but in my Old Age I shall bring great company of notable faces to my side. I shall not only hear grand opera in my home, but I shall see it acted; I shall not only revel in an announcer's report of a world series, I

A modern cemetery memorial of rare Gothic beauty

This distinctive memorial cross was inspired by an old wayside shrine. Gothic in design—combining storied tracery, receding planes and mitred corners, and intensified by a wonderful play of light and shade—the beauty of this cross is made possible only through the sculptural quality of marble.

For over a century and a half Vermont Marble has been the nation's memory stone. It was selected for the Unknown Soldier's Tomb and for the huge all-marble Amphitheatre at Arlington. Yet with all its matchless permanence and beauty, Vermont Marble costs no more than other monumental stones.

Vermont Marble is always available in every American city. Used for structural purposes, it can express the worth & permanence of your business & enrich the beauty of your community.

Write to us for a booklet illustrating the twelve basic types of family memorials. The services of our Department of Design are at your disposal through a nearby Master Craftsman in Marble.

Found in familiar Japan Tea—a wonderful health-building element

Several common ailments, it is now believed by scientists, can be helped by this familiar and delicious tea

FOR years its sparkling delicacy of flavor, has made it a favorite. Now, suddenly, a welcome piece of news!

Scientists have found a wonderful health-giving property in simple Japan green tea: a precious food element, which is entirely lacking in most foods.

Just because our three meals a day, often give us too little of this one all-important element, Vitamin C, countless people are now believed to be suffering from a number of minor maladies.

"It now appears," writes one eminent scientist, "that this condition is rather common among grown people. Certain symptoms may be looked for in those who habitually take too little Vitamin C. These symptoms are: *loss of energy, a muddy complexion, fleeting pains often mistaken for rheumatism.*"

An easy safeguard

In how many ways loss of energy can take the sparkle out of life. Low vitality may bring with it fatigue, sleeplessness, a finicky appetite, nervousness, lethargy.

And how many there are who shrink from looking in the mirror—whose skins are sallow and muddy! How many others who are afflicted from time to time with so-called rheumatic pains in the joints and limbs!

For those who suffer from these ailments, there is now a simple precaution: good old Japan green tea is today known to bring us an abundance of precious Vitamin C—a safeguard against these troubles.

Only a few foods, aside from Japan green tea, spinach and a small number of fruits and vegetables, contain Vitamin C. The Japan tea we buy at the grocery store is rich in it.

If you feel "run-down," if your skin is sallow, if you are troubled with so-called rheumatic pains, try this pleasant plan: Drink delicious cups of Japan green tea *regularly* at lunch, at supper, in the afternoon. Take advantage of its rich store of Vitamin C. In a few weeks you will probably feel and look more vigorous, more vitally alive. Whenever you drink tea, be sure it is Japan green tea.

As you probably know, Japan green tea has been for years one of the two most popular kinds of tea in the country.

In familiar Japan green tea, scientists have found a wonderful health-giving property — an abundance of precious Vitamin C

It comes in several grades—in packages under various brand names and in bulk. Your grocer has it, or can get it. American-Japanese Tea Committee, 782 Wrigley Building, Chicago.

shall behold the players in action.

I don't know where Mamie and Billie and Keith and Elizabeth and Mary Byrd will be then. They may be living in many different cities far remote from me; but I shall see and talk with them when I become very lonesome. And as they find more and more things in life to occupy their minds and time and have less time to spare for visits to the old folks, air travel will solve their problem within a few years.

And, last but not least, I hope to get acquainted with my wife. She used to be the best pal in the world when there were just the two of us and we knew each other intimately. But a husband loses a lot of his importance in the home with the coming of the first baby. And when the babies keep on coming every other February until there are four of them, a woman doesn't have much time to be a wife; most of her time is taken up with her children. The greatest love in the world is mother love; all other loves are subsidiary to it; but it plays havoc with romantic love. And so now I look forward with wistful eagerness to getting acquainted with my wife again; I have an idea we're going to need each other and look more and more to each other for companionship in the years to come.

AND so, after all my fears and doubts and my foolish strivings to deny Old Age, I find that it is not such a dismal prospect after all. I look about me and see peace and happiness in the faces of many old people. I see a lot of unhappy ones too; but the unhappy ones almost always seem to be those who have worn their tongues out and eaten their hearts out trying to regulate the lives of other people, instead of engaging whole-heartedly in the business of living.

I find comfort now in thinking that surely the best years of life are ahead of me. The years behind me have been years of rushing to and fro, running around in circles, forever hurrying, never having time for anything. I never planted a rosebush in my youth because I didn't have the patience to wait to see it grow. I can wait for the rosebushes to grow now; and trees. And if I pass out before they grow up to bless my labors, then they will be a blessing to youths succeeding me who will not have time in their young years to plant rosebushes and wait for them to grow. And I shall have time to read! Scores of books, hundreds of books.

I am entering this era of Old Age with many lively anticipations; we have nearly conquered the material universe and have only begun to contemplate the spiritual side of it with open minds. We have hid in dark closets, buried our heads in the bed covers, and shut our eyes when we talked to God; we are seeking Him today with open eyes and without fear or simpering. It's a glorious era for Old Age.

Tell your time with your measured tick-tock, oh, clock! You shall not depress me any more. Again I may be only kidding myself. Very well, then I shall go on kidding myself; for, after all, it is a way of life. It may be the only true and satisfying way of life: Who knows, who knows?

Does Business Give Women a Square Deal?

(*Continued from page 40*)

expression on their faces. When it becomes evident that I am not a human centipede, or that my hair cannot rival the golden locks of a Circassian beauty, I can see them relegate me to a lower plane, but still hopefully. For I may be a fortune teller, a trapeze performer, a dancer or snake charmer, or Katie the human fly! I never can quite bear the disappointment manifested when I confess I am a gasman, a respectable calling but gray as the sands of the sea on a rainy day."

Gray? Well, you shall be the judge. For to me there is a rosy glow about Mary Dillon from the time twenty-five years ago, when she decided to become an errand boy, until today. She is not merely a pioneer in a business new to woman. As an executive, she has also won the admiration and respect of the men in the gas industry. Since she has dictated its policies, her company has been marked as signally successful. Its growth has been rapid—so rapid indeed that problems of finance and construction have been a regular part of the year's program. Its dividends are paid regularly and there is a surplus.

As part of her work as president, Mary E. Dillon has made herself a vital part of her community. She is a director of the Brooklyn Chamber of Commerce, and a director of the Coney Island Chamber of Commerce; secretary and director of the Coney Island Hotel Corporation, which operates the community-owned Half Moon Hotel at Coney Island. She is an officer and director of the Coney Island Center and of the Carnival Company of Coney Island, and chairman of the Finance Committee of the Harbor Hospital, Brooklyn. And she is a consultant to hundreds of people on any problem affecting community interests.

WHAT has this to do with a gas company? Mary Dillon would tell you that it is essential to its successful administration. Adopting as a business policy the theory that her services belong to the community, she has grown into one of those rare human beings who are always consulted when anything of importance to their neighbors is to happen.

She was one of twelve children born to Philip and Ann Eliza Dillon. Her father was an employee of the United States Post Office, and his salary of eighteen hundred dollars a year—which of course had a buying power of almost twice that amount today—was carefully and cleverly budgeted, so that the family lived nicely upon the sum. It was a home like thousands of American homes, where father and mother and children lived happy, golden days of struggle, glorified by their mutual love.

"An old-fashioned Christian home," said Miss Dillon.

From this old-fashioned home have grown to maturity eight useful men and women. Henry Dillon, one of Mary's older brothers, entered the Gas Company a year after Mary, and is today its general superintendent and a director.

In her senior year at high school Mary decided to work through the summer vacation. Coney Island presented opportunities, and she got a job at Louis Stauch's bathhouses. Her duties were simple. She stood at the bathing-suit counter, surveyed the feminine applicants for bathing suits, decided whether the woman before her wore a thirty-six or a forty-two, and passed out the correct size. Her success at the job depended upon the accuracy of her appraisal, because if the suit did not fit, returns made a lot of trouble. Mary did very well and she suspected that the six dollars a week she was receiving was not all to which she was entitled. She investigated. Her partner, who was doing exactly the same work, was receiving seven dollars a week. Mary sought Mr. Stauch, presented her facts, and asked for a raise of a dollar a week.

"I am doing the same work," she argued, "and doing it just as well." Mr. Stauch shook his head. Mary was new; she might not last. He refused. Today, as a retired magnate, Stauch tells the story and laughs heartily.

"The one mistake of my business career," he says, twinkling, "was when I turned down Mary Dillon."

REFUSED her raise, Mary took action. Her sister Eva was employed by the Gas Company, but was to leave to be married. Mary decided to try for her place. She asked Eva to see the superintendent, James J. Humphrey.

"H'm, is your sister the girl who won the prize given by the 'New York Times' for the best essay on Hendrik Hudson and the Half Moon?" asked Humphrey.

"Yes, she is," said Eva Dillon.

"Send her along," said the superintendent. So Mary, on the strength of the prize essay, entered the Brooklyn Borough Gas Company as a kind of general utility clerk, or office boy. She had decided not to go back to school; she wanted to work.

It was gray work, if you saw it that way. For she began by filling inkwells and sharpening pencils and running errands from office to office. But it was a small company at that time. Mary found an opportunity to fit in in many capacities. For three happy, eager years she burrowed into the affairs of the Gas Company, ferreting out information, her sharp eyes seeing, and her mathematical mind classifying, and her scientific facility relating what she saw and heard. She became a very mine of information at that early day.

At the end of her third year with the Company, there was need for a new office manager. James J. Humphrey, the general manager, wanted Mary Dillon for his office manager; she possessed both the ability and the knowledge to handle the job well. But Mary Dillon was a charming young woman with the joy of life abounding within her. No such office manager had ever been known in the company office. The only other available employee was John H. Bailey. Mr. Humphrey debated the matter and decided upon Mr. Bailey as his next office manager. He sent for Bailey and spoke from

We'll say...
"There's a Reason"
Dozens of them.

Grape-Nuts makes a small breakfast a safe one. With whole milk or cream, it supplies more varied nourishment than many a bulky meal.

THAT'S A REASON

For growing bodies, it's nature's own perfect food—made of wholesome wheat and malted barley.

THAT'S A REASON

Here's something that is mighty scarce today—food that gives teeth the exercise they need for health, by encouraging thorough chewing.

THAT'S A REASON

Pour out Grape-Nuts. Pour on cream. And there you are. A nourishing breakfast that's served in a second.

THAT'S A REASON

Flavor no other food can boast—nutlike, delicately tinged with the natural sweetness of rich malt sugar. And the special fresh-from-the-oven crispness of those golden kernels adds zest to the unique Grape-Nuts flavor.

THAT'S A REASON

Grape-Nuts

Buy it today for breakfast tomorrow.

3 minutes twice a day for teeth . . . that is ample to protect the beauty of your smile

TODAY, practically every woman knows that to preserve youthfulness and charm, it is health that must be guarded. So they pay strict attention to details of diet, of exercise and (as they believe) to mouth hygiene.

Unfortunately, the old-fashioned method of brushing the teeth with a "good cleansing dentifrice" has been proved inadequate. That is why so many people suffer from tooth decay and gum irritation in spite of faithful care. Think of it! To lose beauty and perhaps health, not through neglect, but because of erroneous, old-fashioned practices.

This is the danger

The trouble is that while ordinary brushing is fully effective *as far as it goes*, it does not go far enough. For no tooth-brush can reach into all the pits on the grinding surface of your teeth, or between your teeth along The Danger Line—the tiny V-shaped crevices where teeth and gums meet. As a result food particles collect there. They ferment. Acids are formed. Unless these acids are neutralized, they cause decay or dangerous gum infections such as pyorrhea.

Since mere brushing alone cannot protect you fully, your dentifrice *must* by containing a trustworthy antacid.

Squibb's brings protection

Squibb's Dental Cream contains more than 50 per cent of Squibb's Milk of Magnesia, long recognized as a safe, effective antacid. When you use it, it not only neutralizes the acids at The Danger Line, but enough remains there to protect your teeth and gums against acids for a considerable time after use.

Why should you be content to entrust your teeth and health to a dentifrice less certain to give full protection? The use of Squibb's Dental Cream for three minutes twice a day is ample to guard your health and beauty against the dangers of tooth decay and gum irritations. As an additional precaution, visit your dentist twice a year.

You'll find Squibb's Dental Cream mild and delicately flavored. Children delight in it. Get a tube today. Use it on the gums with a soft brush. It will keep them in healthy condition. It contains no grit, astringents or abrasives. Nothing that can hurt the most delicate tissues—only the finest cleansing ingredients and Squibb's Milk of Magnesia. At druggists—40 cents a large tube. E. R. Squibb & Sons, New York. *Manufacturing Chemists to the Medical Profession since 1858.*

Original from UNIVERSITY OF IOWA

"I've been hesitating," he said, "between you and Miss Dillon. But I don't want a woman as office manager, and so I am giving the job to you."

Then John H. Bailey, with the job in his hand, spoke.

"Mr. Humphrey," he said, "give Miss Dillon this job. It doesn't matter about her being a woman. She can fill the place better than I can. Give it to her."

After a long conference, Bailey went out. Humphrey sent for Mary Dillon.

She was just twenty-one, and although I dislike applying to a woman of Mary Dillon's ability the adjective "pretty," there is no doubt that she merited it at twenty-one (and still does today at forty-three). Humphrey looked at the girl before him, at her curly hair with its glints of gold, her bright blue eyes and her lovely mouth, and he sighed. She didn't look like an office manager; she looked like a girl any young man might capture at any time—without notice. He said something to this effect.

"All right, then," said Mary Dillon. "I'll give you my word I won't marry."

And thus, upon a pledge of spinsterhood and with John Bailey withdrawing in her favor, Mary Dillon became office manager.

John Bailey is now manager of distribution for the Brooklyn Borough Gas Company and a warm friend of its president. When, as president, Miss Dillon presented Bailey with the medal given by the Company at the end of twenty-five years of service, she told this story.

"You did not know that I knew," she said to Bailey, "but after a time Mr. Humphrey told me. One never knows what might have happened, but I owe you my job. You are a good sportsman!"

Under the title of office manager Mary Dillon served the Brooklyn Borough Gas Company for thirteen years. Her first promotions had been rapid; her growth following was with that of the Company. Mr. Humphrey resigned and was succeeded by Mr. G. H. Woodall. To these two men Mary E. Dillon credits much of her training. Humphrey, the technician, the engineer, the conservative, and Woodall, a liberal, an administrator with a distinct flair for public relationship, guided the young woman in just that combination of qualities essential for an able executive. Both men were generous with their help.

"But that," she assured me, "is true of most of the men I have met in business."

In 1916-1917 the eighty-cent gas rate was ordered by legislative action, for New York. The Brooklyn Borough Gas Company could not do business on an eighty-cent rate. It served a widespread territory. In one section the mains ran for miles without being tapped for service. The Company appealed for a rate decision giving it the right to charge more for gas. The attorney for the Gas Company declared that Miss Dillon knew more about the matter than anyone else and that she would be chief witness for the Company. When Mary Dillon heard that decision, she had for days the awful sensation of fear that almost paralyzes one's tongue and brain. But she never thought of stepping or protesting. Long before, she had evolved a guiding principle that she applied to her job as office manager and to herself as a human being:

"Accept as a gift from Heaven the opportunity to try new work."

The exact relation of the trying of a rate case to a gift from Heaven did not disturb her as she sat day after day at the long mahogany table in the office of Charles Evans Hughes, the referee, and replied to the questions asked her, questions that required every bit of the knowledge she had been accumulating all the sixteen years she had been a gasman. Technical details upon the manufacture of gas, operating expense, cost of laying mains and pipes, distribution area, pressure, topography of the territory served, office expense, peak loads—these formed the basis for question after question which she met and answered readily, calmly, and succinctly.

Before the hearings had ended Mary Dillon was accepted as a sensation. Reporters from newspapers spread her fame far and wide, the attorneys became friendly, those in attendance begged to meet her, and within herself her heart sang. She knew that she had established herself as a gasman.

When her testimony was concluded the city counsel turned to the attorneys present.

"Gentlemen," he said, "if all our witnesses were as well-informed and as honest and fair as this young woman, we would get to the marrow of these rate cases in no time."

When the decision was handed down by Charles E. Hughes, the Brooklyn Borough Gas Company had won its appeal, thanks largely to Mary E. Dillon.

Two years later the general manager of the Company left. Miss Dillon was the obvious person for the vacant place. But the owners of the Company demurred. A woman as an office manager might be possible; as a general manager, it was beyond anything heard of in a gas company. Yet they needed Mary Dillon. For five years she worked on, and the general managership remained an empty title. In fact, she was the general manager, but without recognition.

In 1924, after the five years of service without a title, the Board of Directors made Miss Dillon general manager and vice president. A year later, the controlling interest of the Company was sold and when the new president, Mr. Frank Hulswit, came into office he at once recognized how much the Company owed to Mary Dillon.

Something of the general change in the attitude towards women in industry was reflected in this belated granting of office; for shortly before it had come Miss Dillon married. Her pledge to spinsterhood was long outdated. No one in the Company now objected; no one expected her to resign. But there was considerable curiosity as to the man she had chosen as her husband.

Henry Farber stood inspection well. The curious found him a man who had made a considerable personal success, who was now interested in the coal business, and who bore with perfect equanimity, and even a suspicion of pride, the fact that his wife was a distinguished personality in the gas industry.

"How did you ever live through those years when you did all the work without the title?" I asked her.

SIMONIZ

TRADE MARK REG. U.S. PAT. OFF.

MAKES the finish last LONGER

". . It's wonderful for furniture, too."

Every Car Needs SIMONIZ to Protect the Finish from Exposure

"Just think . . fifteen thousand miles . . in all kinds of weather!" "Compare it with any car that has not been Simonized, and driven half as far. You can readily see what EXPOSURE does to motor car finishes and how valuable is the advice 'Motorists Wise—SIMONIZ,' . . and the sooner, the better. Simoniz makes all finishes, including Duco and lacquers, last longer and keeps colors from fading."

Simonized cars are easily kept bright and beautiful for years because of the lasting protection Simoniz gives the finish from snow, sleet and ice in the winter, and dust, dirt and traffic fumes in the summer.

When finishes are dulled and discolored, use Simoniz Kleener to restore the luster. Then apply Simoniz which provides that distinctively beautiful and lasting protection that resists all weather conditions. Insist on SIMONIZ for your car and your furniture, then they will always look new and beautiful.

What a cigarette meant there

It took a lot of courage, for he was no "ladies' man," and she was the belle of the town.

That awkward, stammering proposal... interrupted...And now...would she never come back? The zero hour, for a fact... the longest minutes of a lifetime.

Like most men, he lived through it, sustained by that little friend in need... his cigarette... the most important cigarette he ever smoked.

What a cigarette means *here*

It took a lot of courage, likewise, to propose and go through with the idea behind Chesterfield.

It took courage, for it meant less profit per package than is made on most other cigarettes. Into Chesterfield we blended the finest qualities of tobacco ever offered in a cigarette at popular prices—tobacco selected regardless of cost, from all the leaf markets of the world.

And when Chesterfield jumped to big volume and continued steadily to grow . . . we knew that this cigarette which so surely bespeaks tobacco quality to us had come equally to mean it to you.

Liggett & Myers Tobacco Co.

Xanthi and Cavalla, Smyrna and Samsoun—from here come the fragile tender Turkish tobaccos for Chesterfield's famous blend.

. . . and from Virginia and Carolina come the famous "bright" or "yellow" tobaccos; from Kentucky the rich mellow Burley which completes this mild yet satisfying blend.

field

. . and yet THEY SATISFY

Digitized by Google Original from UNIVERSITY OF IOWA

Her hair is oily

She should use Packer's Pine Tar Shampoo

If you have the kind of hair that loses its fluffiness shortly after shampooing, use Packer's Pine Tar Shampoo. This preparation is tonic and mildly *astringent* . . . approved by dermatologists. It leaves the hair fluffy, with a natural sparkle. Use it every four or five days at first; later every week or ten days may be enough.

Her hair is dry

She should use Packer's Olive Oil Shampoo

Like all Packer soaps, this shampoo is a vegetable oil soap . . . in addition, it contains a rich, soothing emollient (and nothing to dry the scalp). Dry scalps will never feel a stinging sensation when they use this special shampoo. Leaves your hair soft and silky to the touch—more manageable—and delicately perfumed.

He has dandruff

He should use Packer's Tar Soap

. . . the soap that made pine tar famous for shampooing. Pine tar is antiseptic, healing, with properties valuable in the treatment of dandruff. Packer's Tar Soap is endorsed by dermatologists for skin and scalp. For noticeable dandruff use Packer's Tar Soap every few days until improvement begins.

Select the shampoo your hair needs

Acute cases of dryness, oiliness and dandruff need the care of a dermatologist—a doctor who is a skin specialist. But nearly all scalps *tend* to be dry or oily, and many are mildly affected with dandruff. Now—each type of scalp can have this special shampoo which meets its particular needs. The coupon below is for your convenience. The regular size of each shampoo is for sale at your drug or department store.

"I had not demonstrated my ability sufficiently," she replied, "and I had to remember day after day that no woman had ever occupied such a position, that my fitness for it would have to be shown again and again. It was entirely a question of sex; all precedent, all custom was against me. I was willing to give those five years, or any number of required years, until my demonstration was effective."

There is behind that statement a belief in herself that is sustaining. Mary Dillon's faith has always held her to her work.

To understand her work it is necessary to know something of Coney Island. If you had not seen that great playground for many years and you were taken there via airplane and dropped on the wide boardwalk running along the edge of the ocean, you would never recognize the Coney Island of fifteen years ago. The fifty millions of people who go there each summer must rejoice in this new, clean, and spick-and-span walk, with its shops and bathhouses, its restaurants and amusements. Behind it lives a little of the old Coney Island, but it 's neater and cleaner and smarter. No matter how many thousands of bathers leave their papers upon the sands, the next morning the beach is clean, the walks immaculate. In all of this Mary Dillon's feminine fingers have had a large part. The gas company building is a part of the new plan, not only of exquisite neatness, but of personal service, for Miss Dillon makes a special point of having her customers well treated. Any one of them can see her for the asking. And often they do ask. Not long ago a man who had just moved to the Island brought his wife with him to ask that his house be supplied with gas.

"My child is seek," he said, waving his arms wildly; "we musta have the gas . . and queek! queek!" Then he turned to his wife and ordered, "Now, you cry! Cry, do you hear, cry!"

Miss Dillon managed to stop the demonstration by promising gas at once, and the pair went away, talking of a "nice present" if the gas went on. "Nice presents" to the office are many. They have included a quantity of fresh liver wrapped in a newspaper, bags of rolls, candy, and on one occasion the treasurer of the Company was awarded a dime. In order to avoid hurting customers' feelings, these small gifts were accepted.

ALL Coney Island knows the gas company building, not only as a building but as a general meeting-place. If there is need for a clearing house, a general discussion, the gas offices are mutual ground.

If anyone asks Miss Dillon how a utility company can do this and if the cost is not considerable, she points out that the cost is merely a little extra janitor and porter service and that the Company profits in good will. When she spoke to the American Gas Association in 1924 she said:

"This business of ours has such varied and absorbing problems of engineering, accounting, and finance that in the solution we are likely to lose sight of the fact that they constitute just one half of the show. *These* matters are handled with the highest degree of efficiency, and they should be, for they have had the almost

Will You Be Clerk or Manager Ten Years from Now?

SURELY, this could never happen to *me,*" you say—"that I should be sitting at the same desk—be doing the same work, *for ten straight years!*"

But wait a minute—

Exactly the same thing is happening to thousands upon thousands of men throughout the country. It has probably happened to men right in the company you now are working for. *And—unless you deliberately fit yourself for a better job—there is a very good chance that it will happen to you!*

Unthinkable? That's what R. M. Whitney, of Rochester, N. Y., said to himself. Yet lack of training kept him slaving away at low wages for more than twenty years . . .

Trebled His Salary in Three Years

—For more than twenty years, till finally, at the age of 47, *and still receiving only thirty dollars a week,* R. M. Whitney resolved to be a bookkeeper no longer. He enrolled with LaSalle for training in Higher Accountancy, and completed the course. Almost immediately came the offer of a bigger job.

Less than three years later, the Davenport Machine Tool Company—*the very company he had worked for as a clerk*—invited him to come back. He returned as Auditor, at a salary-increase of better than 300 per cent.

Today, he is Treasurer of this great company; and in a letter to LaSalle, after commenting on the opportunities LaSalle affords to men in their forties or early fifties, he adds, "And for the *young* man, who is just getting a foothold in the business world, LaSalle Extension University training is the most profitable investment he could make."

Says Good-bye to Clerkship—Now Heads Successful Firm

We have told you about a man who *waited*—at a cost to himself of probably not less than $100,000. Now consider the experience of a younger man—G. Roy Eshelman, of Decatur, Illinois—

Eshelman was occupying a subordinate position in the purchasing department of a manufacturing concern—salary $16 a week. Visualizing the opportunities for skilled accountants, he enrolled with LaSalle for training in Higher Accountancy.

"Through this training," writes Mr. Eshelman, "I became interested in the Auditing Department and often remained after working hours watching the Auditor at his work. Observing my interest, he soon placed me in his department at a 50% increase in pay, and as I progressed with my LaSalle work, I was shortly rewarded with an additional 40% increase.

"My studies rapidly equipped me to strike out for myself, and at present I have an extensive practice as a Public Accountant, employing other accountants. It is sufficient to say that my present income is *many, many times greater than when I enrolled.*"

Send For These Two Books and Start Toward Real Success

Need you hear more before you investigate the opportunities in Accountancy? Shall we tell you about Hyde—or Gray—or McDuffie—all of them commanding incomes better than $10,000 a year *and all of them still young men?*

Or will you face the problem of your future NOW—and send to LaSalle and get further facts and particulars?

Without cost or obligation, the coupon will bring you two books—one a 64-page book entitled, "Accountancy, the Profession that Pays;" the other, "Ten Years' Promotion in One."

How about those next ten years—will you wait, or will you START TODAY to realize the opportunities that lie ahead of you through sound and practical home-study business training?

Measure your grit and ambition by what you do with this coupon—NOW.

undivided attention of the cream of the gas industry for many years. I firmly believe that if the gas industry were to develop and follow a technique in dealing with its public comparable in excellence with that which it now employs in the manufacture and distribution of its products, the politicians would find other texts to serve their purposes, and our lawyers could take a rest at their own expense."

"We all try to do what Miss Dillon is doing," said an officer of one of the biggest gas companies.

As a pioneer in an industry which at her entry was practically closed to women, she has felt keenly the responsibility to her sex. In her company, there is no discrimination against women as such; offices depend entirely upon efficiency. In fact, they are rather evenly divided between men and women. At present the vice president is a man, the secretary and the treasurer are women, the general superintendent is a man. But even in the manufacturing end of the business, Mary Dillon sees no bar to women workers. She herself is familiar with the gas plant; it was she who insisted that it should be as neat and attractive as possible. Its sun light-yellow painted walls and clear floor and its meticulous order are of her planning. This year a garden lies at its base.

"Business is in many cases dreary and drab," she said. "It needs all the color women can bring to it. All the social grace they have acquired in the administration of their homes is wanted there."

Her views on women employees are novel and refreshing.

"I prefer married women," she said, "because they are more stable, more full natured and usually more in earnest. No woman loses her job here because she marries. And if she wishes to have a baby she can obtain a leave of absence for that purpose and later return to her place. In no case has their value altered except for the better."

FOR a year and a half I have been in touch with Miss Dillon with this article in mind. In that time I have just begun to get acquainted with the real woman. Affable, pleasant, interested in you and your mission, and with a warmth and friendliness, she still conveys an impression that within herself she is living more deeply and more fully in the vision of the future than in either present or past. It was hard for Mary Dillon to talk of her childhood and girlhood, and she had some difficulty in recalling as many of the details as I have given here.

"I don't do it at all well," she said. "I am sorry. I think—" she hesitated. "It is because I am too young. I am only three," she added, smiling, as if to clear any misapprehension upon my part. "Perhaps that is not really young, but things that are past do not interest me particularly. I may enjoy looking back when I am—say, sixty-three. Now my eyes on the present and future. Tremendous changes are taking place in the industrial structure of the world, and the builders are men of daring, of prophetic vision. How they will deal with the problems that are coming—not those of property but those that concern the human element—is and will be of the most interest to me."

New Dodge Brothers Six

presented by Walter P. Chrysler

(*Five-Passenger Sedan*)

The Greatest Value in Dodge Brothers History

Dodge Brothers Six typifies that genius in engineering and craftsmanship which characterizes all Chrysler-built cars.

In new beauty, in sparkling performance, in superior comfort, in safety, and in luxury of detail, it is a supreme addition to the long-time prestige of Dodge Brothers.

Now being shown by Dodge Brothers Dealers everywhere

Introduced in this new Dodge Brothers Six are more than a score of important betterments including the exclusive *Monopiece Body*—a sensational development which revolutionizes body construction.

In eight new-model body styles, the new Dodge Brothers Six awaits your judgment—a car that today reaches far into the future to bring to you fuller and broader measures of value. Just see it.

Have You Progressed during the past 3 years?

FEW people are really satisfied with the honest answer. The question is bluntly asked to induce men and women to undertake study at home. Thousands of people realize that they should study at home—but never start. These thousands intend to prepare themselves better for their work or their enjoyment of life—but they delay. They *know* that they would progress faster, and enjoy life more, but still they postpone.

Columbia University, as one of the world's leading educational institutions, *urges* you to use part of your time to increase by study your capacity to do better the things that lie before you in life. Your days may be so full that you have little time for directed study but for most people there are many hours during which profitable, enjoyable, and interesting knowledge can be acquired. The range of subjects offered is wide.

COLUMBIA UNIVERSITY

Offers Home Study Courses of University Grade in the Following Subjects:

Accounting
Algebra
American Government
American History
American Literature
Applied Grammar
Astronomy
Banking
Biblical Literature
Biology
Botany
Boy Scouting
Business Administration
Business English
Business Law
Business Mathematics
Business Organization
Chemistry
Child Psychology
Classics
Composition
Dramatic
English
Various Languages
Lyric Poetry
Contemporary Novel
Drafting
Drama
Drawing and Painting
Economics
Economic Geography
English
English Literature
Essay Writing
European History
Fire Insurance
French
Geometry
German
Government
Grammar
Greek
Harmony
History
Italian
Juvenile Story Writing

Literature
Magazine Article Writing
Marketing
Mathematics
Personnel Administration
Philosophy
Photoplay Composition
Physics
Psychology
Psychology in Business
Public Speaking
Religion
Secretarial Studies
Short Story Writing
Slide Rule
Sociology
Spanish, etc., etc.

THESE courses have been prepared by our instructors to meet the special requirements of study at home. While all basic material essential to the full understanding of each subject is fully covered, sufficient elasticity is allowed to permit adaptation to the individual needs of the student. Everyone who enrolls for a Columbia course is personally taught by a member of the University teaching staff. Special arrangements can be made for group study.

The University will send on request full information about these home study courses. A coupon is printed below for your convenience. If you care to write a letter briefly outlining your educational interests our instructors may be able to offer helpful suggestions. Mention subjects which are of interest to you, even if they are not listed here because additions to the courses offered are made from time to time.

HIGH SCHOOL AND COLLEGE PREPARATORY COURSES

COLUMBIA University Home Study Department has prepared courses covering the equivalent of four years of High School study. This complete High School or College Preparatory training is available to those who can not undertake class room work. We shall be glad to send you our special bulletin on request.

COLUMBIA UNIVERSITY, University Extension—Home Study Department, New York, N. Y.

Please send me full information about Columbia University Home Study Courses. I am interested in the following subject: Amer. Mag. 2-29

George Washington—Business Man

(*Continued from page 17*)

very profitable enterprise, and that it did not was through no fault of his.

"That the idea and the route were sound enough, however, is shown by the fact that the immediate successors of the Potomac River Company were the Chesapeake and Ohio Canal and the Baltimore and Ohio Railroad.

"It is also worthy of mention that Washington's original superintendent on the Potomac job was James Rumsey, who made the first successful experiments with driving vessels by a propeller instead of by paddle wheels. Washington was so taken by Rumsey's plans for a steamboat that he did all in his power to forward its construction, many years before Fulton's 'Clermont' steamed up the Hudson.

"THESE, in rough outline, are a few of the larger ventures in which Washington engaged. In all he proved himself a great administrator, a wise adventurer on promising undertakings, a shrewd money-maker, able to conduct large negotiations, if necessary, without opening his mouth about them until the proper time. Of course, Washington never formulated his money-making rules in so many words. But the principles are implicit in what he did and said, day in and day out through the years. Seven rules stand out prominently. Let us consider them in some detail, one by one.

"(1) *Early in life, Washington got hold of a worthy line of activity, and he bent his efforts unflaggingly in the direction of this activity.*

"From the age of twenty-one, when he crossed the Alleghenies in midwinter on a mission to warn the French out of the Ohio Valley, until his dying day, he had one great idea. It was that the Colonies on the coast must be tied by commerce and transportation to the valleys beyond the mountains.

"For forty years he pursued this idea. His business activities, his engineering projects, his speculative ventures, all in some degree grew out of this idea and tended to promote it. He built roads, fought wars, bought lands, encouraged settlement, planned canals and constructed them, in order to connect the Potomac with the Ohio and the James with the Kanawha, to make the latent productivity of the interior realizable, and to tie its commerce with that of the coast.

"Washington, in common with other 'empire developers' was a map-thinker, or, as Alexander Hamilton said, he 'thought continentally.' He visioned the rich country beyond the Alleghenies as it had revealed itself to him on many venturesome journeys, and knew that it was bound to develop. He once said prophetically that settlers would pour into that country faster than one would believe possible. He even foresaw the time, as he once said in a letter to Patrick Henry, when settlers would take up the land right across the continent to California.

"Writing to Lafayette just after the Revolution, he told of a great trip that he hoped to take, including a journey through the Lakes to Detroit, 'thence to Lake Michigan by land or water, thence through the Western Country by the River Illinois to the River Mississippi, and down the same to New Orleans.' Thus his imagination worked. And in bringing the dream to practical realization, he had the central idea from which much of his fortune grew.

"(2) *Washington was careful about exacting value, and giving it. He performed his contracts and promises according to the spirit as well as the letter, even when doing so involved heavy losses.*

"Washington hated a mean spirit. In 1760, one year after his marriage, when he was devoting most of his time to his farm and to building up his estate after the close of the French and Indian War, a characteristically brief and pungent remark is to be found in his diary. He wrote:

January 1, Tuesday

Visited my Plantations and received an Instance of Mr. French's great Love of Money in disappointing me of some Pork because the price had risen to 22.6 after he had engaged to let me have it at 20 s.

"On another occasion, Washington was trying to buy a farm from a man named Clifton. The latter agreed to sell for eleven hundred and fifty pounds, but later reneged 'under pretence of his wife not consenting to acknowledge her right of dower . . . and by his shuffling behavior convinced me of his being the trifling body represented.' When, after a while, Washington learned that Clifton had disposed of the property to another man for twelve hundred pounds, he was thoroughly disgusted and confided to his diary the opinion 'that he was nothing less than a thorough paced rascal.'

"Washington hated shiftiness and all appearance of it, and judged men by the sense of honor in carrying out a bargain. It was not what the law might hold him to, but what his conscience declared was right. During the Revolution, owing to his inability to look after his own affairs he suffered serious losses. He wrote to a relative that he made no money from his estate during the nine years he was absent from it—'and brought none home with me. Those who owed me—for the greater part—took advantage of the depreciation and paid me off with sixpence on the pound.' (Two and one-half cents on the dollar!)

"WASHINGTON, on the other hand, paid his debts, which just then were not small, at twenty shillings on the pound and with interest. He did this promptly, and with pride. To do so, he had to sell his best farm and one of his best investments, a block of stock in the Bank of England.

"When, however, it was a case of somebody trying to cheat him of something justly due, he could be firm enough in holding his rights. More than once, Washington went to law to protect what he considered his rights, or to check impositions.

"In affairs involving public trust, Washington's practice was beyond reproach. Indeed, he was inclined to lean backward

Head and shoulders above the crowd

a face that's FIT

Williams has spent eighty-nine years of specialized study in developing products that make for quick, smooth shaving. Products that help vitally in keeping *Faces Fit!*

And the best formula for *Face Fitness* is this,—first, Williams Shaving Cream; then, Aqua Velva.

Williams Cream is pure with the purity of triple distilled ingredients. With not one atom of artificial color. Incomparably (*incomparably!*) mild. Absorbs, *by actual test,* 10 per cent more moisture than any other cream we know of, with all the super softening power such extra moisture brings. With a glow of satisfaction you watch it rise quickly, in thick, smooth creaminess, beneath your lather brush.

Then Aqua Velva! Made scientifically and expressly for the newly shaven surface. First it gives a sprightly tingle. Then it cares for nicks and cuts, mostly unseen. Protects from outdoor wind and weather, indoor dryness. Prevents chapping. Conserves the skin's natural moisture, keeping it flexible, pliant to the touch. Keeping it, as Williams lather *leaves* it, all day long well conditioned and *Fit!*

Try this Williams shaving service,—Williams Shaving Cream and Aqua Velva. Millions of well groomed faces the world over bear cheerful witness to their virtues.

Test the truth of what we say, if you wish. Use Williams Shaving Cream and Aqua Velva 5 or 10 days before you vote for or against them. Send the coupon for a sample of each. Or a post card. You can't lose!

Never a penny of his fortune came unearned from the public purse. The money that he gained in the public service was used up in the public service—and more too. He gave to his country not only his services, but also the sacrifice of all that he might have made had he gone about his private business.

"The Revolution was a nine-year period of continuous service, but he would take no pay as commander-in-chief, and accepted reimbursement only for his actual expenses. As President, his account books show that his income did not equal his outgo. The President's salary then was twenty-five thousand dollars a year.

"A favorite form of investment with Washington was bank stocks. But he would not purchase any stock in the Bank of the United States—though he considered it a splendid opportunity—because he had signed the bill creating the bank and the investment might have been construed as using his public office for personal gain.

"The Legislature of Virginia in 1785 passed a law presenting him with one hundred shares, worth ten thousand dollars, in the James River Company, and fifty shares, worth twenty-five thousand dollars, in the Potomac River Company, in recognition of his services in the Revolution and also in promoting inland navigation. But he would not accept these shares, and in his will stated the reason: that to do so would be 'inconsistent with a principle which I had adopted, and had never departed from, namely—not to receive pecuniary compensation for any services I could render my country in its arduous struggle with Great Britain.'

"(3) *Washington ran his business affairs by exact knowledge. He always knew where he stood. He kept complete records of receipts and expenditures, and of all business transactions.*

"About two years before his death, Washington wrote a letter of fatherly advice to his wife's grandson, his own adopted son, G. W. P. Custis, then a sixteen-year-old boy in school. In part he said:

> Another thing I would recommend to you—not that I want to know how you spend your money—and that is, to keep an account book, and enter therein every farthing of your receipts and expenditures, the doing of which will initiate you into a habit from which considerable advantage would result. Where no account of this sort is kept there can be no investigation, no correction of errors, no discovery, from a recurrence thereto, where too much or too little has been appropriated to particular uses. From an early attention to these matters important and lasting benefits may follow.

"ALL his life, Washington followed the advice he gave young Custis. His ledgers 'A' and 'B' are famous among historians. They cover nearly half a century, from 1749 to 1792, and the first was begun when he was only eighteen. They form one of our direct sources of information about his business. We now know too that he began keeping his accounts carefully even earlier. Tucked away in the collection of Washingtoniana owned by Mr. Lloyd W. Smith, of New York, I came across the original 'little ledger' that Washington began using when he was only fifteen years old.

"The first quaint entry, a debit on September 10, 1747, reads as follows:

Thomas Turner. To Cash, won at billiards £0.1.3

"He kept accounts with relatives and others. Against his half brother Augustine he charges:

1748
9ber To Cash won at Whist down at Nomony 7.6

Per Contra

1748
9ber By One Bottle of Peach Brandy 1.3.
Feby. 5, By Cash in Full —

"The remaining entries in the book are items of cash disbursements made in attending to business for his mother, brother, and Mr. Fairfax. They are intensely interesting, for they show in the most vivid way Washington's early prudence in handling money.

"CLEAR to the end of his life, Washington kept most of his books himself except during the Presidency, when he was too busy. It was his habit to rise very early (four in summer and five in winter) and his writing before breakfast. He made most of his business letters in duplicate, having a letter press for that purpose; some of his most important letters were drafted first in a rough copy and then laboriously transcribed. It is doubtful any other great man of history has left so many documents written in his own hand.

"(4) *Washington kept his liabilities low as compared with his assets, and as far as possible avoided debt, unless it was contracted for some well-considered undertaking with an attractive promise of profit.*

"Like many business men engaged in promoting expanding enterprises, Washington was often pressed for cash, because he had plenty of work for all the money he could lay his hands on. He did borrow small sums to tide him over temporary emergencies, usually of a personal character, and it is well known that at the time he was called to the Presidency he had to borrow several hundred pounds to finance himself in proper style. But the debts were always paid as promptly as possible, and in his larger enterprises Washington had an excellent head for proper proportion.

"At the time of his death, although he had not yet been able to get his affairs in shipshape order after his long absences, his debts amounted to about twenty-thousand dollars. This was small, considering the size of his estate. In the language of bankers, his ratio of assets to liabilities was something like forty to one, a fine state of affairs. In his will, Washington's first provision was for the speedy and punctual payment of his debts, which,' he wrote, 'there are but few, if none of magnitude.'

"He necessarily made a few exceptions to his rule about debt. When he finally came back to Mount Vernon to put his affairs in order, expecting never to go more than twenty miles from the place again, he was not left in the peace he desired. Many calls were made on his time and purse. One, for example, which he felt obligated to undertake as a public venture, was the building of two houses in the new capital city, Washington, to provide quarters for members of Congress when the seat of government was moved thither. These houses cost, altogether

A BRIDGE. A main artery for three railroads and an important highway link. No other crossing within fifty miles. The White Fireman advised the installation of a pipe line with outlets at various points along the span as a protection against fire. Simple. Inexpensive. But the owners said, "Why should we go to the trouble? The bridge has been there twenty years and hasn't caught fire as yet."

But within a year it did catch fire. The wood floor was consumed. The rails and steel work were warped and twisted. Traffic was re-routed. Shipping was demoralized. Hundreds of thousands of dollars wasted, which a few hundred might have saved.

The White Fireman is an experienced loss-prevention engineer — a specialist in reducing fire-hazards. He has helped thousands of owners to make their properties more fire-safe. Frequently the acceptance of his recommendations has resulted in considerable savings in insurance premiums. But where there exists an indifference to fire danger, his best efforts may be nullified.

WHO is the White Fireman? He is used in this advertising to symbolize loss-prevention engineering service — a nation-wide service, supported by insurance companies, having for its purpose the reduction of loss-hazards. Consultation on proposed structures, inspection of property, testing of materials and equipment, and many other kinds of technical assistance comprise the work of this service. in the dimness of boundless distance

ASIA!

(by an Easterner who came to Southern California early in 1927)

Not the North African shore, but the Palisades at Santa Monica, a few miles from the heart of Los Angeles

SNOW PEAKS sheltering Southern California's golden orange valleys overflowed my cup of astonishment that last day on the train. But next morning the Pacific's plea became insistent; I found myself on Santa Monica's palisades!

At last—*the Pacific!* Childhood dreams rewarded! Gorgeous color, placidity, friendly warmth, sparkling winter sunshine—everything! No ocean ever gave me that urge! In the dimness of boundless distance—ASIA! What a sensation; a feeling of awe! Truly, a place to let imagination go wild!

That was two years ago—two years away from a "joy farm" out of New York City! Each trip to some particular close-by wonderland—whether the High Sierra, to Death Valley's lowest sink, the ever-fascinating Pacific, through the orange orchards or to Old Spanish Missions—makes me gladder I am alive—*in Southern California!*

Such winter and summer days and nights, such all-year flowers, such diversions! If you could feel its call as I do now; if, you knew the joys that might be yours! Well—you'd come for a vacation—quick!

And, Los Angeles with its Hollywood; gay hotels, great theatres, fascinating cafes—cosmopolitan to the core! Even the richness of Los Angeles County is bewildering. Billion dollar oil fields; agricultural products that annually approximate $95,000,000!

As you read this, "spring" is just around the corner in Southern California. Pack up—and come—now! That's what I did. The desert will be blooming as you arrive! I'll never forget that sight—*nor will you!*

Send immediately for a free new and authentic book of 73 large pictures—"Southern California through the Camera" showing exactly what you'll see here winter and summer.

Southern California

"A trip abroad in your own America"

All-Year Club of Southern California, Dept. 2-M
Chamber of Commerce Bldg., Los Angeles, Calif.

Please send me your free book "Southern California Through the Camera." Also booklets telling especially of the attractions in the counties which I have checked.

about fifteen thousand dollars, more than Washington anticipated, and he had to borrow at the bank of Alexandria in order to finish paying the contractor. A part of this debt remained unpaid at the time of his death, which occurred a few months later, and was settled by the executors.

"(5) *No man, Washington knew, grows rich by himself alone, but by coöperation with others. He made a practice of choosing subordinates or associates with the greatest care—trusted them implicitly—checked up their performance unfailingly.*

"Once, as a surveyor, he had an experience with a helper that served as a warning and guide all his life. In those days, instead of a chain to measure distances, it was customary to use a rod made of a young sapling cut sixteen and a half feet long. Either maliciously or carelessly, this helper cut his rod only fifteen feet long. Washington did not discover the fact for two days. Then he had to resurvey and repeat all of the two days' work. The incident tended to make him careful about subordinates ever after.

"IT IS not generally realized that Washington had a high temper. Even his friends, many of them, never knew it. But there were a few historic times when he did 'fly off the handle' completely, and almost all of them were occasioned by a subordinate's failing to carry out some carefully given instructions, thereby endangering larger plans.

"Washington was a good judge of men and had a wide knowledge of them. He seldom picked a helper who failed him seriously, and part of the secret no doub was that he never failed others. He received what he gave. But he always kep the threads of his important affairs, eve when entrusted to others, close in hanc At Mount Vernon he often spent six an eight hours daily in the saddle, inspectin planning, directing; and, besides, he i sisted on regular, detailed reports fro each superintendent.

"(6) *In making investments, Washin ton's rule was to choose something that knew about, preferably something close hand, or of such a character that he cou watch it closely.*

"He found most of his investment o portunities in the conditions immediate about him, because here he could rely personal knowledge. Mount Vernon, already pointed out, was the first prope of considerable size that he owned, and was his home for more than fifty years amounted to about twenty-seven hundi acres when he inherited it, but it gr under his hand to eight thousand ac before he died. Similarly, the Poton River flowed past his door, and one of great undertakings, involving a conside ble cash investment, was the Poton River Company.

"His investments in lands were nea all made after personal inspection and s vey; this was true even of many of th located beyond the mountains. He did find these distant properties such g investments, however, as those neare hand. Once he wrote:

"'From the experience of many yea have found distant property in land n pregnant of perplexities than profit.'

"Badly-bitten long-distance specula of recent booms will probably agree him.

This is an advertisement based on opportunity and prompted by appreciation. For further information regarding this opportunity address your letters Manager, Air-Way Branch of (nearest of the cities listed above).

To Men Who Live Within 150 Miles Of These 64 Large Cities

Expansion Plans Of A National Organization Offer New Opportunities For Intelligent, Able Men Of Character Who Can Measure Up To The High Standards Of This Business

BECAUSE of a request made by one grateful man who had appreciated his opportunity and made the most of it, the major Air-Way Branches in 64 large cities are offering to men who can meet requirements and follow instructions similar opportunities for increased incomes in a dignified and permanent business. These opportunities are available to men who live in the cities listed above and in communities of 5000 or more located within a radius of 150 miles of these cities. Appointments and interviews may be arranged by writing the managers as directed above and referring to this article.

Manufacturers have introduced a remarkable new invention, the Air-Way Sanitary System, which has met with such a wonderful reception in American homes that factory production space was more than tripled in one year. Within a brief space of time, these producers have reached a position of leadership in the industry. An unusual and meritorious product, covered by exclusive patents and merchandised by modern, effective methods has made that possible.

Today the Air-Way Electric Appliance Corporation has huge modern factories, employing hundreds of men and women, producing the Air-Way Sanitary System exclusively. The stability of the manufacturers is reflected in the authorized capital stock of $3,000,000 in preferred and 500,000 shares of no-par common stock. Highest financial ratings have been given the corporation by the Dun and Bradstreet mercantile agencies and men interested are invited to inspect these ratings.

Hundreds of thousands of Air-Way Sanitary Systems have been sold in the past few years in a rather limited territory, as the Corporation is establishing itself by conservative methods. The Air-Way has supplanted present-day methods, and, in many instances, rendered existing equipment obsolete. This service has been satisfactorily rendered not only in homes but also in hotels, apartment buildings, schools and universities, municipal and state offices and in other institutions and places so well known that for obvious reasons mention is not permitted. Society leaders in scores of cities have purchased Air-Ways for their homes. The list of Air-Way owners reads almost like "Who's Who" and satisfactory service rendered to these owners has created invaluable good will and led to other sales.

With all of this wonderful success, the surface has been merely scratched, as the occupant of every electrified home is a prospect for Air-Way. There can be no substitute for this equipment. Its exclusive features are covered by patents. Thousands of home makers when acquainted with its services, discarded the equipment which Air-Way made antiquated.

During the time that the Corporation was building for the expansion program which is now announced, hundreds of men have found in this business real opportunities to get out of the rut of routine. They found their earning powers were not limited by a time-clock, but by their own ambitions. During October one Air-Way man, H. S. Daumit of Youngstown, Ohio, earned more than $2,000 in cash, and, when payments are completed, his record for that month will show close to $3,000 as paid to him—and October was his fourth month in the business.

This business does not require experience of any particular sort. Mechanics, salesmen, ministers, university professors, government employees, bond salesmen, newspaper men, clerks and men from all walks of life have made good at it. They were trained in Air-Way methods and were willing to follow instructions. These instructions outline Air-Way methods which are founded on practical experience and are imparted by men who have proved their effectiveness.

Hundreds of men have more than doubled their incomes in this business. Men who dreamed of owning homes, autos and luxuries have seen their dreams realized with Air-Way earnings.

These facts can be substantiated at any Air-Way branch office. Actual names of men will be given to those who investigate with sincerity and good faith.

When you write or call at an Air-Way office, you will be received courteously and given, without expense to you, complete details and instructions which will enable you within a very short time to enter this business and make your own career.

Address your letters to Manager Air-Way Branch of nearest of 64 cities listed to arrange appointment for an interview.

These Men Increased Their Incomes In Air-Way

IN ORDER to present a fair picture of earning possibilities in Air-Way, the following instances were selected at random without thought for naming those who received highest incomes. In other words, the record holders were deliberately omitted.

The successes recorded here are those of men who entered Air-Way without investment of any capital other than their time in this business. Richard Deckert of Baltimore was formerly proprietor of an automobile repair shop. During the year ending November 1, 1928, his earnings averaged $406 a month. Earl Totten of Peoria, Illinois, formerly with a railway express company at $140 a month, averaged $604 per month for his first year in Air-Way. Frank E. Judkins, formerly in the real estate business in Cleveland, earned $5700 during the year ending November 1, 1928. In Detroit, Otto Kaess, former factory worker, averaged $345 a month over a twelve-month period. In Los Angeles, H. E. Brown, during his first seven months showed average earnings of $430. Over a three-month period, L. A. Martin of Plattsburg, New York, averaged $315. The consistency and permanence of the business is shown by W. C. Kemp's average earnings of $400 per month over a three and one-half year period in St. Louis. J. H. Bergman of the Air-Way Branch of Buffalo, in eighteen months, has averaged $364 a month, and D. C. Mackey averaged $101 per week in Meadville and New Castle, Pa., over a period of one year.

"Washington had a special liking for bank stocks as investments, based mostly on a favorable experience that he had with a block of Bank of England stock. His dividends on this, and on other bank stocks that he acquired, were paid regularly year after year, and in his will he made a point of recommending that his executors buy additional bank stocks for certain purposes.

"As a general thing, Washington placed his faith and his money in what would develop the country: in roads, canals, agriculture, the reclaiming of rich waste lands, bringing fresh acres under the plow. He was a 'bull' on the future of the United States, and staked his fortunes on his belief in the country's rapid growth.

"(7) *He did not abandon a judiciously chosen investment or undertaking at the first temporary slump in prices or threat of failure.*

"WASHINGTON was a splendid hanger-on. In war he often lost battles—but usually won the campaign. It was the same way in his business. Time after time, as his letters, diaries, and records show, he suffered the worst kind of farming defeats. Excessive rains were followed by severe droughts that killed the crops. Sometimes for three years in succession there were crop failures beyond his power to prevent. But in the long run, he made money as a farmer.

"He did not lose heart if his plans failed to materialize instantly. On the contrary, he was incredibly patient, as long as he continued to feel that his original reasoning and purposes held good. On this point he was explicit in his will. He wrote:

And by way of advice, I recommend it to my Executors not to be precipitate in disposing of the landed property (herein directed to be sold) if from temporary causes the sale thereof should be dull; experience having fully evinced, that the price of land (especially above the Falls of the Rivers, & on the Western Waters) has been progressively rising, and cannot be long checked in its increasing value.

"He also strongly advised his heirs, if they could conveniently do so, to buy and hold among themselves his shares in the Potomac River Company, even at some immediate sacrifice, for he firmly believed that as the country developed these would pay a good dividend.

"These, then, are some of Washington's basic principles of money-making, as a first-hand study of the records reveals them. And it seems to me that they give a wholly new conception of his character and career.

"Washington never meant to be a great soldier or statesman. He preferred to be a man of peace and to devote his capacities to surveying, farming, and business, road and canal building, land exploration and settlement. He was a good, successful, and great citizen in the largest affairs, because in his small daily contacts he was unselfish and just, loved work, and labored constantly to leave the world better than he found it. He possessed unusual powers which he faithfully used. A thorough study of these powers show us the real Washington—a human, flesh-and-blood man whom we can understand and emulate as well as reverence."

The Vanished Man

(*Continued from page 13*)

on toward night. From far down the river the remote echoes of a sound came up. The river boat was turning a bend of the Ohio. And Mr. Brewster must be on his way if he was to reach Fort Pitt.

He took up his top hat and went out with a curt adieu. Horton remained standing by the door. But Colonel Braxton walked with the attorney to the carriage.

Mr. Evert Brewster pronounced there his opinion.

"Old Berkley may have gone somewhere to the dogs, for all we know," he said. "The affair is a mystery beyond me. But one thing is certain: This creature will stick. And I see no way for my clients to eject him.

"The law in these cases of disappearance will not presume death, following, I suppose, the rule laid down by Sir Matthew Hale, who hanged some sailors for the murder of a mate who had disappeared; and afterward the mate turned up."

He made a gesture as of abandonment.

"Unless the death of Berkley should be discovered, I can see this fellow sitting here for his seven years."

He made a courteous bow to Colonel Braxton, and stepped into the carriage.

"I shall direct the driver to return here for you," he said, "and I am obliged to you in every variety of way for your conspicuous courtesy. When you are coming to Fort Pitt, do me the honor of a c upon my service."

And he drove away to the steamer lan ing.

COLONEL BRAXTON went back p Horton into the house. He paused the hearth, looking down at the big, em fireplace where the body of a tree wo burn, and the great open throat of chimney. Then, for a moment, he stud the little miniature of the boy which sitting on the mantel shelf.

He went over, after that, to the t near the chair from which Mr. E Brewster had so recently got up. And of the corner of his eye he scrutinized daguerreotype at his elbow. Here w new element come into this affair, how, precisely, had it influenced these terious events?

Was there a relation between this man and Captain William Berkley?

But, if so, why did it appear here after the man had vanished?

Why had Horton brought it out?

The incident set something in m in the lawyer's mind. He began to about the room. A bed had been set a corner, Horton's bed; for throu door, ajar, he could see into the where Berkley was accustomed to s and it was empty, the bed dismar There remained only the wooden k on the bed frame.

Lovely pearls that gleam and glisten are yours to possess when cloudy film is removed from lovely teeth.

The Film

that discolors the whitest teeth

Are your teeth dull, lustreless? Are you prone to tooth and gum disorders? Then remove film this scientific way.

(*Send coupon for free 10-day supply*)

MODERN dental research has recently thrown a new light on two common conditions.

Dull teeth are traced to a dingy film which ordinary brushing does not effectively combat.

Many serious tooth and gum disturbances are traced almost as completely to the same source—*film*.

Thus an utterly different way of tooth cleansing is being adopted by thousands, known as Pepsodent. A free ten-day supply is offered you.

Germs, tartar, pyorrhea, decay

Run your tongue across your teeth. You will feel a film; a slippery, slimy coating.

This film absorbs discolorations and makes white teeth dull and dingy.

Film clings to teeth *too stubbornly* for usual days of cleansing to combat successfully. It sets into crevices and stays.

Germs breed and multiply in that film. The seeds of decay are invited. Film hardens into tartar. And germs, with tartar, are a proved cause of pyorrhea.

Now film removed new way

Film cannot resist brushing the way it did before. The new-found agents in Pepsodent curdle and loosen film so that light brushing takes it off. Thus the long and vigorous brushing necessary with old ways now is ended. Its use aids in firming gums and restoring healthy color.

Thus, Pepsodent answers fully the requirements of the dental profession. It is the greatest step made in a half century's study of tooth-cleansing methods.

Give Pepsodent free 10-day test

If teeth are dull, "off color," that is film. Remove this film for ten days and see teeth lighten.

Get a large tube wherever dentifrices are sold. Or send coupon to nearest address for a ten-day tube to try. Make this test and you will be surprised.

Milder than what?

WELL, milder than what you've been smoking. Milder, and mellower, and for two perfectly good reasons: it's choice leaf and it's aged more carefully in the warehouse. Result, Sir Walter's favorite smoking mixture has so much genuine distinction of flavor and fragrance that sophisticated pipe smokers are prompt to recognize it and grow enthusiastic.

LIMITED OFFER
(for the United States only)

If your favorite tobacconist does not carry Sir Walter Raleigh, send us his name and address. In return for this courtesy, we'll be delighted to send *you* without charge a full-size tin of this *milder* pipe mixture.

Dept. 165, Brown and Williamson Tobacco Corporation
Winston-Salem, North Carolina

B&W PRODUCT

SIR WALTER RALEIGH

Who discovered how good a pipe can be

It's *milder*

And his vague impression took a certain form.

The aspect of the room had changed; as with a change of occupant a room, subtly and inconspicuously, can change. Heretofore, it had been a room for Berkley. It was now a room for Horton!

The insistence of this fact disquieted the man.

The thing was a seizure of possession. And Colonel Braxton felt that it was based on something irrevocable and permanent. Did Horton know, then, that Berkley would not return?

When Colonel Braxton came back into the house Horton had gone outside. He made some trivial explanation; there was a chill in the air at evening, and he would find some bits of wood for a little fire. One could not say when the negro driver would return with the carriage from the river. The boat was coming up at some distance below the landing and there were always a variety of delays in an embarkation. Night might be on the way when the carriage returned.

Colonel Braxton was alone in the room.

AND the impressions that he assembled did not reassure him. The daguerreotype of the woman on the table was the most disturbing. If Horton were intriguing for a woman, anything might have happened. Women notoriously complicated any mystery. A man enamored of a woman might do any sort of thing. That lure overrode fidelity, honor, every law. The highest endeavors of the soul went with it, and the most abominable betrayals.

Who was this woman, and what did she here?

Horton came in then with some bits of wood, and started to kindle a little flame on the hearth. And again Colonel Braxton's attention was centered on this fireplace. It presented a marked change from his earlier memory of it.

It was a great, open fireplace with an immense throat of a chimney, in which one could have burned an ox to ashes. It had stood with andirons on which cuts of beechwood that a man could hardly carry in were consumed. The sort of old fireplace that the early men built to heat their houses when the snowstorms raged and the timber cracked in the low temperature of midnight.

Colonel Braxton recalled it precisely as it was when he had been here the last time. Now it was cleaned out; the great andirons were gone, and Horton was kindling a little flame of chips and stove wood.

Colonel Braxton put a query along the line of his impressions:

"Captain Berkley was not in rugged health?"

And Horton, stooping over the fire, replied:

"He was not. He had attacks of the heart."

"His tenure of life was uncertain then?"

"Yes."

"You did not expect him to live long?"

"No."

"Not seven years?"

Colonel Braxton shot the query, as though to take the man unguarded.

But it failed. Horton gave no evidence of any visible concern. He replied slowly in a deeper voice:

"Life and death are in God's hand. One may live long or die early as He wills."

Colonel Braxton deflected his interrogation:

"Captain Berkley had a dread of being buried in the earth."

The man looked up from the fire.

"He said that to you?"

"Yes," replied Colonel Braxton, "more than once he said it. One could laugh at death, he said, if one had not to lie still forever in the earth, if one could be exposed to the vultures, or go out, like the dead Vikings, on a sinking ship, or be burned on a great funeral pyre."

And again he looked closely at the man kindling his little flame in the vast fireplace.

But that one replied with equanimity:

"It was a strange feeling. But there was a deep horror in it to Captain Berkley. To lie forever in one place was an idea that he could not bear. He had a restless spirit; to move; to change—motion of some sort was what he longed for, even after death."

"Precisely," said Colonel Braxton; "the vultures and the water move, and the fire . . . the flames and the smoke go up, and the sparks fly heavenward. There would be in the idea something of the freedom of a thing adventuring on, to a restless spirit."

And again Colonel Braxton put a question from another quarter:

"When you urged Berkley to go to law about this deed, he replied that he had had enough of lawsuits, and you were silent. Why were you silent at that answer, Horton?"

The man turned about, where he was kneeling on the hearth.

"I of all persons could not urge a lawsuit on him."

Horton spoke slowly, softly, but there was an upheaval of emotion under the restraint.

COLONEL BRAXTON put out his hand and took up the daguerreotype from the table.

"Did Captain Berkley care for the woman?"

It was some moments before Horton, on his knees in the great fireplace, endeavored to reply, as though he required that interval for control.

"He cared nothing for her."

There came a strange paroxysm of emotion over Horton's face.

"Nothing?" echoed Colonel Braxton.

"Nothing!" replied the man.

The suppressed emotion broke out in Horton's answer.

Colonel Braxton was profoundly puzzled. He was in the dark, and he moved softly.

"And this other," he said, indicating the miniature above the fireplace. "Was Captain Berkley in his youth?"

"No."

Colonel Braxton paused, for the darkness was now deepened.

"What is the equity," he said, "between this woman and this youth?"

"No equity," replied Horton, "in the affairs of men. But in the vast adjustment of God, a pressing and eternal equity."

"On what man?" said the Colonel.

"On me!" replied Horton. "And I shall adjust it at any cost!"

"At any cost?" said Colonel Braxton.

"At any cost," replied the man.

"Even murder?" said Colonel Braxton.

There came a wrenching, contorting energy into Horton's voice.

Announcing! "POTS, PANS AND MILLIONS"

By Edith Mae Cummings

A Message to All Women who wish to Succeed in Business

THIS, the first book ever published on woman's success in business and how to attain it, pulsates with answers to the very questions that have often vexed you.

Powerfully dramatic, intense with interest and moving swiftly to a conclusion that seems almost too good to be true, it vividly portrays a new era of business success for women, the winning of an income and how every woman may turn her ability . . . into money.

Imagine, if you can, a woman unusually handicapped with genuine grief and responsibility, rising above all obstacles and in but a few short years becoming a millionaire. Such is this story, based on fact, which definitely formulates for every woman the way to financial independence . . . worthwhile business and professional achievement.

Edith Mae Cummings' phenomenal success and her advice to women on how to succeed in business, as plainly stated in "Pots, Pans and Millions," is the book of the year; a contribution to Literature as well as to the business women of America.

Here is a book that is both new and unusual, one you will eagerly read . . . enjoy . . . re-read . . . and profit by. Accomplishment supersedes dreams. Facts replace theories. And woman is gloriously guided into her own without fear or favor. A message to all women who desire to be economically independent, to make the most of their opportunity and to have a successful business of their own.

The First Edition of "Pots, Pans and Millions" will be off the Press about February 10th. To make sure of your copy send in your name now. $3.50 postpaid.

The Views of a Successful Woman on topics of the day

Woman's Ambitions
Capacity for Success
Ability and Reward
Self Confidence
Opportunity and Fitness
Making Money

"Even murder," he said; "if that were a part of the cost."

"And so," continued Colonel Braxton, "you have laid every plan for this adjustment; got everything here into your own hands to do it . . . at any cost, as you say it, Horton; at the cost of a seven-years' tenure if it cannot be shown that Captain Berkley is dead?"

"Yes," cried the man, his voice escaping, in its emotion, out of leash. "Have I not said it? At any cost! And may the Lord God destroy me if I do a less thing!"

THE man was kneeling on the hearth in the great throat of the chimney, near the flame of the little fire that he had kindled. Twilight had fallen. Shadows were gathering in the room.

And Colonel Braxton put another query: "Why did Berkley go on these journeys?"

"It was only to see the South," replied Horton. "It was his native country. He was sometimes homesick to see it."

Colonel Braxton replaced the picture of the woman on the table. He sat down.

"And this last journey," he said; "do you expect him to return from it?"

"He has always returned from his journeys," said Horton.

"He will not return from this one."

"Why not?"

"Because he never went on it," replied Colonel Braxton.

There was utter silence in the room. The attorney sat beside the table looking into the great fireplace, now empty, save for the man who had kindled the little fire of chips and stove wood on the vast hearth. This man in his crouched attitude seemed distorted and grotesque in his big shadowy outline. The voice, when it replied, was like a voice issuing from a shadow.

"You mean he is here?" it said.

For a moment the lawyer did not reply. He seemed to study the great fireplace, in which an ox could have been burned to smoke and ashes, butchered and undressed, on the big andirons, now removed from where they had formerly stood on the wide stone hearth.

"At any rate, Horton," he said, "your design in this matter rescued Berkley from one thing he feared—the fear of the earth over him. He will not lie with the earth over him . . . nor did he go to the vultures . . . what was it that he said would make him laugh at death! To be burned on a great funeral pyre of wood and spices, or to go out to sea, like a dead Viking, in a sinking ship. . . . The great fireplace is empty, Horton. . . . It is empty! Where are the big andirons that used to stand in it? . . . Where have they gone, Horton?"

THE man came out of the throat of the chimney and stood up on the hearth beside the mantel. He bulked big in the twilight, one side of him faintly illumined by the fire.

"Do you pry into this thing," he said, "for yourself or to the gain of another?"

"For myself," replied Colonel Braxton. "For myself only and the adjustment of God's justice. I interrogate you for the gain of no man."

And his voice went on in its prolonged key like a refrain:

"Where is the bed cord, Horton? Berkley's bed is stripped to the knobs on the wooden frame. . . . Where is the bed cord?"

The big man standing on the hearth, the half of him in shadow, the half of him lighted by the fire, did not reply.

And Colonel Braxton's voice went on in its deep rhythmic intonation, like the recurring repetitions of a chant:

"And that seventh wool bale! Where is it, Horton? . . . Where is that other wool bale?"

He put out his hand and touched the paper on the table. The receipt of the consignee at Memphis for the wool shipment; the receipt that Horton had shown to the Fort Pitt lawyer.

"That paper acknowledged the receipt of *six* bales; and you had *seven* bales on the steamboat landing. Seven! Horton, Sylvanus Betts tried to buy them from you. Seven! He counted seven. . . . Where is that other wool bale?"

The big, even, relentless voice went on: "Look at me, Horton. Where is that other wool bale; the lost one, the seventh one; the one that was bound so securely with the bed cord. The one that had the two heavy andirons in it, to make it sink . . . the one that contained the dead body of Captain Berkley? . . . Did you kill him?"

The man, bulking big, indefinite, against the background of the huge fireplace, laughed. It was like no other human laughter. It was like the laughter of a jinni, the laughter of a dominating spirit at a thing too utterly incredible for any other form of answer.

"I kill him! When to gain him an hour of life I would have bled out every blood drop in my body!"

The laughter, guttural, weird, was a sort of agony.

Then, with a great effort, he got back his equanimity. He took a step forward from the shadow of the hearth. He looked down at the lawyer.

"I will tell you," he said, "and with the knowledge you shall take the obligation. And if the adjustment of God's justice is disturbed by what I tell you, it shall be you and not I who must answer to Him!"

THERE was a moment's silence and he went on:

"A woman and a little boy, fleeing out of Mexico, at war, came into Louisiana. They were a blend of Spanish and people and, counting on the color of that blend, slave trader seized them at the border and offered them on the block at New Orleans. Captain Berkley, returning also from the war—passing, heard their protestations and knew that they spoke the truth, for he had a knowledge of these people to the south.

"He protested against the outrage. There were high words. But he was a man of spirit, and once into a thing he did not give way. He put up a bond. Carried the woman and child to his estate. The slave trader raised his fellows and went into the courts, and this gallant gentleman went with him. The case went on, bitter, and shunted from court to court for years. It became famous and it cost a fortune. It ate up like a plague everything that Captain Berkley had.

"And not that only. It turned his people and his friends against him. It put him in the position of fighting against an institution upon which they believed their civilization rested. The wrong of a particular case was lost in the vast e

Digitized by Google Original from UNIVERSITY OF IOWA

of its precedent, if it should be legally established. But against all this Captain Berkley stood with the courage of the angels.

"The case went on for years—for twenty years. The woman died, happy, free. The boy grew up, and finally the case was won. But Captain Berkley was a pauper and an outcast. Even his sister, the only living member of his family, would not speak to him.

"And so, rejected of his people and denuded of his inheritance, he came here. . . . I, only, remained to him. The son of the woman he had saved from slavery. . . . You know the rest."

There was a long silence before Colonel Braxton spoke.

"Not all of it," he said.

"No," replied the man, "not all of it, for things changed. Captain Berkley's sister and her husband died, leaving a son with nothing . . . he is there in that miniature on the mantel. And I must do for him what Captain Berkley did for me . . . in secret for him what was done openly for me. . . .

"For Captain Berkley, after they had turned against him, would not permit me to mention to him any member of his family. And so I got the property into my hands, and so I would have managed, even against these Fort Pitt thieves with their crooked deed, if Captain Berkley had lived on."

The man stopped. Then, with a gesture as of abandonment, he continued:

"But he died. I found him dead in that chair."

Again he paused.

"And so, I did the only thing I could do to gain a little time on these Fort Pitt thieves; time to earn the money to get back Captain Berkley's estate in the South for that nephew yonder on the mantel, the last of his blood; and the image, like a reincarnation, of him."

There came a sudden energy into his voice. He seemed to advance on Colonel Braxton, although he did not move.

"You have searched it out to the last detail. And you are right. I put the body into a bale of wool, with the andirons to make weight, I bound it with the bed cord, and when I took the bales off to the steamer I overturned the boat and sank it. . . . And so . . ."

HIS voice echoed through the empty room.

"I saved the dead man from the earth he dreaded, and I gained my seven years on the thieves. . . . All hidden . . . covered from every man but you; you alone have cunningly ferreted it all out. . . . And the injustice that results be on you!"

Colonel Braxton made a sweeping gesture as of one who rejects an obligation.

"It shall not be on me!" he said.

There was the sound of a carriage on the road outside—the carriage returning from the river boat. And the lawyer rose.

"Horton," he continued, "it shall not be on me." And his voice was balanced—even and level like a sheet of light.

"For I have learned one thing—one thing in a long experience of life—I have learned to keep silent and to stand aside when the inscrutable Providence of God is moving to the adjustment of some troubled matter in the affairs of men!"

✣ ✣ ✣ ✣ ✣

How HUSBANDS *can improve their* dispositions

"Of course I found that replacing caffein beverages with Postum enabled me to sleep better, and kept me from feeling so nervous and fagged out.

"But Postum accomplished a still greater benefit in my case. Its use in place of caffein improved my disposition amazingly! Heretofore, on going home in the evenings, I felt extremely irritable. Only by keeping closest guard over my tongue and actions, could I refrain from outbursts of unjustifiable temper. Jaded nerves, over-stimulated by caffein, were probably to blame.

"Whatever the cause, my disposition is now greatly improved since Postum has replaced caffein in my diet. Needless to say, my family is as enthusiastic about Postum as I am. We continue to use it and like its flavor exceedingly."

Clifton D. Dush
10903 Clifton Blvd., Cleveland, Ohio.

. . .

QUARRELS that start from nothing, cross words that have no reason—these are the things that shatter happy households. And the tragedy of it is that so often the real cause of this irritability lies in a seemingly harmless mealtime indiscretion—in the continued use of caffein.

For caffein is a known nerve irritant. Slyly, it does its work, robbing a man of sleep, hammering at his nerves, until gradually he becomes testy, short-tempered—a trial to family and friends.

But eliminate caffein from the diet—replace it with Postum—see what a wonderful change takes place! Sound sleep returns, nerves become normal—smiles chase away the frowns!

Try this diet change in *your* family! Try it for thirty days! Then judge!

You'll lose nothing in mealtime enjoyment by changing to Postum. Postum has a rich, full-bodied flavor that millions prefer. A drink made of roasted whole wheat and bran—without a trace of any artificial stimulant in it.

Your grocer has Postum. Or mail the coupon—we will send you one week's supply *free*, as a start on your 30-day test. Please indicate whether you wish Instant Postum, made instantly in the cup, or Postum Cereal, the kind you boil.

© 1929, P. Co., Inc.

Postum is one of the Post Health Products, which include also Grape-Nuts, Post Toasties, Post's Bran Flakes and Post's Bran Chocolate. Your grocer sells Postum in two forms. Instant Postum, made in the cup by adding boiling water, is one of the easiest drinks in the world to prepare. Postum Cereal is also easy to make, but should be boiled 20 minutes.

MAIL THIS COUPON NOW!

P.-A. M. 2-29

POSTUM COMPANY, Inc., Battle Creek, Mich.

OUR OBLIGATION TO THE PUBLIC

NOT merely to sell vaults, but to deliver positive and permanent burial protection, is our solemn obligation to the public. And our greatest pride lies in having produced the Clark Grave Vault for more than a quarter of a century without failure.

Our vault is sealed by an immutable law of Nature. It *must* be secure. No man-made locks determine the measure of protection. Our selection of materials is determined only by what is best. Metal because it is not porous. Special quality of Armco Ingot Iron or Keystone Copper Steel—the most rust-resisting metals.

Our workmanship is far more exacting than appears to be necessary. Oxy-acetylene welding on the outside, electric welding on the inside — making seams of solid metal stronger than the heavy 12 gauge sheets used. Every Clark Vault must prove its quality by a submergence test under 5000 pounds of water. In the finer models, a plating of pure cadmium gives still greater rust-resistance.

Every Clark Vault sent out is a sincere fulfillment of our obligation. That is why leading funeral directors recommend the Clark. Guaranteed for 50 years!

A de luxe model, beautifully designed, of 10 gauge Solid Copper is also available. It is practically indestructible and carries a perpetual guaranty.

Less than Clark complete protection is no protection at all!

THE CLARK GRAVE VAULT CO.
Columbus, Ohio
Western Office and Warehouse, Kansas City, Mo.

CLARK

GRAVE VAULT

This trade-mark is on every genuine Clark Grave Vault. It is a means of identifying the vault instantly. Unless you see this mark, the vault is not a Clark.

What I Don't Like About the Movies

FIRST PRIZE

The Long List of Preliminaries Is Like a Pewter Dollar

A "HUNK" of roast beef manifestly is not desired by most people when their taste is set for romance, and I, as one of the bulk of movie-goers, do not care for that overdone slice of publicity forced upon us in the introductory titles which begin a film.

I refer to the listing of all who contributed to every detail and function, except the acting, in the film's make-up. I believe the average movie fan ignores it, passes it up like a pewter dollar, yet chafes inwardly with impatience, as I do, while waiting for the real reel show to begin.

Picture Ringling Brothers' Circus about to begin, with an audience waiting to be thrilled, when out steps the ringmaster and announces:

"Ladies and Gentlemen, the clowns, the elephants, the trained horses and all are ready to perform but I must delay them a bit to tell you this: The canvas for this tent was made by the Henry Grillbortzer Tent Corporation; the tent stakes were manufactured by the Hobglobin Lumber Company; the guy ropes were designed by Mr. Gabriel Gilreath; the paint on the circus wagons was prepared by Mr. Samuel Katz"; and so on—*ad infinitum*.

Picture the effect on the impatient seat-holders and I believe you have the identical effect on a movie audience when the average film starts by telling you who was responsible for the titles, the photography, the continuity, and what not. At least, the effect on me is one of fretful impatience, and this is really the only thing that I don't like about the movies.

As to the pictures themselves, they are not filmed to suit individuals; there are varieties galore, and one can choose according to his moods.

To complain against the picture part of films in general is to bear a grievance against the human race, whose actions vitalize the cinema; to find fault with any one film is to condemn for its dimness a tiny star in a whole heaven of brighter ones.

G. B. C. K.

SECOND PRIZE

Why Don't the Picture Makers Assume that We Have a Little Sense?

IT IS with great trepidation that I approach the subject of criticizing the "Came the dawners," as Sam Hellman calls them. In an art so amazingly developed and so technically perfect, criticism can only be pointed at the methods employed by directors in unfolding the story to be told and the scope they allow their cast in portraying human emotions. However, THE AMERICAN MAGAZINE has asked for a purely personal criticism, so here goes:

It seems that the art of suggestion is almost totally unknown to ninety per cent of moving picture directors. To my mind that is one of the chief points in which the industry falls short in its striving toward true art.

Must we actually have close-ups of the heaving breast, the clenched hands, the glycerine tears, to make us realize that our heroine is crying? Must the villain always leer, scowl, wear black mustachios, and tear ladies' garments to shreds, for us to imagine his black heart? The comedian seemingly cannot be identified as such until he actually falls down a flight of stairs or trips over people's feet.

My plaint, in short, is that we must not take it for granted that an object is a spade until someone turns a sod with it. A few times I have gone to pictures and found, to my incredulous delight, that I was actually being allowed to use my intelligence. It amazed and heartened me and I eagerly awaited the next "feature." But, alas, my fond hopes were shattered and again I resumed the attitude of a four-year-old child learning its A B C's.

E. M. M.

THIRD PRIZE

It's Time to Show the Other Side of the Shield

WHEN moving picture companies set out to film an event that is far removed from us in space and time, they can do it to the very minutest detail with absolute accuracy. But when they attempt to depict our contemporary American life, they fall down so miserably that it is hard to believe they are the same organizations.

Yet, obviously, it is this class of pictures that has the most vital effect on the movie audience at large; and one hates to think what this effect is on the many who go to the movies under the delusion that what they see there is true to life. Smoking, drinking, dissipation, and excess of all kinds are common in many of these pictures. Almost invariably the romance of the "love at first sight" variety.

The movie people's defense is that they are "picturing life." As long as just one picture is up for discussion, this argument will hold. Anyone will admit that these unsavory elements actually exist, therefore, that one particular picture cannot be called inaccurate. But when a other true-to-life picture of this type is turned out, and another, and still other, every one of them true to life, until they greatly outnumber pictures of normal conduct, it becomes quite evident that the general effect is not at all "true to life."

There are only two possible remedies. Dispel the fallacy that the pictures are true to life. Let everybody who goes to the pictures understand that the producing companies are over-emphasizing the sensational, merely for purposes of drawing a crowd.

Or else let the wholesome side of life be shown in a reasonably correct proportion.

Unto the Hills

(*Continued from page 47*)

she told him. It was safer to keep narrowly to the truth. Lizeri had passed this way often enough to remember where to find the schoolhouse. He might remember the distance to the nearest farmstead; a lie gained nothing, risked much.

"A mile? Expect to get home tonight, do you?"

"Why, yes." She spoke as if the question sounded foolish. "Of course."

"How you going to get there—walk?"

"Why not? I'm used to snow. I've taught this school two winters."

The eyes surveyed her deliberately. "What were you waiting for when we came in? Wasn't the snow deep enough to suit you?"

She laughed carelessly. "The wind's apt to drop a little at sundown."

As if the answer satisfied he turned back carelessly to the stove, loosening his coat and holding out his hands to the warmth. The gesture somehow relaxed the tension of Margie's nerves; it was reassuringly commonplace, natural. She told herself that she had nothing to fear; these men worked at killing like a trade—they wouldn't work at it without need or profit any more than Neil Rintoul would plow for pleasure. They couldn't guess that she knew who they were. They—

HER glance, moving past the Lizard's shoulder, saw the open paper on her desk. The sense of security went out of her like a candle in a wind; for a moment she was desperately afraid, not of the men themselves but of death; just in time she caught back the scream that was in her throat, arrested the blind impulse that urged her to run for the door.

The effort of self-control somehow stilled her panic, cleared her brain. She stopped being afraid as suddenly as she had begun; she was even conscious of a kind of excitement that was almost pleasant, in the nearness and deadliness of danger. She seemed to hold her life in her two hands; holding it thus, she found it, for the first time, magically bright and precious, like a shining jewel, set at venture on the steadiness of face and voice and yet infinitely worth possessing and defending. For the first time, looking death between the eyes, Margie Wayland felt utterly alive.

She found an unsuspected ability to masquerade. It was easy to walk to the desk without haste, to lean against it, interposing her body between the open newspaper and the men huddled before the stove, to wait, deliberately, for the chance to fold it behind her instead of yielding to the stupid impulse that would have snatched, screamed, tried to run. Borowitz and Lizeri did not even look at her. Only Little Joe Scapo, farthest away, watched her across the stove, the glints of the gold teeth showing in a smile that she knew was intended to be amiable. She could even smile back at him, as if pleased and flattered by his approval. Her hand went carelessly behind her; she could feel the corner of the paper. Would it be safer to push it accidentally to the floor or to pretend to play with it?

She saw Scapo's eye follow the move-

A chapped skin adds years to your looks

—for chapping weathers the skin unmercifully

WHEN your skin gets chapped and rough, smooth in Hinds Honey & Almond Cream. Its healing touch will relieve—immediately. For years, Hinds Cream has been famous for doing that.

But do you realize that Hinds Cream actually *prevents* chapping? Before going outdoors, pat it on as a base for your powder. Then no matter how cutting the wind, how paralyzing the cold, your skin will keep its creamy smoothness.

It's important to take this simple precaution these chapping days. For chapping weathers the skin. And it's weathering that ages your skin—not the years.

Hinds Cream gives simple, sure protection against all weathering.

Smooth it on—often. At night. In the morning. Every time you wash your face. As a powder base. Use it on your hands, too. (Marvelous for hands!)

Then your skin will keep its petal texture, its soft youth—indefinitely. (Let the youngsters use it, too. It will soothe their chapped skin—and protect it.)

Start using Hinds Cream today. Or, if you wish, we'll gladly mail you a generous sample bottle to try. Just send us your name and address on the coupon below.

Lehn & Fink Radio Program—WJZ and 14 other stations associated with the National Broadcasting Co.—every Thursday at 8:00 p.m., Eastern time; 7:00 p.m., Central time.

ment of her arm, and paused. The smile widened suddenly; he came behind the others, straight toward her. She held her breath. But he only reached past her to take the wrinkled russet apple from the desk, bit into it. Again the naturalness of the action reassured her; hunger suggested, at least, that the man was human.

He stood beside her, eating with noisy relish, unmistakably friendly.

She turned a little, as if disconcerted under the frank, appraising stare; the movement would draw his glance a bit farther from the desk; she could pretend to fumble self-consciously . . . the paper rattled at her touch, her hand jerked back from it as if from heat; she saw the scarred face twist toward her; met, against her will, the steady, unblinking scrutiny of the opaque eyes; knew, suddenly, that she had lost.

She played out the game, nevertheless. Without haste she turned, took up the paper, moved to the stove; there was just the thousandth chance that she could get the door open, the paper on the flame, before—a hand closed on her wrist.

"LET'S see it, sister." The voice was gentle. She felt another throb of panic because of that very mildness, and then, suddenly, she wasn't frightened at all. She could watch the yellow weal across the cheek, as Borowitz read, without even any sense of immediate and personal concern, as if all this were happening to somebody in a book.

"Stalling, eh?" Borowitz lifted his glance above the page. "Kidding us along, are you?"

"I don't know what you mean." She could even laugh.

"More stalling." He nodded. "Yesterday's New York paper." He spoke to the others. "She's wise. Look."

She saw his finger touch the picture of his mutilated face. Three pairs of eyes dwelt on her now, queerly alike. She chose the bold course, thrilled and puzzled by the quickening sense of aliveness that was upon her.

"Of course I know who you are, if that's what you mean. What of it?" Again she laughed. "What difference does it make? I can't do much about it, can I?"

They watched without answering. None of the three faces showed any revealing sign of emotion; but she knew that behind each of them was the same indifferent meditation as to whether it would suit them better to let her live or—Lizette moistened his lips. The thought came to Margie Wayland that for him the trade of killing had still some pleasant quality of sport.

"I can't do you any harm," she said quickly; "but maybe I might be a lot of help."

"How?" Borowitz spoke carelessly, a thin amusement at the corners of his mouth. "What could you do, kid?"

"You can't get away for a while," she said. "You've got to have a place to hide till the road's open, haven't you? You've got to eat while you're waiting. Who's going to show you where you can stay, if I don't?"

"I guess we could attend to that, if we had to," said Scarface. "There's hous along any road."

"Not up here!" She found that she could laugh. "It's a mile to our place, a

Digitized by Google

Original from UNIVERSITY OF IOWA

that's the nearest and easiest to find. But you could go by it in weather like this and never know it was there." She watched Lizeri; he had been this way before. "There's an empty house that you can see from the road; but you'd only starve if you found it." She saw that Borowitz was mildly interested. Hunger, she guessed, was her best argument. "You might have to wait a week," she went on. "We've been snowed in, lots of times, longer than that."

"Aw, applesauce." This was Lizeri. "I been over this road."

"Yes—in summer. You didn't get over it today, did you?" She faced him. "How far away did you leave your car? You looked pretty cold when you came in here. It's been snowing right along while you've been here. If you think you can find your way to our house for yourself—"

"All right." Borowitz came abruptly to decision. "You show us the way, then."

She saw the shifting of his glance to Lizeri, read it like print. It was a reprieve, no more. Scarface wasn't sure whether she was lying; but he chose to play safe, let her lead the way to food and shelter and then . . . she caught a sudden clear vision of the three of them coming into the kitchen, where Simon Wayland would be waiting for her. Instinctively, she played for time.

"We'd better wait till the wind drops. It's sure to die down a little, at dark."

Borowitz went to the window, rubbed the frost from the pane.

"I guess it's dark enough now," he said. "Let's get started."

She saw that argument would only quicken his watchful distrust. They stood about her as she pulled on the clumsy fleece-lined overshoes, put on mackinaw and cap and mittens, as slowly as she dared.

THE wind, jostling past the door, seemed to give her a rough greeting; the roar of it was like loud, friendly laughter, and it buffeted her, she thought, as a merry man might pound the shoulders of a well-met crony. It gave her, too, a queerly heartening pride in the strength that carried her easily forward against its playful thrust, in the glow of her flesh under the sting of the bitter cold.

Borowitz closed his hand about her wrist.

"No funny business, kid."

She discovered that she had lost her fear of him. Out here in the swirl and scurry of the storm there was something ridiculous in that fear. The yellow stripe across his cheek, the still, lidless gaze, the tired deadliness of his voice—these things were bogies, absurd the moment they were clearly understood.

She had no plan. She knew only that she must get them away from the schoolhouse before Neil Rintoul came blundering innocently in upon the scene; that she must not guide them home, to kill old Simon Wayland, as, presently, one of them would certainly kill her. She turned away, therefore, from the traveled road, taking the narrower, almost abandoned timber track that led away from it, following the face of the hill out into the waste of cut-over uplands.

A sort of exultation came upon her as she realized the violence of the storm; it was fiercer than she had guessed; the tem-

The Provident *Thrift* Policy—

COMPLETING THE CIRCLE OF PROTECTION

WHAT IT WILL DO FOR YOU:

If you live ~

It pays you $10,000, or the face value of your policy, at age 65. This plan establishes a capital quietly accumulated during your productive years to take care of you in your old age.

If you die ~

Before age 65 your wife or children or heirs will receive $10,000 cash, plus any accumulations. A monthly income (plus excess interest) may be taken in place of the principal sum.

If you become totally and permanently disabled ~

You, yourself, will receive $100 per month and will be relieved of paying any further premiums, while such disability lasts. Moreover you will receive the regular annual dividend. In addition to these benefits your policy will be paid in full at your death; or, if you are living at age 65, the $10,000 cash will be paid you, and the disability income will continue so long as you remain totally disabled.

Now, while you are insurable

and can spare the money let us tell you how small a yearly saving will put this Thrift Policy into action for the comfort of your old age—or for your family's comfort should you die. Just fill in the information called for on the blank below and mail it to us and we will send you full particulars without delay.

ARE YOU INSURABLE TODAY?
TOMORROW YOU MAY NOT BE!

perature was lower, and the drifts were deep; the swirl of snow islanded them in a narrow hemisphere of gray, restless movement. If she could trick them into following her far enough . . . there was already a foreboding shadow in the air; in another hour it would be dark. Nobody who did not know this road by heart could find his way back over it by night . . . an hour. . . .

She stopped, turned her back to the wind.

"I've got to rest a minute. It's going to be harder work than I thought. I'll have to take it slowly."

Surprisingly, none of the three objected. They dropped into the drift, panting; Scapo's mouth was open, so that the points of the gold dog teeth were visible; one of his ears, Margie saw, was beginning to turn putty color.

"Much farther?" Borowitz glanced at her. She lifted her shoulders.

"We've hardly started. We've come about a hundred yards, perhaps."

SHE saw his eyes shift; for the first time they seemed to lose the forbidding blankness that made her think of shuttered windows, through which somebody watched her, furtive and hidden. Anxiety almost contrived to humanize them.

"Come on, then! It's warmer when we're moving."

Scapo whined in protest: "Aw, wait till we get our breath, can't you?"

Scarface whirled about at him, suddenly savage, snarling: "Stay there and freeze, if you want to." He plunged heavily into a thigh-deep drift at Margie's side, his hand always on her wrist. Glancing back, she saw that Lizeri was already a few steps in the rear, Scapo stumbling after him. Carefully she quickened the pace till Borowitz snarled at her. Obediently she halted.

"Getting tired, are you? Shall we rest again?"

"Keep moving," he said, "and take it easy, see? How much farther?"

"We've only come a little way," she said. "It seems longer, when the snow's deep like this, than it really is."

"It hadn't better seem much longer, see?" The voice was flat. "We better get there pretty sudden."

"I'm doing the best I can," she told him. "I don't like this any more than you do."

But she knew, with a stab of hope, that she liked it infinitely more. The bite of the frozen wind was only a quickening spur to her body; the lowering curtain of dusk held out a heartening promise of sanctuary; the drifts, steadily, swiftly deepening, were allies. She was only pleasantly tired; the man who struggled through the snow beside her had begun to draw, she knew, on the reserve energy of will.

When she glanced back she could see nothing of Scapo; Lizeri, hardly visible through the swirling snow, fell steadily behind; she heard him call out faintly to Scarface, heard Borowitz curse him under his whistling breath without even pausing in his toiling stride.

It was necessary, now, to resist a stupid pity that woke in her. She could remember vividly the glint of expectancy in Lizeri's face as he licked his lips at the pleasing thought of killing her, and still be sorry for him, ashamed of having led him out here into the unforgiving storm, ashamed to go on, with that faint outcry in her ears.

"We ought to keep together." She stopped. "The others will get lost, if—"

A whistling whisper of a voice cursed them and her; she scarcely understood the words; the fear behind them was more audible, more intelligible; it was too dark to see the face, a blur of gray shadow with a white line standing out against it, but she could read, even there, the print of terror.

"Keep moving, you—" the rest was abuse, threats, whipped away by the wind that made them, somehow, pathetic. She could be sorry even for this man, too. Considering the evil of him, here in the immense, relentless malice of the storm, was like weighing the microscopic wickedness of a gnat. He didn't matter; his death, the death that his gasping whisper promised her, was no more important. She was sorry for him because he was so little, so helpless, so afraid.

Instinct kept her in motion rather than any conscious resolve. You didn't matter, one way or the other; but something demanded that you cherish to the last of your tiny strength that little atom of life you carried in you. Again it seemed like a flashing gem that she must carry in her hands, not hers, a trust from Something Somebody. . . . If she carried it on into the empty, whirling night she would lose it, presently, in one of the drifts that were now so strangely warm and soft, inviting as the thought of sleep.

She knew suddenly that she must go back . . . carry that glowing spark to a safe place . . . to the road where Neil would find her as he came walking home. She would make a wide circle, so that there should be no trouble with the man whose hand still clutched her numbed arm, whose weight held her back . . . a man she thought of now only as a vague danger to the precious thing that she must carry. . . . She stumbled over something hidden under snow, fell . . . up again, curious, stronger, freer, plunging on without the hindrance of that dragging weight at her wrist . . . a noise behind her, a rattle of flat, slapping sounds, like firecrackers, absurdly tiny in the roar of the wind . . . a dull blow against her arm . . . funny, be afraid of bullets if they didn't hurt a more than that . . . another drift . . . another. . . .

SOMEBODY was rubbing snow again her face. There was a lantern, holding out a tiny cave in the dark; again, suddenly, there was fear, the old fear, familiar, real, that startled her awake.

Neil Rintoul's face in the yellow light made her think of carved granite; the loom of his shoulders seemed to reduce night and the storm to just proportions; this was only a commonplace winter evening, an ordinary snowfall, through which a man could walk, hardly noticing the wasted malice of the weather, calmly heading to milk.

She understood, suddenly, why she had always been afraid of Neil Rintoul, even as she rejoiced in the comfort of his nearness, leaned gratefully against the strength of his arm, she was still afraid. But she could laugh now, at that fear; she could laugh at the memory of

hatred for these wind-swept winter hills, her hunger for escape from them.

Somewhere out beyond and below their unseen rim were the cities where men like Scarface and the Lizard could build up petty kingships on the fear and apathy of other men, such men, she thought, with a stab of shame, as she might have mothered if she had gone down to find their father in the warmed caves and lighted tunnels where even murderers were soft!

"The soft ones get sieved out." Neil Rintoul's homely phrase found sudden meaning. The hills hadn't found her soft. She needn't go out of them. Needn't? She erased the word. She couldn't go out of them. They'd always hold her—the high, hard, sifting hills . . . and Neil! Her hands reached out to him.

SIXTEEN THOUSAND SILVER FOXES! A fortune in fur! This is what the Fromm boys have out in Wisconsin on the largest silver fox farm in the world. Next month you'll read how the Fromm boys started in on this most hazardous of industries and how, because of their staying qualities, they are today the leaders in their line.

IN HIS TEN-GALLON HAT, chaps, high-heeled boots, and with his rope on his saddle, Shorty Caraway, cowboy extraordinary, rides into the magazine next month with a ki-yi-yi. Ross Santee, who tells Shorty's story, says he is the most interesting cowboy he has ever met. And Santee has met hundreds of the real thing.

When We're Through Changing We're Through

(*Continued from page 9*)

So the changes come and go, bringing riches to some and hard times to others. To most of us riches have only a theoretical importance. We are not so much concerned to die rich as we are to know how we can live up to the limit of our possibilities. Given ourselves as we are, with certain physical and mental equipment, certain talents and shortcomings, how can we make the most of these in the great game of living? In helping to furnish an answer to that question the law of change has very definite application.

It applies to the important matter of habits. Everybody ought to read once—and most of us could stand it once a year—William James's stimulating *Talks to Teachers*. In them he discusses how impossible life would be without the beneficent aid of habits. Suppose that it took you just as long to dress yourself every morning as it did when you were learning to dress as a child. Suppose that the routine of your office was as new and difficult every morning as it was on the day you entered business. Suppose that you had to think of as many things in driving your automobile as you did when you were learning to drive. Life would be impossible; progress would cease. We

Don't envy your friend's fine car

You, too, can enjoy a better car! For the cost of a new low priced car, you can buy a quality car with only a fraction of its mileage used. This free book, "How to Judge a Used Car," tells you how to save money on your motoring. Last year millions of people bought used cars.

Mail Coupon for FREE BOOK

Cut your motoring expense by sending the coupon below for this valuable free book. In it, experts who buy hundreds of cars for resale, tell you in plain words and pictures how to select any make of used car from any dealer—show you what to look for and what to avoid. Get this money-saving information for a 2c stamp. You can easily save $200 by mailing this coupon *NOW* while used car prices are at their lowest level.

Pledge to the Public on Used Car Sales

1 Every used car is conspicuously marked with its lowest price in plain figures, and that price, just as the price of our new cars, is rigidly maintained.

2 All Studebaker automobiles which are sold as CERTIFIED CARS have been properly reconditioned, and carry a 30-day guarantee for replacement of defective parts and free service on adjustments.

3 Every purchaser of a used car may drive it for five days, and then, if not satisfied for any reason, turn it back and apply the money paid as a credit on the purchase of any other car in stock—new or used. (It is assumed that the car has not been damaged in the meantime.)

should all be devoured by the cares of routine.

This is both our salvation and our peril. It preserves us from the tyranny of trifles, but it tempts us into ruts. William James startled his audience by the statement that the average man is an old fogy at twenty-five. By that age, he said, Mr. Man has acquired the little stock of ideas and practices which are enough to make him a living. Henceforth he becomes purely a creature of habit, his mind closed tight against new ideas. He quoted the famous confession of Darwin, who gave himself so devotedly to the study of biology that he awoke, late in life, to the sad discovery that the other sides of his mind had died. Said he:

"Up to the age of thirty or beyond it, poetry of many kinds gave me great pleasure; but now for many years I cannot endure to read a line of poetry. I have also almost lost my taste for pictures or music. . . . My mind seems to have become a kind of machine for grinding general laws out of large collections of facts. If I had my life to live over again I would have made it a rule to read some poetry and listen to some music at least once every week; for perhaps the parts of my brain now atrophied would thus have been kept alive through use. The loss of these tastes is a loss to happiness, and may possibly be injurious to the intellect, and more probably to the moral nature, by enfeebling the emotional part of our nature."

Mr. James, the great psychologist, says: "We all intend, when young, to be all that may become a man, but the destroyer cuts us down," and he points out the importance, not only of keeping the finer parts of our brains active through regular exercise, but of jarring ourselves forcibly out of ruts by systematic and, if necessary, violent disturbances of our routine. "Once in every so often we ought to clean out our desks—and what a useless accumulation of things we find when we do it—turn the desk at an angle of a hundred and eighty degrees and look at a different wall or out of a different window, and get a new light on our daily affa'rs. If it is our custom to go to bed every night at nine o'clock, then we should stay up occasionally all night, and see the city, and our fellow men, under the stars and the arc lamps. If we lunch every day at the same place, and with the same group, let us make it a rule at least once a week to lunch elsewhere and talk with and listen to different people."

C. F. KETTERING, the brilliant engineer, has a game which he calls "going into mental competition with ourselves." It is played after this fashion: You say—"Suppose I were to lose my job today and take another job with our competitor who is across the street. I should look back at this company then and say, 'There are certain weaknesses in it; certain things ought to be changed.'" Says Kettering: "Why wait to lose your job? Why not strengthen the weaknesses right now? Why not make the changes at once?"

If we don't make the changes for ourselves, time and circumstances will make them for us, and usually at a very high cost. At the beginning of this piece we set forth some stories showing that no business is so big as to be permanently secure. Such stories can be multiplied indefinitely; every reader can furnish instances out of his own observation.

I admit that change cripples some businesses permanently, like the ferries, for instance, but most businesses of permanent character recover from temporary depressions and come back into greater strength and earning power. Generally speaking, we are wise if we expect that the changes are to be big instead of little; if we build our hopes on a country destined to outgrow even the boldest imagination.

The subways of New York involved an enormous investment, but before the first one was finished it was already outgrown. The General Motors building in Detroit was labeled "Durant's Folly." Miles from the depot, in an unbuilt section of the city, the biggest office building in the world looked as if it would always be at least half empty. Today it is full, and the Fisher brothers are erecting an even bigger building directly across the street.

One way to keep our expectations large and bright is to surround ourselves with the spirit of youth. A very successful man of my acquaintance said: "Until I was forty years old I made it a rule always to associate, whenever possible, with older men. After I passed forty I began deliberately seeking the company of men younger than myself."

SAID Samuel Johnson: "If a man does not make new acquaintances as he advances through life, he will soon find himself left alone. A man, sir, should keep his friendship in constant repair."

The biggest men have remained open-minded right up to the very end. Th quotation from Charles Darwin, which w noted a moment ago, does him a parti injustice. It is true that his absorptio in his chosen task narrowed his mind an killed his appreciation for the arts, but is equally true that, within the boundari of his chosen field, he was always lookin for new ideas and never showed the sligh est hesitation in saying frankly: "I w wrong." For more than twenty years studied and thought about the origin species before setting pen to paper. I great book was many, many years in pr ess. A smaller man would have said: have mastered that subject. I need n make any more changes. What I ha written I have written. It is the tru and will last forever." Not Darw Constantly he was seeking criticism, vising, changing, and late in life we f him writing: "It is only about two ye since the last edition of the *Origin* an am disgusted to find how much I have modify and how much I have to ad

Consider Benjamin Franklin, how gerly his mind reached out for new id even in his very old age. He sat in fr of a fire which smoked. "Why coul there be a stove that would have charm of a fireplace and not smoke?" said. And he invented the Franklin st Going across to Europe for the last t he stayed on deck and kept dropping measuring line and his thermometer the stern of the boat to add to his kn edge of ocean temperatures and curr

Bacon, pondering on the problem preservation of meat, left his sl stepped out into the wet, and stuff chicken with snow. He caught a cold shortened his life—but his body die fore his brain.

Said Laplace, the great astronomer, as he lay on his deathbed: "What we know is nothing; what we have to learn is immense."

That is the spirit of eternal youth. Such a mind must expect to reverse itself often. Big men have been contemptuous of consistency; only the little folks are afraid to embrace a new truth because it conflicts with something which they have previously thought.

"A foolish consistency is the hobgoblin of little minds," Emerson exclaimed. "With consistency a great soul has simply nothing to do. He may as well concern himself with his shadow on the wall.... If you would be a man, speak what you think today in words as hard as cannon balls, and tomorrow speak what tomorrow thinks in hard words again, though it contradict everything you said today. 'Ah, then,' exclaim the aged ladies, 'you shall be sure to be misunderstood.' Misunderstood! It is a fool's word. Is it so bad, then, to be misunderstood? Pythagoras was misunderstood, and Socrates, and Jesus, and Copernicus, and Galileo, and Newton, and every pure and wise spirit that ever took flesh."

Summed up in different language, the secret of genius, as Carlyle said, is to carry the spirit of chi'dhood into old age. The Bible reminds us that except as we become as little children we shall not inherit eternal life. As children—with little interest in the past but boundless curiosity about the future. With little care what tomorrow may bring forth so long as it be different from today. With no petty regard for what we may have said or done in the past; flexible, growing, easily bent but never broken, hoping, dreaming, trying, ready for any change.

My Biggest Problem

Prize Contest Announcement

WHAT is the biggest problem you ever have faced? Perhaps you solved it; perhaps you did not. In any event, write us what that problem was, or is; and if you solved it, tell us how. THE AMERICAN MAGAZINE is deeply interested in the problems of its readers, and is eager, as you know from its articles and stories, to help solve them. This contest, therefore, is a sort of intimate communication between you and the editor, and what you say will certainly help him, even if it does not win one of the three substantial prizes for you. Write frankly—your name will be withheld.

For the best four-hundred-word letter we offer the following prizes: $30, first prize; $20, second prize; $10, third prize. Competition closes on February 20th. Winning letters will appear in the May issue.

Address "Biggest Problem" Contest Editor, THE AMERICAN MAGAZINE, 250 Park Avenue, New York City.

Contributions to this contest, and any enclosures, cannot be returned, so you must make a copy of them if you want to preserve them.

Manuscripts and inquiries not connected with the contest must be sent under separate cover to the Editor of THE AMERICAN MAGAZINE.

Speechless...When a Few Words Would Have Made Me!

But now I can face the largest audience without a trace of stage fright

THE annual banquet of our Association—the biggest men in the industry present—and without a word of warning the Chairman called on me to speak—and my mind went blank!

I half rose from my seat, bowed awkwardly and mumbled, "I'm afraid you'll have to excuse me today," and dropped back in my chair.

Speechless—when a few words would have made me! The opportunity I had been waiting for all my life—and I had thrown it away! If I could have made a simple little speech—giving my opinion of trade conditions in a concise, witty, interesting way, I know I would have been made for life!

Always I had been a victim of paralyzing stage fright. Because of my t midity, my diffidence, I was just a nobody with no knack of impressing others—of putting myself across. No matter how hard I worked it all went for nothing—I could never win the big positions, the important offices, simply because I was tongue tied in public.

And then like magic I discovered how to overcome my stage fright—and I was amazed to learn that I actually had a natural gift for public speaking. With the aid of a splendid new method I rapidly developed this gift until in a ridiculously short time, I was able to face giant audiences—without a trace of stage fright.

Today I am one of the biggest men in our industry. Scarcely a meeting or banquet is held without me being asked to speak. I am asked to conferences, luncheons and banquets as a popular after-dinner speaker. This amazing training has made me into a self-confident, aggressive talker—an easy, versatile conversationalist—almost overnight.

* * * *

No matter what work you are now doing or what may be your station in life; no matter how timid and self-conscious you now are when called upon to speak, you can quickly bring out your natural ability and become a powerful speaker. Now, through an amazing new home study training you can quickly shape yourself into an outstanding, influential speaker able to dominate one man or five thousand.

What 20 Minutes a Day Will Show You

- How to address business meetings.
- How to propose and respond to toasts.
- How to make a political speech.
- How to tell entertaining stories.
- How to write better letters.
- How to enlarge your vocabulary.
- How to develop self-confidence.
- How to acquire a winning personality.
- How to strengthen your will-power.
- How to be master of any situation.

Send for This Amazing Booklet

This new method of training is fully described in a very interesting and informative booklet which is now being sent to everyone mailing the coupon below. This booklet is called, *How to Work Wonders With Words*. In it you are told how this new easy method will enable you to conquer stage fright, self-consciousness, timidity, bashfulness and fear. You are told how you can bring out and develop your priceless "hidden knack"—the natural gift within you—which will win for you advancement in position and salary, popularity, social standing, power and real success. You can obtain your copy absolutely free by sending the coupon.

IF YOU ARE RUN DOWN, FAGGED OUT, CONSTIPATED AND *IN FACT*

Only half there

EAT YEAST IN THIS Modern FORM

Don't eat ordinary baking yeast if you don't like it. No need to—now. Eat Yeast Foam Tablets which are all yeast . . . pure yeast . . . powerful in their corrective properties and best of all, *easy and pleasant to eat.*

The leading universities and the U.S. Government regard this yeast so highly that they use it for their studies in the effects of the B Vitamin. What better endorsement of its quality and efficacy? Eat these tablets for constipation, indigestion, skin disorders, 'nerves,' run-down conditions. The little glassine envelope (6 tablets) costs but 5c—the 10-day bottle is 50c or less . . . at drug stores.

Northwestern Yeast Company 1750 N. Ashland Ave., Chicago

The Gnat

(*Continued from page 31*)

On the end of his show-case, Bud Meyer always kept a glass jar standing and in the jar was always a quantity of the sort of tobacco called bird's-eye. It was not only the poorest quality of bird's-eye but it was musty, being some tobacco Bud had let get wet under his counter. Anyone was welcome to fill his pipe from the jar, and that was the smoking tobacco Flin used. One afternoon he had just gone to the jar to fill his pipe when Japheth Strone came into the Smoke Shop. Doc Clavering and some of the others were in the shop, and Doc had just come from the funeral of Edward Laud and was telling about it.

"Well," Bud Meyer said, "Ed was a good man. I never got real friendly with him and I guess we didn't think alike on every point—but he was a good man."

"Stingy as a goat, though," Flin Werster said. "Tight-fisted as a clam. Yes, sir; pretty mean old cuss, Ed Laud was."

"Folks don't speak disrespectfully of the dead, Flin," Doc Clavering said somewhat lightly.

"I do when they've got it coming to them," Flin said.

"You sure do," Bud Meyer agreed. "You sure are outspoken that way, Flin."

"SOMEBODY ought to tell the truth about things once in a while," Flin said. "By hecky, the way you hear folks talk you'd think that all a man in this town had to do was to die, and right away he becomes a saint or something. I don't see that dying changes a man much, except it puts him where he can't straighten out the mean things he's been doing. Ed Laud was a tight-fisted skinflint, and he wasn't anything else, and you know it as well as I do, and I'll say so as long as I've got breath to say it. He had ought to have been ashamed of himself."

Japheth Strone was filling his snuffbox, and he turned his head on his massive neck and scowled at Flin Werster. Just so he might have scowled at an annoying gnat.

"Flin thinks he's a Jeremiah or something, and appointed to keep the dead from feeling too stuck up," Rally Foster, the dry goods man, said.

"Well, somebody ought to," Flin said, and went back to his chair. Japheth Strone's face reddened down to his collar, as it always did when he was angry. This gnat was annoying him.

"Edward Laud was an upright man," he said ponderously. "He was a good man. No one but a carrion crow would speak ill of the dead."

He said this to no one in particular and, having said it, he turned and went out of the shop, and when the door closed Flin Werster chuckled.

"Got under his skin," he said. "Must be a couple of cracks in his rhinoceros hide somewhere, Bud."

"He's going to die himself sometime," Doc Clavering said. "He don't like to hear you talk that way about highly respected citizens, Flin."

"It's a free country," Flin Werster reminded them. "A man has a right to talk when he's a mind to."

This was in June, and by July the weather had become unmercifully hot and dry, and one of the organizations—The Woman's Civic Club—felt pity for the dogs and horses and tried to raise a fund to buy pails and hire a man to keep them filled with water so that the panting animals could be refreshed. Mrs. Joel Townsend was in the Smoke Shop, and had collected a dollar from Bud Meyer for this good work when Japheth Strone came in for his snuff, and she tackled Japheth.

"You'll give us something for watering the horses, Mr. Strone?" she said and, oddly enough, Japheth Strone looked in Flin Werster's direction before he answered her. Then he took his worn purse from his pocket and opened it. He hesitated a moment over the bills it contained and then drew out a dollar bill and handed it to her.

"There's a dollar for you, but I don't know why men can't water their own horses," he said, as if giving ungraciously lessened the pain of giving. Flin Werster got out of his chair and walked to Mrs Townsend and took from his pocket silver dollar and handed it to her.

"There's a dollar for you," he said "but I don't see why some man like E Laud didn't give this town a water foun tain long ago. But Ed Laud wouldn't He's dead now, the old tight-fist; he ain breaking his heart when he gives anybod a dollar any more. Here's mine."

"Oh, thank you!" Mrs. Townsend e claimed. "Every little helps."

"That's all right," Flin told her. " don't bust me; I've got a dime left. I build you a cast-iron water trough if I h the money."

ONCE more Japheth Strone's face r dened down to his collar, and this ti he turned on his heel without looking Flin Werster and went out, and less tha week later the news went around town t Japheth Strone had made arrangeme to donate to Denton a permanent *ma* fountain for man and beast. The fount was to be a memorial to his wife, and w it was erected the lettering on it so sta But Japheth Strone had thought of t only to lessen the pain of giving.

Calling it a memorial to his wife exc him to himself, but the fountain wa good truth a memorial to Flin Wers buzzing. In spite of himself, Jap Strone was unable to avoid looking ward Flin Werster when he entered Meyer's the day after the fountain put in place. When he looked at Fli saw a grin on his face, and he looked a again, his face and neck red.

"Cheap!" was what Flin's grin se to say. "Too cheap! You can't kee mouth shut after you are dead by bu a dinky little drinking fountain." B words were spoken by the two that It was not until some weeks later tha Clavering was talking about what a s it was that Denton had no hospital, Japheth Strone came into the S Shop for his snuff.

"Yes, but there ain't liable to be Flin Werster said. "You can give u

Digitized by Google Original from UNIVERSITY OF IOWA

notion if you've got it, Doc. Ed Laud could have built us one, but look what a tight-fist he was. 'Get and keep' is all he ever thought of."

"Lay off Ed Laud, Flin," Bud Meyer said. "Let the dead alone. What has he got to do with Doc's hospital?"

"Nothing, and never would have had," Flin said. "That's the way he was—scrooge the last dollar out of folks, and then squeeze it till the eagle on it hollered. Man like him is no good to the town."

Right there Japheth Strone interrupted him. He did not admit that Flin existed by giving him a glance, and his face was red, but he spoke to Doc Clavering gruffly, almost angrily.

"What makes you think this town needs a hospital?" he asked. "Where's the need of it?"

"Old George Gatlett might have saved a hand if we'd had one," Flin said, to no one in particular, but Japheth Strone had turned to the door.

"Come over to the bank, I want to talk to you," he said to Doc Clavering.

SO DENTON got the hospital and it was probably then that Flin Werster, grinning to himself as he sat in his chair in Bud Meyer's Smoke Shop, decided to get a library for Denton, so that Mary Gatlett could have a library job. He knew that no one in Denton would ever think of anyone else for that job. Day after day Japheth Strone went to the Smoke Shop for his snuff, and for an instant let his eyes turn to Flin Werster's face. One day it meant an extra ward for babies at the hospital, and another day it meant an X-ray outfit, until the hospital was the best in that section. But always old Japheth's eyes met that same sarcastic grin on Flin's face. "I'll say what I think of you when you're dead," the grin seemed to say.

Sometimes, walking home up the hill with his ivory-headed cane stumping along in his hand, old Japheth Strone would stop short and stare at the walk, his forehead creased with a frown. Then he would walk on, annoyed and uncomfortable in mind, unable to get Flin Werster entirely out of his thoughts. After all, Japheth did have a lot of money, and he had made it all in Denton and he could take none of it with him when he went.

That he had made his money in Denton probably had little to do with opening old Japheth's Strone's purse, and it is almost certain that he did not know he was being driven by Flin Werster. For some time Flin himself did not guess this. He knew when old Japheth would be coming into the Smoke Shop for his snuff and a few minutes before he was due Flin would say that what the town needed was a good public library, but none of the men in the Smoke Shop thought much of the idea. "What we need more than that," one of them would say, "is a decent memorial to the boys that got killed in the World War," or some other thing. And once the others began to talk of a thing, Flin did not count to anything. He was ignored.

Old Japheth, now that he had begun giving the town some of the things it needed, found it less and less easy not to give others. He always had plenty of money after he had given. Each time, it was due, he had a struggle with himself before he could bring himself to part with the money, but at some point in the struggle he would have a thought of Flin Werster sitting there in the Smoke Shop, waiting to tell folks what he thought of Japheth Strone when he was dead.

Flin never became old Japheth's conscience; he was more like an advance warning of Japheth's living tombstone—a phonographic tombstone that could and did talk—with an epitaph that Japheth Strone was mighty sure was apt to be just but cruel.

Even more, Flin was like a gnat, buzzing in Japheth's ear what Denton actually thought of Ed Laud, and thus suggesting that he would buzz the town's real thoughts about Japheth Strone when Japheth Strone was gone, keeping them alive, letting no one forget them. It fretted Japheth Strone to think that when he was gone Flin Werster would be sitting there in the Smoke Shop, grinning his sarcastic grin when Doc Clavering and the others came back from the funeral, getting up to fill his pipe and saying "The truth is—"

It cannot be known just when Flin Werster began to be a little peevish over the thickness of Japheth Strone's head. It may have been the day when the fellows in the Smoke Shop discussed the soldiers' memorial. As has been said, Flin had tried to turn the talk to the need of a library, but Doc Clavering had said that what was needed was a war memorial.

"It could be a library," Flin suggested. "Now, a real good library—"

That was when old Japheth came in.

"We are talking soldiers' memorials," Doc Clavering said, and old Japheth reddened, as he always did when he heard such things, and less than a week later it was known that our generous citizen Hon. Japheth Strone, was having a soldiers' monument planned that would be the most noble in the state, as it proved to be.

"Well, then, dag it all!" Flin said to himself. "If he's got to do everything else first, let him! He's got to build a library for Mary sometime."

IT WOULD have saved Japheth Strone much worry if he had come right out and asked Flin what he wanted, but you could not imagine Japheth doing such a thing. He went to the Smoke Shop hoping to hear, and thus began the great game of hints and guesses that eventually made Denton the noble little town that it is.

For about three years Japheth Strone built and paid for and donated, and he could not build or pay or donate the sarcastic grin from Flin's face. And each time he entered the Smoke Shop, Japheth's jaw was set harder and his glare at Flin was accompanied by a redder face and neck.

Thinking this over, Flin came to the conclusion that he would never get the library he wanted, with the job for Mary Gatlett, unless he spoke out boldly. He began by dropping hints whenever Japheth Strone stopped in for snuff. He would get out of his chair and go to the jar of bird's-eye, and say it was sure a pity that some of these old skinflints around town couldn't do something for the town—give it a library, for instance. Bud Meyer said you could almost see the hair on old Japheth's neck stiffen.

"Ain't a town," Flin would say, "the size of this but has got a swell library. If Ed Laud hadn't been such a tightwad—"

How your Company can make available 3000 hours of extra time

Expansion of effective effort is even more vital than reduction of payroll.

How many do the dictating in your Company? Six? Fourteen? Twenty?

How many stenographers work for your Company? Three? Seven? Fifteen?

Those extra hours of producing time are *there!*

Let us prove this at your desk. Telephone "The Ediphone," your City, and ask for the book "An Easy Way to Chart Your Correspondence."

"MY LITTLE GRANDDAUGHTER, Mildred, somehow collided with me in the doorway when I was holding a pan of boiling hot starch. Her face was horribly burned. She kept screaming with the pain. I didn't know what to do. When the doctor finally arrived he applied Unguentine. It stopped Mildred's crying immediately.

"For weeks she wore a muslin mask lined with Unguentine and when this was removed, night and morning, layers of skin came with it—but Mildred never cried. We were all very pessimistic but now we know she is going to have as good a complexion as any girl, not a scar anywhere."

Spare them such pain

WHAT if your own child were burned? Could you soothe her, stop the horrible pain? Or would you have to hold her screaming in your arms while you waited for the doctor—and Unguentine?

Unguentine is the standard antiseptic surgical dressing used for burns in eight out of ten hospitals. It stops pain almost instantly.

It helps prevent infection from even insignificant kitchen burns. It hastens normal healing. And almost invariably *leaves no scar.*

For all cuts, scratches and bruises as well. For serious burns apply on gauze, bandage lightly. Write for free household manual, "What To Do," for little ailments, accidents and real emergencies, by M. W. Stofer, M. D. The Norwich Pharmacal Co., Norwich, N. Y. Canada—193 Spadina Ave., Toronto.

Buy Unguentine Today

Keep extra tubes in danger zones: bathroom, kitchen, office, shop, auto kit and club locker. At all druggists', 50¢.

So Japheth Strone frowned and fumed and gave Denton the Y. M. C. A.

"There's one thing a man can say about Carnegie," Flin said another time. "He made money, but he gave it too. If we had a Carnegie in this town that would open up and give us a library—"

But old Japheth wasn't going to let any Flin Werster tell him what and when to give. He fretted and fussed, and finally gave the new church. By that time Japheth Strone's name was being praised to the skies by everyone in Denton except Flin.

Flin Werster sat on the old chair in the Smoke Shop and grinned sarcastically at old Japheth whenever the old fellow came in, and then Japheth would go out—red down to his collar—and give the park a bandstand, or bring a new railway to Denton, or build the new opera house. He could have been elected mayor of Denton by that time. He could have been chosen Duke of Denton and King of America, as far as Denton was concerned. For two cents the town would have renamed itself Strone City.

And still Flin Werster grinned sarcastically when old Japheth entered the Smoke Shop and, at last, old Japheth's face turned a fairly vivid purple and he went out and ordered a library built. He built a good one too, and he gave it a noble endowment. It stands in a little park of its own, fine and fair and beautiful.

WHEN it reached the point where the roof was being put on and the floors laid Flin Werster walked up the hill and looked at it and he approved of it. He went back to the Smoke Shop and dropped into his chair, and presently Japheth Strone came in for his daily modicum of snuff. He looked toward Flin Werster, but the living tombstone did not look up at him. Not until Japheth Strone turned to go out did Flin Werster speak.

"Say, Mr. Strone!" he said, "I wonder have you got time to listen to me a minute?"

Japheth paused and waited, for Flin was coming toward him, and they went out onto the step in front of the Smoke Shop. And they stood there, Japheth tapping gently with his ivory-headed cane and looking down the street—looking anywhere but at Flin.

"What do you want? I've got to go in the bank," Japheth said.

"I just sort of wanted to ask who you were going to put in for librarian."

"Mary Gatlett," said Japheth Strone. "Mary Gatlett."

"Well," Flin said, "I guess she'll make a good one." And with that he went back into the Smoke Shop and Japheth went on into the bank next door.

And here's a funny thing: About eight months after that short conversation Flin Werster got pneumonia and died suddenly, having no constitution to fight it. He did not live to be any kind of living tombstone for Japheth Strone, eulogistic or derogatory. He did not have much of a funeral, but Japheth Strone was one of those who went, and after the funeral he stopped in at the Smoke Shop for his snuff as usual. The same crowd was there, Doc Clavering and Rally Foster and all the rest, and when Japheth entered the shop Flin's name was mentioned. Joe Brant brought it up.

"WELL, there's one thing, Bud," he said to Bud Meyer, "you sure gave Flin about all the comfort he ever had, letting him loaf here in the Smoke Shop."

"He cleaned out for it," Bud said. "It didn't hurt anybody, letting him sit around."

"What I can't make out," said Billy Smits, "is how anybody can be so worthless as Flin Werster was. Now, there's one man I'll say was just no good at all. You take the way he pretty near drunk himself to death when—"

What stopped him was the ferrule of Japheth Strone's ivory-headed cane coming down on the floor with a thump, and they all turned and looked at the benefactor of Denton. He had turned to face them, his olivewood snuffbox still in his left hand, and his face was red. He was so angry that his hand trembled, spilling some of the snuff.

In an instant they were all silent, a little frightened, as they always were when Japheth Strone was angry, being always a little afraid of him. He raised his right hand, clasping the neck of his cane with three fingers, and shook his index finger at them, and opened his mouth, but unexpectedly he lowered his hand, and his face became its normal color.

"You don't know anything about him," he said in his naturally gruff voice, and snapped his snuffbox shut and went out of the Smoke Shop.

Solitude

(*Continued from page 43*)

because of the manner in which, from that coign of vantage, the watcher can see how the stars march up the great dome of heaven, as if they were angels in procession, carrying tapers, joyously climbing a mighty hill. I reached the pasture just at the right moment. The dark-blue flower of twilight was opening wide. The sky showed lilac lanes, wan gulfs, sea-breakers of misty red.

In that high pasture I thought myself alone; but presently, as I sat on the roots of a gnarled and ancient apple tree, two cows with tinkling bells came by. They were followed by a tiny mountain girl, not more than five years old. I knew her well, but I hardly had expected to see her so far away from home at such an hour. She recognized me at once and stopped to talk with me; and the cows, no less urged, buried their broad noses in the dewy grasses of the hilltop.

"What you doin' out here so late?" I asked, with womanly directness. She, of course, had her work to do; but why should I be loafing around?

"I like to watch the stars come," I told her, "and I like to see the lights down yonder in the mist."

"Do you like them things too?" I asked, in a tone more kindly than that in which her initial question had

The dream that *must* come true

CALIFORNIA*

for your next vacation

YOSEMITE VALLEY, FAMED ROUND THE WORLD, A FEW HOURS ONLY FROM SAN FRANCISCO

Lifting their rugged crests to the sky of deepest blue, sheer walls of granite, magnificent in their beauty, rise on all sides from the floor of Yosemite Valley. A few hours' distance by marvelously scenic highway is the Mariposa grove of Big Trees,—magnificent veterans of two, three and five thousand summers and winters. Almost in their shadow you can play golf,—golf a mile in the air, in a setting of alpine glory.

San Francisco

California calls to you,—calls to you *this summer*. A vacation spent in this famed playland will be one of *double profit*. For you will have good chance to study the state's practical opportunities. Tens of thousands arrive in California every year, for a holiday, and find the business opening that permits them permanently to remain, with their families, "where life is better."

Plan your trip by way of—

This city, the central gateway to the Pacific Coast. Behind it are spread, fan-like, the Redwood Empire with its mystic groves and gamey streams; mountain-high lakes, geysers and petrified forests; several national parks; thousands of square miles of national forest for camping and fishing; scenic rail lines and motor highways; and the long, foaming coastline of the blue Pacific. Over-seas, just a few days' jaunt, lies Hawaii.

San Francisco is itself a holiday city of sparkling interest. It is the coolest summer city in America. Average temperature in summer 59°, and it doesn't rain. San Francisco is ringed with golf courses. At one of these, the Pebble Beach course on Monterey Bay, (5 hours distant), the 1929 national amateur golf tournament will be held, September 2 to 7.

Low roundtrip excursion rates to San Francisco and the Pacific Coast will be in effect on all railroads beginning May 22, return limit October 31. The Victory Highway (U. S. Highway No. 40) will be in good condition. Or you can come by air, or by steamship via Panama Canal.

Let Californians Inc., a non-profit organization of institutions and citizens, send you a book of sumptuous illustrations and travel information,—"San Francisco, Golden Gateway to Vacationland." It is free.

*"WHERE LIFE IS BETTER"

CALIFORNIANS INC.

put. "I nearly allus stops here when it ain't rainin'. I don't get lonely when the stars come out."

"Why do you love to watch the stars?" I asked my tiny comrade.

"I talk with them," said the child. "And they lights me home."

In a moment she was gone over the fading hill, leaving me with another treasured memory about solitude. And I never look at the spangled heavens without recalling what that baby said of the stars—"They lights me home."

IN OUR modern day, with the pace that our civilization tries to establish and to maintain, a great many people are made nervous by peace and solitude. Our speed of life is such that usually, when we seek repose, we make a mad dash for it. Solitude has a hand to still the pulse's leap, a voice to calm and to reassure.

I remember going late one afternoon to see old Sambo Boykin, an ancient negro who lived as a solitary on a deserted plantation. All his kith and kin were gone. It would seem that there was little left for him to live for. Yet, despite his dusky skin, despite the apparent desolateness of his situation, he was a grave and charming philosopher, made what he was, I think, by living close to nature, by watching, with dim eyes but a discerning heart, the stupendous mystical ways of life.

The old negro was sitting on the wooden bench before his doorstep. He greeted me with affection and that easy courtesy that not many people realize a negro possesses. I gave him the little basket of things I had brought, and his gratitude was touching.

"Sambo," I said, after we had talked about many other matters, "you must not mind being all alone like this."

He looked far over the fading country, his eyes seeing more than the saffron sedge field and the towering pines beyond.

"Cap'n, I ain't 'xackly alone. I miss all who are gone, but I ain't alone."

It is not infrequent for a plantation negro to utter simply the great truths of existence. He lives so much with the infinite patience of nature, and he feels so keenly the mystery of life and the presence of God that it is natural for him both to think and to speak with the thoughtfulness of an Oriental.

"Somebody else has been to see you then," I ventured crudely. "I am mighty glad to hear it."

"Cap'n," he said, and he laid his gnarled, black hand on my knee for emphasis, "you know Who I mean. He was my first friend in this life, and He will be my last—same as He is to you. God don't come to see me; He stays with me all the time. I ain't lonely."

A masterly work of any kind, whether it be natural or produced by man, can seldom be sincerely enjoyed save in some kind of spiritual isolation or solitude. I remember going into an art museum where there was a famous little masterpiece. It was in a room by itself. Before it was a single chair. And the guard at the door permitted only one person at a time to enter. When asked the reason for this practice, he said: "Everyone can get it for himself; but when several people go in together, each is liable to spoil the picture for the others by trying to explain it. We think really fine things don't have to be explained."

I remember going to visit one morning an expert woodworker by the name of Hulon Padgett. He and I were on intimate terms, so that as I went into his sawdust-smelling workshop that morning, I did not even speak to him when I saw him perched on a high stool, his head in his hands, bowed over some problem of construction on the table before him. One flaming maple actually hung into one of Hulon's open windows. It's a pretty thing to have a tree look into a house. At last my friend straightened himself, slipped from his stool, and turned to face me. He was smiling.

"I knew you were here," he said, "but I had to stay by myself until I got this thing."

He then showed me the design for an interlocking splice for the broken back of a hickory chair.

"All day yesterday," he went on, "there were people here. I had time to do this but I hadn't the quiet. I don't exactly have to be alone to think, but I love to be alone to finish thinking—to do that last bit of it that completes the job." He smiled reminiscently. "The very best work I ever got done," he said, "was during the summer when we had a smallpox scare over at the next farm. Nobody would come near this place. I had a chance to think out designs entirely new and to work them out in wood."

FOR a good many years I used to take my youngest boy hunting with me, and of course together we learned much about game birds and animals. Yet I always felt that he was depending on me; and my own ideas simply echoed mine. The came the great day when I gave him my old setter and told him to go out alone. That night he could hardly eat his dinner for telling me about the things that he had seen for himself.

Once I watched a white chip whirled madly down the wild waters of a rain-filled trout stream. It raced toward it frantically; but a backwater eddy caught it, and quietly it floated into a little sheltered bay. We, too, ought to leave the mad current sometimes, to rest our hearts and, ere it is too late, to muse upon the innocent beauty gleaming on the banks. If we do not so retire, how shall we ever be thrillingly pierced by the music of silence? How shall we hear the lustral music of the rustling corn? How shall we ever feel the pure, inevitable charm of the world?

It takes solitude for these great and humble pleasures to be enjoyed. And it takes solitude, under the stars, for one to be reminded of our eternal origin and far destiny.

RECENTLY MARY B. MULLETT was seated on a bench on a flying field talking with an experienced pilot of the Curtiss Flying Service. She came away from that field primed with some of the most interesting and informative facts about commercial aviation, especially as it relates to passenger service, that any writer has ever obtained. Watch for "From the Ground Up." You will thoroughly enjoy it.

(Attractive home of Geo. E. Smith, at Great Neck Estates, Long Island, N. Y. Architect, W. Albert Swasey. Roofed with J-M Asbestos Shingles)

Everlasting COLORFUL BEAUTY GUARDS THIS ROOF-TREE

Johns-Manville Asbestos Shingles Mean Permanent Protection from Fire, Weather and Time

WHAT a warmth of rich color there is in this beautiful home roofed with Johns-Manville Rigid Asbestos Shingles! How perfectly it proves what every architect and builder knows—that upon the colorful beauty of the roof depends the character of your house. Velvety greens—autumn reds—mellow grays—there is a Johns-Manville roof to blend with every house design to meet every home-owner's desires.

And the colorful distinction of Johns-Manville Asbestos Shingles will last forever. Time does not touch them! Weather will not wear them out, nor penetrate their sturdy, thick protection. Fire cannot harm them—or the house they guard. Roofing expense is ended for all time. You cannot afford to be without the lifetime of roofing beauty and protection found in Johns-Manville Shingles.

Look At Your Roof Today!

And for old homes as well as new! Thousands of houses are finding new beauty each year when re-roofed with Johns-Manville Asbestos Shingles *laid right over the old shingles*. Think of the satisfaction of knowing that you'll never have to worry about your roof again. Johns-Manville Asbestos Shingles end roofing expense where other materials begin them. Let your local Johns-Manville Dealer tell you how *little* it will cost you to beautify and protect your home with these everlasting asbestos shingles.

Johns-Manville
RIGID ASBESTOS SHINGLES

A roof of Johns-Manville Colorblende Shingles admirably fits this attractive Eastern home. And the owner was surprised to find how economical it was to have the additional beauty and protection found only in Johns-Manville Asbestos Shingles.

This interesting stone house is roofed with Johns-Manville Asbestos Shingles in blue-black tones. It will never need another roof, will always be safeguarded from firebrands and the ravages of time and weather

Study these Homes

Successive owners of these houses will enjoy permanent beauty and protection from fire and weather. This is so because their roofs are of Johns-Manville Asbestos Shingles. A Certificate of Registration goes with every genuine J-M Asbestos Shingle Roof.

What "Made by J-M" Means

Johns-Manville Asbestos Shingles bear the "J-M" trade-mark—the hall-mark of quality of the world authority on Asbestos and its products. J-M Asbestos Brake Lining makes motoring safer for millions of car owners. J-M Built-up Asbestos Roofs guard office buildings and factories from coast to coast. Throughout industry "Johns-Manville" packings, insulations and fireproof building materials are famed for their unfailing service and quality. Write today for our booklet, "The Story of Asbestos."

Justice of Peace hands down 8395 *decisions* in favor of this pipe-tobacco

IF any man be a sound judge of what's right and what's wrong, it's Justice of the Peace Bostock. And no exceptions taken on pipe-tobaccos or any other decisions that may be handed down to the folks in the county courthouse.

For twenty-three years this gentleman has rendered opinions favoring just one brand of tobacco—Edgeworth. He says he's smoked more than eight thousand tins of it—at least one a day!

Justice Bostock's decisions are as unvarying as the quality of the tobacco that he favors. For Edgeworth *does* possess the same likable flavor—tin in, tin out!

Let us send you, free of charge, trial packages of both Edgeworth Ready-Rubbed and Edgeworth Plug Slice so that you, too, can put them to the pipe-test. Simply write your name and address to Larus and Brother Co., 45 S. 21st Street, Richmond, Va. If you like these samples, you can be sure you'll keep on liking Edgeworth; for, as you will discover, its likable quality is always *there!*

Ipswich, S. D.
Sept. 4, 1928

Larus & Brother Co.
Richmond, Va.
Gentlemen:

In answer to the challenge of J. J. Roberts of Columbia, S. D., as printed in the Minneapolis Journal dated Sunday, September 2, I have smoked Edgeworth for twenty-three (23) years, and for two years previous to that time I smoked Qboid, which, I believe, is manufactured by your firm.

During this time I have smoked at least one can each day, and to verify this statement you may address the C. & C. Cafe of this city, where I make my tobacco purchases.

It may be interesting to know that my purchases of Edgeworth during this period have totaled more than 8395 (eight thousand three hundred ninety-five) cans, representing a total expenditure of more than $1,259 (twelve hundred fifty-nine dollars).

I have never smoked any other brand of tobacco but Edgeworth during the twenty-three years.

Yours very truly,
(Signed) Chas. Bostock
Justice of the Peace.

Both Edgeworth Ready-Rubbed a Edgeworth Plug Slice are sold in vario sizes from small pocket packages to han some pound humidor tins, and also several in-between sizes to suit the nee of any smoker.

On your radio—tune in on WRVA, Ri mond, Virginia—the Edgeworth Stat atop the Edgeworth Factory. W length 270 meters. Frequency 1110 k cycles. Special feature, the "Edgewo Club" Hour every Wednesday evenin nine o'clock, Eastern Standard Time.

S O S—The Call That is Always Answered

(*Continued from page 33*)

The next great radio drama came in April, 1912, when the "Titanic" was lost after a collision with an iceberg. Both distress signals, C Q D and S O S, were used by the "Titanic's" wireless operator. And it was because these signals brought the "Carpathia" speeding to the scene of the tragedy that hundreds of lives were saved.

The official adoption of S O S as the international distress signal came a few months later, at the Radiotelegraphic Conference in London. The delegates realized that there must be only one such signal; and they realized also that it ought to be entirely different from every other wireless call, something which would be recognized instantly, from the very first letter, as a desperate cry for assistance. This was not true of C Q D. But it *was* true of S O S! And that is the reason why S O S was chosen.

In the code, S O S is represented thus: (...) (O) --- (S) . . . ; and this signal is three dots, three dashes, and three dots. It is selected because it is a simple and clear one, different from every other wireless call. It is the only call that begins with the letter S.

It is different also in this respect: in sending other calls, the letters are separated by pauses; but in the S O S signal there is no spacing between the letters.

You may never have heard this signal. It comes on the 600-meter wave length, which is used by ships and coast stations for all general calls. This wave length must not be used by the broadcasting stations to whose programs you listen. It is reserved for general service among ships at sea or on the Great Lakes, and between vessels and the coast stations handling ship radiograms.

It probably seems strange to you, as it seems to me, that an operator can convey *emotion* through mere clicks of an instrument. I don't mean that he conveys it by the words he spells out. Radio operators who have received S O S calls will tell you that they can detect, merely by the *tone and quality* of the signals, the sender's state of mind.

Kenneth Upton, chief radio operator on the "President Roosevelt" when that vessel was searching for the sinking steamship "Antinoë," says that "despair permeated every message" received from the doomed vessel.

Other operators have emphasized the fact that an S O S call has a different tone, or quality, from any other; that even if you could not read the signal, you would know that it was an imperative demand, prompted by some great

The first paragraph of this country's Radio Regulations reads: "That from and after October 1, 1912, it shall be unlawful for any steamer of the United States or of any foreign country, navigating the ocean or the Great Lakes and licensed to carry, or carrying, fifty or more passengers, including passengers or crew or attempting to leave or attempt to leave any port in the United States, unless such steamer shall be equipped with an efficient apparatus for radio communication, in good working order, capable of transmitting and receiving messages over a distance of at least one hundred miles, day or night."

In the second paragraph it says: "The radio equipment must be in charge of two or more persons skilled in the use of such apparatus, one or the other of whom shall be on duty at all times while the vessel is being navigated."

A ship's radio operator goes by the nickname, "Sparks." On all vessels which are required by law to carry radio equipment, either an operator or a "watcher" must be listening in continuously. A watcher is not a real "Sparks;" but he must be able to *receive distress signals* and to send call letters that will get the attention of a regular operator who can follow up the cry for help.

EVERY detail of our radio laws is dominated by this one supreme consideration: *nothing* must be allowed to interfere with an S O S call! Every ship that carries a radio apparatus must be able to send distress signals. In sending them, the transmitting set on the ship "may be tuned to create a maximum of interference." At other times there are severe restrictions on this point, but in an S O S emergency, "Sparks" is permitted to do his utmost to rip through all other communications.

Operators on ships and at coast stations are required to listen in day and night, at intervals of not less than fifteen minutes and for at least two minutes each time, on the 600-meter wave length, just on the chance that someone is sending an S O S call.

They must make entries in the "radio log" every fifteen minutes, as evidence that they are keeping this continuous watch. When an operator is sending long radiograms he must stop every fifteen minutes and remain silent for three minutes, in case an S O S signal is trying to get through.

When a distress signal is heard, every other communication must cease instantly. No messages relating to anything else may be sent until the "All clear" signal is given.

This applies, not only to ships and coast stations, but to broadcasting stations also; especially to those anywhere near the seaboard. Perhaps, while you were listening to radio programs on certain evenings during January and February, three years ago, there came a sudden break and you heard an abrupt "Signing off on account of S O S!" After that, possibly for several hours, you twirled the dials in vain. Not a sound could you get.

The man who caused this break in your evening's entertainment holds one of the strangest jobs you ever heard of. Let us take, for example, a big New York station whose programs, during most of the day and half the night, are heard by millions of listeners-in.

You probably know that a broadcasting

$50 a month made a Priceless Investment

CONCRETE FACTS speak louder than words. Here is the actual program of a young man, 28, married, with two children.

His income is $5,000 a year. What would you consider a fair proportion of this income to spend for life insurance? Ten per cent?

Actually in this case the annual premiums amount to about $600, leaving a balance of $4,400 of the income for the support of the family, an easy proposition for ambitious young parents looking to the future.

What does he get for his $600?

Total life insurance of $30,000,—$5,000 to be paid in cash in case of the husband's death, the rest so arranged in a trust settlement as to produce $100 a month income for the wife during her lifetime, the remaining principal to go to the children after her death.

Do you not think this young man has done well for himself and his family?

Surely he has laid out his life very successfully, with a fair income for present living expenses and an estate of $30,000 to leave for his family.

In the meantime, cash value accumulates and dividend returns are paid.

He might struggle for years to obtain such a result in other ways, and then fail of his goal, in the meantime missing the best there is in life, including the contented enjoyment of his income and his family.

How near can YOU get to this? Let us help you work it out.

MONEY Immediately for Every Woman!

Given To You To Decorate

Right at Home

No Soliciting—No Canvassing

Here is a new, easy, fascinating way to use your spare moments in real pleasure—in a money-making occupation so simple that no previous training whatever is needed. You will astound your friends and win new ones. You will make your family and friends proud of you. And you will receive

An Income of Your Own

Think what that means! The joy, the independence of having money all the time—your own money—to spend for the things you have always wanted, but never before felt you could afford. That Paris model hat—more soft, dainty underthings—new clothes, and furnishings for your home. Trips! Theatres! Music. Other women just like you are getting them the Fireside way. Begin now to be independent *yourself!*

We Show You How

to make money in a delightful, dignified way—without leaving your home. By decorating charming giftwares! Our method is so simple! No tedious study—you learn by doing! *You begin making money right away!* Our members are making hundreds to thousands of dollars—in spare moments. Ora Scott cleared $1000.00 in one month. You can devote as much time as you wish.

No Special Ability Needed

You don't have to have any special talent whatever to decorate these lovely popular giftwares. It is the Secret of Monsieur Petit's Three Simple Steps that enables you to begin right away. We send you this secret *immediately*. We supply everything you need—Big, Generous, Complete Kit WITHOUT EXTRA COST, We absolutely guarantee your satisfaction.

Now, we want women in every community! Be the first! Fill out and mail the coupon at once.

FIRESIDE INDUSTRIES
Dept. 60-B Adrian, Michigan

FREE!

Wonderful Fireside Book showing home decoratives in full and charming colors. Fill out and mail coupon and we will send you this fine book FREE—immediately—without any obligation. Send for it now!

Mail Coupon To-day!

Fireside Industries, Dept. 60-B, Adrian, Mich.
Send me absolutely FREE and without obligation, the FIRESIDE Book and plan for making money—immediately.

Big Profits MAKING HOME MADE CANDIES!

Your Kitchen Can Be Your Candy Shop

Successful manufacturer teaches you secrets of candy-making in your spare time. The candy business is the only business where the **little fellow** has the **big fellow** at a disadvantage. You can start in your own kitchen—earn big money from the very beginning. We furnish tools and show how to quickly sell your candy at a big profit. Many now wealthy started with practically no capital—YOU CAN DO THE SAME! Write for fascinating FREE book which gives full details.

Capitol Candy School
DEPT. AK-329, WASHINGTON, D.C.

TRICKY LAMP, MAKES AGENTS BIG MONEY!

Brand new! An adjustable lamp! Shade tilts, stem bends, base hangs on wall or clamps anywhere. Years ahead of stiff-necked eye straining lamps. Ideal for bridge prize. Complete line—beautiful Parchmentex or ivory shades, bronze or ivory base. 30 second demonstration sells on sight. One man sold 500 in small Indiana town. Big commissions, exclusive territory, repeat business. Full or spare time. Get full details.

Falcon Lamp Co., Dept. B-80
2550 Sullivan Ave., St. Louis

It's Easy To Build Things!

$30.00

—with these and other Boice-Crane Bench Machines. They do the hard work for you. Unexcelled for quality, capacity and variety of work.

Astonishingly low priced. Satisfaction Guaranteed or Money Back. Thousands in use.

Handisaw
15" x 17" Tilting Table. 9" Saw cuts 2½". A whole workshop in itself. Saws, dadoes, joints, disc and drum sands, bores, and grinds.

Jig Saw
8" Tilting Table. Saw to frame 10". Cuts plywood or 1½" stock. Blades 1-16" to ⅞" wide. Unexcelled for puzzles, toys and novelties

$12.00

4" Jointer, $28; 12" Band Saw, $35; 7" Lathe, $13.50 and many other machines are found in the Boice-Crane 1929 Catalog. Also tells about our Books of Designs. Send 10c for your copy NOW!

When you realize that whole

Digitized by Google Original from UNIVERSITY OF IOWA

vessels, take them all together, are constantly threading their lonely ways across those waters, the small total of distress signals is very reassuring. It is also a wonderful testimony to the skill and courage of the men who go down to the sea in ships—and who, except in rare instances, bring those ships safe to port.

During 1925 Station WEAF went off the air twenty-seven times because of S O S calls. Only six times did the interruption last more than one hour! In other words, in all except those six cases a rescuing vessel had gone to the scene of trouble within sixty minutes after the distress call was sent out.

Sometimes the "All clear" signal, meaning that assistance had arrived, came in less than ten minutes after the S O S was heard! If radio meant nothing else to the world than this amazingly swift help in time of peril, it still would be one of the greatest marvels of the twentieth century.

THERE was one occasion in 1925 when the broadcasting studios were silent for more than three hours on account of S O S. That was on October fifth, from 8:19 in the evening until midnight.

This three hours and forty-one minutes is the longest continuous S O S silent period recorded in the WEAF radio log. Yet it was not due to a real disaster. It was simply a curious demonstration of how *any* S O S call takes absolute possession of the air, so far as radio is concerned.

The vessel which sent out the signal was the coast guard cutter "101," part of the so-called "prohibition navy" patrolling Rum Row to prevent the smuggling of liquor. The cutter's own trouble was liquid; but in her case the liquid was water! Her hold was half full, due to a bad leak.

Her distress signal stirred up a lot of commotion off the New Jersey coast. Several steamers hurried to the rescue, and the captain of the coast guard station at Atlantic City dispatched the "Seneca" and two smaller boats to the scene. It was a night when static was particularly bad, causing a good deal of confusion; and for hours several vessels hunted the "101" persistently but unsuccessfully.

"I think she's sunk!" one of these ships finally declared by wireless to his companion searchers. But still they continued their quest; and still every broadcasting studio anywhere near that part of the coast was shut off.

Meanwhile, the "101" was slowly creeping back to port all by herself! The coast guard captain on shore had received this word from her and had gone to bed. But, probably because of the tricky atmospheric conditions, no one else got the information until midnight, by which time most of the radio audience also had gone to bed.

The entire evening had been monopolized, not by a real disaster, but by the mere possibility of a disaster. There is a thrill in this evidence that S O S is the undisputed king of the air.

A few months later, on Monday evening, January twenty-fifth, the broadcasting studios had another long period of silence. They were shut off at 7:09 P. M. and did not get back on the air until about half past ten.

Perhaps you remember that the At-

Busy—*He takes a short-cut to sound investments* —so can you

In these "high pressure" days you must make every working minute count. Instead of shopping leisurely as you did a decade ago, you now save time by settling on one reliable house in each line—be it clothing, jewelry, furniture, or investments. The National City Company makes it easy for you to handle your investments on this time-and-worry-saving principle. It maintains offices in over fifty leading American cities for the convenience of busy men. Just telephone our office nearest you when you have funds to invest or wish market quotations or other investment information. Our experienced men will gladly help you.

GIANT ZINNIA

lantic was swept by a succession of terrific gales during January and February, 1926. As a result, one dramatic chapter after another was written into the history of S O S. In less than forty-eight hours there were three of these chapters. The most thrilling was that which told how the "President Roosevelt," of the United States Line, rescued the entire crew of the British steamer, "Antinoë."

The "Roosevelt" had left New York on Wednesday, January twentieth, and by Saturday had run into "dirty weather." There were three wireless operators on board, the twenty-four hours being divided in shifts among them. Kenneth Upton, the chief operator, went on duty at 4 A. M. Sunday.

All day Saturday ships had been exchanging messages about the weather. All of them to the east of the "Roosevelt" reported fierce gales. Occasionally a ship would tell of a broken rudder or a shifting cargo; but up to Sunday morning, none of them asked for assistance.

Upton put on his head-phones and began to listen in on the 600-meter wave length. As he told the story afterward, there was silence at first. Then, out of the storm and the darkness, came the call: "S O S de G K J Y! S O S, S O S de G K J Y!"

Every radio-equipped vessel carries an international list of call letters. From this list it was quickly learned that GKJY was the "Antinoë." On getting a response from the "Roosevelt," she reported her position in latitude and longitude, said that her condition was very serious, and frantically appealed for help.

Other ships picked up the call. Among them was the "Aquitania," the big Cunard liner. These vessels talked with one another, each giving its position. The "Roosevelt" was nearest the "Antinoë." The "Aquitania" was next. But she was fighting her way westward and making slow headway against the gale. So it was agreed that Captain Fried, of the "Roosevelt," should go to the rescue of the "Antinoë."

UPTON immediately sent out a general call, Q S T, to all ships and shore stations, and told them of the situation. In this way, the air was cleared of all other messages, so that the "Roosevelt" and the "Antinoë" could communicate without interruption.

The second operator, Nelson Smith, soon came to Upton's assistance. Smith handled the messages to and from the "Antinoë," while Upton stationed himself at the direction finder, carefully turning it, listening to the strength of the signal and watching the radio compass.

Without that mechanism, it would have been almost impossible to find the disabled vessel. The ocean was a mass of raging combers. The air was so filled with spume and spray that it was impossible to see any great distance. It was like hunting for a needle in a *wind-blown* haystack.

"How many knots are you making?" came the desperate message from the "Antinoë's" operator. "If you don't come soon it's all up! . . . Another half has let go. . . . You say we so nearer?"

The messages were interrupted by long silences, when the anxious listeners on

Digitized by Google Original from UNIVERSITY OF IOWA

'Roosevelt" feared that the worst had happened. They found later that these breaks occurred when Evans, the "Antinoë" operator, had to leave his instrument to speak to the captain. Every time he did this he had to go along the open deck, which was being swept by huge waves. One of these waves tore a lifeboat loose and hurled it against the radio room, smashing the wall. After that, Evans was forced to fight the big seas that came in and drenched him as he sat at his instrument.

It was noon on Sunday when the "Roosevelt" sighted the "Antinoë." The story of the next few days was one which stirred the whole civilized world. Captain Ried lost two of his own men and five lifeboats before he finally succeeded in saving the twenty-four men on board the "Antinoë." Finally, late Wednesday night and early Thursday morning, taking advantage of lulls in the storm, the rescue was effected. Utterly exhausted, half frozen and half starved, every member of the crew was brought in lifeboats and hoisted to the "Roosevelt's" deck.

THE S O S call which had silenced the broadcasting programs on Monday evening was the first warning received of another tragedy. But this one did not have a happy ending. Although the signal was picked up a little after 7 P. M., it was not until hours later that the vessel in distress was identified as the "Laristan," another British freighter, with a crew of twenty-two men. She was in a desperate plight, her bulkheads stove in, and she was fighting a terrible storm.

Two ships, the "North Carolina" and the "Bremen," went to her assistance. The "Bremen" succeeded in taking off members of her crew. Then the gale grew so much worse that further attempts were impossible. But the "Bremen" continued to stand by, waiting for a lull in the storm, until daylight on Wednesday morning showed only scattered wreckage floating on the water. The "Laristan" had gone down in the night.

The "Antinoë's" S O S had come Sunday morning; the "Laristan's" Monday morning; and there was still another one about ten o'clock Sunday evening! This time it told of a collision between the two ships "Solvang" and "Vacuum" off the New Jersey coast. The "Solvang" sank; but not before all the members of the crew except two, had been rescued.

That last week in January was a terrible week. It was black with tragedy. And yet, because of the miracle of radio, the world was illuminated by something so beautiful and splendid—the light of courage and of compassion.

It is interesting to note that the "Vesuvius" disaster, which held the front page for weeks last November, was in no way due to failure to respond to the S O S. Within half an hour after the first call of distress went out, several vessels were on their way to the scene of trouble. And the good Samaritans of the sea stood by long as there was even a very remote chance of picking up a survivor. Had it been for the radio outfit aboard the "Paris," probably every soul on the ship would have been lost instead of approximately a third of the passengers and

Makes Life Sweeter

Because of the way we live today, the things we eat, few are entirely free from acidosis. To help the system keep sound and sweet, take Phillips Milk of Magnesia.

Does a hearty meal give you an uncomfortable sense of fullness? Do rich foods disagree or bring on sour stomach? Don't suffer, and don't diet. Try this universal sweetener that every physician endorses; that the public has found so helpful. It is a gentle corrective that every stomach needs at times; whenever a coated tongue, fetid breath, and acrid skin tells you the system needs sweetening.

Phillips is the genuine, prescriptional product; physicians endorse; the name is important.

Demand PHILLIPS Milk of Magnesia

"Milk of Magnesia" has been the U. S. Registered Trade Mark of the Charles H. Phillips Chemical Company and its predecessor Charles H. Phillips since 1875.

1000 HOTEL POSITIONS OPEN!

Hotels, restaurants, clubs, apartments, hospitals, institutions, schools and colleges everywhere need trained men and women. Over 70,000 positions paying $2,500 to $10,000 a year open annually in hotels of the United States. Nearly one and three quarter billions of dollars' worth of NEW HOTELS, CLUBS and INSTITUTIONS being built this year will need over 200,000 trained men and women. Hotels start you at salaries up to $3,500 a year, with living usually included.

Previous Experience Unnecessary

You can have one of these fascinating, big-pay positions. Thru our Simplified Study Plan we give you the valuable knowledge that it has taken successful hotel men years to obtain. Age is no obstacle—young and old alike have equal chance for success. A common school education is all you need.

We Put Our Students in Touch With Positions

We train you and put you in touch with big opportunities. All of your training under the personal supervision of Clifford Lewis, Managing Consultant for over 300 hotels thruout the United States. Our students employed by leading hotels everywhere.

Send today for Free Book "Your Big Opportunity," showing how we can train you for one of these splendid positions, and explaining our Money-Back Agreement.

Nobody can steal MY Happiness

By EDGAR A. GUEST

ONE beautiful Sunday afternoon during the summer of 1927, a memorable thing happened to me. Along with five or six hundred others, I sat in the little Methodist church at Huron City, Michigan, and listened to Professor William Lyon Phelps of Yale University preach his now widely known sermon on Happiness. This sermon has since been printed in book form. I have read it a number of times, and I have heard Professor Phelps deliver it a number of times. But I shall always be grateful and glad that I braved those eight dusty miles to hear its first public utterance.

I felt then, and I feel now, that Billy Phelps was inspired that afternoon. And I believe that the people gathered together in that little church felt the same way. The very walls seemed to listen receptively. I remember, as though it were yesterday, the opening sentence of his talk:

"Years ago," he began, "I came to the conclusion that the happiest person is the one who thinks the most interesting thoughts."

Of course this was another way of saying that happiness comes from within, not from without. Professor Phelps went on to show that, while happiness may be partly made up of externals—grand possessions, a big house, fine furniture, a costly automobile, and the like—it never *depends* upon these things.

For the past year, I have been trying out on myself Billy Phelps's recipe for happiness, and I have been watching it work out in the lives of others.

"HAPPINESS is the one thing in life you can't afford to postpone," says Mr. Guest. "It is like the manna of old. Enough for today is all that life measures out to us. There may be more tomorrow; but today's supply isn't going to keep. You can't store it in the ice box.

"If your first little car failed to thrill you with delight, the last limousine will be just another automobile. If your first little garden wasn't a bower of beauty to you; if you didn't watch for the zinnia seeds to sprout and the morning glories to start their climb on the old wire fence, then you needn't count on getting any fun out of the bouquets the hired gardener will cut for you some day. If you've never risen at dawn to go fishing in a leaky boat, and thanked the Lord that you had been permitted to see the sunrise, don't look forward to the day when you will own a yacht. You may take happiness with you aboard a yacht, but you'll never find it waiting there for you.

"When it comes to getting joy out of this life not one of us has a minute to waste. It is folly to postpone a single smile. The habit of frowning grows, and the habit of whimpering becomes increasingly hard to break. The time to be happy is *now!*"

I firmly believe he has the right idea. In short, I have decided that we are the authors of most of our own misery. The lion's share of our bad luck may be traced to our attitude toward something or somebody. As for our good luck, we are prone to give it a grossly exaggerated value. If success comes, the best that it can do is to increase our bank account, or widen our fame a little. And these things may have nothing to do with happiness. The thrill of victory is sweet; but often it doesn't last overnight. The new suit becomes old with the first rainstorm. Having more money than your neighbor can get to be monotonous. You can't lord it over him more than once or twice, and get any satisfaction out of the process.

This is what Billy Phelps told me that Sunday afternoon more than a year ago, and this is what experience has taught me to be the truth: *Unless you have my permission, you can make me neither happy nor unhappy.* How can you cheer me up, good neighbor of mine, unless I am willing to respond in some measure to your hopeful words and to your sunny presence? And, Mr. Sneering Critic, you certainly cannot disturb my peace of mind with your gibes and taunts, unless you have my coöperation.

You can see it for yourself: If my happiness comes from with anybody could rob me of i would be at the mercy of e careless or unkind tongue. snub, or a malicious dig, c make me miserable for days a time. Therefore, I refuse to my happiness into the keepin Tom, Dick, and Harry.

It is all a question of makin your mind: Will the loss of a set you to weeping? If so, it w bad day for you when that came into your possession, f put into sorrow's hand a weapon with which to strik you. Has an enemy lied a you? Did the stranger who h it believe the lie to be the tr Who is the injured one? Not if you are wise enough not t into the trap. Go on about business and let the liars lie. I let them rob you of appeti sleep. The stranger who has deceived is the one who has defrauded, and he will find the truth sooner or later.

IF I were asked today to the unhappiest man I strangely enough he would b of the richest men I know. tune has smiled upon him, b has seldom smiled back. A were asked to name the ha man I know, he would be the poorest. His nickna "Sunny," and he works b day. Fortune has never upon him and probably nev for he is now well over sixty of age. But Sunny has ceased to laugh at life. genuinely glad to be alive. at Pointe aux Barques, actually glad that he can grass and look after my boxes in the spring. He genuine thrill out of flowers and bi animals and people. He was ill a f early this month, and I stopped i pretty little house to inquire for

"I've been laid up," he said; " on the mend again now, and I' your place in a few days. Every all right. I suppose we've got to now and then just to apprecia health when we have it."

Sunny sensibly refuses to let g joy of life. You can't steal his saying something unkind about it isn't true. You can come up city with bushel baskets filled w from the florist, (*Continued on p*

UNIVERSITY OF IOWA

Introducing BIG CAR Standards of Luxury, Style and Performance at Low Prices . . .

TODAY a new type of low-priced motor car is available. It embraces big car luxury, style and performance. It provides big car riding comfort. It embodies big car quality in unseen parts. It is essentially a brand new automobile—the New Pontiac Big Six.

The New Pontiac Big Six is entirely new in appearance. Stunning new bodies by Fisher contribute to its big car beauty and big car style.

It offers the luxury of a car 167 inches in overall length, with deep, richly upholstered cushions, charming appointments and such advanced comfort features as adjustable drivers' seats in closed body types.

It provides the power of a larger L-head engine and the smoothness imparted by a dynamically balanced counterweighted crankshaft and the famous Harmonic Balancer. From fan to rear axle, its "line of drive" is in accurate dynamic balance. Its new brakes are of the internal-expanding four-wheel type protected against mud, rain and ice.

As for its performance, you can drive it at express train speed. You can watch it accelerate alongside the finest cars on the road. You can test its power under any conditions, confident of its ability to pull through. Meanwhile, it continues to provide that unmatched dependability for which every Pontiac has been famed.

Only a few highlights in its construction have been mentioned. Just enough to prove that the Pontiac Big Six is entirely new. But the amazing thing about it is that it gives so much big car luxury, style and performance at prices which come within practically everyone's reach!

Nobody Can Steal My Happiness

(*Continued from page 138*)

but your joy in the flowers will be as nothing to Sunny's when he goes out in the evening among the blossoms in his own patch of garden.

Sometimes it seems to me that we all go at life too haphazardly. I have written it before, but I repeat it here: Luck may make a man rich, but luck never will make a gentleman. Nobody ever becomes cultured by accident; chance will never make a mean man generous nor a brutal one kindly. Nobody ever became happy who was not willing to be. Biologists may prove much, but I doubt that they will ever prove that a man was born surly, or selfish, or petty, or bigoted, or whining, or sarcastic. These traits are the results of repeated demonstrations of choice on our part. Perhaps the choice was unconscious, but it was there all the same.

What happens to us is not nearly so important as our reaction to what happens. Actually, what difference does it make to our happiness that a ring is lost, or that a purse has gone astray, or that the game went to another? Has life in any way been changed? Are we not still the same as we were before? But the way in which we meet these situations makes all the difference in the world, both to ourselves and to others.

I know this, too: You can't be happy by yourself. You can't corner the good cheer of this life. You can't take all the victories and none of the defeats; you can't keep your smiles for the sunny days and growl through the dark, and get anywhere with yourself. You can't steal the happiness of others, and you can't save it up for special occasions.

If you are happy only when you are winning, then there is much unhappiness in store for you.

It takes courage to be happy. It doesn't take fine houses and large bank accounts and bonds innumerable. High-priced automobiles aren't upholstered with happiness.

It takes common sense to be happy. You don't need to study Greek philosophy, or Roman history, or higher mathematics in order to achieve contentment. A knowledge of these things may make you a wise person, but it will not of itself make you happy.

Without courage and common sense we become slaves to things and position and pride. The thief who can strip us of these treasures can leave us miserable and helpless.

A FINE old citizen of Detroit who had reached seventy years and a little more believing himself to be independent of the world, stood face to face with penury a few years ago. One day he was rated to be worth two millions or over; the next it seemed absolutely certain that he had lost everything. He had endorsed notes for sums larger than his entire fortune, and the notes were due.

I met this grand old man in the lobby of the Detroit Athletic Club, grip in hand, shortly after he discovered that he was penniless.

"Where to?" I asked.

"Eddie," he said to me, "I'm going back on the road to sell goods. They've taken everything from me but my spirit. I can still sell, and I'm on the way."

Brave? Yes, but oh how sensible! He had endorsed notes for his fortune—not for his happiness. He had lost his money, but not his smile or his grit. He was still thinking clearly, and he was wasting no time getting back to work. That he advised me never to endorse a note I remember, and have failed to follow that counsel. What he didn't know that day is that he was setting me the finest example I have ever had of how to bear myself in the face of adversity.

Should hard luck ever knock me flat, I shall remember that grand old man. I shall see him as I saw him then, grip in hand, seventy years of age—starting out as a traveling salesman. Back where he was forty years before, and wasting not one precious day in whimpering and wailing.

It takes common sense to do that.

NOT long ago, I sat in with a company of men who were starting a new business venture. Were they taking any chances with that money of theirs? Not if they could avoid it. They discussed their plans pro and con. Would this be a good move or a bad one to make? Would this help or harm? How far would they proceed the first year? What would they do if something unforeseen came up? What risks could normally be expected? Why, I was fairly dazed by the questions which were brought up and carefully considered.

Those fellows weren't leaving anything to luck. They were business men, putting real money into a venture. And, so far as it was humanly possible to do so, they were going to make sure that their money was safeguarded.

And all the time I sat there, I couldn't help thinking that that is precisely what we ought to do with our lives. Why not map it out as far as possible? Why not go at this stretch of years intelligently and rationally? Why not check and balance the possibilities. Why not make a business of happiness, and bond it ourselves.

Who is the general manager of this life of mine anyhow? Who says whether I shall keep on working or quit? Luck? Not at all. Who tells me to growl and swear and make a nuisance of myself generally just because some trivial plan of mine has gone wrong? Chance or mere chance? Not at all. I'm the fellow who lets go of everything that's fine and decent in me and sinks for the time to the level of the mucker. Can I prevent that thing happening to me again? I'm a poor sort of weakling if I can't.

I can't lose my temper without a loss losing something of my self-respect. I never done an ill-natured act of which afterward managed to be proud. Getting even with somebody for a genuine or fancied wrong has never proved the thing I thought it would be. Always there has come with my bit of revenge and momentary gloat, a larger sense of loss.

Years ago my father and I were

Digitized by Google
Original from UNIVERSITY OF IOWA

walking together, and a little yellow dog came snapping and snarling at us. Boy-like, I picked up stones and sticks and threw them at the cur.

"Son," he said, "don't do that. If you'll just walk on and pay no attention to that dog, he'll stop annoying you. It isn't any fun to a dog to yelp at people who pay no attention to him. The same is true of men. When you get older, you'll find there are a lot of human yellow dogs. They'll run out at you and snap at your heels and try to anger you. They'll say all manner of bitter things about you. Pay no attention to them. Never turn to answer them or throw sticks back at them. That's what they want you to do. Let the yellow dogs howl and snarl, but don't become a yellow dog yourself."

You can't please everybody. There is no use in trying. Unkind things will be said about you. You will encounter envious people and malicious people and grasping people. Jealousy, intolerance, and sarcasm and bitterness are human traits. Who goes out into life must expect to encounter all these difficulties. The sailors who put out to sea hope for fair weather, but they are prepared for the storms that may come at any hour. Loss and gain are as certain as rain and shine. If you have nothing to worry about, you have nothing at stake. And if you have nothing at stake, nothing to hope for, nothing to look forward to, nothing of which to be afraid, you might as well be dead.

LAST evening just at sunset two of us walked down to the cliffs overlooking Lake Huron. There on her porch sat one of the happiest and sweetest women I have ever known. The friend with me was struck by the beauty of her smile and the graciousness of her greeting. Her eyes were radiant with joy and her laughter was as clear and musical as the ripple of the waves near by.

As we walked on toward home, the friend said:

"What a remarkably happy woman she is."

"Yes," I said. "Everybody here loves her. She is the shining example for us all. Did you notice anything unusual about her?"

"Nothing but the beauty of her smile," he said.

"Did you notice that she didn't rise to meet you?"

"No," he answered.

"Well, she didn't," I replied. "She couldn't. She never takes a step without suffering excruciating pain. She can, and does, move about a little, but always with exceeding difficulty—and you never guessed it."

The incident is everywhere repeated. Disease attacks the body, but with the body brave it cannot get to the spirit. The mind still functions, and the mind is in control. Laughter is a better defense than whimpering.

But there is another side to this happiness question. One must have the *right* to be happy. An ill-natured man isn't entitled to friendship. He has thrown it away time and again and his sobs of loneliness in his old age come with little grace.

We were discussing a certain man the other day—a man rich and almost friendless. His life has been a long round of bickering and close dealing. Lawsuits have strewn his path. Friendship apparently meant nothing to him when he was busy making his fortune. Men who once tried to like him, gave him up as a hopeless case. He is old now and has more money than he will ever need.

To one with whom he quarreled bitterly more than twenty years ago, he said recently:

"I don't understand it. You have hundreds of friends about you, and I have almost no one outside of my own family whom I can turn to."

And the man replied simply: "I was making friends years ago while you were busy making money."

IT'S all in that one sentence. We carry into old age only the things we have thought to bring along the way. If we were happy as boys we possibly shall have happiness as men. If we are making friends now, some of them will be with us at the end.

Time was that I fretted when people sneered, but no more. Say what you will, think what you will, do what you will, you haven't the key to my peace of mind. I carry that myself. I shall lie awake only when I have wronged another. I shall be disturbed and unhappy only when I have done a vicious thing or a mean thing. When anger has caused me to lose my self-respect; when in a moment of carelessness I shall fail to live up to what I believe to be best, I shall be grieved and hurt and miserable. But not because of the bitter tongue of malice or of slander.

There are griefs which come to us through locked doors and bolted windows. We have all known days when to be happy and smiling was impossible. No one escapes such days.

A loved one goes out of our lives, and we feel that all happiness has gone too. But happiness hasn't really left us. Grief has stunned us and shocked us and hurt us beyond our powers to describe; but the smiles will come again and the laughter ring. Time will work that miracle. By and by we learn to talk happily of the departed spirit. Here she sat and there she played her games. Now we are reading again the stories which we read to her. Is her absence all misery? It was in those first few months, but not now. In the kingdom of the mind she still dwells with us, radiant and bright—a joy which we have known and loved. How richly we were blessed by those few years of her life. What if they had been denied to us? We should never have known these tender memories. We should not now be sitting here talking of her and looking forward to seeing her again in that eternal future. But she brought us sorrow. Aye, and laughter and gladness and love, and priceless memories.

So I say, let me keep my tears and sobs for life's real losses. While I still have friends, and books, and flowers, and my own people about me; while there are still cares to face and dangers to encounter; while I can still dream and plan and hope and see something to look forward to, I can still laugh when the road grows smoother, and still smile when a good friend calls!

Can you talk about BOOKS with the rest of them?

REBECCA WEST, contributor to "BOOKS"

Picture yourself in a gathering of "up-to-the-minute" people. Someone mentions Trader Horn or H. L. Mencken. What do you do? Do you try to swing the conversation back to baseball?

A knowledge of books is a necessity today. In order to help busy men and women keep well-read, the New York Herald Tribune got together a group of famous literary folk—William Allen White, Zona Gale, Sinclair Lewis, H. L. Mencken, and others—and asked them to write for "BOOKS," an illustrated weekly magazine.

"BOOKS" gives you the high spots of everything good that is being written. It enables you to talk on topics of the day. Fiction, poetry, history, biography. Authors, poets, essayists, journalists, explorers, architects and playwrights. You get the cream of modern literature. Comments on books. Sparkling gossip about authors. Actual quotations from the books themselves.

SPECIAL TRIAL OFFER

Already more than 400,000 people read "BOOKS" every week. You can now get it for six months for only $1.00—26 issues at less than 4c a copy, postpaid. Simply mail the coupon below. If, after receiving "BOOKS" for one month, you are not delighted, just let us know and we will refund your dollar instantly. You are the judge. Mail the coupon NOW!

BOOKS—New York Herald Tribune

BANKS,

in time of prosperity invest as carefully as in periods of depression

Do YOU *follow the same rule?*

Many American, Scotch, Dutch and British Banking Institutions and Insurance Companies have been customers of ours for a great many years.

When prosperity reigns, they exercise great caution and are perhaps even more exacting in choosing investments than in less prosperous times. Always they make sure of the judgment, experience, integrity and financial responsibility of the investment firm from which they buy.

You will profit by following that same rule. Deal with an institution which has earned the confidence of bankers, which is distinguished for its caution in safeguarding the funds of investors.

Current offerings provide a wide choice of high grade public utility, industrial, railroad, investment trust, real estate, municipal and government securities. Mail the coupon for descriptive literature.

They're Your Feet but Stop Abusing Them

(*Continued from page 49*)

and plaster. As a general rule, it requires four or five applications to soften the corn sufficiently so that it may be removed without trouble. Finish the operation by painting with tincture of iodine or mercurochrome.

However, if the corn is very large or high, it is best to remove the upper two-thirds with a sterile knife before applying the salve and adhesive, taking care not to draw blood, and follow the directions above.

Large calluses on the soles of the feet and stone bruises are usually due to bulging of the soles of the shoes or to wearing shoes with too thin soles. They should be treated after the same general method as advised for corns.

To relieve the stinging which sometimes accompanies these newly formed callosities, soak the feet at night in hot, soapy water. Sometimes, after a half hour's foot bath of this sort, the callus can be largely removed by rubbing with a damp, very rough Turkish towel. Dash a little cold water upon the feet, dry carefully, and anoint with cocoa butter.

Blisters and abrasions usually result from wearing shoes that are too large or stockings that wrinkle. Sometimes it is a wrinkle in the lining of the shoe itself that causes the trouble.

The best way to treat a blister is to sterilize a needle, and after pricking it at the edge, very gently press out the serous content. Under no circumstances should the loose skin over the blister be removed. Paint the area over with either tincture of iodine or mercurochrome, and allow it to dry. Then cover with adhesive tape applied over a layer of gauze or cotton. The gauze is important; otherwise, ulceration may occur if the adhesive tape is left on very long.

Abrasions are simply blisters from which the outer covering of skin has been removed or torn off. These tender surfaces are very painful when exposed to air or when irritated by the material of the stocking or the sock. Treat them as you would a blister after its serous content has been squeezed out. If the abrasion is very large or if it seems to be infected, go to the doctor.

THE care of the nails is an important feature of foot hygiene. There is an art in the trimming of nails, especially of the big toe, to prevent tendency to ingrowing. This inward curve of the nail going down into the flesh produces a very painful condition and it sometimes becomes infected and constitutes a serious menace. Socks or stockings that are too small are one of the causes of this condition, not to mention too narrow and improperly fitting shoes. But, aside from wearing properly fitting stockings and shoes, a simple way to prevent ingrowing nails is to trim them squarely across. Do not cut the nail of the big toe as you might those on the other toes, in a circular fashion, but allow the sides to remain on a level with the center of the nail, which is pared down to the flesh.

In mild cases of ingrowing nail, infection can sometimes be prevented by gently raising the corner of the nail and inserting a small pledget of cotton. The cotton should be changed at least once or twice a day and the nail will thus be gradually forced away from the flesh. In the more severe cases of ingrowing nail, surgical treatment is required.

If you have a painful or tender spot where the big toe joins on to the foot, or, to be technical, where the metatarsal joint of the great toe is located, watch out for trouble. A bunion may be on its way.

You have probably been wearing shoes that have crowded the big toe and caused the metatarsal joint to be pushed outward at a sharp angle; as a consequence the synovial sac, which is situated over the metatarsal joint, is enlarging.

THE first thing to do is immediately to remove all pressure and look to your shoes.

You may be able gradually to pull your toe into place again by the use of adhesive plaster and by wearing wool pledgets between the first two toes. But if the joint has begun to get badly deformed, consult a doctor, as there is danger from pus formation and ulceration.

Sometimes bunions result, not from pressure but from a hereditary conformation of the foot, in which case a surgical operation is the only cure.

The next two common foot ailments which are in a measure linked together, are excessive foot sweating and poor circulation.

There are two general plans of treatment for excessive sweating. The first is to tone up the circulation of the feet by taking the alternate hot and cold foot baths each evening. The feet should be put into piping-hot water for from two to three minutes and then taken out and put into ice water for eight to ten seconds. This should be kept up for from fifteen minutes to half an hour, making anywhere from half a dozen to a dozen changes between the hot water and the ice water.

Finish the treatment by drying the feet when they are taken out of the cold water and dusting them with the following powder:

Salicylic acid	3 parts
Powdered starch	10 parts
Powdered talcum	87 parts

Another remedy is the potassium permanganate treatment. First wash the feet thoroughly with soap and warm water, great care being taken to see that all soap is removed by rinsing them with water. They are then soaked for about twenty minutes in a saturated solution of potassium permanganate in hot water. This permanganate solution is allowed to dry on the feet. Carry out this treatment for three successive nights. After the first night the feet are not again washed with soap and water, but are put directly into the permanganate solution, which each time is allowed to dry on.

Liberally use the foot powder as suggested, applying it not only to the feet but to the inside of the socks, and be sure to get plenty of powder between the toes.

Digitized by Google — Original from UNIVERSITY OF IOWA

This treatment, especially if it has been preceded by a course of tonic alternate hot and cold foot baths, usually checks excessive perspiration. The permanganate will stain the feet a deep mahogany color, but this is harmless and will soon wear off.

Another good tonic treatment for poor circulation is the salt glow. Take some cool water and some coarse salt (not the rock salt used for making ice cream, but just coarse salt, such as is used in taking a salt bath) and thoroughly massage the feet with this moistened salt, rinsing off with cold water. Dry carefully and rub in cocoa butter.

Sometimes circulation in the feet is interfered with to the point where the ends of the toes are threatened with tissue death, gangrene. This condition is called Reynaud's disease, and its treatment should always be directed by a physician.

If you should happen to suffer from cold hands and feet, this does not necessarily mean that your whole systemic circulation is poor. I am constantly meeting people who have cold hands and feet, but who otherwise have a good circulation and normal blood pressure and enjoy the best of health. They are simply born that way. If people with this hereditary tendency are reasonably careful in keeping the feet dry and warm and do not go to the extreme of over-clothing the feet, no serious harm comes from this sluggish circulation.

While on the subject of cold feet we may as well take in that distressing complaint —chilblains.

Chilblains, as you probably know, are a mild form of frostbite. If you have frozen your feet, do not put them immediately into hot water, but warm them up first by massaging either with snow or cold water. They can then be bathed in warm water and rubbed with menthol ointment.

If, however, the chilblains have reached the ulcerated stage, a safe and effective remedy is Balsam of Peru—20 per cent—in a base of cocoa butter. Sometimes, however, when chilblains reach a very badly ulcerated stage, they need surgical care, as it is frequently necessary to remove all tissue of lowered vitality and either allow this surface to scar over or to replace the lost skin by means of skin graft.

PEOPLE who are engaged in heavy work, particularly in hot places, often suffer from cracks and fissures between the toes and on the soles of the feet. These can be treated in their earlier stages by careful washing, drying, and cleansing with alcohol. This must be unadulterated alcohol; that is, grain alcohol that has not been denatured. Then dust with foot powder. Borated talc is good for this purpose. Cracks and fissures should be covered with adhesive tape, after first being protected by a little gauze or cotton.

When fissures have become very deep, you should go to the doctor.

Flat foot is more common among women than men and this is probably due to the fact that weak arches are not merely a foot condition, but they also result primarily from a general weakened condition of the muscles that have to do with arch support. The more vigorous exercise of boys as they grow up as compared to that of girls no doubt serves greatly to protect them from this tendency to flat foot later in life. Moreover, boys' shoes conform much better to the shape of their feet.

FOOT PAINS ENDED in 10 minutes or costs you nothing

1 Trouble starts in weakened muscles. Tiny bones of forward arch are displaced. Pain follows.

2 A super-elastic band assists and strengthens weakened muscles, replaces bones. Pain stops instantly.

Burning, aching, tired feeling in the feet and legs—cramps in toes, foot calluses, pains in toes, instep, ball or heel—dull ache in the ankle, calf or knee—shooting pains from back of toes, spreading of the feet, or that broken-down feeling—all can now be quickly ended

SCIENCE says 94% of all foot pains result from weakened muscles that permit the foot bones to become displaced and press against sensitive nerves and blood vessels. Now a way is discovered to strengthen these muscles while holding the bones in position. Pains stop in 10 minutes when this amazing band, the Jung Arch Brace, is used. Stand, walk, or dance for hours—you just don't get tired. Just slips on—results are almost immediate. One of the secrets is in the tension and stretch. It is highly elastic and amazingly light and thin, yet strong and durable. An exceedingly soft sponge rubber lift is provided and urgently advised for severe cases. Worn with any style footwear. There is nothing stiff to further weaken muscles or cause discomfort.

Pain stops like magic. Soon band may be discarded and feet are well to stay. Nearly 2,000,000 now in use. Specialists, amazed at results, urge it widely.

Wear it 10 days; if not delighted, your money returned. Go to druggist, shoe store or chiropodist. If they can't supply you use coupon below and pay postman. **Write for free book on foot troubles.**

2019 Federal Schools Bldg., Minneapolis, Minn.

Weak feet sooner or later come to be flat feet. Another reason why women suffer more from flat feet is because they toe out more both in walking and standing, and this places a great strain upon the arches of the feet. The persistent practice of toeing in, standing and walking Indian fashion, and the daily exercise of the leg muscles, rising on the toes twenty to forty times, night and morning, will do much to prevent flat foot. The following exercise is also valuable for preventing and correcting this troublesome condition:

Exercise for flat foot. Draw two parallel chalk lines about three fourths the length of one foot apart, and practice walking on them until the habit of toeing straight is acquired. Correct posture is like the military attitude of "at rest"—heels apart, toes straight forward, the sides of the feet forming two sides of a square. This attitude gives stability and poise and insures a proper distribution of the weight of the body upon the feet.

Those who stand a great deal should avoid distorted positions, as resting the weight on the sides of the feet, or on one foot with the body sagging to one side. The body weight should be kept evenly supported on both feet.

TO DETECT weak feet, note whether you have a tendency to toe out when walking, a bending inward of the ankles when standing, or a disposition to walk on the inner side of the feet, as shown by the uneven wearing of the shoe. This condition may be present with a high instep and no evidence of flat foot. As flat foot develops, the inward bend of the ankle is easily apparent. The inner hollow disappears and the entire sole rests flat upon the ground when the shoes are removed.

The earlier in life this condition of weak feet is detected the better for the individual. After middle life a cure—especially in heavy people—may be difficult, or impossible, if the arches are completely broken down. In young people, a cure can almost invariably be effected.

The prevention of flat foot consists largely in affording due exercise to the leg and foot muscles and tendons by plenty of walking, especially in childhood, and on rough ground. Flat pavements are indirectly one cause of flat foot.

The following additional exercises are also valuable in an effort to strengthen the arches and prevent or cure flat foot tendency:

1. Stand on a wooden stool about one and a half feet from the wall, supporting yourself with your hands against the wall, with the right foot, except the heel, extended off the stool. Now stretch the foot downward as far as you can, counting five. Then flex the foot upward as far as possible, counting five, always keeping the heel on the stool. Repeat from ten to twenty times. Repeat with left foot.

2. Sit on a stool and place your right leg on a chair, the ankle and foot extended off the chair. Grasp the leg half way between the ankle and the knee, and, while stretching the toes, rotate the foot vigorously from five to ten times in each direction. Repeat with the left leg.

The arches of the feet can also be greatly strengthened by wearing moccasins or sandals, which, while protecting the soles of the feet, afford every opportunity for a free play of all muscles and tendons.

With regard to arch supports, I suggest that the sufferer from flat feet consult a competent podiatrist before using them.

DANDRUFF

A Sure Way to End It

There is one sure way that never fails to re[illegible] move dandruff completely, and that is to dissolv[illegible] it. Then you destroy it entirely. To do this just apply a little Liquid Arvon at night befor[illegible] retiring; use enough to moisten the scalp an[illegible] rub it in gently with the finger tips.

By morning, most, if not all, of your dandru[illegible] will be gone, and two or three more application[illegible] will completely dissolve and entirely destro[illegible] every single sign and trace of it, no matter ho[illegible] much dandruff you may have.

You will find, too, that all itching of the sca[illegible] will stop instantly and your hair will be lustrou[illegible] glossy, silky and soft, and look and feel a hu[illegible] dred times better.

You can get Liquid Arvon at any drug sto[illegible] and a four ounce bottle is all you will need.

This simple remedy has never been known [illegible] fail.

Original from UNIVERSITY OF IOWA

There are many good arch supports and health shoes on the market, but there are also a number of so-called health shoes and arch appliances brought out by commercial exploiters, whose products do more harm than good. Your feet are too valuable to fool with—that is why I advise anyone suffering from *serious* foot trouble to consult a reputable podiatrist. He will suggest the support and last best suited to your feet.

Another good course for the foot sufferer is to have his feet X-rayed. Sometimes foot strain is caused by bone spurs which will continue to make trouble until surgically removed.

We have come to realize that most of our ailments result from over-civilized living habits and would vanish if we spent more time tramping in the woods and along country roads. But if we are to enjoy such hikes, the feet should be in good condition and suitably clad. Also, before starting on a long walk, one should make sure that there are no protruding nails inside the shoes or wrinkles in the lining.

A middle-weight cotton sock I consider even better than the half-wool, half-cotton sock that some prefer for hiking. It should be a comfortable fit, neither so large that folds will be formed and cause blisters or abrasions, nor so tight that the feet are crowded and holes result; for holes and darns in the sock will also cause blisters.

Those who have tender feet might well follow the example of our soldiers during the war and grease their socks on their feet, before a long hike, with vaseline or candle grease.

Another help in walking over rough country or on smooth, short grass will be six or eight hobnails driven into the soles of the shoes and four or five in the heels. The so-called Hungarian hobnail, with a steel head, is the best, and those for the heels should be smaller than those for the soles. Hobnails will give a better foothold and save wear on the shoe, but will interfere with the grip of the foot on the ground if put on too thickly.

Hikers must sometimes dry out their shoes quickly, and an effective way to do this is to heat clean pebbles over the camp fire and then shake them about inside the shoes until the inner moisture has been driven off as vapor. Hot, dry cloths stuffed into the shoes will also soon absorb moisture. For overnight drying, wet shoes may be packed with dry oats. These will absorb the moisture and prevent the leather from shrinking.

HEALTH and happiness are, in a great measure, bound up with foot ease. It's a "grand and glorious feeling" to be able to go on a ten- or fifteen-mile hike and not know that you have feet when you return. As it is, far too many of us are painfully aware of their existence after getting through merely an ordinary day's work.

And it *should* not and *need* not be.

Give your feet a chance to function naturally by clothing them properly.

Tone up their circulation by tonic baths.

Keep them free of corns and calluses.

Do the foot exercises regularly.

Even if you are not suffering from flat feet or fallen arches your feet will benefit from these barefooted exercises and you will walk better as a result.

The Romantic Gypsy

(*Continued from page 27*)

much about your habits as you wonder about his. He despises the white man more for his sedentary habits than he is despised for his nomadic ones. You cannot always understand why one should prefer the inconveniences of a nomadic life to the comforts of home. He cannot understand why one should prefer the inconveniences of home to the beauties of the road. "A home," says the gypsy, "is a comfortable pillow under an uncomfortable head. The road is a hard pillow under a quiet one." There is another gypsy saying: "The gajo likes fire without smoke. But fire without smoke is like food without taste."

STARTING out from India some two thousand five hundred years ago, the first batch of gypsies trod on the footprints made by their grazing cattle and opened a tortuous road leading through passes in mountains and valleys, across forests and rivers. Alexander the Great followed that road in the inverse sense from the Black Sea to India. The black buffaloes the gypsies drove served the same purpose as the camels of the Arab. They provided food, milk, and meat, and their hides were used to stretch tents and to make clothes and boots.

It is difficult to imagine the hardships encountered by these people, but the conditions under which the gypsies had lived in India had been such that the hardships of wild and unknown Asia were heaven by comparison.

Three centuries before Christ, the advance guard of these gypsies had touched the outposts of the Greek Empire and were hailed by the immortal poet, Homer, as a people beloved by Vulcan, the god of fire, for their skill at the forge.

It had taken the gypsies two hundred years or so to travel from India to Greece, the distance between New York and Kansas City.

For fifteen hundred years groups of gypsies, in small and large caravans, trickled over the roads from the Ganges to the Black Sea. Some stopped in Persia, others in Egypt and in Arabia, but most of them traversed the tolerant and uninquisitive Turkish Empire to rest on the banks of the Danube, in the Thessalian mountains, and on both sides of the Carpathians, amongst the Roumanians and Hungarians. Western Europe did not know of their existence until the beginning of the fifteenth century, when the first band of gypsies, in colorful and barbaric rags, appeared in Germany and claimed to come from Egypt.

The world took them at their word, and, by corruption, from Egyptians they were called "gypsies." In Oriental Europe they were known by another name. As most of them plied the tinsmith trade, they were called "Tincari" in Roumania; "Tingheri" in Hungary; "Zincar" in Greece; and "Zingari" in lower Italy. Driven from Germany, the gypsies spread into France, Italy, Spain, and later to England, trafficking in horseflesh, working as blacksmiths and coppersmiths, providing dance music for festivals, smuggling from one country to another, on both sides of the

fence whenever neighboring countries were at war, and becoming highway robbers when pressed hard.

For five hundred years the European powers have made laws forbidding the gypsies to continue their nomadic life, yet the force of these laws spent itself against the moving rocks of the children of the Ganges.

When they cannot move on, they die. Wherever the law hemmed them in, they perished like deer against a fence. The *Wanderlust* is so strong in their blood it comes to the surface in the fifth and tenth generations. A drop of gypsy blood in a man makes him a gypsy. I have known whole tribes of gypsies in Hungary and Roumania to disappear in one generation because they were compelled to stay in one place. The mortality amongst the gypsies wintering on the East Side of New York and around the Hull House in Chicago is greater than that of any population. Where gypsy children are compelled to go to school, they die like flies. Yet the mortality of roving gypsies is perhaps the lowest of any race and they live to a ripe old age, passing the century mark hale and hearty.

SOME three hundred years ago the English, tiring of repeated attempts to assimilate these uncontrollable wanderers, loaded a large group of gypsies on the good ship "Virginia," and sent them over to the Barbadoes. At about the same time the French, having had their troubles with the gypsies for more than two centuries, decided to get rid of them by exiling them to Louisiana. Not to be behind the times, the Spaniards exiled large contingents of the Black Brothers to Brazil. One can still meet tribes of gypsies in this country whose ancestors had been exiled from these three countries. They are to be found along the Mississippi, along the St. Lawrence, on the banks of the Wabash, and on the shores of the Hudson, living exactly the same nomadic life as their ancestors had lived three hundred years ago, or twenty-five hundred years ago in Asia, in the deserts of Arabia, on the peaks of the Macedonian mountains or on the banks of the Danube or the aprons of the Carpathians. They still speak the same language, still sing the same songs, and have the same old customs and traditions.

One never knows where a gypsy camp fire will burst forth. Without being organized, in spite of popular belief in the existence of a king of the gypsies, without any central government, a web of tradition and custom unites them and keeps them informed about the doings of their brothers the world over.

Having no sense of time and no feeling of the limitation of space, the gypsy envisages the whole world as his happy hunting ground. The gypsy knows only one condition conducive to happiness: being on the road, forever traveling. He does not desire to go anywhere. He wants to be moving on; without plan, without aim.

But aren't we all continually traveling? For hundreds of years human ingenuity has been devising means of faster and better means of travel. In less than a hundred years we have advanced from the horse carriage and the sailboat, from a maximum speed of ten miles an hour, to the airplane speed of a hundred and fifty.

Here is Edwin McTeer (address on request) and some of his work. The crude pen drawing was made before he had any training and the striking story illustration (worth $100) was made after he took the Federal Home Study Course.

He did it—Why don't you?

Edwin McTeer is only one of the hundreds of young men (and young women, too) who are succeeding in commercial art with the help of the practical training offered by the Federal Home Study Course. Well trained artists earn $50, $75, $100, $150 a week and more.

Success in Commercial Art

begins with a liking for drawing and the ambition to follow through with the right training. Mr. McTeer was thirty years old when he clipped a coupon like the one at the bottom of this ad, and took up the Federal Course. He progressed rapidly, increasing his earnings each year until, at the end of five years he is making around $10,000 a year. Read what he wrote us:

"I was not very talented when I entered this training with you people as you certainly know, and I had not even had high school training and I know any one with a love for the work can accomplish even more than I if they will just let you people, the Federal Schools, help them.
"I suppose you remember I opened my own independent commercial art studio, and to make a long story short, my earnings are now at the rate of over $10,000.00 a year."

Send for "Your Future"

If you like to draw—send for book "Your Future" and find out what amazing progress you can make with the right art training. Use the coupon now, giving age and occupation.

Federal School of Commercial Designing

Mellin's Food
A Milk Modifier

Food for the Baby

Mellin's Food and milk furnishes protein in sufficient amount to assure constant development of all tissues and cells of the body.

Mellin's Food and milk supplies carbohydrates of a character that are readily utilized for bodily heat and energy, which is essential in sustaining digestive functions.

Mellin's Food and milk provides natural salts which have an important part in all digestive processes and which furnish material for the growth of bones and teeth.

Mellin's Food and milk supplies fat, an element that is made use of in the body for practically the same purpose as carbohydrates—a source of heat and energy.

Mellin's Food and milk thus covers completely the nutritive requirements during the first year of life and may be relied upon as a satisfactory substitute for human milk.

Mellin's Food Biscuits

Especially suitable when it becomes time to wean the baby from the bottle.

A sample box sent free, postage paid, upon request

Mellin's Food Co., 177 State St., Boston, Mass.

70 BREEDS Chickens, geese, turkeys, and ducks. Pure bred, hardy, northern raised, profitable. Fowls, eggs, baby chicks, incubators at low prices. Largest plant. 36th year. Fine new 100 page poultry book FREE.

There has been no equal progress in any other endeavor. The gypsies have taken two hundred years to travel from India to the Black Sea. It could now be done in forty-eight hours. The cost of the travel equipment of the people of the United States—trains, boats, automobiles, airplanes—is greater than the rest of the wealth of the country. We accuse the gypsies of being a nomadic people, but what civilized man has not made ten times greater mileage than most nomadic gypsies? Only we miss most of the beauty of the road; most of the romance of it. We peep through the window of a fast-moving train at the most gorgeous range of mountains. The gypsy stops, pitches his tent, lights his fire, and fills his eyes with the beauties of Nature.

Walled up within most hearts is the desire to travel. Whenever man is happy he wants to travel. Whenever he is unhappy he wants to travel. His deepest emotions move him to go where he hasn't been. Honeymoon voyages, travels to forget one's sorrows, the fever of exploration, and the seizing of every possible pretext to go from East to West and from West to East, whether it be at the head of a conquering army or in the function of a traveling salesman, are all pretexts to travel.

We are being transported rapidly from one place to another. The gypsy is on the road, forever and ever. This is why children and young people admire gypsies so much. The gypsies are the irrepressible youth of the world.

No sedentary population has ever been able to bring itself to live at peace with a nomadic one. When the first agriculturists put up fences dividing their lands, the foundations for all wars for all eternity were laid. Agriculture needs a sedentary population. Because of the necessity of new grazing grounds, sheep herders and cattle raisers can live no other but a nomadic life. Historically speaking, the first agriculturists were only a few generations removed from the nomadic cattle raisers. The man who discovered that seed reproduces itself a hundredfold was made prisoner by the land he had conquered. Whatever ye possess that cannot move of itself possesses you a hundredfold.

I DID not take that 7:59 train the morning after I met the gypsies in New Jersey. I joined them instead and went with them in search of that mystical daughter of Rama. It took us six months to reach Toledo. Why did we go to Toledo? I don't know. Nobody knew or cared. We bartered horses. We traded automobiles. In six days an old Ford had grown, through various changes, to a last year's model of an expensive car. But, oh, what stories I heard! And the songs, and the dances and the impassioned loves I have watched grow! We camped wherever we pleased and burned woods of many odors: branches of sweet-smelling elms and roots of spicy ash trees. In six months we celebrated four weddings. We stopped once for ten days in a rather dismal place because one of the dogs was too sick to travel. Occasionally people were rude but most of the time they were merely envious because they sensed how much happier we were than they themselves.

Other tribes joined us and we celebrated joyously each addition. We were a hundred and sixty by the time we reached

Original from UNIVERSITY OF IOWA

Toledo; and not all of us were pure gypsies. Then there was the story of Rima, that honey-brown, black-eyed girl who sang so beautifully. A bank clerk fell in love with her . . . but that, as Kipling says, is a tale for another page.

Modern civilization is the civilization of good roads. Good roads will unite the world and bind it with stronger ties than scraps of paper and sealed treaties. Let people travel. The stronger element of every nation has reached out and struck out for other countries to conquer. The vigor of a people is measured by its spirit of adventure. Alexander of Macedon was the greatest ruler of Asia. The most constructive of all the Pharaohs of Egypt were those of the Greek dynasty of Ptolemy. The ruling heads of almost every European country are of a different nationality from that of the people they rule. The great Napoleon was a Corsican and not a Frenchman. And in our own day in this very country, most men of power come from other states and cities than the ones in which they have succeeded.

YET the gypsies have never imposed themselves anywhere. The reason for that can be found only in the gypsies' attitude towards life. There is no word for *possession* and no word for *duty* in the gypsy language. The gypsy has no desire to accumulate beyond his immediate needs. He lives literally from day to day and from hand to mouth. If he is a sharp trader it is only because of the pleasure and joy he derives from outwitting the other man. The profits obtained mean nothing to him and are immediately shared by all the others of the tribe. The lack of a desire for private property has enabled the gypsy to roam over the world so joyfully, so care-free, despite the difficulties an un-understanding world has thrown in his path.

No sense of duty! I can hear a loud cry: "Then what? Are they savages?" To this the gypsy answers: "No law has to impose upon me the duty of loving my parents. No law has to impose upon me the duty of loving my children."

The reverence of gypsies for their elders has no counterpart in any other people. As to the purity of gypsy family life, so many students of gypsy life have written volumes on it, it would be idle to say another word. Conjugal fidelity and love and reverence for one's parents and children are not law-imposed duties upon gypsies; they are deeply felt sentiments.

The purpose of laws is to coerce a minority to live according to the will of the majority. Such things, however, are only necessary to unorganized society and to protect that majority against the marauding instincts of the few who cannot adapt themselves to the life of the fold. The gypsy needs no laws nor does he have to act because of a sense of duty.

Many things have been said as to the purity of the blood of the gypsies, and authorities on the subject hastily have maintained that the "Kalo" are the only people of pure blood in existence. Personal observation inclines me not to believe this sweeping assertion. There is, and there has been, intermarriage between the gypsies and the fringe of the population of every country. One tenth of the population of Hungary and Roumania, of Spain and Southern France, has gypsy

Write today for details of the proven "Brown Bobby" Plan

HOME BUSINESS

It can make you independent

WE want a reliable man or woman in every community to make *nationally advertised* "Brown Bobby" greaseless electric doughnuts for the wholesale and retail trade. Charles Minch, Fla., cleared $3,000 his first 3 months; Iota Blanton, Ia., took in $400 profits first 26 days; J. D. Hecker, Ill., makes $48 daily.

No baker's skill needed; simply add water to prepared "mix" we send; electric doughnut machine does the rest. Start at home. Spare time. Your profits 100% to 125%. Small investment (to show you mean business) required. We will help you sell your entire output.

Write today for figure—facts of what others are doing and what you can do, how you can be making $50 to $100 a week in a few weeks.

blood in its veins. The celebrated Brazilian author, Professor Morano, maintains that there is not a single prominent Brazilian family in which there is not some gypsy blood.

As a widening river sweeps along in its course everything on its way, so have the gypsies in their travels from India carried along in their path countless other migratory people they have encountered. The main objection against the gypsies in the Balkans has been that they attracted like magnets the more unstable element of the population. In Spain their spell was so great that kings made laws forbidding their subjects to partake of a meal with the gypsies. To spend a night in a gypsy camp was once punished with death.

The reason given for expelling the gypsies from England, three hundred years ago, was that the best youth of England was attracted by them. The rulers of France, also gave the same reasons and spoke volubly of the irresistibility and of the charms of the road which the gypsies mirrored in front of the youth of France.

This vaunted purity of race is very much exaggerated. It is not absolutely necessary to be born a gypsy. One can become one. Of every three tribes gypsying between the Atlantic and the Pacific, only one is of pure gypsy origin. Many a peaceful family of Balkanic origin goes a-gypsying for a week-end from Chicago, and remains on the road to weave baskets and do occasional labor harvesting or tinsmithing.

The romance of the road is irresistible to most healthy, vigorous people. There are many more pseudo gypsies today in the United States than in any other country; and there is hardly a stretch of fifty miles which does not boast of tent camps in the summer.

Five miles out of New York toward Westchester, hardware clerks and their families give vent to their nomadic tendencies, out-gypsying the gypsies. Many a new gypsy tribe has started that way in the past. For twenty-five hundred years the gypsy blood has been enriched and impoverished by streams of other bloods in the same proportion as their blood has injected itself into the veins of other peoples.

THERE are some sixty thousand gypsies in the United States today. Until ten or fifteen years ago the greater number of the gypsies, excluding the descendants of the original gypsy exiles, were English gypsies, descendants of gypsies who had settled in England in the fifteenth century. There were also a good many Scotch tinkers, and Irish and Welsh people of the road, tinsmiths and basket weavers, yet these latter were only gypsying people, not real gypsies; the roads of England, Wales, and Scotland are thick with a nomadic element frequently confused with gypsies. In the last ten years, however, Russia, Hungary, and Roumania have furnished the greatest number of gypsy immigrants to the United States. There were less than a hundred Balkanic gypsies in 1910; there are more than twenty thousand today.

In the winter they live in vacant stores and dilapidated houses in the crowded districts of the industrial cities. One is almost certain to find gypsies after the month of December in New York and Chicago, in Cleveland and Pittsburgh, in

hool of Home Economics, 838 E. 58th St., Chicago

Boston and Kansas City. During the winter the gypsy families pick up very comfortable livings. There are as many people today who have faith in the fortune-telling abilities of the gypsies as there were five hundred years ago. Italian, Spanish, and all Slavic immigrants prefer the medicinal herbs of an old gypsy to the prescription of a doctor and do believe in the powers of the love potions sold by gypsy women.

While the gypsy women are thus earning hundreds of dollars a week, selling hope and despair, the men are not idle. They play the violin at wedding festivals and at cabarets, or work as coppersmiths in shops and factories. There is no gypsy girl, worthy of the name, who cannot pick up more money than she needs posing for artists, dancing, and singing.

I have known gypsy families of four or five people who earned as much as five hundred dollars in a week; yet at the first sign of spring they vanished.

BY SOME mistaken process of mind, well-meaning people, including Jane Addams of Chicago, have come to the conclusion that the happiness of the gypsy would be increased if he were made to settle down, provided settled life were made agreeable enough for him. At the Hull House in Chicago they organized special classes for the youngsters, special classes for music, drawing, and dancing. The total result of this benevolent and well-meaning work will be the increase of the death rate amongst gypsies and a few totally worthless songs most of which will be heard at gypsy camp fires. "Frankie and Johnnie" may replace some wonderful old gypsy song at the camp fires during the next ten years.

It is useless, and heartless, to attempt to coerce by law or cajolery the gypsy to live otherwise than hundreds and hundreds of generations have trained him to live. The world will not be worse off if a thousand more camp fires light the roads at night. The world craves Romance in this hard, matter-of-fact age. What is more, we need Romance. The gypsies are the only romantic people alive today. The world will not be worse off if after a tired day's work we can look at a column of curling smoke in the distance and let our minds wander along with these rovers who have the courage to do what we desire to do.

NEXT MONTH, Dr. Will Durant, author of that famous book "The Story of Philosophy," takes you into his home and shows you how he is bringing up his child. His scholarly and philosophical mind has solved or is solving many problems of child upbringing that are troubling the minds of parents and teachers today. No one who has anything to do with children should miss this article.

IF YOU ARE AMONG the thousands of people who find it hard to say "No," you should by all means read Bruce Barton's article next month, which shows the pitfalls that await the man or woman who isn't trained to say "No" at the right time. It is the kind of article that makes you sit up and take notice and then go into a closed session with yourself on the subject.

Keeps Hair Neat

Rich-looking — Orderly

IF your hair lacks natural gloss and lustre, or is difficult to keep in place it is very easy to give it that rich, glossy, refined and . . . orderly appearance . . . so essential to well-groomed men.

Just rub a little Glostora through your hair . . . once or twice . . . a week—or after shampooing, and your hair will then stay, each day . . . just as you comb it.

Glostora softens the hair and makes it pliable. Then—even stubborn hair—will stay in place of its own accord.

It gives your hair that natural, rich, well-groomed effect, instead of leaving it stiff and artificial looking as pastes and creams do.

Glostora also keeps the scalp soft, and the hair healthy by restoring the natural oils from which the hair derives its health, life, gloss and lustre.

Try it!—See how easy it is to keep your hair combed—any style you like . . . whether brushed lightly or combed down flat. If you want your hair to lie down particularly smooth and tight, after applying Glostora, simply moisten your hair with water before brushing it.

A large bottle of Glostora costs but a trifle at any drug store.

Try It FREE

My Memories of the Old-Fashioned Drummer

(*Continued from page 21*)

entertainment, and applauded with occasional weird jets of laughter that sang and whistled among his ringing adenoids. The clerk from Doc Cummins' drug-store came in and listened with a studious intentness, eager to pick up points, for it was his ambition to go on the road himself. And there were others, including six or eight of The Boys—The Boys being, in a country town, The Boys, without regard to their age, and quite distinct from Us Kids, who were also there.

And the older ones called him Billy.

A good many of his stories were always about Pullman cars and Pullman porters—and you felt that here was a man who would be intimidated by neither. He was eloquent about the dollar dinners on the Pullman diners; although he thought the price pretty high and you knew that he would not be embarrassed by any possible combination of knives and forks and spoons. As for the porters, he called them all George, he let you know. One of his Georges he found masquerading as an Arab at the World's Fair in Chicago—he assumed you had been there, and if you hadn't you felt still more inconsequential by the side of him—and there was a story about that.

There was an hour or so of stories. Some of them were detailed as actual personal experiences. And a good many of them, if he thought Uncle Ben would like that kind, were off color. After a while he would glance about Uncle Ben's shelves and counters and tell him that he was going to put him down for a dozen of this and a bolt of that and a gross of the other, interspersing the items with still more Good Ones. Uncle Ben might mildly resist, cutting the orders in half.

IF THE proprietor of the Weekly Banner were in the audience, the next issue of the paper would carry an item something like this:

Billy Jackson, the popular drummer, visited our little city one day this week and sold Uncle Ben Wilson quite a bill of up-to-date goods. See Uncle Ben's ad. in another part of the paper. We are always glad to see Billy Jackson's genial face on our streets. Billy always tries to make it here for over Sunday in our little town. Maybe the only attraction is the Sunday dinner at the Palace Hotel, which is the best for a good many miles around, see ad. among our business cards. And maybe the attraction is one of the new waitresses, not naming any names. Hey, Billy? Well, boys will be boys.

For Billy, whatever his name might be or his line, or his mental equipment or his physical appearance, was always supposed to be a gay dog with the ladies.

If you put it up to him, of course he denied the charge, or deprecated it; or he might even pretend to become angry—but with an air! With an air and manner that made you understand that romance, as well as sophistication, visited your little city along with Billy.

And he was always feared, as a rival, by the local swains. He knew all the latest line of talk calculated to capture a maiden's fancy. All the airy nothings. He was a man of the world in dress as w as conversation; he was supposed to kn the latest thing in the way of waistcoa shirts, ties, shoes, hats. If he took a gir the county fair, he would be at no l even for an instant as to how to enterta her, what to order in a restaurant, or an thing of that sort.

More than that, he was a man w would scarcely think twice about spe ing as much as three dollars on an e ning's entertainment, including a Liv Rig.

He was especially full of stories things that had happened in other to along his line of march; inside storie the kind of thing that naturally woul get into the newspapers. That is, t wouldn't in those days; the tabloids w be full of them now, if they could get of them. I remember one yarn—

But let Billy the Drummer tell it.

"YOU know old Deacon Ciphers ov Blankville? I was over there weeks ago, and they were holdin' a re meeting in the Deacon's church. The I was there, the Deacon prayed for rai got a cloud-burst, in a way of spea He was leading the exhorters, afte sermon—one of the volunteers that passin' down the aisles callin' on th ners to come forward, you know. a sudden there was a woman got u started down the aisle, shouting ou she was going to confess and be and live in sin no longer, and the D started down the aisle along with h first everybody thought he was help along and encouragin' her, and was noticed that he was shouti prayin' louder than she was, so tha she was confessin' to couldn't be h anybody else. Feller sittin' next slipped me the word that she was girl who worked in the Deacon family, but what it was she had to we never got out of her, the shouted and prayed so loud. C able speculation over to Blankvil what it was, and a lot of the D friends think it's up to him to con with an explanation."

Billy was always indignant if taken for a peddler. I was in a lit some miles distant from the o habited, a town not on any rai all, when this actually happen Drummer.

He was a shoe Drummer, an showing his samples to a local n when the proprietress of the ho innocently if she could buy a ce of shoes, and how much they w

"Do you take me for a peddler, asked the Drummer, drawing h to his full breadth, for he was fat ones. And later he took a f venge upon her.

"I want eggs for my dinner, "and I want 'em boiled. If open up an egg before you eat can get into it at all that sh there, such as flies or hairs."

The Billy I am talking of is a recollection of some forty or fi

ers whom I knew. And looking back on im through the haze of thirty years, he eems somehow less romantic to me now an he did then. The composite picture that of a man getting along towards iddle age, a trifle bald, and slightly inined to obesity. He wore dangling from s watch-chain the emblem of at least one aternal order, and sometimes there were ree or four of them. Frequently there is attached to his watch-chain also, in dition to the various "charms," a quill othpick in a little golden, cylindrical se.

I fear that the brutal truth is that lly really thought more about food than out gallantry. When he found a coun- hotel where the food was really good d plentiful, he would stay in that town long as he possibly could, and eat as en and as much as possible. After din- he would sit on the hotel veranda, h his feet on the railing, and ply the ll toothpick. I can remember, as a ng man, witnessing as many as five mmers at the same time on a hotel anda using quill toothpicks steadily n two o'clock of a Sunday afternoon il supper time, when they laid in new terial for this form of exercise, and re- ed to the veranda. I do not think this t scene could be witnessed anywhere he country today.

ut the eating never seemed to lessen legend that Billy was, actually or ntially, a devil of a fellow with the . Whether it is true, or whether it only an agreeable and exciting fiction, n't know; but it was part of the story went with Billy. And the girls them- s evidently believed it. Only the er waitresses and the cashiers, only gayer flappers of the Gay Nineties, as the ones who used habitually to on their flashiest clothes and Go n to the Depot and See the Passenger is Come In ever dared to be openly lly with Billy when he was on the The more staid and circumspect els, when they passed by the Palace where Billy sat after dinner with er-stuffed fellows, were careful not to at him—unless, of course, they had him formally. A glance, they felt, it had been preceded by a formal luction, might be misconstrued by hole town, and by Billy himself, as st advance towards a flirtation.

yet what Billy and his mates alked about more frequently than they sat and digested, was the Little n and the Kiddies. It would take n hour or so to get around to that. hey had told each other what their ere, and had swapped general notes siness conditions, and had traded ation on the worst and best hotels r territory, one of them would be oonet or later, to strike a Serious

How I Started Making A Big Yearly Income

With a Borrowed Kriss-Kross Stropper

The True Story of A Man Who Found Himself Facing Failure And Then, By a Sudden Stroke of Luck, Discovered The Secret Of Making Over $5300 A Year! Don't Fail To Read This Illuminating Article of Real Life Success! It Should Prove An Inspiration To Any Man Who Wants To Make More Money!

By B. G. LOUGHREN

$200 the first week! $1000 in a single month! And over $5300 cash profit in a year! When I sit down and look at those figures in my bank book, I can't help marveling! I had been in the real estate business when suddenly the local "boom" collapsed. The immediate future looked gloomy, until one day when I dropped in to talk things over with a friend.

When I sat down at his desk my eye fell on a little nickel-plated contrivance about half the size of my hand.

New, Revolutionary Invention

"What's this thing?" I asked.

"That's one of those KRISS-KROSS razor stroppers," said Jimmy. "You've read about it in the magazines. I've only been using it a month, but I'm getting the keenest shaves of my life, all from the same blade."

"I wish I could invent something like that," I said. "I'll bet the company that puts it out is coining money."

"They are," said Jimmy. "Furthermore, they only sell through agents—and those agents are making plenty, too! I sent for their proposition the other day just out of curiosity."

He handed me a letter with some sample order blanks attached.

"Jimmy," I said at last, "this thing sure will SELL—and they certainly give their men a generous proposition! Let me borrow your stropper this afternoon and see how many orders I can take!"

Astonishing Profits

That afternoon I got the surprise of my life. The first man I walked up to had read all about KRISS-KROSS in The Saturday Evening Post and said "Send me one" before I got half-way through my demonstration. By 4:30 I had 9 orders—and next morning I got 11 more! . . . And the end of the week found me with exactly $200 cash profit in my pocket!

Why KRISS-KROSS Pays Agents Such Astonishing Profits

KRISS-KROSS actually reproduces with mechanical precision the intricate diagonal stropping stroke of a master barber. Strops any make blade (except Durham Duplex), giving the keenest cutting edge that steel can take! Just insert blade, turn the crank for 11 seconds and the trick is done!

A $15,000 Business

The money I made that first week came easily enough—but after I got well started it became easier and easier. And then, before I knew it, I found that I was actually clearing as high as $1000 in a single month!

Today I figure that I did a $15,000 gross business that first year—with profit of over $5,000. And it all came from getting started with the right kind of a proposition. Success comes from giving the public what it wants and they surely have shown that they WANT KRISS-KROSS! Personally, I believe that it is the *greatest shaving invention of all time.*

* * * *

Mr. Loughren's experience is typical of the surprising successes of KRISS-KROSS representatives in all parts of the country. Practically every man finds himself making money faster and easier than he ever dreamed possible. Right now, due to our heavy advertising program in Liberty, The Saturday Evening Post, Collier's, etc., there is room for more KRISS-KROSS representatives—to earn $30 a day and up. Find out about this opportunity today. No obligation. Just clip the coupon and mail it at once!

Fat is your silent enemy

Surplus flesh goes on for many years sometimes before it warns you of the damage it is doing. You feel lazy and comfortable—on and on and on—but gradually disease is creeping on you through that unhealthy flesh. Life insurance companies do not consider fat people good risks.

Moreover, fat interferes with personal success. Often it tarnishes friendship and love. Frequently it hinders self-respect.

The Delle Ross System of reducing is the one safe, sure, permanent way. The pictures shown here are unretouched photographs taken of Mrs. Clarence Fox, R. F. D. No. 12, Dudley, Illinois, before and after reducing 57½ pounds.

If you are overweight, send in the coupon. It is just an inquiry for literature—not an enrollment. Mail it now, while the magazine is before you.

life, and he is constantly exposed to a good many temptations that the ordinary man never gets up against, but if he's any kind of a man at all he always remembers that he's got a home with the little woman and the kiddies waiting for him there."

Billy was always conscious that he and his tribe were considered a bit raffish. In the Gay Nineties preachers and traveling evangelists used sometimes to mention the Drummer as a type of the Sport whom it would be highly desirable to bring to repentance; and the preachers felt proud when they could say that in the last revival meeting they had converted a gay and thoughtless Drummer. And Billy felt a little proud, too, of this especial mention, and also of the especial mention that he used to get in the sentimental and comic songs of the period. But, in spite of this, Billy wanted you to feel—and it was generally felt—that his Heart Was in the Right Place.

He always had certain customers to whom he never told the gayer stories that were so popular with the majority of his customers.

"Deacon," he would say, "here's one you can tell in Mixed Company."

As a matter of fact, Billy's job could scarcely have been any sinecure. He had to be a solid citizen one minute, in order to get the confidence of his customers, and a racy comedian the next. He had to be a sport and a typical family man at the same time. He had to be wise concerning all the rakish diversions he was supposed to be in touch with, while standing always for the best interests of the community. If he was supposed to be a little bit wild, he was more popular; but he must impress people as being trustworthy and conservative.

"I heard T. De Witt Talmage preach last summer," he would say, in one gathering; and in another: "The last time I saw Sam T. Jack's burlesque show in Chicago I picked up this one. . . ." And Billy would contrive to make both narrations impressive.

Billy never hesitated to give his political opinions, whether he was asked for them or not. And there was a popular belief that the combined strength of the Drummers of America was a mighty force which no candidate could buck against.

Probably only a minority of my readers remember the Presidential campaign of 1896, when Bryan ran the first time. I remember it very well; I was too young to vote, but I was thoroughly convinced that unless Bryan was elected, the republic would go to perdition.

We Bryanites told each other, and believed, that the Drummers had had a lot to do with turning the country to McKinley and the Gold Standard. The Drummers had got their orders from Business, the story was—possibly from Mark Hanna himself—and they had gone all over the country telling the small business men that financial and industrial ruin would ensue unless Bryan were defeated.

GAY Dog with the Ladies; purveyor of stories that only robust men could stand up under; political prophet and political power; noble eater; sentimentalist—such was Billy. It takes the automobile, the radio, and the salesman to fill the place that once he filled so expansively.

The Bishop Murder Case

(*Continued from page 39*)

returning home from the opposite direction along the Drive."

"That's right, sir. And, of course, I took up my post again on Seventy-fifth Street."

"You realize, Emery," said Markham gravely, "that it was during the time you waited at Seventy-fourth Street that Drukker fell over the wall."

"Yes, sir. But you're not blaming me, are you? Watching a man on a foggy night on an open path when there ain't anybody around to screen you, is no easy job. You gotta take a few chances and do a little figuring if you don't want to get spotted."

"I realize your difficulty," Markham told him; "and I'm not criticizing you."

THE Sergeant dismissed the three detectives gruffly. He was obviously dissatisfied with their reports.

"The farther we go," he complained, "the more gummed up this case gets."

"*Sursum corda*, Sergeant," Vance exhorted him. "Let not dark despair o'ercome you. When we have Pardee's and the Professor's testimony as to what took place while Emery was watchfully waiting beneath the trees at Seventy-fourth Street, we may be able to fit some very interestin' bits together."

As he spoke, Belle Dillard entered the front hall from the rear of the house. She saw us in the drawing-room and came at once.

"Where's Lady Mae?" she asked in a troubled voice. "I was here an hour ago and Grete told me she was out. And she is not in her room now."

Vance rose and gave her his chair.

"Mrs. Drukker died last night of failure. When you were here earlier Menzel was afraid to let you go up."

The girl sat very quiet for some time. Presently the tears welled to her eyes.

"Perhaps she heard of Adolph's accident."

"Possibly. But it's not quite clear what happened here last night. Doctor Ostead thinks Mrs. Drukker died about ten o'clock."

"Almost the same time Adolph died," she murmured. "It seems too . . . Pyne told me of the accident. I came down to breakfast this morning; everyone in the quarter was talking about it—and I came over at once to see Lady Mae. But Grete said she was out, and I didn't know what to do. There's something very strange about Adolph's death. . . ."

"What do you mean by that, Dillard?" Vance stood watching her.

"I—don't know—what I mean," she answered brokenly. "But only this afternoon Lady Mae spoke to me of Adolph and the—wall. . . ."

Digitized by Google Original from UNIVERSITY OF IOWA

"Oh, did she, now?" Vance's tone s more indolent than usual, but every rve in his body was, I knew, vigilantly rt.

'On my way to the tennis courts," the went on, in a low, hushed voice, "I lked with Lady Mae along the bridle h above the playground—she often it there to watch Adolph playing with children—and we stood for a long e leaning over the stone balustrade of wall. A group of children were gath- l around Adolph: he had a toy airplane was showing them how to fly it. And children seemed to regard him as one hemselves; they didn't look upon him grown-up. Lady Mae was very hap- and proud about it. She watched him shining eyes, and then she said to 'They're not afraid of him, Belle, be- se he's a hunchback. They call him npty Dumpty—he's their old friend the storybook. My poor Humpty npty! It was all my fault for letting fall when he was little.' . . ." The s voice faltered, and she put her hand- hief to her eyes.

So she mentioned to you that the chil- called Drukker Humpty Dumpty?" e reached slowly in his pocket for his ette case.

e nodded, and a moment later lifted ead as if forcing herself to face some- she dreaded.

Yes! And that's what was so strange; fter a little while she shuddered and back from the wall. I asked her was the matter, and she said in a ied voice: 'Suppose, Belle—suppose Adolph should ever fall off this wall way the real Humpty Dumpty did!' almost afraid myself; but I forced a and told her she was foolish. It t do any good, though. She shook ead, and gave me a look that sent a through me. 'I'm not foolish,' she 'Wasn't Cock Robin killed with a nd arrow, and wasn't Johnny Sprig with a little gun—*right here in New* ?'" The girl turned a frightened gaze us. "And it *did* happen, didn't it— s she foresaw?"

s, it happened," Vance nodded. we mustn't be mystical about it. Drukker's imagination was ab- l. All manner of wild conjectures hrough her tortured mind; and with two other Mother-Goose deaths so n her memory, it's not remarkable e should have turned the children's et for her son into a tragic specu- of that kind. That he should ac- have been killed in the manner she is nothing more than a coinci- . . ."

Beauty is skin deep —*and it fades*

BUT there is a kind of beauty which does not fade. It comes from fine vitality and healthfulness; from a fastidiously cared-for body, and a life of sane and controlled habits.

Feminine hygiene, science's health safeguard for women, plays a great part in preserving after marriage that beauty which does not fade.

But even in this frank, enlightened day, when it is not unladylike to discuss and understand this delicate phase of a woman's toilette, there is much misinformation abroad.

Feminine hygiene wrongly practised is dangerous. The use of the wrong disinfectant may lead to serious harm. You must have the facts about this vital subject.

And no woman need follow false advice. The makers of "Lysol" Disinfectant offer you free a booklet called "The Scientific Side of Health and Youth." It was written by an eminent woman physician. It contains correct, *professional* information and simply stated rules. Send the coupon below. The booklet will reach you in a plain envelope.

But take no chances with new preparations. Buy a bottle of "Lysol" Disinfectant at your druggist's today. Full directions come with every bottle.

Soft Gums *need more than* nice flavor

They need this medicated powder that puts *results* ahead of taste . . . . . .

DESPITE faithful brushing with flavored pastes, gum troubles steadily increase. No wonder! As your dentist will tell you, soft, easily-irritated gums need the stimulating action of a powder that concentrates on *results* instead of taste.

Pyrozide Powder has done this for twenty-two years. It is not flavored. It contains *only* those gum-stimulating and tooth-cleansing agents that dental clinics have proved most effective. It is medicated with Dentinol, used by dentists to promote gum healing. Its distinctive taste comes from its Dentinol medication.

Scientifically compounded, Pyrozide Powder allays gum irritation and helps make soft gums firm and resistant. It keeps the teeth clean and white by removing the daily deposits of salivary secretions which, if not removed, harden and form tartar.

Today, largely on dentists' prescriptions, more people than ever are turning to it for gum protection. If you wish, begin by using it for just one of your daily brushings instead of your usual paste. The improvement in the condition of your gums will soon be so noticeable that you will use this sterilized, medicated powder exclusively. The economical dollar package contains six months' supply. At all drug stores.

Free sample sent on request

need for me to share Lady Mae's suffering. Mr. Pardee agreed with Uncle. He was very sympathetic, and asked if something could not be done to help Lady Mae's mental condition."

"And Mr. Arnesson?"

"Oh, Sigurd never takes anything seriously—I hate his attitude sometimes. He laughed as though it were a joke; and all he said was: 'It would be a shame if Adolph took his tumble before he got his new quantum problem worked out.'"

"Is Mr. Arnesson at home now, by the bye?" asked Vance. "We want to ask him about the necess'ry arrangements in regard to the Drukkers."

"He went to the university early this morning; but he'll be back before lunch. He'll attend to everything, I'm sure. We were about the only friends Lady Mae and Adolph had. I'll take charge in the meantime and see that Grete gets the house in order."

A few minutes later we left her and went to interview Professor Dillard.

XIX

THE RED NOTE-BOOK

(*Saturday, April 16th; noon*)

THE Professor was plainly perturbed when we entered the library that noon. He sat in an easy-chair with his back to the window, a glass of his precious port on the table beside him.

"I've been expecting you, Markham," he said, before we had time to speak. "There's no need to dissemble. Drukker's death was no accident. I'll admit I felt inclined to discount the insane implications arising from the deaths of Robin and Sprigg; but the moment Pyne related the circumstances of Drukker's fall I realized that there was a definite design behind these deaths: the probabilities of their being accidental would be incalculable. You know it, as well as I; otherwise you wouldn't be here."

"Very true." Markham had seated himself facing the professor. "We're confronted by a terrific problem. Moreover, Mrs. Drukker died of shock last night at almost the same time her son was killed."

"That, at least," returned the old man after a pause, "may be regarded as a blessing. It's better she didn't survive him—her mind unquestionably would have collapsed." He looked up. "In what way can I help?"

"You were probably the last person, with the exception of the actual murderer, to see Drukker alive; and we would like to know everything you can tell us of what took place last night."

Professor Dillard nodded.

"Drukker came here after dinner—about eight, I should say. Pardee had dined with us; and Drukker was annoyed at finding him here—in fact, he was openly hostile. Arnesson twitted him good-naturedly about his irascibility—which only made him more irritable; and, knowing that Drukker was anxious to thrash out a problem with me, I finally suggested that he and I stroll down to the park. . . ."

"You were not gone very long," suggested Markham.

"No. An unfortunate episode occurred. We walked up the bridle path to almost the exact spot where, I understand, the poor fellow was killed. We had been there for perhaps half an hour, leaning agains the stone balustrade of the wall, whe Pardee walked up. He stopped to spea to us, but Drukker was so antagonistic i his remarks that, after a few minutes, Par dee turned and walked away in the dire tion he had come. Drukker was ver much upset, and I suggested we postpon the discussion. Furthermore, a damp mi had fallen, and I was beginning to g some twinges in my foot. Drukker straigh way became morose, and said he didn care to go indoors just yet. So I left hi alone by the wall and came home."

"Did you mention the episode to A nesson?"

"I didn't see Sigurd after I got ba I imagine he'd gone to bed."

Later, as we rose to take our lea Vance asked casually: "Can you tell where the key to the alley door is kept

"I know nothing about it, sir," the p fessor replied irritably, but added i more equable tone: "However, as I member, it used to hang on a nail by archery-room door."

From Professor Dillard we w straight to Pardee, and were receive once in his study. His manner was r and detached, and even after we seated ourselves he remained standing the window, staring at us with unfrie eyes.

"Do you know, Mr. Pardee," a Markham, "that Drukker fell the wall in the park at ten o'clock night—shortly after you stopped spoke to him?"

"I heard of the accident this morn The man's pallor became more notic and he toyed nervously with his w chain. "It's very unfortunate." Hi rested vacantly for a while on Mar "Have you asked Professor Dillard it? He was with Drukker—"

"Yes, yes; we just came from interrupted Vance. "He told us was a ruffled atmosphere between y Drukker last night."

PARDEE slowly walked to the de sat down stiffly.

"Drukker was displeased for so son to find me at the Dillards' w came over after dinner. He had good taste to hide his displeasu created a somewhat embarrassin ation. But, knowing him as I did, to pass the matter off. Soon, h Professor Dillard took him out for a

"You didn't remain long afte observed Vance indolently.

"No—about a quarter of an ho nesson was tired and wanted to tu I went for a walk myself. On my took the bridle path instead of th and came on Professor Dillard an ker standing by the wall talkin wishing to appear rude, I stopp moment. But Drukker was in a mood and made several sneering I turned and walked back to ninth Street, crossed the Drive, a home."

"I say; didn't you loiter a b wayside?"

"I sat down near the Seven Street entrance and smoked a c

is from the front porch of the Dillard ouse, and stalked forward to meet us. "Just heard the sad news. Got home rom the university a little while ago, and he professor told me you'd gone to g Pardee. Learn anything?" Without aiting for an answer he ran on: "Frightil mess. I understand the entire Drukr family is wiped out. Well, well! And ore storybook mumbo-jumbo to boot. . . Any clues?"

"Ariadne has not yet favored us," reonded Vance. "Are you an ambassador om Crete?"

"One never knows. Bring out your estionnaire."

Vance had led the way toward the wall te, and we now stepped down on the nge.

"We'll repair to the Drukker house st," he said. "There'll be a number of ngs to settle. I suppose you'll look after ukker's affairs and the funeral arrangeents."

Arnesson made a grimace.

"Elected! I refuse, however, to attend funeral. Obscene spectacles, funerals. t Belle and I will see to everything. ly Mae probably left a will. We'll e to find it. Now, where do women erally hide their wills? . . ."

ANCE halted by the Dillards' basement door and stepped into the archroom. After glancing along the door's ding he rejoined us on the range.

The alley key isn't there.—By the bye, t do you know about it, Mr. Arnes-"

You mean the key to yon wooden door e fence? . . . Haven't an idea on the ect. Never use the alley myself—h simpler going out the front door. one uses it, as far as I know. Belle d it up years ago: thought someone t sneak in off the Drive and get an w in the eye. I told her, let 'em get ed—serve 'em right for being interl in archery."

e entered the Drukker house by the door. Belle Dillard and Mrs. Menzel busy in the kitchen.

Hallo, sis," Arnesson greeted the girl. ynical manner had been dropped. d lines for a young 'un like you. d better run home now. I'll assume hand." And taking her arm in a rly paternal fashion, he led her to oor.

hesitated and looked back at Vance. Mr. Arnesson is right," he nodded. ll carry on for the present.—But he question before you go. Did you s keep the key to the alley door g in the archery-room?"

s—always. Why? Isn't it there

as Arnesson who answered, with ue irony.

ne! Disappeared!—Most tragic. eccentric key collector has evidentl snooping around." When the girl t us, he cocked an eye at Vance. in the name of all that's unholy, usty key to do with the case?"

haps nothing," said Vance care- "Let's go to the drawin'-room. It's mfortable there." He led the way e hall. "We want you to tell us u can about last night."

son took an easy-chair by the ndow and drew out his pipe.

LOW PAY LONG HOURS NO FUTURE

I Said "Good-bye" to It All After Reading This Amazing Book—Raised My Earnings 700%!

Where Shall We Send Your Copy—FREE?

WHEN a man who has been struggling along at a low-pay job suddenly steps out and commences to earn real money—$5,000, $7,500 or $10,000 a year—he usually gives his friends quite a shock. It's hard for them to believe he is the same man they used to know . . . but such things happen much more frequently than most people realize. Not only one, but HUNDREDS have altered the whole course of their lives after reading the amazing book illustrated above.

True, it is only a *book*—just seven ounces of paper and printer's ink—but it contains the most vivid and inspiring message that any ambitious man can read! It reveals facts and secrets that will open almost any man's eyes to things he has never even *dreamed* of!

Remarkable Salary Increases

For example, R. B Hansen of Akron, Ohio, is just one case. Not long ago he was a foreman in the rubber-curing room of a big factory at a salary of $160 a month. One day this remarkable volume, "The Secrets of Modern Dynamic Salesmanship," fell into his hands. And from that day on, Mr. Hansen clearly saw the way to say "good-bye" forever to low pay, long hours, and tiresome routine! Today he has reaped the rewards that this little volume placed within his reach. His salary runs well into the 5-figure class—actually exceeding $10,000 a year!

Another man, Wm. Shore of Neenach, California, was a cowboy when he sent for "The Secrets of Modern Dynamic Salesmanship." Now he is a star salesman making as high as $525 in a single week. O. D. Oliver of Norman, Oklahoma, read it and jumped from $200 a month to over $10,000 a year! C. V. Champion of Danville, Illinois, raised his salary to over $10,000 a year and became President of his company in the bargain!

There was nothing "different" about any of these men when they started. None of them had any special advantages—although all of them realized that SALESMANSHIP offers bigger rewards than any other profession under the sun. But, like many other men, they subscribed to the foolish belief that successful salesmen are born with some sort of "magic gift." "The Secrets of Modern Dynamic Salesmanship" showed them that nothing could be farther from the truth! Salesmanship is just like any other profession. It has certain fundamental rules and laws—laws that you can master as easily as you learned the alphabet.

City and traveling sales positions are open in every line all over the country. For years, thousands of leading firms have called on the N. S. T. A. to supply them with salesmen. Employment service is free to both employers and members, and thousands have secured positions this way.

YOUR INCOME MULTIPLIED OR YOU PAY NOTHING

N. S. T. A. is now offering, to every man who wants to increase his income, an amazing Double Money-Back bond that assures you a definite stipulated addition to your income, within three months after your training is completed—or the course costs you nothing. This daring offer is possible only because of the success of thousands of members. Remember, if you are really ambitious to increase your earnings, this opportunity is offered you by a million dollar institution, the oldest and largest of its kind in the world. Send coupon immediately for full details.

FREE TO EVERY MAN

See for yourself WHY "The Secrets of Modern Dynamic Salesmanship" has been the deciding factor in the careers of so many men who are now making $10,000 a year. Learn for yourself the REAL TRUTH about the art of selling! You do not risk one penny or incur the slightest obligation. And since it may mean the turning point of your whole career, it certainly is worth your time to fill out and clip the blank below. Send it now!

NATIONAL SALESMEN'S TRAINING ASSOCIATION
Dept. B-11 N. S. T. A. Bldg. Chicago, Ill.

National Salesmen's Training Assn.
Dept. B-11, N. S. T. A. Bldg., Chicago, Ill.

Without cost or obligation, send me your free book "The Secrets of Modern Dynamic Salesmanship". Also include a free copy of the new N. S. T. A. money-back bond that assures me a definite addition to my income within three months after completing training—or a complete refund of tuition fee.

95 cents at any drug store

"Last night, eh? . . . Well, Pardee came to dinner—it's a sort of habit with him on Fridays. Then Drukker, in the throes of quantum speculation, dropped in to pump the professor; and Pardee's presence galled him. Showed his feelings too, by gad! No control. The professor broke up the *contretemps* by taking Drukker for an airing. Pardee moped for fifteen minutes or so, while I tried to keep awake. Then he had the goodness to depart. I looked over a few test papers. . . and so to bed." He lighted his pipe. "How does that thrilling recital explain the end of poor Drukker?"

"It doesn't," said Vance. "But it's not without interest.—Did you hear Professor Dillard when he returned home?"

"Hear him?" Arnesson chuckled. "When he hobbles about with his gouty foot, thumping his stick down and shaking the banisters, there's no mistaking his arrival on the scene. Fact is, he was unusually noisy last night."

"Offhand, what do you make of these new developments?" asked Vance, after a short pause.

"I'm somewhat foggy as to the details. The professor was not exactly phosphorescent. Sketchy, in fact. Drukker fell from the wall, like Humpty Dumpty, round ten o'clock, and was found this morning—that's all plain. But under what conditions did Lady Mae succumb to shock? Who, or what, shocked her? And how?"

"THE murderer took Drukker's key and came here immediately after the crime. Mrs. Drukker caught him in her son's room. There was a scene, according to the cook, who listened from the head of the stairs; and during it Mrs. Drukker died from dilatation of the heart."

"Thereby relieving the gentleman of the bother of killing her."

"That seems clear enough," agreed Vance. "But the reason for the murderer's visit here is not so lucid. Can you suggest an explanation?"

Arnesson puffed thoughtfully on his pipe.

"Incomprehensible," he muttered at length. "Drukker had no valuables, or no compromising documents. Straightforward sort of cuss—not the kind to mix in any dirty business. . . . No possible reason for anyone prowling about his room."

Vance lay back and appeared to relax.

"What was this quantum theory Drukker was working on?"

"Ha! Big thing!" Arnesson became animated. "He was on the path of reconciling the Einstein-Bohr theory of radiation with the facts of interference, and of overcoming the inconsistencies inherent in Einstein's hypothesis. His research had already led him to an abandonment of causal space-time coördination of atomic phenomena, and to its replacement by a statistical description.* . . . Would have revolutionized physics—made him famous. Shame he was told off before he'd put his data in shape."

"Do you happen to know where Drukker kept the records of these computations?"

"In a loose-leaf note-book—all tabulated and indexed. Methodical and neat about everything. Even his chirography was like copperplate."

"You know, then, what the note-book looked like?"

"I should! He showed it to me often enough. Red limp-leather cover—thin yellow pages—two or three clips on every sheet holding notations—his name gold-stamped in large letters on the binding. . . . Poor devil! *Sic transit. . . .*"

"Where would this note-book be now?"

"One of two places—either in the drawer of his desk in the study or else in the escritoire in his bedroom. In the daytime, of course, he worked in the study but he fussed day and night when wrapped up in a problem. Kept an escritoire in his bedroom, where he put his current records when he retired, in case he got an inspiration to monkey with 'em during the night. Then, in the morning, back they go to the study. Regular machine for system."

Vance had been gazing lazily out of the window as Arnesson rambled on. The impression he gave was that he had scarcely heard the description of Drukker's habits but presently he turned and fixed Arnesson with a languid look.

"I say," he drawled; "would you mind toddling upstairs and fetching Drukker's note-book? Look in both the study and the bedroom."

I thought I noticed an almost imperceptible hesitation on Arnesson's part; straightway he rose.

"Good idea. Too valuable a document to be left lying round." And he strolled from the room.

Markham began pacing the floor, Heath revealed his uneasiness by puffing more energetically on his cigar. There was a tense atmosphere in the little dining-room as we waited for Arnesson's turn. Each of us was in a state of expectancy, though just what we hoped for or feared would have been difficult to define.

In less than ten minutes Arnesson appeared at the door. He shrugged his shoulders and held out empty hands.

"Gone!" he announced. "Looked every likely place—couldn't find it." He threw himself into a chair and relighted his pipe. "Can't understand it. Perhaps he hid it."

"Perhaps," murmured Vance.

XX

THE NEMESIS

(*Saturday, April 16th; 1 p. m.*)

IT WAS past one o'clock, and Markham, Vance, and I rode to the Pleasant Club. Heath remained at the Drukker house to carry on the work, to draw up his report, and to deal with the reporters who would be arriving there shortly.

Markham was booked for a conference with the Police Commissioner at two o'clock, and after lunch Vance and I walked to Stieglitz's Intimate Gallery and spent an hour at an exhibition of Georgia O'Keeffe's floral abstractions. We then dropped in at Aeolian Hall and saw Debussy's G-minor quartette. There were some Cézanne water-colors at the Montross Galleries; but by the

*An important step toward the solution of these complex problems was taken a few years later by the de Broglie-Schrödinger theory as laid down in de Broglie's "Ondes et Mouvements" and Schrödinger's "Abhandlungen zur Wellenmechanik."

had pushed our way through the late-afternoon traffic of Fifth Avenue the light had begun to fail, and Vance ordered the chauffeur to the Stuyvesant Club, where we joined Markham for tea.

"I feel so youthful, so simple, so innocent," Vance complained lugubriously. "So many things are happenin', and they're bein' manipulated so ingeniously, that I can't grasp 'em. It's very disconcertin', very confusin'. I don't like it—I don't at all like it. Most wearin'." He sighed drearily and sipped his tea.

"Your sorrows leave me cold," retorted Markham. "You've probably spent the afternoon inspecting arquebuses and petronels at the Metropolitan Museum. If you'd had to go through what I've suffered—"

"Now, don't be cross," Vance rebuked him. "There's far too much emotion in the world. Passion is not going to solve this case. Cerebration is our only hope. Let us be calm and thoughtful." His mood became serious. "Markham, this comes very near being the perfect crime. Like one of Morphy's great chess combinations, it has been calculated a score of moves ahead. There are no clues; and even if there were, they'd probably point in the wrong direction. And yet . . . and yet there's something that's trying to break through. I feel it: sheer intuition—that is to say, nerves. There's an inarticulate voice that wants to speak, and can't. A dozen times I've sensed the presence of some struggling force, like an invisible ghost trying to make contact without revealing its identity."

Markham gave an exasperated sigh. "Very helpful. Do you advise calling in a medium?"

"THERE'S something we've overlooked," Vance went on, disregarding the sarcasm. "The case is a cipher, and the key word is somewhere before us, but we don't recognize it. 'Pon my soul, it's annoyin'. . . . Let's be orderly. Neatness—that's our desideratum. First, Robin is killed. Next, Sprigg is shot. Then Mrs. Drukker is frightened with a black bishop. After that, Drukker is shoved over a wall. Makin' four distinct episodes in the murderer's extravaganza. Three of 'em were carefully planned. One—the leaving of the bishop at Mrs. Drukker's door—was forced on the murderer, and was therefore decided on without preparation. . . ."

"Clarify your reasoning on that point."

"Oh, my dear fellow! The conveyor of the black bishop was obviously acting in self-defense. An unexpected danger developed along his line of campaign, and he took this means of averting it. Just before Robin's death, Drukker departed from the archery-room and installed himself in the arbor of the yard, where he could look into the archery-room through the rear window. A little later he saw someone in the room talking to Robin. He returned to his house, and at that moment Robin's body was thrown on the stage. Mrs. Drukker saw it, and at the same time she probably saw Drukker. She screamed—very natural, what? Drukker heard the scream, and told us of it at, in an effort to establish an alibi for himself after we'd informed him that Robin had been killed. Thus the murderer knew that Mrs. Drukker had seen something—how much, he didn't know. But

The start of many serious ills . . .

INTESTINAL TOXICITY

MANY of us are constantly risking the priceless gift of health because of faulty intestinal hygiene. Not that we neglect the matter! Indeed, no. As soon as we feel the headache, the tired digestion, the fatigue that so often warn us of intestinal toxicity, we take a cathartic—and consider the matter settled.

It is not. A drastic cathartic may bring temporary relief. But it also frequently shocks the system, and too often tends to cause undesirable habits. And meanwhile intestinal toxicity continues its work—spreading poisons to all parts of the system, stealing away strength and vitality, often laying the foundation for serious ills to follow.

That is why an ever-increasing number of people are turning to natural means in their efforts to combat intestinal toxicity. A balanced diet (with green vegetables and roughage reducing the amount of proteins)—exercise *in fresh air*—plenty of water—work wonders.

As an added precaution, ENO, taken regularly, often gives just the extra assistance needed to keep one fit.

For ENO is so unlike the ordinary bitter "salts"—so pleasing in taste—so gentle, yet thorough, in action that it never leaves you "all dragged out"! It simply flushes and cleanses the intestinal tract and speeds up normal action. It does not gripe nor disturb the day's routine.

Try ENO for a week—regularly morning or evening. You'll give it a regular place on your bathroom shelf when you have once experienced the keen, clear-eyed health that is possible to those free from the absorption of intestinal toxins.

This famous effervescent saline is available at all druggists at 75c and $1.25 a bottle. Prepared only by J. C. Eno, Ltd., London, England. Sales Agents: Harold F. Ritchie & Co., Inc., Belmont Building, Madison Avenue at 34th Street, New York.

ENO—health precaution—will cost you less than 3c a day

When you get up, simply take a glass of water and add a generous teaspoonful of ENO. *Taking this sparkling, delightful saline regularly will help to keep you fit and eager through the hardest day.*

For a business headache, nothing is better than a glass of ENO. *You can get it at the better soda fountains everywhere.*

"He has a good personality, BUT we can't have a representative, who says, 'I AIN'T YOU WAS THOSE SORT CAN'T HARDLY and IT'S ME'"

"No, his crude English would offend. A salesman who says, 'THEAYTER GENUWINE and DEEF' has too big a handicap to overcome"

Thousands are held back by Mistakes in English

~yet never know why!

SOMETIMES it is the little, unconsidered "trifles" that check promising careers. A man may make only two or three really bad mistakes in an interview—yet they may completely spoil the favorable first impression created by fine manners, good clothes, and attractive personality.

Your mistakes in English *stand out!* The fact that *you* are unconscious of making them does not prevent those who know good English from noticing and commenting behind your back upon your apparent lack of education. Many a fine opportunity for advancement has been wrecked on the rock of a "little" mistake made in an interview or in writing a letter of application!

Correct Your Unconscious Errors

For the first time in the history of education there is a way to improve your English quickly and surely. Sherwin Cody, perhaps the best-known teacher of practical English, has perfected and patented a remarkable device which will quickly find and correct the mistakes you unconsciously make. Correct English soon becomes a habit.

This method is so remarkably successful because it concentrates, not on useless rules but on the formation of correct habits. There is no hard study. Only fifteen minutes a day is required, over a short period, and the instruction is guaranteed to improve your English to your satisfaction, or it costs you nothing.

Get Free Book on English

Write today for Mr. Cody's new free book, "How to Speak and Write Masterly English." Merely mail the coupon or a postal card. Free yourself of the embarrassing errors in English that keep you from feeling sure of yourself wherever you go. You never can achieve your greatest possibilities until you do master English. Write today. SHERWIN CODY SCHOOL OF ENGLISH, 92 Searle Building, Rochester, N. Y.

he wasn't taking any chances. He went to her room at midnight to silence her, and took the bishop to leave beside her body as a signature. But he found the door locked, and left the bishop outside, by way of warning her to say nothing on pain of death. He didn't know that the poor woman suspected her own son."

"But why didn't Drukker tell us whom he saw in the archery-room with Robin?"

"We can only assume that the person was someone whom he couldn't conceive of as being guilty. And I'm inclined to believe he mentioned the fact to this person and thus sealed his own doom."

"Assuming the correctness of your theory, where does it lead us?"

"To the one episode that wasn't elaborately prepared in advance. And when there has been no preparation for a covert act there is pretty sure to be a weakness in one or more of the details.—Now, please note that at the time of each of the three murders any one of the various persons in the drama could have been present. No one had an alibi. That, of course, was cleverly calculated; the murderer chose an hour when all of the actors were, so to speak, waiting in the wings. But that midnight visit! Ah! That was a different matter. There was no time to work out a perfect set of circumstances—the menace was too immediate. And what was the result? Drukker and Professor Dillard were, apparently, the only persons on hand at midnight. Arnesson and Belle Dillard were supping at the Plaza and didn't return home until half past twelve. Pardee was hornlocked with Rubinstein over a chessboard from eleven to one. Drukker is now of course eliminated. . . . What's the answer?"

"I could remind you," returned Markham irritably, "that the alibis of the others have not been thoroughly checked."

"Well, well, so you could." Vance lay back indolently and sent a long, regular series of smoke rings toward the ceiling. Suddenly his body tensed, and with meticulous care he leaned over and put out his cigarette. Then he glanced at his watch and got to his feet. He fixed Markham with a quizzical look.

"*Allons, mon vieux.* It's not yet six. Here's where Arnesson makes himself useful."

"What now?" expostulated Markham.

"Your own suggestion," Vance replied, taking him by the arm and leading him toward the door. "We're going to check Pardee's alibi."

HALF an hour later we were seated with the Professor and Arnesson in the Dillard library.

"We've come on a somewhat unusual errand," explained Vance; "but it may have a vital bearing on our investigation." He took out his wallet and unfolded a sheet of paper. "Here's a document, Mr. Arnesson, I wish you'd glance over. It's a copy of the official score sheet of the chess game between Pardee and Rubinstein. Very interestin'. I've toyed with it a bit, but I'd like your expert analysis of it. The first part of the game is usual enough, but the play after the adjournment rather appeals to me."

Arnesson took the paper and studied it.

"Aha! The inglorious record of Pardee's Waterloo, eh?"

"What's the meaning of this, Markham?" asked Professor Dillard contemptuously. "Do you hope to run a murderer to earth by dilly-dallying over a chess game?"

"Mr. Vance hoped something could be learned from it."

"Fiddlesticks!" The professor poured himself another glass of port and, opening a book, ignored us completely.

Arnesson was absorbed in the notations of the chess score.

"Something a bit queer here," he muttered. "The time's askew. Let's see. . . . The score sheet shows that, up to the time of adjournment, White—that is, Pardee—had played one hour and forty-five minutes, and Black, or Rubinstein, one hour and fifty-eight minutes. So far, so good. Thirty moves. Quite in order. But the time at the end of the game, when Pardee resigned, totals two hours and thirty minutes for White, and three hours and thirty-two minutes for Black—which means that, during the second session of the game, White consumed only forty-five minutes whereas Black used up one hour and thirty-four minutes."

Vance nodded.

"Exactly. There were two hours and nineteen minutes of play beginning at 11 P. M., which carried the game to 1:19 A. M. And Rubinstein's moves during that time took forty-nine minutes longer than Pardee's.—Can you make out what happened?"

Arnesson pursed his lips and squinted at the notations.

"It's not clear. I'd need time."

"SUPPOSE," Vance suggested, "we set up the game in the adjourned position and play it through. I'd like your opinion on the tactics."

Arnesson rose jerkily and went to the little chess table in the corner.

"Good idea." He emptied the men from the box. "Let's see now. . . . Oh! A black bishop is missing. When do I get it back, by the way?" He gave Vance a plaintive leer. "Never mind. We don't need it here. One black bishop will swapped." And he proceeded to arrange the men to accord with the position of the game at the time of adjournment. Then he sat down and studied the set-up.

"It doesn't strike me as a particularly unfavorable position for Pardee," ventured Vance.

"Me either. Can't see why he lost the game. Looks drawish to me." After a moment Arnesson referred to the score sheet. "We'll run through the plays and find out where the trouble lay." He made half a dozen moves; then, after several minutes' study, gave a grunt. "Ha! This is rather deep stuff of Rubinstein's. Amazing combination he began working here. Subtle, by gad! As I know Rubinstein, it took him a long time to figure out. Slow, plodding chap."

"It's possible, isn't it," suggested Vance, "that the working out of that combination explains the discrepancy in time between Black and White?"

"Oh, undoubtedly. Rubinstein must have been in good form not to have made the discrepancy greater. Planning that combination took him all of forty minutes—or I'm a duffer."

"At what hour, would you say," asked Vance carelessly, "did Rubinstein take that forty-five minutes?"

Many public schools now have piano classes

So Simplified and so Inspiring are the New Methods of Teaching Piano that Public Schools are Successfully Giving Class Instruction to Children

GREAT things have happened in music—things that every parent should know about. Gone are the drudgery and mystery of learning to play the piano. No longer are scales and exercises regarded as the only approach to actual piano performance. Through the allied efforts of musicians and educators, new methods of teaching the piano are in vogue and today piano instruction is as inspiring as it is simple.

In the past the great problem of the teacher has been to hold the interest of the child. The modern way of teaching the piano in classes has solved this problem of interesting the child from the outset.

Children have always wished to play the piano and the new approach, more direct and more spontaneous, satisfies this natural desire because it enables children to play before their interest begins to wane.

Piano Instruction Enters the Public Schools

It was only natural that these methods should find wider application. Public school authorities, ever on the alert for advanced ideas, recognized the possibilities of this method. They have added music, piano music, to their list of basic studies. Over 400 cities in the United States are today offering piano study as an optional course to their school children. That the idea is fast taking hold is evidenced by the fact that even cities as large as Chicago, have adopted class piano instruction, thus making it possible for thousands of school children to learn to play the piano.

One leading educator says, "I feel that it is of far more importance to a child to learn something of music than to learn arithmetic. It is our hope to provide piano instruction to every child in our great city."

You, as a parent, should be vitally interested in the spread of this splendid work. Perhaps you are fortunate enough to live where your school authorities have already taken this progressive step. If you do, it is your duty to see that your boy or girl takes advantage of this marvelous opportunity. For here, indeed, is an influence for the good of your child.

If you are interested in this forward step in child education, we shall be glad to send you literature about it. For piano teachers and educators, booklets are now ready which describe in detail the advantages contained in the idea of Class Piano Instruction, both to the private teacher and to the public school.

When the young wife knows half the truth (*and half only*) —about feminine hygiene

WHERE does her information stop? When does it begin to be *mis*information? It all depends upon her circle of friends. Some may know—and *she* may know—the general attitude of doctors and nurses concerning feminine hygiene. But does she know the dangers that follow the wrong application? These dangers are very real, and yet so easy to avoid.

The right way is so easy, so safe—Zonite

No woman need hesitate in taking advantage of the professional approval behind the regular practice of feminine hygiene. No longer need she fear poisonous germicides like bichloride of mercury or the compounds of carbolic acid. Today she can get *Zonite*, the great non-poisonous antiseptic of the World War.

Zonite is as safe to use as pure water. It will not injure delicate internal membranes. It will not leave terrible scars on feminine tissue. And yet for all its harmlessness to human beings, Zonite is more powerful as a germ-killer than any dilution of even carbolic acid that can be used on the body.

Booklet—mailed free

For complete information send for new booklet on feminine hygiene. Frank. Scientific. Zonite Products Corporation, 250 Park Avenue, New York, N. Y.

Use Zonite Ointment for burns, abrasions, skin infections or chapped skin. Also as a powerful deodorant in greaseless cream form. Large tubes, 50c.

In bottles: 30c, 60c, $1 *In U.S.A. and Canada*

ZONITE PRODUCTS CORPORATION 45-H

"Well, let's see. The play began at eleven: six moves before the combination started. . . . Oh, say, somewhere between half past eleven and half past twelve. . . . Yes, just about. Thirty moves before the adjournment; six moves beginning at eleven—that makes thirty-six: then on the forty-fourth move Rubinstein moved his pawn to Bishop-7-check, and Pardee resigned. . . . Yes—the working out of the combination was between eleven-thirty and twelve-thirty."

VANCE regarded the men on the board, which were now in the position they had occupied at the time of Pardee's resignation.*

"Out of curiosity," he said quietly, "I played the game through to the checkmate the other night.—I say, Mr. Arnesson, would you mind doin' the same? I could bear to hear your comment on it."

Arnesson studied the position closely for a few minutes. Then he turned his head slowly and lifted his eyes to Vance. A sardonic grin overspread his face.

"I grasp the point. Gad! What a situation! Five moves for Black to win through. And an almost unheard-of finale in chess. Can't recall a similar instance. The last move would be Bishop to Knight-7, mating. In other words, Pardee was beaten by the black bishop! Incredible!"†

Professor Dillard put down his book.

"What's this?" he exclaimed, joining us at the chess table. "Pardee was defeated by the bishop?" He gave Vance a shrewd, admiring look. "You evidently had good reason, sir, for investigating that chess game. Pray overlook an old man's temper." He stood gazing down at the board with a sad, puzzled expression.

Markham was frowning with deep perplexity.

"You say it's unusual for a bishop alone to mate?" he asked Arnesson.

"Never happens—almost unique situation. And that it should happen to Pardee of all people! Incomprehensible!" He gave a short, ironic laugh. "Inclines one to believe in a nemesis. You know, the bishop has been Pardee's *bête noir* for twenty years—it's ruined his life. Poor beggar! The black bishop is the symbol of his sorrow. Fate, by gad! It's the one chessman that defeated the Pardee gambit. Bishop-to-Knight-5 always broke up his calculations—disqualified his pet theory—made a hissing and a mocking of his life's work. And now, with a chance to break even with the great Rubinstein, the bishop crops up again and drives him back into obscurity."

A FEW minutes later we took our departure and walked to West End Avenue, where we hailed a taxicab.

"It's no wonder, Vance," commented Markham, as we rode downtown, "that Pardee went white the other afternoon when you mentioned the black bishop's being at large at midnight. He probably thought you were deliberately insulting him—throwing his life's failure in face."

"Perhaps. . . ." Vance gazed drea ily out into the gathering shado "Dashed queer about the bishop being incubus all these years. Such recurr discouragements affect the strong minds sometimes; create a desire for venge on the world, with the cause of o failure exalted to an Astræan symb

"It's difficult to picture Pardee in a v dictive rôle," objected Markham. Th after a moment: "What was your po about the discrepancy in time betw Pardee's and Rubinstein's playing? S pose Rubinstein did take forty-five m utes or so to work out his combinati The game wasn't over until after one. don't see that your visit to Arnesson us ahead in any way."

"That's because you're unacquain with the habits of chess players. I clock game of that kind no player sit the table all the time his opponent is fig ing out moves. He walks about, stretc his muscles, takes the air, ogles the lad imbibes ice water, and even indulge food. At the Manhattan Square Mas Tournament last year there were tables, and it was a common sight to se many as three empty chairs at one t Pardee's a nervous type. He wouldn through Rubinstein's protracted me speculations."

Vance lighted a cigarette slowly.

"Markham, Arnesson's analysis of game reveals the fact that Pardee three-quarters of an hour to hi around midnight."

XXI

MATHEMATICS AND MURD

(*Saturday, April 16th; 8:30 p. m*

LITTLE was said about the case dinner, but when we had ourselves in a secluded co the club lounge-room Markham broached the subject.

"I can't see," he said, "that fi loophole in Pardee's alibi helps much. It merely complicates an intolerable situation."

"Yes," sighed Vance. "A sad pressin' world. Each step app tangle us a little more. And the part of it is, the truth is staring u face; only, we can't see it."

"There's no evidence pointing one. There's not even a suspect whose possible culpability reason revolt."

"I wouldn't say that, don't y It's a mathematician's crime; landscape has been fairly clutte mathematicians," replied Vance.

Throughout the entire investig one had been indicated by nam possible murderer. Yet each of u in his own heart that one of th with whom we had talked was gu so hideous was this knowledge instinctively shrank from adm From the first we had cloaked thoughts and fears with general

"A mathematician's crime!" Markham. "The case strikes series of senseless acts commi maniac running amuck."

Vance shook his head.

"Our criminal is supersane,

*For the benefit of the expert chess-player who may be academically interested I append the exact position of the game when Pardee resigned: WHITE: King at QKtsq; Rook at QB8; Pawns at QR2 and Q2. BLACK: King at Q5; Knight at QKt5; Bishop at QR6; Pawns at QKt7 and QB7.

†The final five unplayed moves for Black to mate, as I later obtained them from Vance, were: *45.* RxP; KtxR. *46.* KxKt; P—Kt8 (queen). *47.* KxQ; K—Q6. *48.* K—Rsq.; K—B7. *49.* P—Q3; B—Kt7 mate.

Have you the Courage to take it?

—This Guarantee of a Drafting Job and a Raise

OF COURSE you'd like to earn $50 or $75 or $100 a week—you'd like to do more interesting work—you'd like to get into a line that offers a real future—but do you know how to go about *getting* these things?

If you have been thinking of "taking a course" but have held back because you were afraid you didn't have education enough to learn better-paid work—if you have hesitated to take the risk that it would actually find you in the better position and increase your salary—*then here's the best news you ever heard in your life!*

I want to tell you about DRAFTING, and show you that it offers you everything in pay and opportunity that you could hope for. I want to show you that a fine Drafting job is now easily within your reach. And I want to set before you an amazing plan which we have worked out with the co-operation of some of the biggest employers and engineers in America, to prepare you at home, in spare-time, get you the job and raise your pay—absolutely without risk of a penny on your part.

Come Into DRAFTING!

Thousands of men—not a bit smarter than you, with no more schooling or experience—have gone from poorly paid positions as clerks, mechanics, building trade workers and laborers into Drafting positions paying $50 to $100 a week, with our help. Now with a job and a raise waiting for you *as soon as you are ready for it*, all it takes is the COURAGE to go after it—now if you remain in the rut it's because you choose to, not because you have to.

3 Drafting Lessons *Actually FREE to show you how interesting and simple Drafting is*

Maybe you think Drafting is "over your head"—that it takes artistic talent or some ability you haven't got. In that case you have a pleasant surprise coming to you. For I'll be glad to send you the first three lessons from our home-training to show you that the drawing of plans is purely mechanical, easily learned and the most interesting kind of work you ever tackled. It takes little enough courage *to look into* this wonderful opportunity—just mail the coupon and see for yourself how you like Drafting and our guaranteed way to get into it.

The American School Dept. D-21, Drexel Ave and 58th St., Chicago, Ill.

COMMONWEALTH EDISON CO., CHICAGO

Dear Sirs:

I take this occasion to assure you that many years of experience in the employment of your students and graduates has convinced me that your institution very effectively supplies the educational needs of many young men, who would otherwise be deprived of facilities for equipping themselves for advancement into well-paid, responsible positions.

We have employed hundreds of your students and graduates, and could use more of them if they were available.

Very truly yours,
Ernest F. Smith
Supt., Sub-Stations

Motor Car Company

Gentlemen:

We take pleasure in recommending American School, Chicago, to those who seek training in the correspondence school method. We are pleased to state that the American School of Chicago, is one of the select few that we are glad to recommend to employes of this company who seek our advice in the matter.

Yours very truly,
MOTOR COMPANY,
Arthur F. Avis
Supt. of Apprentices

Get this "No-Risk" Plan!

I wish I had the room here to tell you all about DRAFTING—how it has become the most important branch of every kind of manufacturing and building construction work—how fascinating the work is—the fine bunch of fellows you'll work with—the big salaries paid—the wonderful chances for advancement. How while Drafting is white-collar office work, it is hooked up closely with big projects and big men, and offers the thrill that goes with making plans which govern every move of the men who do the work. All this inside dope takes a 36-page book to describe and I'll be glad to send you a copy free when you mail the coupon for my no-risk job and raise plan.

O. C. Miller
Director Extension Work.

THE AMERICAN SCHOOL
Dept. D-21, Drexel Ave. and 58th St., Chicago, Ill.

Please send without cost or obligation, 3 Drafting Lessons, 36-page book with the inside dope about Drafting and your no-risk plan and guarantee to prepare me, to place me and raise my pay, or no cost.

Original from UNIVERSITY OF IOWA

And his acts are not senseless: they're hideously logical and precise. True, they have been conceived with a grim and terrible humor, with a tremendously cynical attitude; but within themselves they are exact and rational."

Markham regarded Vance thoughtfully.

"How can you reconcile these Mother-Goose crimes with the mathematical mind?" he asked. "In what way can they be regarded as logical? To me they're nightmares, unrelated to sanity."

VANCE settled himself deeper in his chair, and smoked for several minutes. Then he began an analysis of the case, which not only clarified the seeming madness of the crimes themselves, but brought all the events and the characters into a uniform focus. The accuracy of this analysis was brought home to us with tragic and overwhelming force before many days had passed.*

"In order to understand these crimes," he began, "we must consider the stock-in-trade of the mathematician, for all his speculations and computations tend to emphasize the relative insignificance of this planet and the unimportance of human life.—Regard, first, the mere scope of the mathematician's field. On the one hand, he attempts to measure infinite space in terms of parsecs and light-years, and on the other, to measure the electron, which is so infinitely small that he has to invent the Rutherford unit—a millionth of a millimicron. His vision is one of transcendental perspectives, in which this earth and its people sink almost to the vanishing point. Some of the stars—such as Arcturus, Canopus and Betelgeuse—which he regards merely as minute and insignificant units, are many times more massive than our entire solar system. Shapleigh's estimate of the diameter of the Milky Way is 300,000 light-years; yet we must place 10,000 Milky Ways together to get the diameter of the universe—which gives us a cubical content a thousand milliard times greater than the scope of astronomical observation. Or, to put it relatively in terms of mass:—the sun's weight is 324,000 times greater than the weight of the earth and the weight of the universe is postulated as that of a trillion†—a milliard times a milliard—suns. . . . Is it any wonder that workers in such stupendous magnitudes should sometimes lose all sense of earthly proportions?"

Vance made an insignificant gesture.

"But these are element'ry figures—the everyday facts of journeyman calculators. The higher mathematician goes vastly farther. He deals in abstruse and apparently contradict'ry speculations which the average mind cannot even grasp. He lives in a realm where time, as we know it, is without meaning save as a fiction of the brain, and becomes a fourth coördinate of three-dimensional space; where distance also is meaningless except for neighboring points, since there are an infinite number of shortest routes between any two given points; where the language of cause and effect becomes merely a convenient shorthand for explanat'ry purposes; where straight lines are non-existent and insusceptible of definition; where mass grows infinitely great when it reaches the velocity of light; where space itself is characterized by curvatures; where there are lower and higher orders of infinities; where the law of gravitation is abolished as an acting force and replaced by a characteristic of space—a conception that says, in effect, that the apple does not fall because it is attracted by the earth, but because it follows a geodesic, or world-line. . . .

"In this realm of the modern mathematician curves exist without tangents. Neither Newton nor Leibnitz nor Bernoulli even dreamed of a continuous curve without a tangent—that is, a continuous function without a differential coëfficient. Indeed, no one is able to picture such a contradiction,—it lies beyond the power of imagination. And yet it is a commonplace of modern mathematics to work with curves that have no tangents.—Moreover, *pi*—that old friend of our school days, which we regarded as immutable—is no longer a constant; and the ratio between diameter and circumference now varies according to whether one is measuring a circle at rest or a rotating circle. . . . Do I bore you?"

"Unquestionably," retorted Markham. "But pray continue, provided your observations have an earthly direction."

Vance sighed and shook his head hopelessly, but at once became serious again.

"THE concepts of modern mathematics project the individual out of the world of reality into a pure fiction of thought, and lead to what Einstein calls the most degenerate form of imagination—pathological individualism. Silberstein, for instance, argues the possibility of five- and six-dimensional space, and speculates on one's ability to see an event before it happens. The conclusions contingent on the conception of Flammarion's Lumen—a fictive person who travels faster than the velocity of light and is therefore able to experience time extending in a reverse direction—are in themselves enough to distort any natural and sane point of view.* But there is another conceptual homunculus even weirder than Lumen from the standpoint of rational thinking. This hypothetical creature can traverse all worlds at once with infinite velocity, so that he is able to behold all human history at a glance. From Alpha Centauri he can see the earth as it was four years ago; from the Milky Way he can see it as it was 4,000 years ago; and he can also choose a point in space where he can witness the ice age and the present day simultaneously! . . ."

Vance settled himself more deeply in his chair.

"Toying with the simple idea of infinity is enough to unhinge the average man's mind. But what of the well-known proposition of modern physics that we cannot take a straight and ever-advancing path into space without returning to our point of departure? This proposition holds, in brief, that we may go straight to Sirius and a million times farther without changing direction, but we can never leave the universe: we at last return to our starting point *from the opposite direction!* Would you say, Markham, that this idea is conducive to what we quaintly call normal thinking? But, however paradoxical and incomprehensible it may seem, it is almost rudiment'ry when compared with other theorems advanced by mathematical physics. Consider, for example, what is called the problem of the twins. One of two twins starts to Arcturus at birth—that is, with accelerated motion in a gravitational field—and, on returning, discovers that he is much younger than his brother. If, on the other hand, we assume that the motion of the twins is Galilean and that they are therefore traveling with uniform motion relative to each other then each twin will find that his brothe is younger than himself! . . .

"THESE are not paradoxes of logic Markham; they're only paradoxes c feeling. Mathematics accounts for the logically and scientifically.* The point I'm trying to make is that things which see inconsistent and even absurd to the la mind are commonplaces to the math matical intelligence. A mathematic physicist like Einstein announces that t diameter of space—of *space*, mind you is 100,000,000 light-years, or 700 trilli miles; and considers the calculation abe darian. When we ask what is beyond t diameter, the answer is: 'There is no l yond: these limitations include eve thing.' To wit, infinity is finite! Or, as t scientist would say, space is unbound but finite.—Let your mind meditate this idea for half an hour, Markham; you'll have a sensation that you're go mad."

He paused to light a cigarette.

"Space and matter—that's the ma matician's speculative territ'ry. Edd ton conceives matter as a characterist space—a bump in nothingness; whe Weil conceives space as a charact tic of matter—to him empty spac meaningless. Thus Kant's noumenon phenomenon become interchangeable, even philosophy loses all significa But when we come to the mathema conceptions of finite space all rat laws are abrogated. De Sitter's co tion of the shape of space is globul spherical. Einstein's space is cylind and matter approaches zero at th riphery, or 'border condition.' W space, based on Mach's mechani saddle-shaped. . . . Now, what beco nature, of the world we live in, of h existence, when we weigh them a such conceptions? Eddington sugge conclusion that there are no natura —namely, that nature is not amena

*I am obviously unable to set down Vance's exact words, despite the completeness of my notes; but I sent him a proof of the following passages with a request that he revise and edit them; so that, as they now stand, they represent an accurate paraphrase of his analysis of the psychological factors of the Bishop murders.

†Vance was here using the English connotation of "trillion," which is the third power of a million, as opposed to the American and French system of numeration, which regards a trillion as a mere million millions.

*Lumen was invented by the French astronomer to prove the possibility of the reversal of time. With a speed of 250,000 miles per second, he was conceived as soaring into space at the end of the battle of Waterloo, and catching up all the light-rays that had left the battlefield. He attained a gradually increasing lead, until at the end of two days he was witnessing, not the end, but the beginning of the battle; and in the meantime he had been viewing events in reverse order. He had seen projectiles leaving the objects they had penetrated and returning to the cannon; dead men coming to life and arranging themselves in battle formation. Another hypothetical adventure of Lumen was jumping to the moon, turning about instantaneously, and seeing himself leaping from the moon to the earth backward.

*Vance requested me to mention I d'Abro's recent scholarly work, "The Ev of Scientific Thought," in which there i cellent discussion of the paradoxes as with space-time.

"Pink Tooth Brush"?

Never neglect it Start with IPANA today!

A LITTLE tinge of "pink" upon a tooth brush may be a trivial and nimportant thing. But more likely it a pretty broad hint that somewhere your gum wall is a tender, spongy pot . . . one which you can quickly store to normal with Ipana and massge . . . or one which, if neglected, ould easily result in more serious and ore stubborn troubles.

* * *

ne great element present in the lives all of us is having a bad effect upon r gums. It is this soft modern food e eat, fibreless, robbed of roughage, amy, and all too easy to eat.

It does not give to the gums the stimulation they need to remain in health. It causes them to grow flabby and soft . . . to bleed easily.

How Ipana and Massage restore the gums to health

In half a minute, every time you brush your teeth, you can remedy the damage that your all too soft diet is doing to your gums.

For a light massage with the finger or the brush will restore to your gums the stimulation which they need so much. Thousands of dentists recommend it, for they know the good it does.

Thousands of them, too, recommend that the massage be effected with Ipana Tooth Paste. For Ipana, because of its content of ziratol (a recognized antiseptic and hemostatic) has a salutary and stimulating effect upon the gums fully as important as the massage. It will make your gums sturdier, stronger, more resistant to disease.

Make a month's trial of Ipana

The coupon offers a 10-day sample, gladly sent. But the better way is to get a full-size tube of Ipana at the drug store today. Start to use it tonight. Brush your teeth and gums with it, faithfully, twice a day, for one month.

You will find it far more than a pleasant dentifrice — more than a good cleaning agent. With its regular use will come a sense of oral cleanliness you have never before known . . . and a firm and healthy gum structure that will defy the ravages of gum diseases.

BRISTOL-MYERS CO., Dept. J-29
73 West Street, New York, N. Y.

Kindly send me a trial tube of IPANA TOOTH PASTE. Enclosed is a two-cent stamp to cover partly the cost of packing and mailing.

the law of sufficient reason. Alas, poor Schopenhauer!* And Bertrand Russell sums up the inevitable results of modern physics by suggesting that matter is to be interpreted merely as a group of occurrences, and that matter itself need not be existent! . . . Do you see what it all leads to? If the world is non-causative and non-existent, what is a mere human life?—or the life of a nation?—or, for that matter, existence itself? . . ."

Vance looked up, and Markham nodded dubiously.

"So far I follow you, of course," he said. "But your point seems vague—not to say esoteric."

"IS IT surprising," asked Vance, "that a man dealing in such colossal, incommensurable concepts, wherein the individuals of human society are infinitesimal, might in time lose all sense of relative values on earth, and come to have an enormous contempt for human life? The comparatively insignificant affairs of this world would then become mere petty intrusions on the macrocosmos of his mental consciousness. Inevitably, such a man's attitude would become cynical. In his heart he would scoff at all human values and sneer at the littleness of the visual things about him. Perhaps there would be a sadistic element in his attitude; for cynicism is a form of sadism. . ."

"But deliberate, planned murder!" objected Markham.

"Consider the psychological aspects of the case. With the normal person, who takes his recreations daily, a balance is maintained between the conscious and the unconscious activities: the emotions, being constantly dispersed, are not allowed to accumulate. But with the abnormal person, who spends his entire time in intense mental concentration and who rigorously suppresses all his emotions, the loosening of the subconscious is apt to result in a violent manifestation. This long inhibition and protracted mental application, without recreation or outlet of any kind, causes an explosion which often assumes the form of deeds of unspeakable horror. No human being, however intellectual, can escape the results. The mathematician who repudiates nature's laws is nevertheless amenable to those laws. Indeed, his rapt absorption in hyperphysical problems merely increases the pressure of his denied emotions. And outraged Nature, in order to maintain her balance, produces the most grotesque fulminations—reactions which, in their terrible humor and perverted gayety, are the exact reverse of the grim seriousness of abstruse mathematical theories. The fact that Sir William Crookes and Sir Oliver Lodge—both great mathematical physicists—became confirmed spiritists, constitutes a similar psychological phenomenon."

Vance took several deep inhalations on his cigarette.

"Markham, there's no escaping the fact: these fantastic and seemingly incredible murders were planned by a mathematician as forced outlets to a life of tense abstract speculation and emotional repression. They fulfill all the indicated requirements: they are neat and precise, beautifully worked out, with every minute factor fitting snugly in place. No loose ends, no remainders, apparently no motive. And aside from their highly imaginative precision, all their indications point unmistakably to an abstrusely conceptive intelligence on the loose—a devotee of pure science having his fling."

"But why their grisly humor?" asked Markham. "How do you reconcile the Mother-Goose phase of them with your theory?"

"The existence of inhibited impulses," explained Vance, "always produces a state favorable to humor. Dugas designates humor as a '*détente*'—a release from tension; and Bain, following Spencer, calls humor a relief from restraint. The most fertile field for a manifestation of humor lies in accumulated potential energy—what Freud calls *Besetzungsenergie*—which in time demands a free discharge. In these Mother-Goose crimes we have the mathematician reacting to the most fantastic of frivolous acts in order to balance his superserious logical speculations. It's as if he were saying cynically: 'Behold! This is the world that you take so seriously because you know nothing of the infinitely larger abstract world. Life on earth is a children's game—hardly important enough to make a joke about.' . . . And such an attitude would be wholly consistent with psychology; for after any great, prolonged mental strain one's reactions will take the form of reversals—that is to say, the most serious and dignified will seek an outlet in the most childish games. Here, incidentally, you have the explanation for the practical joker with his sadistic instincts. . . .

"Moreover, all sadists have an infantile complex. And the child is totally amoral. A man, therefore, who experiences these infantile psychological reversals is beyond good and evil. Many modern mathematicians even hold that all convention, duty, morality, good, and the like, could not exist except for the fiction of free will. To them the science of ethics is a field haunted by conceptual ghosts; and they even arrive at the disintegratin' doubt as to whether truth itself is not merely a figment of the imagination. . . . Add to these considerations the sense of earthly distortion and the contempt for human life which might easily result from the speculations of higher mathematics, and you have a perfect set of conditions for the type of crimes with which we are dealing."

WHEN Vance had finished speaking Markham sat silent for a long time. Finally he moved restively.

"I can understand," he said, "how these crimes might fit almost any of the persons involved. But, on the basis of your argument, how do you account for the notes to the press?"

"Humor must be imparted," returned Vance. "'A jest's prosperity lies in the ear of him who hears it.' Also, the impulse toward exhibitionism enters into the present case."

"But the Bishop alias?"

"Ah! That's a most vital point. The *raison d'être* of this terrible orgy of humor lies in that cryptic signature."

Markham turned slowly.

"Do the chess player and the astronomer fulfill the conditions of your theory as well as the mathematical physicist?"

"Yes," Vance replied. "Since th days of Philidor, Staunton, and Kieser itzki, when chess was something of a fin art, the game has degenerated almost int an exact science; and during Capablanca' régime it has become largely a matter o abstract mathematical speculation. In deed, Maroczy, Doctor Lasker, and Vid mar are all well-known mathematicians . . . And the astronomer, who actuall views the universe, may get an even mor intense impression of the unimportanc of this earth than the speculative physi cist. Imagination runs riot through a tele scope. The mere theory of existing life o distant planets tends to reduce earthl life to second'ry consideration. For hou after one has looked at Mars, for instanc and dallied with the notion that its i habitants outnumber and surpass in i telligence our own population, one ha difficulty in readjusting one's self to th petty affairs of life here on earth. Eve a reading of Percival Lowell's romant book* temporarily takes away from th imaginative person all consciousness of th significance of any single planet'ry exis ence."

There was a long silence. Then Mar ham asked:

"WHY should Pardee have taken A nesson's black bishop that nig instead of one from the club, where would not have been missed?"

"We don't know enough of the moti to say. He may have taken it with so deliberate purpose in view.—But wh evidence have you of his guilt? All suspicions in the world would not per you to take any step against him. Eve we knew indubitably who the murde was, we'd be helpless. . . . I tell y Markham, we're facing a shrewd brai one that figures out every move and culates all the possibilities. Our only h is to create our own evidence, by find a weakness in the murderer's combi tion."

"The first thing in the morning," clared Markham grimly, "I'm going put Heath to work on Pardee's alibi night. There'll be twenty men chec it up by noon, questioning every spe tor at that chess game, and making a d to-door canvass between the Manha Chess Club and the Drukker house. can find someone who actually saw dee in the vicinity of the Druk around midnight, then we'll have a suspicious piece of circumstantial dence against him."

"Yes," agreed Vance; "that w give us a definite starting point. P would have considerable difficulty i plaining why he was six blocks away the club during his set-to with Rubin at the exact hour that a black bisho being left at Mrs. Drukker's door. Yes, yes. By all means have Heat his minions tackle the problem. It lead us forward."

But the Sergeant was never called to check the alibi. Before nine o'cl the following morning Markham ca Vance's house to inform him that had committed suicide.

(*To be continued*)

*Vance's M. A. thesis, I recall, dealt with Schopenhauer's "Ueber die vierfache Wurzel des Satzes vom zureichenden Grunde."

*I do not know whether Vance was he ring to "Mars and Its Canals" or "Mar Abode of Life."

"I smoke a Lucky instead of eating sweets."

Grace M. Hay Drummond Hay

Lady Grace Drummond Hay,
only female passenger on the Graf Zeppelin.

Lady Grace Drummond Hay,
first woman to fly the Atlantic from Europe to the United States.

"The fact that we were not permitted to smoke from the time the Graf Zeppelin left Friedrichshafen until we landed at Lakehurst only increased my appetite for a Lucky Strike. Oh, how good that first one tasted! I'm really keen for Lucky Strike—the toasted flavor is delightful. I smoke a Lucky instead of eating sweets—that's what many men have been doing for years. I think it high time we women smoked Luckies and kept our figures trim."

The modern common sense way—reach for a Lucky instead of a fattening sweet. Thousands are doing it—men keep healthy and fit, women retain a trim figure.

Lucky Strike, the finest tobaccos, skilfully blended, then toasted to develop a flavor which is a delightful alternative for that craving for fattening sweets.

Toasting frees Lucky Strike from impurities. 20,679 physicians recognize this when they say Luckies are less irritating than other cigarettes. Athletes, who must keep fit, testify that Luckies do not harm their wind nor physical condition. That's why Luckies have always been the favorite of those men who want to keep in tip-top shape and realize the danger of overweight. That's why folks say: "It's good to smoke Luckies."

A reasonable proportion of sugar in the diet is recommended, but the authorities are overwhelming that too many fattening sweets are harmful and that too many such are eaten by the American people. So, for moderation's sake we say:—

"REACH FOR A LUCKY
INSTEAD OF A SWEET."

"It's toasted"

No Throat Irritation—No Cough.

Compton's Pictured Encyclopedia

TEACHERS SAY,

"You can pick a COMPTON *trained child out of any classroom"*

AND teachers by this time ought to know. Because Compton's is already in 35,000 schools and 250,000 homes.

What is Compton's?

Compton's is the first complete set of reference books in encyclopedic form that has ever been written and pictured in terms that children could understand. It simply gives the child a private source of knowledge on every subject. Naturally such a source will bring leadership in school now and success in life later on. Your children can never blame you for not giving them every advantage when you give them Compton's. For Compton's represents every advantage except money that a child can have.

Mail this coupon now and we will send you a complete sample section of this wonderful encyclopedia together with a free Questionario Game which is a wonderful mental test of every child of every age. And we will give you full information as to how you can get this wonderful set of reference books for your children for as little as $4.50 cash.

Here's the coupon. Mail it now.

Compton's Pictured Encyclopedia

F. E. COMPTON & CO.
Dept. 917, Compton Bldg.

THE FAMILY'S PROBLEMS

We Are Between the Devil and the Deep Blue Sea

DICK and I have been married three years. This year, we had planned to have a baby, but when we added up, we found that we couldn't swing it. In a big city like Philadelphia, babies like most other things, come high. Still, if we had all of Dick's salary for ourselves, we could manage it. But right there is the rub!

We don't have all of Dick's salary. Every month, twenty-five of his one hundred and fifty dollars go to his parents to pay back what they spent on his college education. It is a sort of sacred tradition in Dick's family that the children must look upon the money put into their college training as a loan to be repaid just as scrupulously as if they had borrowed it from a bank.

As a general principle, this may all be very fine. But surely circumstances alter cases. The plan worked no hardship on the two older boys, because they were out of debt and well established in life before they got married. But it's different in Dick's case. We were married in less than a year after he was graduated. Of course, when he told me how things were, I agreed that we must pay back as the others had. So we settled on a definite sum, increasing it a little every time Dick got a raise. At first, I was gay and cheerful about it. But that was before I realized how horribly pinched we were going to be.

Now, I must frankly confess, I am rebellious.

It's not as if his folks really needed the money. They don't need it half as much as we do. We have to go home on our vacation because we can't afford to go anywhere else; and on every trip I grow more resentful because it is rubbed in afresh how comfortable they are and how care-free financially as compared to us.

DICK'S folks live on a big farm in Pennsylvania. They raise practically everything they eat, and Mother has just as many conveniences in her house as I have in my little city apartment. She has more, for she owns an electric refrigerator and we can't afford one. They have a car. We ride in the subway instead of the bus so as to save the extra fare. They have meat twice a day; we have it twice a week.

It's true that Mother makes her coat last two winters for best and two more for second-best. I don't know how long mine will have to last. This is its third winter and, as yet, I have not had the courage to consider a possible successor. Mother orders her best things from a big mail-order house in Philadelphia. I shop for mine at the remnants counters among the basement bargains and do my own sewing.

It is also true that there are still two young daughters at home to educate. But I'm sure they could be put through college without levying blood money on Dick and me. That's a mean thing to say, and perhaps I ought to be ashamed of it. I know perfectly well that Dick's parents feel that the family rule is a fair one, and that they see no reason for making an exception to it in favor of Dick and me. Their idea is that it will all come back to us some day. They reason that they are helping us to save for our old age.

Maybe they are. But, personally, I can't get a kick out of the prospect of a well-fed and well-cushioned old age if all I have to look back on is a starved and colorless youth. I honestly believe I'd rather spend my declining days in a Home for the Aged and Indigent than spend all of my young married life doing without every scrap of beauty and fullness that makes living worth while.

I want my heart to have a chance to sing *now*.

OF COURSE, to do them justice, Dick's father and mother don't realize how serious this pinching business is with us. Nor do they dream how bitter we sometimes feel about it. They can't help knowing that we have to cut corners, but with their thrifty Dutch ways, they think that is good for us. To them, a hundred and fifty dollars a month seems like a lot of money for two young people to run through with. Unconsciously, they picture us as gay city people living in an atmosphere of bright lights and brighter doings.

Well, I've come to the conclusion that it's high time the family knows the truth. I just don't think it's fair to me—or to Dick—for us to go on scrimping and scraping for three more years to pay back that miserable debt which was wished on him when he was too young and inexperienced to know what it would cost him. Especially, when the people who wished the debt on him would never miss the money, and we do—terribly.

But then, it's not so easy as it sounds. Dick can't bear the idea of failing to do as much as the other boys have done. To him he is afraid that his parents will be hurt if we come out and tell them just how we feel about it. I don't want to hurt anybody's feelings any more than Dick does. Above all, I don't want to hurt his pride.

So—I find myself between the devil and the deep blue sea. Frankly, I don't know which way to jump. Either way, I'm likely to rock the boat. I can't go on much longer the way I am going. I want babies while I'm young enough to enjoy them! What is the way out? A. M. K.

The American Magazine

MORE THAN 2,200,000 CIRCULATION

Seven Minutes in Eternity—the Amazing Experience that Made Me Over

By WILLIAM DUDLEY PELLEY

NOT long ago William Dudley Pelley came into the office of THE AMERICAN MAGAZINE, after an absence of more than a year.

"Man, what's happened to you?" asked the editor. "You're looking incredibly better than you did the last time I saw you."

"You've never seen *me* before," replied Mr. Pelley.

"Just what do you mean by that?"

"I mean that the fellow who is standing before you now is a new Bill Pelley—so new that he's only about one year old. I've had an experience. . . ."

On the strength of that conversation Mr. Pelley was asked to write about his great adventure. Neither the editor nor any members of the staff knew what transforming experience the author had been through, but it was evident to all that he had greatly changed, both in appearance and in manner. The accompanying article is the intimate account of his "re-birth." It will surprise and interest you as much as it surprised and interested the staff of THE AMERICAN MAGAZINE. *The Editor.*

N THE Sierra Madre Mountains, near Pasadena, California, I own a bungalow. When I want seclusion in order to complete a knotty job writing, I lay in a stock of pro-ions, bid adieu to acquaintances, ıtor up to this hide-away, and rk there undisturbed. My only npanion is Laska, a tawny police g.

In the month of April, 1928, I s living in this bungalow while iting a novel. The work had gone ll and was nearing completion. vas untroubled mentally, feeling ysically fit, writing six to eight ırs a day, with plenty of eve-g recreation.

ne night toward the last of the nth I returned around ten o'clock I lay reading in bed till midnight. e book had nothing to do, I am vinced, with what subsequently ıpened. It was a ponderous vol-e on ethnology, a subject that is ıething of a hobby with me. I drowsy around midnight, laid volume aside, pulled off my ses, and extinguished the bed-p. I had gone through a similar ıne on a hundred other eve-ıs; the day had been no different ı a hundred other writing days ıt in the bungalow.

ly sleeping chamber was located he back of the house and was ectly ventilated, with two case-t windows opening toward the ntains. Laska curled on the at the foot of my bed—her stomed sleeping place—and she did not externally motivate ıhenomena in any way, I am ive. When it ended, and I was in my body, I stumbled from the bed and my voice awoke her, bringing her over beside me, where she thumped her tail on the rug and sought to lick my wrist. . . .

I do not recall having any specific dreams the first half of the night, no physical distress, certainly no insomnia. Ordinarily, I do not use liquor and I had none on the premises or in my system on this night in question. For twenty years I had consumed from a dozen to twenty cigars daily and smoked my pipe constantly over the typewriter. But I had never observed any derogatory effects from such indulgence and was no more distressed than usual from this particular day's consumption of nicotine.

BUT between three and four in the morning—the time later verified—a ghastly inner shriek seemed to tear through my somnolent consciousness. In despairing horror I wailed to myself:

"*I'm dying! I'm dying!*"

What told me, I don't know. Some uncanny instinct had been unleashed in slumber to awaken and apprise me. Certainly something was happening to me—something that had never happened down all my days—a physical sensation which I can best describe as a combination of heart attack and apoplexy.

Mind you, I say *physical* sensation. This was not a dream. I was fully awake, and yet I was not. I knew that something had happened either to my heart or head—or both—and that my conscious identity was at the play of forces over which it had no control. I was awake, mind you, and whereas I had been

Digitized by Google
Original from UNIVERSITY OF IOWA

on a bed in the shadowy dark of a California bungalow when the phenomenon started, the next moment I was plunging down a mystic depth of cool, blue space, with a sinking sensation like that which attends the taking of ether as an anesthetic. Queer noises were singing in my ears. Over and over in a curiously tumbled brain the thought was preëminent:

"*So this is death?*"

I AVER that in the interval between my seizure and the end of my plunge, I was sufficiently possessed of my physical senses to think: "My dead body may lie in this lonely house for days before anyone discovers it—unless Laska breaks out and brings aid."

Why I should think that, I don't know—or what difference it would have made to *me*, being the lifeless "remains"—but I remember thinking the thought as distinctly as any thought I ever originated consciously and put on paper in the practice of my vocation.

Next, I was whirling madly. Once in 1920 over San Francisco an airplane in which I was passenger went into a tail spin and we almost fell into the Golden Gate. *That* feeling! Someone reached out, caught me, stopped me. A calm, clear, friendly voice said, close to my ear:

"Take it easy, old man. Don't be alarmed. You're all right. We're here to help you."

Someone had hold of me, I said—two persons in fact—one with a hand under the back of my neck, supporting my weight, the other with arm run under my knees. I was physically flaccid from my "tumble" and unable to open my eyes as yet because of the sting of queer, opal light that diffused the place into which I had come.

When I finally managed it, I became conscious that I had been borne to a beautiful marble-slab pallet and laid nude upon it by two strong-bodied, kindly-faced young men in white uniforms not unlike those worn by internes in hospitals, who were secretly amused at my confusion and chagrin.

"Feeling better?" the taller of the two asked considerately, as physical strength to sit up unaided came to me and I took note of my surroundings.

"Yes," I stammered. "Where am I?"

They exchanged good-humored glances.

They never answered my question.

They did not need to answer my question. It was superfluous. I knew what had happened. I had left my earthly body on a bungalow bed in the California mountains. *I had gone through all the sensations of dying*, and whether this was the Hereafter or an intermediate station, most emphatically I had reached a place and state which had never been duplicated in all my experience.

I say this because of the inexpressible ecstasy of my new state, both mental and physical.

For I had carried some sort of body into that new environment with me. I knew that it was nude. It had been capable of feeling the cool, steadying pressure of my friends' hands before my eyes opened. And now that I had reawakened without the slightest distress or harm, I was conscious of a beauty and loveliness of environment that surpasses chronicling on printed paper.

A sort of marble-tiled-and-furnished portico the place was, lighted by that soft, unseen, opal illumination, with a clear-as-crystal Roman pool diagonally across from the bench on which I remained for a time, striving to credit that all this was *real*. Out beyond the portico everything appeared to exist in a sort of turquoise haze. . . .

I looked from this vista back to the two friends who had received me. There were no other persons anywhere in evidence in the first half of my experience.

Somehow I knew those two men—knew them as intimately as I knew the reflection of my own features in a mirror. And yet something about them, their virility, their physical "glow," their strong and friendly personality sublimated, as it were, kept me from instant identification.

And they knew a good joke about me. They continued to watch me, with a smile in their eyes, when I got down from my marble bench and moved about the portico till I came to the edge of the pool.

"Bathe in it," came the instruction. "You'll find you'll enjoy it."

I went down the steps into delightful water. And here is one of the strangest incidents of the whole "adventure" . . . when I came up from that bath I was no longer conscious that I was nude. On the other hand, neither was I conscious of having donned clothes. The bath did something to me in the way of clothing me. What, I don't know.

But immediately I came up garbed, somehow, by the magic contact of the water, people began coming into the patio, crossing over it and going down the southern steps and off into the inexpressible turquoise. As they passed me, they cast curiously amused glances at me. *And everybody nodded and spoke to me.* They had a kindness, a courtesy, a friendliness, in their faces and addresses that quite overwhelmed me. Think of all the saintly, attractive, magnetic folk you know, imagine them constituting the whole social world—no misfits, no tense countenances, no sour leers, no preoccupied brusqueness or physical handicap—and the whole environment of life permeated with an ecstatic harmony as universal as air, and you get an idea of my reflexes in those moments. I recall exclaiming to myself:

"How happy everybody seems!—how jolly! Every individual here conveys something that makes me want to know him personally." Then, with a sense of shock, it dawned upon me: "*I have known every one of these people at some time or other, personally, intimately!* But they are sublimated now—physically glorified—not as I knew them in life at all."

I CANNOT make anyone understand how natural it all seemed that I should be there. After that first presentment of dying—which experience had ended in the most kindly ministration—all terror and strangeness left me and I had never felt more alive. It never occurred to me that I was in "heaven," or, if it did, it occasioned me no more astonishment that I should be there than when, at some period of my mundane consciousness, it had occurred to me that I was on "earth." . . . After all, do we know much more about the one than the other?

I had simply ended a queer voyage through bluish void and found myself in a charming place among jolly, worthwhile people who saw in me something that amused them to the point of quiet laughter. Yet not a laughter that I could resent. I had no mad obsession to go off at once in search of Deity or look up Abraham Lincoln or Julius Cæsar. I was quite content to stroll timidly in the vicinity of the portico by which I had entered this harmonious place and be greeted with pleasant nods by persons whose individualities were uncannily familiar.

They were conventionally garbed, these persons, both men and women. I recall quite plainly that the latter wore hats I can see with perfect clarity in my mind's eye the outline of the millinery worn by a dignified elderly lady *at whose deathbed I had been present in Sioux City, Iowa, in 1923*. The big, broad-shouldered, blue-eyed fellow in white duck who had first received me, with his hand beneath the nape of my neck, always hovered in my vicinity, I recall, and kept an eye on my whereabouts and deportment. . . .

I PLEDGE my reputation that I talked with these people, identified many of them, called the others by their wrong names and was corrected, saw and did things that night almost a year ago that is *verboten* for me to narrate in a magazine article, but which I recall with a minuteness of detail as graphic to me as the keys of my typewriter are now, under my fingers. Regardless of the fact that imagination is the chief asset in one of my vocation, I am not given to particularly graphic dreams. Certainly, we never dream by the process of coming awake first knowing that we are suffering some kind of heart or head attack, swooning, and coming abruptly conscious again in the arms of two kindly persons who reassure us audibly that everything is quite right. Nor do the impressions of a dream so stay with us—at least they have never so stayed with me—that after a year such an experience is as vivid as many of my experiences in Siberia during the late World War.

I went somewhere, penetrated to a distinct place, and had an actual, concrete experience. I found myself an existing entity in a locality where persons had always called "dead" were not dead at all. They were very much alive.

The termination of this journey—exit so to speak—was as peculiar as the advent.

I was wandering alone about the place I have described, with most of my recognizable friends gone out of it for the moment, when I was caught in a swirl of bluish vapor that seemed to roll in from nowhere in particular. Instead of pitching prone I was lifted or levitated. Up, up I seemed to tumble, *feet first*, despite the ludicrousness of the description. A long, swift, swirling journey of it. And then something clicked—something in my body. The best analogy I can sound my repeating deer-rifle when I work the ejector mechanism—a flat, metallic, automatic sensation.

Next, I was sitting up in bed in my physical body again, as wide awake as I am at this moment, staring at the rectangle of window where the moon was shining down, with a reflex of physical exhaustion through my chest, diaphragm, and

William Dudley Pelley

that lasted several moments. Not digestive distress, you understand; ly a great weariness in my torso as if I passed through a tremendous physi- rdeal and my heart must accelerate ake up the lost energy.

hat wasn't a dream!" I cried aloud. my voice awoke Laska, who straight- to her haunches.

ere was no more slumber for me that . I lay back finally with the whole ex- ce fresh in my senses but an awful tation in my heart that I was forced ne back at all—back into a world of gle and disappointment, turmoil and erpretation, to an existence of bill collectors, unfriendly bankers, capricious editors, and caustic critics—to all the mental and physical aches and pains which combine with the slings and arrows of outrageous fortune to make of this Earth Plane a Vale of Tears.

It was tragedy, the coming back.

Call it the Hereafter, call it Heaven, call it Purgatory, call it the Astral Plane, call it the Fourth Dimension, call it What You Will. Whatever it is—and where—that human entities go after being released from physical limitations, I had gone there that night. And, like Lazarus of old, I had been called back—back to the anguish (in comparison) of physical existence to finish out my time in the conventional manner. Up to the moment of writing this article almost a year later, I have had not the slightest indication toward a repetition of the episode. Dreams I have had, and occasionally a fine, old-fashioned nightmare, but I have known them for such. Somehow or other, in sleep that night, I unhooked something in the strange mechanism that is Spirit in Matter, and for from seven to ten minutes my own conscious entity that is Bill Pelley, writing-man, slipped over to the Other Side.

There is a survival of human entity after death of the body, (*Continued on page 139*)

Down the road dashed the bull, on his u

Any age is the age of Chivalry if there is a

By Albert Payson Terhune

THERE was one car for hire in all Hampton; a wheezy and dingy and uncertain-tempered machine of ancient vintage. It contrasted with the village's other cars as might a tramp with the winners of a Fashion Parade. It belonged to Axel Thorje. If Axel drove the alleged car for a passenger, the rates were two dollars and fifty cents an hour. If the temporary lessee drove it himself, the toll was a dollar an hour, plus oil and gas.

When Roy Thacker used the antique car, he drove it himself.

When he drove it, he took Maida Barham along—at such times as he could induce her to go, and when some swain in a self-owned and shinier and newer car had not preëmpted her companionship.

With the coming of the automobile, a new Aristocracy of Locomotion had been born, not only in Hampton but everywhere else. Of old, not one low-salaried man in twelve had been able to afford a horse and buggy, or even a saddle horse. Now, it seemed, the huge majority of mankind bought and drove cars whose price and upkeep were more than treble those of the finest old-time horse equipage.

To Roy Thacker this did not make sense. Nor, in his morbid moments, did it make sense that the average girl of his acquaintance seemed to judge men by the quality of their cars rather than by inherent traits.

For instance, Maida Barham was the One Girl in all the world. When he should be able to afford a wife, Roy meant to tell her so, whatever her answer might be. Yet he had a queer feeling that a loyalty to their long friendship, rather than any real pleasure, made her accept his invitations for drives through the back co try dusk in Axel's clankingly disreput car; and that she sat with a certain scious, happy pride in McGrath's th thousand-dollar machine, or in G Pryce's trig racer—a pride that was l ing when she drove with Roy.

On his low salary at the local crean Thacker could not see the wisdom of ing with a goodly slice of his hard-hoa savings-bank account for the purcha a new car. Nor could he see the econ soundness of buying one on installm and thus putting the bulk of his a week by week, into an investment w value decreased so steadily that b time it should be paid for in full it be all but worthless.

AS a compromise, two years earli had begun to lay aside his ove pay toward the purchase of a roa During part of the year there w overtime at the creamery. But for rush months there was work at and a half" for any man who ch supplement his eight-hour day b hours of night toil.

the slaughter of the offensive red hat's wearer

Galahad

Illustrated by

HAROLD VON SCHMIDT

Slowly the car's price accumulated; t so much more slowly than Thacker's bitions for it that he jumped eagerly a book-balancing night job during the nter and spring months at the Galvanized bber Works in the next town. True, s kept him away from Maida every ening except Sunday—and she devel- d a vexing way of having other callers these Sunday evenings. But it rolled his car fund with gratifying speed.

t last—a long and tiring last—the s price was laid by. This without udice to the share of his weekly sal- which must go to fatten his savings- k account. True, the night-and-day k left him oddly dull and tired by the e Sunday came around. But he had th to draw on, with all its glorious rves of energy. So he came through ordeal with only a little loss of flesh a brace of dark hollows under his

nd he could now say farewell to Axel rje's hideous and antediluvian per- ulatory ark. He could take Maida rive through the fragrant summer in a car she need not be ashamed to be seen in. It was the Big Moment of Roy Thacker's life when he made that complete payment and drove the wonder-car out of the Paterson dealer's garage and toward Hampton.

He was minded to make an Occasion of it. Wherefore, he had taken the whole Saturday afternoon off from the creamery and had gained Maida's consent to go driving with him for an hour or two before sunset.

THE new roadster gleamed like the armor of some medieval knight as it sped smoothly over the nine-mile stretch of concrete road from Paterson to Hampton. Its strong new engine sang softly to itself, a song of conscious power.

Into the mile of surfaced back road between the state highway and Maida Barham's home turned Thacker. This double work he had been doing had not pulled him down so very much after all. Perhaps he could keep it up indefinitely. If so, he would be drawing weekly pay on which any lad of his age could afford to marry. If only he could make Maida see it that way.

Roy's ideas on marriage were on a par with his notions as to car-buying. He could not bring himself to the point of going to his sweetheart and saying to her: "I'm not making a marrying salary. I love you. Will you be engaged to me, for perhaps two or three years, and give up better chances, on the bare possibility that some day I'll make enough to marry on?" To him, the notion seemed as unsportsmanly and as unfair and as unsafe as to buy a brand-new car without the ready cash to pay for it. But now. . . !

Up the slope of a hill purred the roadster, ignoring the tug of the acclivity, rejoicing in its own sure strength. Then came the summit, and the half-mile level stretch at whose end he could see the Barham house. Bit by bit, Roy let out the speed. He was minded to arrive snappily and smartly at Maida's door even as he had seen more fortunate youths drive up to it in their installment cars.

A furlong ahead, a woman was trudging stolidly along the roadside ahead of him. Squat she was, and built for endurance rather than for speed. Her age was uncertain, despite the rakishly gay red

Beginning NEXT month . . .

Zane Grey's

NEW NOVEL

The Drift Fence

LITTLE Molly Dunn of the Cibeque. . . . Surely Zane Grey has never given us a lovelier or more appealing heroine. And never a more enthralling story! Against the stirring background of Western ranch life is played out the grim drama which centers about "The Drift Fence"—and which carries with it the life and fortunes of Molly Dunn.

ON the one side all the "two-bit cattlemen" and rustlers led by Molly's brother, "Slinger Dunn," on the other the wealthy and progressive ranchmen typified by Jim Traft—with the hundred-mile fence he is building on the free range as the bone of contention.

THE situation was tense enough and dangerous enough already when Jim Traft brought on his "tenderfoot" nephew, young Jim, to take charge of the famous "Diamond D" outfit, and build the fence—no matter what happened. And Jim proceeded to fall head over heels in love with Molly, quite unaware that she was the sister of the notorious "Slinger Dunn."

IT is an exciting story—"The Drift Fence." And an appealing record of a lonely young girl's aspirations and struggle to rise above the sordid environment that is crushing all her hope of happiness.

THE story of Molly and Jim, and "The Drift Fence," begins in THE AMERICAN MAGAZINE for April, and it is a story you mustn't miss!

cloche hat which crowned her grayin hair. Her whole appearance had a hom made aspect bespeaking bad team-wor in the assembling of it. Her clothes wer lumpily dowdy.

Well did Thacker know old Miss Vande cook by sight. Often he had passed h thus on the road, as she returned to h summer bungalow from one of her afte noon walks. Twice, she had been to th creamery, too; complaining of late deliver of her daily two quarts of milk and hal pint of cream. She was an artist or writer or some such freak, summering Hampton, encouraging no acquaintanc ships, and wearing rough-and-ready ga ments which Hampton women woul have scorned to be seen in.

Well, for once the old dame should b hold him in a car worth anyone's notic not trudging dustily along on foot or pr pelling Thorje's abhorrent antique. T thought gave Thacker a mild thrill pleasure. He stepped lightly on the ga Obedient, the new roadster quickened smooth pace.

Miss Vandercook was the first perso he knew whom Roy had happened up during that triumph drive of his. Thoug his acquaintance with her was less tha casual, still, she was not a total strange

Yes, and another acquaintance w coming into sight. Someone Roy kne far better, if even less pleasantly. Fro out an opening in bush-bordered pastu bars, a man was emerging at the heels a drove of cattle. He was Lem Hannoth, lifelong neighbor of Roy's; a rich and par monious farmer who vied with one or tw others of his kind for the historic title "the meanest cuss in this county." was convoying his cattle from their da pasturage to his farmyard, a quarter-m beyond.

IT WAS a prettily sylvan scene— placid drove of cows debouching sedat from the let-down bars among the bush and heading with tinkle of bell tow their milking place. Even the uncout rugged presence of Lem Hannoth at t heels could not spoil the effect.

Thacker slowed his machine. By perience he knew the erratic ways of tle on a back road and their blind pensity to swing across the right-of- directly in face of an approaching Safer it would be to wait, with wha tience he might be able to command, they should have passed by him. H not care to incur a possible damage from the litigation-loving Hannoth grazing one of the cow's flanks with mudguard. Especially while his car was uninsured. By this time Monday insurance papers for the new roa would be made out and the premium —the papers which would indemnify against property damage as wel against fire and theft. Until ther must move with some wariness.

As he drew almost to a standstill a road edge, one of the cattle lowed. sound was short and truculent, the ing of an angry bull. Roy Thacke too much of a country boy not to nize it.

From the plodding herd, the bull lu forward. He was a Holstein, som over a ton in weight, the basic wh his coat splotched with harlequin p of black. His horns were thick and

Digitized by Google Original from UNIVERSITY OF IOWA

Out of the patiently moving ruck of cows he trotted, in mid-road, snorting raucously as he emerged. It had been a trying day for the bull's murderous temper. The June flies had been intolerably torturing. An early drought had dried the pasture waterhole where he was wont to wallow and to drink. He was parched with thirst. Then, too, an hour earlier, a boy returning from school had pelted him stingingly with green apples, from the safety of the fence top. The Holstein was savage, raw of nerve, ripe for trouble.

As he came crankily out of the pasture, his nearsighted eyes focused on a splash of irritating scarlet—the rakish cloche hat of old Miss Vandercook at the roadside, a hundred yards ahead of him. The bull gave evidence of his fast-increasing fury by that first short roar and then by snorting. The offensive red hat did not vanish at his defiance. Indeed, as the sun's rays slanted athwart it, it flared with more and more maddening provocation.

WHOLLY unaware that she was the cause of the piebald giant's rage, Miss Vandercook continued to move slowly toward the advancing herd, giving them the whole byway to pass her in, but advancing steadily. She was not one of those humorous city women who are afraid of cows. Stolidly she maintained her pace, the fury hat nodding in deadly affront of the Holstein at every onward step she took. No self-respecting bull, with a homicidal complex, could have withstood the insult nor have conquered the wild surge of fury it evoked.

The Holstein lowered his head, pawing the roadway. Lem Hannoth did not see the menacing gesture. He was busy driving back into formation a heifer which had tried to bolt through a fence gap into a wheat field on the far side of the ditch. But Thacker saw; and he understood.

He was perhaps a hundred yards away from the bull. Midway between them Miss Vandercook clumped along, her red hat bobbing. Roy shouted to her to climb the near-by fence. She heard the voice, but the fresh afternoon breeze drowned the words themselves. She turned and frowned slightly, in reproof, at the forward motorist who, presumably, was yelling and gesticulating to her to get out of his way. Then, primly, she turned back toward the unguessed peril and continued her stroll into the face of impending death.

Measuring his distance and shutting his bloodshot eyes, the great Holstein charged.

With express-train speed he thundered toward the on-moving woman. His dull brain was afire with the zest of tossing her high in air and then goring and trampling her collapsed body into a pulp. He tore furiously forward upon his murder-mission, with head down and tail aloft, his horrible horns all but raking the road. His hoofs drummed a deafening tattoo on the hard roadbed.

Miss Vandercook saw at last—saw and understood. With a birdlike screech she halted, paralyzed and gasping, midway in the on-thundering monster's path.

The new roadster had been crawling at snail-pace. Now, under the impact of Thacker's toe, it leaped forward like a living thing. Over the intervening rods of roadway it flew, at a speed to which no brand-new car should be forced. Straight at the charging bull it dashed.

At the wheel crouched Roy Thacker, his face bone-white and set in a mask. But his brain was strangely cool. In that second or two of premeditatedly suicidal flight, he found himself saying, wordlessly, with an entire calm:

"Certain smash. . . . Not insured. . . . All for an old hen in a flapper hat. . . . Why in blazes didn't I take the other road? . . . Car gone. . . . Overtime work gone for nothing. . . . But—Lord, there's nothing else to do!—Will the windshield glass blind me?"

Past the fear-palsied Miss Vandercook flashed the lightning-swift roadster, held true in the center of the byway and strained to every last atom of speed.

DOWN the road, unseeingly, to meet it, dashed the bull, on his way to the slaughter of the offensive red hat's wearer. Two flying bulks, weighing a ton or more, were headed for each other at top pace.

Miss Vandercook saw the roadster blur past her; and she caught a fractional glimpse of its driver's face. Then, through her trance of (*Continued on page 130*)

The girl barred his way. "I think," she remarked impersonally, "you're the very rudest man I ever knew, Roy Thacker"

"THE FROMM BOYS"

are the biggest fox raisers in the world because of their

Staying Qualities

The story of a remarkable family that grew up and still lives in the Wisconsin woods

By CHARLES LANE CALLEN

"RAISE foxes!" Twenty years ago that cry swept through the northern farm districts like a shout heralding the finding of new gold.

Civilization was fast crowding the fox from the wilds, as it had already crowded out the wolf and the buffalo. Steadily since 1890 the supply of fox furs had been dwindling, while prices at the great fur auctions had doubled and then trebled.

The single pelt of a silver black fox had sold in London for $2,700, and half of that sum was an ordinary price for a silver fox pelt anywhere. Man, strange creature, always wants and will pay high for that which is out of the ordinary or difficult to get; and the silver black fox is the Koh-i-noor of foxes, the rarest of its kind.

Then came an electrifying discovery.

The silver black fox, as every trapper knew, is a sport of the common red fox; that is, it is one of the rarest of several rare color phases of the parent red stock—a full black fox with a veiling of fur that resembles spun silver.

A red fox mother might have only one silver black puppy in a lifetime; she might never have one. Again, the silver black strain might be strong in a red fox parent, strong enough to be perpetuated through the offspring; and this is also true of the black fox and of the cross fox, other sports of the red fox.

Trappers long had pondered over these tricks which nature played with the fox. They had learned that foxes caught in warm weather could be kept alive in captivity until their furs became prime with the coming of cold weather. In Canada this was a common practice.

And on Prince Edward Island, in 1887, two shrewd Scots began to experiment with captives.

That winter they did not dispose of all of their foxes. Instead, they kept several precious pairs—their finest specimens—hidden away in a remote and almost inaccessible part of the woods. They believed that, in time, it would be possible to breed the silver fox domestically, just as farmers breed Ayrshire cows and Clydesdale horses.

They had their troubles, those Scots, and disappointment piled upon disappointment; but the upward swing of prices paid for fine fox furs had started and the Scots kept their lips sealed. It was a rich goal they saw ahead; and presently neighbors began to marvel at the rare and lustrous fox pelts that these inordinately "lucky trappers" sold at fabulous prices on the London fur market.

But one bleak winter night, the story goes, a fox escaped from the hidden inclosure in the woods. Like a silvery black shadow on the snow, it streaked away into more open country and toward the habitations of men. Next day hounds scented its trail and were off on it, while behind the hounds came eager hunters.

The fox doubled and feinted, but it was unable to shake off the hounds. Finally, it headed back for the safety of the inclosure, a fugitive worth its weight in gold. It made the inclosure, fortunately, ahead of the hounds; but before nightfall the secret of the world's first silver fox farm was out—at least to the extent that it was shared by the hunters.

HOWEVER, it was no more to the hunters' advantage to talk than it had been to the Scots'. They, too, went into the fox-breeding business and kept their mouths closed. Prince Edward Island is isolated, off the beaten ways of travel, and it is filled with canny Scots. It wasn't until 1909 that the world awoke to the fact that a new farm industry had been established wherein a single animal, no larger than a small dog, was worth the price of a farm.

And the cry, "Raise foxes!" went out. It swept furiously westward through Canada, down through the American border states, up into Alaska, and even leaped the Atlantic into Europe. Men who had never before heard of Prince Edward Island raced each other there to bu breeding stock.

Mature silver fox pairs brougl $5,000, then $10,000, and then $15 000; until a record price of $35,0 was paid for a single pair of breede of proven fecundity. Silver fox became too valuable to kill, and f prices went still higher. A silv fox boom was on!

Now jump back to America.

Out in the woods of Wisconsir little group of farm boys, five bro ers, heard the fox cry, and hea it wistfully. Of these brothe "Herb" was twenty-four, a the youngest, "Hank," was o thirteen. "Walt," "Ed," and Jo ("Nick") were twenty-one, ni teen, and sixteen respectively. Fo around Hamburg—which is me a name at a crossroads—knew them "the Fromm boys," sons of that stalw pioneer farmer, Fred Fromm.

"Raise foxes? Bah!" said Fred Fro "That talk is just a lot of foolishnes won't put a penny in a fox."

IN THAT staid, hard-working Ger farm community, where woods crow log barns and stumps still protruded many a field, the Fromm boys had a r tation for "foolishness." When sti knee trousers and bare feet, they ha gun to raise ginseng, a wild woods which nobody but the Chinese regard of any value. Now they talked of r foxes, more rank nonsense. What boys needed, said folks, was an old-ioned "birching."

But the five brothers, neverth talked foxes. They had trapped and h the mink, the skunk, the otter, an muskrat, and they knew something value of furs. Besides, there was a r tic ring to this fox business; It stirre blood. And a pair of red foxes was f over at the farm of John Wittko Athens.

Two of the boys walked the ten through the snow over to Wittkope's In their pockets they had just five d the five brothers' combined capital, trance into this new business in whi tunes were changing hands like m money. Wittkope asked forty doll his foxes.

"But they're only common red jected the boys, mindful of their sc sources.

"The pelts alone are worth fo

UNIVERSITY OF IOWA

lars," replied the farmer, and he wouldn't take a dollar off his price. "I want cash, too," he added; "paid on the spot."

The boys argued, pleaded, begged. They would pay five dollars down and five dollars a month for seven months. At last Wittkope capitulated, the "down" payment was made, and the two foxes were moved over to the Fromm farm at Hamburg, where they were as welcome as a pair of hungry cats in a bird shop.

Thus, contrary to all advice, and in the face of parental opposition, the five Fromm boys tossed their few and only dollars into a gamble wherein the failures of the near future were to outnumber the successes by ten to one.

THAT was in 1909.

The fox boom died, as all such furors do. War came in Europe, and prices on foxes, alive or dead, crashed down, down, down. On the newly stocked fox farms of America and Canada, disease swept off the captive animals by the thousands. Financial failure came hand in hand with disease; but in the welter of disaster the Fromms held on, though by adding foxes to ginseng they had tackled *two* of the toughest businesses in the world.

Then, following the 1928 winter fur auction, the New York Times published the following item as news:

"The largest check ever passed in the fur industry of this country, and of the world as far as is known, has been drawn to the order of Fromm Brothers, Hamburg, Wisconsin, by the New York Auction Company, Inc. It is for $1,021,071.24, and represents the net return to the Fromm firm on the silver fox consigned to the company's fur auction here a few weeks ago.

"Fromm Brothers are generally regarded as the largest silver fox farm operators in the world. Originally raisers of ginseng, which they continue to raise, they began farming silver fox about fifteen years ago. They now operate six farms in Wisconsin, five at Thiensville and Cedarburg, and the sixth at Hamburg."

The correct name of the Fromm enterprise is now the Fromm Brothers Nieman Company—John F. Nieman, an uncle, and Edwin Nieman, a cousin, having joined their interests with those of the Fromms.

And the Times might have added several other pertinent details. In addition to the single check received in New York, the brothers received a total of $267,203 for fox furs sold at other fur auctions, and they received approximately $225,000 for ginseng. Receipts in 1928 for both fox furs and ginseng totaled almost one and a half million dollars, exclusive of sales expenses and commissions paid.

Their six farms cover 2,000 acres, and they have on them approximately 16,000 silver black foxes. It is estimated that in all the world there are only 700 acres of ginseng in cultivation, mostly in small lots of less than an acre each. At Hamburg, the Fromms have 100 acres planted in ginseng, which makes them by far the world's largest ginseng growers, as well as the world's largest breeders of foxes.

Hamburg is thirteen miles from a railroad station. Fred Fromm settled there forty-four years ago, a tall, straight, powerful pioneer then at the age of thirty-two. With his own hands he built the log house that until recent years was the Fromm homestead, and he built a log barn and cleared away the forest at his door to make way for fields.

And children came, nine of them—Arthur, Herbert, Walter, Edward, John, and Henry; and Erna, Clara, and Nora.

"For twenty years my wife and I rocked a cradle," sturdy old Fred Fromm told me. "We had a big family but we tried to educate them all. I wanted the girls to marry good men, and I wanted the boys to become school-teachers."

THE school-teacher was an honored figure in the community, ranking even the minister in local distinction. It was considered a big thing for a young man to teach, so that it was no small ambition that the father held for the boys.

The old man loved music, and every son of his learned to play some musical instrument and to sing. Though the house was of hand-hewn logs, the piano therein bore the name of a famous maker. The father's prized Magini violin hung in the rafters beyond the reach of hands that might damage it. Here was a guitar, there an accordion belonging to Herb, there a violin of Ed's. Neighbors passing on winter nights often heard music from the operas of Wagner swelling in majestic dignity above the jingling of their sleigh-bells. Again, it might be Bach they heard—or a rollicking old-country jig.

It was a man's world. Chairs and tables were sturdy, homemade things of oak that it took strong arms to lift. Bearskins formed the floor coverings, and the heads of bears and the spreading antlers of deer were displayed on the walls. Guns and axes, traps and (*Continued on page 126*)

Here are the Fromm boys, fifteen years older than they were when they heard the call, "Raise foxes!" Today more than 16,000 silver foxes roam over their six farms in Wisconsin, and they are regarded as the largest silver fox operators in the world

"Mr. Chairman

Those are familiar words to Fanny Sweeney, skilled convention reporter who has recorded the speeches of five Presidents of the United States and of thousands of lesser speakers

The chairman of the Research Committee reports that "said committee visited 711 homes, finding that two and seven-eighths children in each home were undernourished. . . ."

"ORDER!" thunders the chairman, pounding his gavel in an endeavor to quell the loud buzzing produced by a thousand men talking at once. The buzz becomes a murmur. The murmur dwindles to silence.

"Gentlemen, the fifth annual convention of the association will please come to order," he bellows. Then, assuming a more conversational tone, he continues:

"Fellows, we're already half an hour late in getting started; so we'll have to make our remarks short and snappy if we're going to get through today. The first item of business is the reading of last year's minutes. The secretary will . . ."

"I move we dispense with the reading of the minutes," one man pipes up.

"Second the motion," chorus half a dozen voices from scattered regions of the hall.

"Will you please give your name and city when you rise, so the stenographer can get a complete record," exhorts the chairman.

The convention is under way!

"Our first speaker, who needs no introduction, will outline the aims and ideals of our organization," announces the chairman.

The audience, as a man, sinks back complacently. It has heard the same speech for five successive years, so why listen? Lulled by the sonorous tones, one or two who haven't had their regulation eight hours, frankly doze.

"Time's up!" The relentless gavel cuts short the speaker's eloquence in the middle of a sentence. He concludes with a lame "I thank you," and disappears into the human mass before him.

A timid little man gives a nervous and inaudible account of the work of the Research Committee.

"Louder, please!" insists a member from the back of the room.

With an effort he raises his voice for a few paragraphs and then subsides to his former pitch.

Speaker succeeds speaker. Two hours have passed and still the talking goes on, full blast. Officers are elected, committees appointed, resolutions adopted. The air is heavy with tobacco smoke. One or two members who are close to exits sneak out. A committee chairman drones through the final report. The program is concluded.

"Adjourned!" shouts the chairman. The devitalized mass becomes animated. Men scramble to their feet, to make a mad dash for a train or to gather in knots about the lobby to hash over the meeting. Another convention is done.

But it has really only just begun for Fanny S. Sweeney, the official reporter.

"The ideals and aims of this organization, ladees and gentlemen, are those that each of us learned at the sacred knees of our sainted Mo-others!"

She has recorded on her shorthand machine every syllable that has been spoken in session. Now she crams into her portfolio a mass of notes to be transcribed when she returns to headquarters in New York City.

As she leaves the assembly hall, one man corrals her:

"For goodness' sake, tone down those last remarks of mine, where I . . ."

"Yes, I'll remember," nods Mrs. Sweeney.

"In spots I was more emphatic that grammatical," says another. "You know what I mean. Fix it up so it sounds half-way decent," he pleads.

"I will," indulgently promises Mrs. Sweeney, as she departs.

REQUESTS like these are made at every convention she attends. By the butcher, the baker, and the candlestick maker—by doctor, lawyer, merchant, chief. And out of her wide experience with men and women of all classes and professions, Mrs. Sweeney pretty much knows what to do about each request.

To the relief of the harassed speaker she unsplits infinitives and undangles participles.

"This business of going from one convention to another has its amusing side," said Mrs. Sweeney. "People take themselves so seriously. Each group thinks its problems are more difficult than those of any other group, and peculiar to its. As a matter of fact, when reduced to the least common denominator, all organizations have much the same problems to meet and similar conditions to contend with.

"No convention is complete without a call for coöperation. We reporters hear the word 'coöperation' almost as often as 'and' or 'the.' It is used so much that we have reduced it to an abbreviation I can write in one stroke.

"At business meetings, they love to talk about 'service,' 'organization,' and 'education.' In religious and international gatherings, most commonly

ADELT

Illustrated by DAVID ROBINSON

The secretary of the "Society for the Preservation of Things as They Are" suffers somewhat from stage fright. Women, says the convention reporter, are more given to this form of torture than men

erms are 'challenge,' 'completeness,' and fullness of life.'

"Pronunciation isn't always standard. Municipal' is more frequently mis-ronounced than any other word, ap-arently because 'mu-ni-*cip*-al' requires ss vocal effort than 'mu-*nic*-i-pal.' ven statisticians and bankers err on tatistics.' Most often it is 'stastistics,' r else the speaker stumbles through it nd finally has to repeat it painstakingly. ement' is usually 'sment,' or '*cee*-ment,' articularly in the South. 'Con-*fis*-cate' commonly used. Physicians say 'ab-do-en' as frequently as laymen.

LAWYERS have a great habit of using legal expressions, even in ordinary eech; such as 'thereto,' 'therefrom,' eretofore,' 'theretofore,' 'thus,' and so on. stead of saying 'I think' or 'I believe,' ey use 'in my opinion,' 'to my mind.' I e to report lawyers better than anyone e, because they are so fluent and their tences follow in logical sequence.

"Oratory is dying out, but there are ne old men of the by-gone flag-waving ool still left. During the War, how-r, oratory was common. With four-nute speakers it was quite the thing. And the good old stand-by jokes are l going strong. Chairmen en use that one about the g-winded banquet speaker trying to cut short persist-talkers:

"After the speaker had ted so long that his audience ld no longer suppress their ns, the toastmaster got im-ent with the garrulous one rapped with the gavel to that his time was up. By ake he hit a near-by bald-led man who had stooped ick up something. The fell unconscious. Restora-s were applied.

When the victim regained ciousness he was asked, you feel better?"

"Hit me again," he begged. n hear him yet."'

ne joke may be repeated ty different conventions. story will go the rounds, then another will bob up ke its place. The mother-in-law joke has now given way to Scotch jokes and prohibition jokes.

"A Scotch Presbyterian, who spoke with a delightful burr, told the best jokes on his countrymen I ever heard. He reeled off a whole bunch of stories and solemnly assured his audience that Scotch jokes were manufactured in Scotland for foreign consumption.

"I wish I could imitate the way he told about Jock, who met Sandy on the street and casually announced that he was going to send over a hen for his friend's Sunday dinner. A long time passed and the hen was not forthcoming. Finally the friend said: 'See here, Jock, what about that chuckie?'

"Jock looked at Sandy in astonishment and said, 'Chuckie? What chuckie was that? Oh, I mind. It got better!'

"A rather new one is about the Scotchman who got married in his back yard so his chickens could eat the rice.

"Jokes are harder to take down than anything else—often because of the way they are told, and sometimes because of interruptions from the audience. There are only a few basic jokes in the world and all the rest are merely elaborations. Learn those few and you won't have any trouble with funny stories at conventions.

"POETRY seems to run in cycles. During the War, the favorite poem was one by J. Mason Knox:

> It is not the guns or armament
> Or the money they can pay;
> It's the close coöperation
> That makes them win the day.
> It is not the individual
> Or the army as a whole,
> But the everlastin' teamwork
> Of every bloomin' soul.

"Right now, Edgar Guest is a reigning favorite. He just about ties with Shakespeare, who continues to hold his own. The Bible is quoted more frequently than any other book.

"It is necessary to hear well in order to take accurate notes," Mrs. Sweeney went on. "Sometimes when a discussion gets hot, four or five speakers will jump to their feet and talk at once. I then beseech the chairman to ask them to come forward, one at a time, to the front of the room. When they talk indistinctly I must interrupt the proceedings and call out, 'Louder, please!' But I don't like to do this unless I really have to, for it is likely to embarrass the speaker.

"On one occasion, I had more than the usual trouble in getting speakers to talk loud. I asked one man who arose to come forward. He protested. The chairman came to my aid and (*Continued on page 154*)

"And in concluzeeon, accept my countree's assurances of its regards most distinguish. . . . VIVE L'AMÉRIQUE!" It's hard, says the reporter, to get the speeches of these distinguished foreigners

SIDE-TRACKED

A Love Story in which a boy searches for the road that leads to living

By MARY SINGER

Illustrated by

JOHN ALONZO WILLIAMS

WHEN Boyd McKim was six years old, a portentous thing happened. His uncle Max came to visit. He walked up the porch steps, of a mellow evening in May, and straightway was life turned into a breathless, colorful, exciting adventure. He wore a soft, black, crushy-looking velours hat, and his tie was knotted in a bow just like Boyd's.

He said to Boyd, in a voice rich and charming, "Sonny, does John McKim live here?"

Boyd looked at him, and fled gasping into the house, calling at the top of his voice:

"Pop! *Oh*, Pop! There's a man. Outside. He said—he said—"

"Wait a minute. Wait . . . a . . . minute," said his father, trying to calm him. "Who does he want?"

"You. He said—he said—"

"What does he look like?"

"Like the picture on Aunt Fannie's table."

His father rose quickly. "It can't be," he said. And went out to the front door.

But it was! All in an instant a great shouting filled the house. His father cried, "Max! You old son-of-a-gun! Where've you been all these years? Where've you been?" And went running to the stairs to call to Boyd's mother "Mar'gret! Come down! Guess who's here? Where's Fannie? Where's Fannie?"

"Here," said Aunt Fannie, and came scuttling down the steps. "Who's—What's all the—*Max!*" In a cry like a song. "Max!" Uncle Max was her brother. "Max!" As if she couldn't say his name enough. She patted him all over. "Oh! It's good to see you! I can't tell you how good it is!" And unaccountably she began to sniff.

Uncle Max said warningly, "Now, Fan. If you're going to become hysterical—"

And Boyd's mother clicked down the stairs. She had been catching a nap. Her hair was all crinkly golden, and little curls of it lay on her forehead. She put out her lovely pink hands, and Uncle Max came toward her as if she were the only one that counted.

She said, "Max! Is it really you, old rover?"

And he said, "It's really me. Same old scapegrace."

Aunt Fannie chattered, "Did you hav dinner, Max? Did you have—"

"What a question, Fan!" said Boyd' mother. "Dinner!" And she and Unc Max laughed as if they were enjoying good joke.

AUNT FANNIE, however, scuttled in the kitchen, where she conversed wi Lena, the maid, in quick, whispered se tences. "Eggs. With that Spanish filli you know. Tomatoes, and onions, and gre peppers. He's crazy about that. A lyonnaise potatoes. And—and—cal That strawberry shortcake, Lena. any of it left?"

She came back into the living-room a hauled Uncle Max right out of the mi of things. "You'll talk later," she sa "Plenty of time for that." Aunt Fan was that way. She believed that the v first thing you did when people came feed them. That was the difference tween her and Boyd's mot *She* talked. And smiled. made you laugh. And all time she talked, Boyd's fa looked at her with a spr sort of watchfulness in eyes.

Finally, though, Uncle came back to the living-r and Boyd's father said, "W Max? Tell us. Where you been all these years

"Oh!" Uncle Max w a graceful hand. "E where! Trinidad. Zan Singapore. Algiers. C Ask me where I *haven't* John. It'll be easier."

Boyd's mother clappe hands together. A smile and lit up her face an eyes and her hair like a

men in Trinidad, Max? Please tell us!"

'Not many, I regret to say. The only utiful women I've ever seen are right e in New York."

Oh, Max!" said Boyd's mother.

Same old ladies' man, eh, Max?" Boyd's father.

hey stayed up till two o'clock that t. Even Boyd. And the tales Uncle t told! What he had seen! Such gs as no storybooks told about. n they rose to go to bed, Boyd's her said suddenly, "Play something, . Just a little thing?"

Tomorrow, Margaret."

No. Tonight. I insist. A tiny bit. Please? You couldn't refuse that, Max!"

"Oh, well!" He went to the great piano that stood in the corner. He ran his fingers, like spattering raindrops, over the keys. Up and down. As if he were trying the notes out. Then he began to play, softly, with his eyes closed. His nostrils quivered, and his mouth was set in a funny little smile. Over one of his eyebrows a little wrinkle came and went.

Strange things, he played. He seemed to be smelling the music, as it came from the keys. You'd have thought what he brought out was like the smell of a rose. Sweet. And velvety. And sad. But nice to listen to. Until Aunt Fannie began to cry, softly, as she sat far back in the morris chair. Then Uncle Max stopped. And everyone went to bed.

Things changed, with Uncle Max in the house. There was music, 'most any time of the day, from the great piano in the corner of the living-room. People came. Relatives whom Boyd had never seen. They all wanted to see Uncle Max. They hung about him, listening to him hungrily.

Uncle Max liked to lie a great deal in the swinging hammock on the porch, with a cigarette drooping between his lips, and his eyes far off somewhere beyond the clouds. And once, when Boyd was playing near him, he said suddenly:

Digitized by Google
Original from
UNIVERSITY OF IOWA

"Well, Boyd? And what are *you* going to be when you grow up?"

"A doctor," said Boyd promptly.

A pained look came into Uncle Max's eyes.

"Ugh!" he said. And then, "Why?"

"'Cause. My pop says they make oodles of money."

"Oh! So you're going to live the life your father cuts out for you?" He blew round rings of smoke into the air. Then he sat up and swung his feet over the side of the hammock. "Come here, son," he said.

Boyd came and stood before him. Uncle Max looked at him a long time. He put his big, slender hands on his shoulders.

"Don't," he said. "Don't be anything you haven't a mind to be. See? Don't learn a trade or a profession, and then stick in it all the years. That's not life. Travel! That's the big thing! Getting out in the world. Seeing things. New people. New places. New customs. Sunsets. Storms. Heat. Cold. Having clothes and food. Not having them. Moving. Being in the middle of things wherever they're happening. *That's* life! See?"

Boyd said, "Yessir."

TWO days later, when the family was gathered in the living-room after dinner, Uncle Max rose casually and said, "Think I'll take a little walk down the block."

He went down the porch steps. Ten years passed before he walked up them again.

But, though only half-comprehending, Boyd McKim never forgot the little sermon Uncle Max had preached him.

His mind harked back to the episode with a strange insistence. In a lull in his play, when he lay at night composing himself for sleep, or on a rainy day, when he was forced to pressing his nose against the window panes and staring out into the wet street, he mouthed the words over and over again, as nearly exact as he could remember them.

By virtue of them, as the more active years sped upon him and he began to run with a bunch, he became the leading spirit of that bunch. Ten years old, twelve years old, fourteen. He sat among them and sang his little credo. This one would be a lawyer; that one an architect; a third would build bridges. Boyd would shake his head.

"None o' that for me!" His voice high and immature. "I wanna *live*, I do! No stickin' in one place for *me!* I'm gonna travel! See the world! Everything in it! All kinds o' people! All kinds o' places! Singapore! Trinidad! Cairo! Calcutta! Bombay! Uh—uh—Bang—Bangkok! All those places! Seein' things happening. Knowin' things. *That's* life, that is!"

He wrote a composition on the theme when he was in the high school. He wrote it furiously, passionately, like a cry. The teacher, a soft, wistful person with compassionate eyes and a voice like a bell, read it aloud to the class, without comment. But when she returned the paper to Boyd it had a few lines in blue pencil across the top: "This is one kind of living. But where does it lead to? Let's talk it over, the two of us, one of these afternoons."

He didn't talk it over. But that question bothered him. Where *did* it lead to? Uncle Max had neglected to say.

He was sixteen when Uncle Max appeared again and he was able to put the query to him.

"Lead to?" echoed Uncle Max. "Does living have to *lead* to anything? Isn't it enough just to *be*—to be free, to be happy, to go where you want, do what you want? When living has to *lead* to something, then it isn't living, it's being in prison, it's being tied, under orders! Lead to!" He sniffed. "Lead to!" He went in to the piano and played something like wild waves beating on a harsh shore.

He was just as charming as ever, Uncle Max. He hadn't changed a bit. His face had the soft contours of a woman's and his hair was just as thick and black as before. Boyd's father pointed that fact out one Sunday afternoon.

"The years don't seem to leave a mark upon you at all, Max," he said, complaint in his voice. "Here you are, a good five years older than I, and you haven't grayed, or lost a hair, or got fat, or anything. Look at me, now. I'm aging like the dickens!"

Uncle Max laughed. "What would you?" he said. "A wife, a family, a house, a position in the community, and still keep your looks and your health? It doesn't go that way, old man. No, siree!"

It was during this second visit that Boyd discovered why his mother was always so sprightly when Uncle Max was about. And why Uncle Max always looked at his mother as if she were the only person in the room. His aunt Fannie told him. She told him a good many things. They were more like playfellows than aunt and nephew.

"Your uncle Max and your mother were sweethearts. Everyone thought they would marry. But he ran off. Suddenly. The way he always does. And your mother married your father. They've been happy; but I think, in the bottom of her heart, your mother still loves your uncle Max."

"*I* don't," said Boyd, stanchly defending his father. "She's crazy about Pop. And he's just as crazy about her."

"Well . . . maybe you see things clearer than I do." She never referred to the subject again.

BOYD thought Uncle Max had forgotten the little talk that afternoon on the front porch. But one afternoon, when he was doing his lessons up in his own attic bedroom, Uncle Max walked in and then seated himself on the bed.

"Well?" he said. "Still intent on being a doctor and making oodles of money?"

"No," said Boyd. "I'm going to be an artist. Sketch. Do portraits." A wild exultation filled him as he made the confession. He was trembly all over. He had told no one else of this ambition.

"An artist. M'mm." Uncle Max searched for a cigarette, lit it, clasped his hands behind his head. "An artist. Why?"

Boyd stood up straight before him.

"I've got it in me," he said. "I know." Suddenly he held out his hands. "They're like yours," he announced. "Long. Slim. Strong."

Uncle Max produced his own hands. Studied them.

"Well . . . if it's an artist you're going to be . . ." He got up from the bed, came close to Boyd, dropped his hands upon his shoulders. "If it's an artist you're going to be, I've got a tip for you. Steer clear of women! Stay away from them! If you don't, they'll side-track you. The best of them.

"Women are a snare, a delusion to themselves and to men. They seem to hold out a promise of beautiful things. We men think we possess them. But they possess *us*. And after they have us, the promise they seemed to hold out of beautiful things, turns out to be a bondage—worse, abject slavery. They turn us into scavengers, ceaseless scouts for food, clothing, shelter for themselves and their young. Not," and he stopped impressively, "that they want to. But life is hard on women. They are the agents of a great force, peopling the earth. And the children they bring forth always come first. We—men—are just grist that comes to their mill." He paused to gather his thoughts.

And, "Yes!" said Boyd breathlessly.

His uncle went on as if he had not heard him:

"An artist, my boy, must first of all live! *Live!* See things. Travel. Get impressions. Wide vistas, limitless horizons. freedom! Those are the things. Freedom to do the things you want to do. No skirts to hold you to a placid hearth. No little hands to clip your wings. You get mixed up with women, marry, and you're done for. You won't live. You'll suffer!"

And, "I *want* to live!" said Boyd McKim.

UNCLE MAX went away, suddenly just as they had known he would. A card came to them from Port Said, and another some years later from Mombasa. He was here; he was there; he was somewhere else.

Boyd grew into a handsome youth. At twenty he had fine, wide-set eyes under level brows, a clean sweep of lustrous hair, a promising jaw, and a mouth firm and eager. At twenty-three, the promising jaw was a beautiful thing to behold, a line of sheer strength and dominance from ear to chin. When twenty-five, he met Sally.

She was small, and soft, and fluffy like a kitten. She looked a good deal as Boyd's mother may have looked when she was a girl. She had the same kind of crinkliness about her; her hair, and her eyes when she laughed. Her hands were the absurdest things. You were surprised that they could do anything at all.

But indeed they could! All sorts of things, with paper, and paste, and scissors, and paints. Bunnies, and dolls, and baskets, and parasols. She sold these in the stores as party favors. She wrote catchy, sing-song, crazy little rhymes for children, and she illustrated them with ridiculous figures. Whenever you saw her she was laughing, and she never had to go outside of herself for entertainment.

Boyd was delirious about her—delirious and miserable.

Delirious, because he loved her; because the feel of her absurd little hand in his was as no other sensation; because the base of her throat was a little, pink-and-white, satiny hollow where he ached to press his lips. And miserable, because he didn't. Couldn't dare to. There

Strange things he played. You'd have thought what he brought out was like the smell of a rose—sweet—and velvety

at thing Uncle Max had said. It rang his brain warningly every time he felt nself slipping.

"You get mixed up with a woman, rty, and you're done for! You won't You'll suffer!"

nd he wanted to *live!* He was begin- g to do things with his art work. To get newhere. In the agency where he made y, slouchy, informal figures of men and men in the loose, present-day fashions, y were letting him sign his work. He had a technique. Critics said he knew his anatomy. Under all the ease and seeming slap-dash of his line work there were muscles of blood and flesh.

"You'll go far," they told him. "As you live a little more, become wiser, maturer, it'll show in your stuff. First thing you know, you'll be painting in oils. That's the real medium."

As he "lived" a little more. Lived. The thing Uncle Max was always talking about. *Living.* That meant traveling, seeing things, people, having adventures, *being free to have them!* And how could you be free to travel, to see things, to have adventures, when, while your brain said one thing, your body pulled you toward the satiny hollow at the base of Sallie's throat?

Boyd grew moody, irritable, irrational. The only time he was happy and at peace was when he was at his drawing table. But he couldn't be working all the time. He went to see Sallie, and (*Continued on page 100*)

I Haven't *Cluttered* My Head *with* Things *not in my* Line

says ANDREW MALONEY,

President of The Philadelphia and Reading Coal and Iron Company,

in this remarkable interview with

SHERMAN GWINN

TWENTY-EIGHT years ago "Andy" Maloney put away his dinner pail for the last time, packed his few belongings, and quit the anthracite coal fields of Pennsylvania for what he said, grimly, would be forever.

He had been born in those coal fields. His father, and his father's father, and his mother's father, were coal miners. For more than five years, since he was eleven years old, Maloney likewise had been a worker in the mines. That was his only training except for a smattering of stenography picked up in a night school.

"I'm not coming back; I'm done with the mines," he told his friends. And he added that a job was awaiting him in Philadelphia.

"You know, Andy, that chickens always come home to roost," warned his friends good-naturedly, as they bade him Godspeed.

"This one won't!" laughed Andy, and waved good-by.

A week later, in Philadelphia, he lost the job which he had so confidently left home to take. After days of walking the streets, he found other work; whereupon the firm which employed him failed. Again he got work, but it paid him only a little more than a third of what he had earned at the mines. Finally, his old friends heard that he had gone to Chicago. The years sped on; a quarter-century passed—and in the region of culm heaps, of looming breakers, and of the mines where he had toiled and hoped as a boy, Andrew Maloney was all but forgotten.

Then, one year ago, Maloney came home. He came back to the mines, just as they had said he would. He came back to the employer of his boyhood, to have his name restored to the same payroll in company with old friends who had stayed. He had "come home to roost."

But whereas Maloney had left at the bottom of the payroll, he came back to put his name at the very top. He had left in overalls, and he returned as president of the company! And that company—The Philadelphia and Reading Coal and Iron Company—operates forty-seven coal mines and thirty-two collieries; it employs an army of twenty-six thousand workers and has assets of $130,000,000. It is one of the greatest coal companies in the world.

Some of the shrewdest judges of men in big business today are in control of the company. A year or more ago these men got together. Inroads had been made into the coal company's business by competitors both inside and outside the coal industry. For the first time a competitor, smaller in holdings, had exceeded the company's sales. A new president was needed, and he had to be the best available man in the country. They picked Andrew Maloney as that man.

And it was a startling choice when you consider the facts. There are two great general divisions of coal: anthracite and bituminous, or "hard" coal and "soft" coal. The former is used mainly for domestic purposes, in homes; the latter mainly for industrial purposes, in factories. Each division follows its own mining processes, has its own sales methods, and commands its own market distinctly apart from the other.

All of the coal company's mines, with a single exception, are anthracite mines located in Pennsylvania. It is a "hard" coal company operating almost exclusively in the "hard" coal market. Therefore, the very natural supposition was that for the new president it would select a "hard" coal man, experienced in the Pennsylvania fields. Nobody dreamed that it would pick a "soft" coal man; but that is exactly what the company did when it picked Maloney.

True, Maloney had been born in the "hard" coal fields. He had worked about an anthracite colliery, but this had occurred during his boyhood. Upon leaving Philadelphia for Chicago, at the age of twenty-two, he had gone into the bituminous fields of Illinois and remained there. His reputation had been built and his real experience gained solely as a "soft" coal man.

IN OTHER words, when the company for which he had worked as a breaker boy brought Andy Maloney home to be its president, it paid him more than usual honor. It had reached over its own great anthracite fields of Pennsylvania all the way to the "soft" coal fields of Illinois in order to get him. It had put the *man* above his experience and above his market—that it might employ the man!

The man?

I had two talks with Mr. Maloney. The first was during the hours of business, and he broke it off abruptly.

"Let's be frank," he said. "I am grudging you every minute that you are getting from me. These minutes don't belong to me, but to this company, and this interview is not company business. I can't sit here and steal time that isn't mine."

I went back that evening at six o'clock. The offices of the big corporation were emptying out their clerks, bookkeepers and stenographers and executives. A (*Continued on page*

Old Man Trouble *can* be Worn Out

"WHEN the situation gets so tough that it can't get any tougher, there is bound to be a break," says Mr. Maloney. "Things may be bad, but hold on. Don't be surprised or frightened if they grow worse, for that is possible and not unlikely; and when they have reached their worst, hold on by all means, for that is the limit of trouble. You'll find no word in the dictionary beyond *worst*. The only change from it must be for the better."

Andrew Maloney

NEAR the coal fields of Pennsylvania, "Andy" Maloney was born. At the age of sixteen, equipped with a meager knowledge of stenography and a consuming ambition, he set out for Philadelphia. Here, he landed a stenographic job with a cement firm owned by a group of men who also had large mine holdings. A few years later, when an Illinois mine owned by his company went on the rocks, he had so entrenched himself in the confidence of his employers that he was sent to Chicago to take charge. In a remarkably short time, he was an outstanding figure in the coal industry. A year ago, when The Philadelphia and Reading Coal and Iron Company needed a president, Maloney was picked for the job.

Shorty Caraway

SHORTY is a real cow-puncher. "I started out to be a cow-puncher, and I'm proud that's what I am," he says. "Of course, I cuss my job sometimes, and wish it was somethin' else, but if I had it all to do over I reckon I'd do it again." Shorty was born on a farm in Texas, but kept running away with cattle drivers. Finally he got away for good. "I don't guess there's been a Christmas yet since I left home, but what I planned to go back," he says. "A dozen times I've had the money saved but somehow, when I hit town, the money slips away—and I couldn't go home broke. But I did send some of my own pictures once, and my sister who I've never seen wrote how interesting they were, and that Mother wished I'd send some of myself!"

The ranches were few and far between—the water holes were scarce

SHORTY CARAWAY Cowboy

(*He couldn't be anything else*)

By ROSS SANTEE

HORTY CARAWAY was thirty-four years old when I met him, and foreman of the Cross S outfit in Arizona. That was ten years ago. A little runt with steel-blue s an' a mop of hair as black an' coarse an Apache's. He wasn't much when it ne to looks. But of all the cow-punch- I have ever known Shorty is to me the st interesting. For he couldn't have n anything but a cow-puncher. Most boys I know were raised on a ranch an' e never known anything else. But it a matter of choice with Shorty.

om on a little farm in East Texas, he owed his first bunch of cattle off when was just six years old. That was all ning country even then, but occasion- someone drove a bunch of cattle by place. It made no difference to ty that he was the only one afoot. ad a long stick an' he was busier than on dog driving drags, when an uncle lived four miles down the road hap- d to see him pass the house. "What- doin', kid?" he yelled. "A-punchin' ," said Shorty. By promising to let ty ride a pony that he owned he y talked him into going on back with him.

e next time Shorty started out he ust fourteen. He got a little farther this trip but they brought him back ond time. A cousin who was just his n' he had always ed to go out West n as they got big h an' go to punch- ws. When these were alone they l of nothing else, hey spent their in riding all the en calves an' rop- t everything in

was one Sunday on when they d it was time to They saddled up their horses as if to take a little ride. An' that night when it got dark they were twenty miles from home. His cousin had brought two six-shooters of his Dad's to take with them on the trip. For, of course, they'd both need guns out West.

The first night out they camped in a thicket just out of sight of the road, an' using their guns as pillows, they slept on their saddle blankets. The boys had only four dollars but by stopping at each orchard they passed they made out all right until the third day. By this time they were burnt out on apples, so they stopped at a little store.

There were several people in the store but the boys were too busy with their lunch to notice anyone. But, just as they were leaving, an hombre with a white mustache an' broad-brimmed hat asked them where they were from. Shorty got full of panic when he noticed he wore a star. But his cousin was quick on the trigger an' gave him the name of a town just a little piece down the road an' told him they were goin' down the road a ways to visit folks of theirs. But the sheriff didn't seem satisfied. For he asked him the name of his folks an' he asked just where they lived. This had his cousin up a stump, for he hemmed an' hawed around. Finally the sheriff said, "I think you boys have run off." With that, his cousin dove right thru the door with Shorty at his heels, an' no movie cowboy in all his stunts ever mounted as quick as those kids. As they went out of town they both looked back but they could see nothing but dust. They finally pulled their horses up, thinking they'd lost this bird, when Shorty happened to see the sheriff coming after them riding a big bay horse. At sight of him they were off again as if the devil himself was after them.

HIS cousin was riding a good pony. But Shorty was riding an old buggy horse an' that first heat had finished him. The sheriff was gaining all the while. When he yelled at them to halt, his cousin passed Shorty like a shot an' went on down the road. Shorty flattened out on his horse, for he expected the sheriff to shoot. But he was still beating a tattoo against his horse's ribs when the sheriff drew up 'long-side an' got his horse by the bits. Shorty says he wouldn't have been surprised if the sheriff had shot him then, but instead the sheriff laughed.

As soon as he saw that Shorty was caught, his cousin came on back an' the sheriff took the boys back to town. After putting their horses up at the

This time the punchers hazed him away from the fence an' Shorty kept his seat

It rained all that week before Christmas

livery barn he took the boys over to the jail, an' after showing them all through the place without a word he took them home to supper with him. For Shorty's Dad had wired him to be on the lookout for two stray boys.

That night when the sheriff went uptown to wire Shorty's Dad, he took both boys along. Everyone they met was curious, for the way they had left town that day had stirred the whole place up. Each time someone asked who they were, the sheriff would look real serious. "I'm not real shore," he'd say, "but from the looks of them guns they was packin' I think it's Frank an' Jesse James."

THAT one trip cured his cousin of all his interest in the West but Shorty had nothing else upon his mind, so his father finally told him he could go. Thinking that when he found out what he was up against he would be glad to come back home. But it was just twenty years from the time that Shorty rode away till he came home again.

A neighbor boy had an uncle living on the edge of the cow country an' Shorty planned to ride that far with him. It took six weeks to make the trip. His pardner was two years older than Shorty an' taller by a head, but he got his belly full of cow-punchers after spending one night at a ranch.

The first real cow outfit they struck was across the line in New Mexico. The wagon had just come in that day an' the place was full of punchers. The boys didn't get a job but the foreman told them they were welcome to stay an' rest their ponies up. That night the boys set around pop-eyed an' listened to the talk. No cowboys have ever been known to miss a bet like that, an' the boys heard plenty that night.

A red-haired puncher finally spoke to them as if he'd just discovered they were there. The boys were glad to talk, an' when the puncher switched the conversation around to skunks both boys fell for it. "I ain't afraid of skunks," Shorty says, "for I've trapped lots of skunks at home." "Kid," said the redhead, speaking up, "you ain't never seen no skunks like the kind they've got out here. Of course, these skunks out here smells pretty much the same as the one's you're speakin' of, but these out here goes mad." Shorty vaguely remembered of hearing of hydrophobia skunks before an' he looked at the foreman of the ranch, for he had some doubts of Red. The foreman took a long pull on his cigarette. "I reckon it's so," he said, "but it's goin' on six months now since the last man here was bit."

"Funny thing," said the redhead, "that feller was sleepin' right where you boys will sleep tonight, when all at once we heard him squall, an' here he come a-tearin' right through this room an' right on out the door a-slobberin' at the mout We was shore scairt." "I'll say we was said the foreman. "What did you do asked Shorty. "Well, there wasn't mu that we could do," Red said, "but we up the rest of the night with our gı right in our hands, for he might come b at any time an' mebbe bite some one of But as soon as it broke light we sadd up an' cut for sign. When we fin jumped him out I was lucky enough to a shot at him." "What did ya shoot for?" both boys asked at once. "I n hated to kill a man as much as I did hi said Red, "but we couldn't have him nin' loose like that, for he might bite sc one."

SHORTY says that things were co too fast for him. At first he figur was a lie, then again he didn't know nobody cracked a smile. As soon a redhead finished with his yarn he outside the house, but shortly he back again an' began playing stud wit other puncher. No one paid any a tion to them till they started talking But as soon as his pardner began cu him Red made a grab for his gun, a pardner dropped the car the floor an' ran right t the boys. One look at gun was enough for An' they both made a for the door. As they re the door they heard a but they never did look for just then they hit th Red had stretched c an' both boys fell over

It was only a split till Shorty was up ag on his way, but in th second his pardner ra off from him. They w shooting from the d

UNIVERSITY OF IOWA

Shorty laid down and flattened out as flat as he could get. As he lay there wondering how many had been killed, he heard a cowboy laugh. At first he didn't get it, for shooting a man in a card game was no laughing thing to him. But just then he heard a puncher say, "Didn't the skinny one run." "The little one never throwed off," another said, an' then the whole bunch laughed. As soon as he saw that it was all a joke, Shorty came on back an' tried to laugh it off. But they had to hunt his pardner up.

He liked the life they led

In that one night his pardner saw enough cowboys to do him the rest of his life. He started back home next day. But Shorty drifted from ranch to ranch for the next six months looking for a job. Shorty says it never occurred to him to go back home once he had started out. He never gave it a thought. He only had one thing upon his mind, an' that was to land a job. For the punchers he met just suited him an' he liked the life they led, an' from the very beginning he liked the lonesome flats an' the coyotes that howled at night.

EACH place that Shorty stopped they usually told him if he'd only come a few days earlier they might have put him on. Until Shorty began to think that he was jinxed. Not realizing that there was nothing around a cow outfit he could do and the punchers were only trying to spare his feelings with their talk. He was always welcome to stay an' rest his pony up. But he couldn't land a job. Occasionally some cowboy tried to talk him into going on back home. For after a few months he had come to the place where he was wearing cast-off clothes that cowboys had taked him to. But there was only one thing on Shorty's mind, and that was to land a job.

When he missed the ranch he was headed for, Shorty laid out at night. He'd pull the saddle off his horse and turn him loose, then sleep till it broke light. At first he didn't mind it, for he liked the lonesome flats. But summer soon slipped away and those fall nights got mighty cold. An' often Shorty was up walking to keep warm when the morning star came up. Most kids would have given up an' gone back home, but Shorty was going to be a cowboy no matter what else came along.

The week before Xmas he stopped at a ranch an' the punchers were mighty proud he came. For they were just ready to cut the cards an' see who stayed at the ranch an' fed the ponies while the rest went in to town to celebrate. Shorty stayed alone at the ranch. It rained all through the week. But Xmas Eve it started in to snow. It was the first Xmas he had ever been away from home. An' Shorty says that Xmas Day was the longest he ever spent.

In due time it was New Year's and then the day after. Shorty was still alone, when he heard a drunken puncher squall outside as the outfit came riding in. Shorty ran outside to watch them all unsaddle. The whole outfit was still drunk, an' two punchers had passed out an' were sound asleep still sitting in the saddle.

"Here's somethin' for ya, kid," a drunken puncher said, untying a package from behind his saddle. An' when the rest of the outfit laughed, Shorty took it in the house where he could open it alone, for he was afraid they were teasing him. But it was a bran'-new pair of boots. It was no time before he had his hobnails off, an' as he walked around in these high heels there was no one living he'd have traded places with right then. But the boots were less'n half of it.

Each cowboy had brought him something. They gave him one package at a time. An' they had thought of everything from underwear to socks an' a heavy ducking coat. The last thing they pulled on him was a bran'-new Stetson hat. Shorty says he's never had a Xmas quite like that before or since. For each cow-puncher had remembered him no matter how drunk he was.

"I stayed on my horse an' follered him across"

It was in February that Shorty landed his first job, tending the ranch at a horse outfit at fifteen dollars a month. There were two cows to milk, some chickens to feed, an' he was supposed to keep the ranch house clean. The rest of the time he waited on the peelers who were breaking horses there. For it was a straight horse outfit. They didn't run any cows.

The old man who owned the place was seldom there. But he gave Shorty particular instructions to keep off all the broncs for fear that he'd get hurt. But Shorty had waited too long to miss a chance to learn to ride. And the only time the old man's orders went with him was when the old man was around. For the bronc peelers were willing, an' there was hardly a day but what Shorty was on some bucking horse. For as soon as they let the hammer down on some new bronc, the peelers let Shorty try him. "Want to try this one, kid?" they'd say, an' Shorty would pile on. He couldn't reach their stirrups by a foot an' he got plenty of falls. But in six months he rode so well the old man raised him to twenty a month an' Shorty was breaking horses.

Shorty often laughs about that raise an' how it came about. One night in the ranch house he happened to hear the old man tell the head bronc rider if some light rider came along to put him on, as he wanted some young colts broke. Shorty was in the other room but he happened to hear it all, an' Shorty says his heart skipped several beats when he heard the head bronc fighter say, "Why don't you put Button on?" "They'd kill that kid," the old man says; "he's nothing but a boy." "Like hell they would," the bronc peeler says. "He's been ridin' broncs from the day he landed here, an' ridin' tough ones too."

SHORTY eased outside an' spent the next half-hour just talking to himself. But it wasn't until next morning that the old man spoke to him. Shorty was feeding the chickens and the old man looked at him a good five minutes before he cleared his throat. And when the old man spoke to him Shorty got full of panic, for what the old man said to him wasn't what he expected.

"Thought I told you to stay off them broncs," the old man finally said. "You did," said Shorty, weakly, "but if you'll just let me stay an' tend the ranch I won't do it again." At that the old man grunted and cleared his throat again. "Well, as long as you've gone an' learned to ride I'll tell you what I'll do. I want some young colts broke; the foreman will show you the ones. An' I'll raise you to twenty dollars a month an' see how you make out. Another thing," the old man said, "next time I go to town I'll bring you a new saddle, for that one of yours is no good."

At that the old man walked away an' Shorty says he (*Continued on page 84*)

Gypsy

By KONRAD

SOME years ago, while traveling with gypsies, I had occasion to explain to the chief of the tribe that no two things were ever exactly alike; that no two people were exactly alike; that no two leaves, no two drops of water, were exactly alike. Chief Murdo answered: "Yes, but what fool wants to look so close as to see the difference? What thing, or person, is ever worth so much trouble?"

Because of their nomadic conditions of life, the gypsies have never had to look at things so closely and have been satisfied with the general outlines that present themselves as one passes by. Gypsies' eyes have acquired a technique of seeing more at a glance, and more rapidly, than the eyes of any other men can see. A glimpse of a person and the gypsy can tell more about the newcomer than he is willing to admit, and can tell more of the other man's character than years of close study might reveal. The quickness of eye of the gypsy is the most astounding mystery.

While traveling in horse-drawn wagon or automobile, any gypsy can tell at a glance whether another gypsy caravan has passed by that same road and whether it has gone right or left. Frequently also he knows the name of the tribe and whether anything untoward had happened on that very road: disagreeable encounters with the police, or unfriendly attitudes in the people. All this and a good deal more is read from the *patteran*, the sign, that the gypsies leave on every road they pass. And they don't neglect leaving a more detailed account of the trip at a crossroad. Even after one has been with the gypsies a long time and has been shown the signs that were left on the road, and has looked on at the making of patterans, a white man not only does not know how to leave these signs on the road, but he cannot even find them. And yet the gypsy sees them and reads them without getting up from the seat of his cart or without taking his hand off the steering-wheel of his automobile.

A patteran is usually composed of two small sticks, seldom longer than six inches apiece, placed crosswise, one on top of the other. The four open triangles which these sticks form tell the tale which the gypsy wants to leave behind. There are infinite possibilities in the placing of these two sticks. Only on very rare occasions does the gypsy find it necessary to leave more than one patteran. When a gypsy caravan comes upon two pairs of sticks laid one upon the other, the whole tribe stops to read them accurately.

A ship's log written closely on four pages could not have more detail than that left upon four little sticks or twigs from broken branches. When a gypsy finds somewhere, in the most unlikely places, where neither man nor beast will derange it, a patteran left in the form of a "T," he will speed up his horses or his automobile. No power on earth can stop him. The "T" sign means: "Run, as fast as you can!" The caravan will not stop until another patteran is found telling that the danger is over. Perhaps it means that the population on that road is extremely unfriendly. It may also mean that the gypsies who had left the patteran have *dukkered*, swindled, robbed, some woman of all she has. A gypsy never stops to question such things. When a patteran tells him to run, he runs.

At another time a gypsy caravan will meet two sticks placed so as to form the letter "V." At once the caravan will slow up of its own accord, and everybody will be looking right and left for other signs indicating where they should camp for the night. In a few minutes the children will discover where the previous gypsies have nighted. Even if the previous camp had been there a year or two before, the caravan children will discover the exact spot and will frequently be able to tell the name of the tribe that had been there, how long they had remained, and which they had gone. Mothers instruct their children in the reading of patterans. At the age of six, children of nomadic gypsies are past masters in that form of literature.

No caravan will leave camp, no caravan will pass a crossroad, without leaving a patteran behind. And the thing is done so rapidly, so accurately, that an outsider, though living with the gypsies for months, will seldom catch them at the act.

IN SPAIN, Roumania, and England there are scholars who have succeeded in learning the secret language of the gypsies, the *Calo*. I have met white men who spoke a deeper *Calo* than many of the younger gypsies themselves. Yet no white man was ever able to read more than one or two patterans. Chi Panaiti, a celebrated Greek gypsy scholar, admitted to me that his learning, his knowledge of gypsy lore, was incomplete because he could not read patterans. I have heard gypsies

sWisdom

)BERCOVICI

m at the sight of a patteran: "Poor Yorgas, they have lost orse." At other times: "Stan's older daughter was married e crossroads to the left." And at still other times: "Don't to ask for work here." And even while these things were , the very same patterans they had found were rearranged kly so as to give further information to gypsies who would e tomorrow, next month, five months, or five years from .

ATTERANS are not made of sticks only. Occasionally they re formed out of stones. The uninitiated one passes them at his own door and at his own gate, without knowing it. gypsy laughs at the inability of the white world to read ecret writing; laughs at telegraph and telephone and letter ing and book writing. If one could read all the patterans, would come into possession of the exactly recorded chronicle erything that has happened to the gypsies in the country g the year.

once found a patteran made of twisted hay on the hinge of gate leading to my barn. Hurriedly I put heavy locks on door. The patteran read: "These barn doors are left at night. We have not been able to take advantage of "

emoving the patteran alone wasn't sufficient precaution, earch as I would for days and days for further information I knew was left by the gypsies who had passed, I could etect anything. Yet I am absolutely certain that another tribe on passing by will find the information, much to my mfiture and loss.

his secret, detailed, and exact language of the road was de- ed by the gypsies in the thousands of years since they left to come westward toward Oriental Europe. Like all tive people and like soldiers today in the face of danger, the es traveled in single file. Families and tribes frequently split up temporarily, and those ahead felt it was necessary to leave signs for their people behind them. The infinite variety of angles possible to obtain with two sticks was seized upon and the reading of it became an inherited instinct possessed by those of the blood alone. It took several hundreds of years to come from the Ganges to the Black Sea, and on this trip the successive waves of the gypsies who had migrated from India met very frequently and must have adjusted between themselves the interpretation of patterans. As new conditions arose on the way and troubles multiplied, the making of the patterans became more complex in the measure that the information to be left was more complicated. I fancy the language of the patteran developed very much as grows the language of a child. The first words are those of primary necessity. Primitive people seldom use more than two hundred words. Uneducated classes the world over seldom use more than three hundred words. The number of words used represents the degree of sensibility, the mental complexity, the struggle toward civilization, and the striving to express newly discovered or developed sensations.

The gypsies' necessities and complexities were those of people on the road; the language of the patteran that they had developed, and continue to develop from year to year, was expressing and satisfying those needs. Gypsies living in America have added many new words and meanings to the patteran language which baffle newly arrived gypsies. I once listened to a gypsy reading a patteran which told him that his predecessor had exchanged two worthless automobiles for one good one, and at another time I was told to keep a sharp lookout for the constables. A newly arrived European gypsy would have been baffled looking at the patteran speaking of automobiles and constables.

I HAVE even seen gypsies obtaining bootleg information from a few stones on the road; there were two chips of broken glass imbedded in that patteran. I have seen youngsters, not older than four, as able to read the patterans as the grown-ups. What is even more remarkable than the reading and the writing of these sticks is the finding of the patterans. I have seen them marked on the wooden posts of the country letter boxes in front of the gates. I have seen them hung up on the trees along the road. I have seen them on the thatched roofs of the low houses of Roumania and under the broad stairways of palaces; and in thousands and thousands of places where their ingenuity baffled mine. There are any number of patterans at

every railroad station in the United States. No white person knows anything about them, yet the smallest gypsy child can discover and read them.

One day Chief Petru, whose tribe I had followed to Cleveland from New York, told me suddenly they were in a hurry to reach a certain place near a lake in Toledo before the end of the third moon quarter. They were invited to the wedding of Tudor's daughter.

"When were you invited?" I asked.

"We read all about it while we were in Kansas City," he said. "And since we are friends of Tudor's, we are going there."

Astonished at the word "read," I asked: "What do you mean?" Petru laughed broadly.

"The *patteran*, brother."

Twenty tribes gathered at exactly the third quarter of the moon, ten on one side of the lake and ten on the other. The bride's friends and relatives clustered together, while the groom's friends and relatives formed a square camp on the other side. The invitation to that wedding had been signaled through patterans for four months over the roads of the Middle West. Those willing and able to come, those who had recognized the moniker of the host, gathered at the exact place indicated by the sticks. The patteran had also told them there would be plenty of things to drink.

We danced, sang, and drank the whole night. The *daro* of the *pireme*, the bride, was rich and generous, and the father of the *piramlo*, the groom, was not to be left behind. The bride's tribe had been waiting for the family of the groom three days and had prepared the feast. Lucullus could not have prepared a finer banquet. And when the *barossan*, the oldest of the tribe, rose to his feet at midnight and asked the father of the *pireme*: "*Des amindi i tchai?* Will you give us the girl?" and the father answered: "*Amen dasa.* Take her," twenty pistol shots were fired in the air.

IT IS absolutely necessary for people who travel together to have a community of interests; not only must they want to go to the same place, but they must also want to be together while on the road. "Misery likes company" is an old saying, but a gypsy likes to be alone only when he is very sick and unhappy or before dying. When a sick or an old gypsy begins to retire from the circle around the camp fire, or attempts to remain behind when the others are leaving, his friends and relatives know that he is either so unhappy that he wants to die or so sick that he expects to die. And they leave him, or her, alone. Should this gypsy not appear in the midst of his friends before the following moon has set, they will retrace their steps to find him alive or to dig a grave if he has died.

Sick and unhappy people are a hindrance to travel; therefore, next to the chief, the man or the woman of greatest importance in the caravan is the one best able to entertain the rest: to sing, to play, or to tell tales. The first thing a gypsy mother teaches her child is to be happy and to entertain others under all circumstances. I once saw a little boy, not older than four, laugh with amusement because his big toe was frozen. He had walked barefoot in the snow with the temperature at thirty degrees below zero.

Gypsy children can walk unaided long before they are ten months old. By the time they are a year old they have been taught many gymnastic tricks, can do tumblesets, take the most grotesque postures, sing, and dance. A gypsy boy is considered a backward specimen if he cannot turn a perfect somersault at the age of four. Girl children are taught to dance long before they are able to stand on their feet. The child is taught to sway the bust to the rhythm of the mother's song, to the snapping of her fingers, and, when the father comes home, to the song of the violin or the cymbalon.

NOT only is the child made to follow the rhythm with her body, but the eyes and the tongue and the little fingers are trained to follow the rhythm. I have never seen a more comical performance than one in which a dozen little gypsy girls between the ages of one and two are trained to wiggle their ears in rhythm to the music. Later on, when the girl children have reached the mature age of five, they are trained to dance the ritual dances. By the time they are ten years old, they know the intricate movements of the *tanana*, the sacred dance.

The teaching and instructing is done without solemnity, in the spirit of great fun and joy, and the children are recompensed for their abilities, as well as for their clumsiness, by passionate hugs and kisses and by the gifts of small pieces of jewelry and sweetmeats and ribbons. The attitude of the parents toward the children is that of civilized man toward actors, concertists, and circus performers: an attitude of admiration and gratefulness, for children entertain. The gypsy is grateful to whomsoever makes him laugh and be happy.

The third day after the burial of one of the members of a family, the oldest of the tribe calls out to the bereft: "Stop crying, it makes the children sad." The youngsters are called upon to entertain; and the woman who has lost her husband or her child finally laughs and sings with the youngest one. The whole tribe will remain in one place until the "sad one," the *locorom*, has been made to laugh.

The gypsy is convinced there is no more dangerous sickness than sadness. As a matter of fact, he has no word for "sick." Instead of saying, "He is sick unto death," he says, "He is sad unto death." Happiness means health. A gypsy is never so hungry, so cold, that he will refuse to dance or to sing.

It is only recently that science has discovered that the gastric juices are influenced by the mental condition of the individual, and that food wetted with tears is like poison to the body; that the quality of the food is not half so important as the mental condition of the eater. The gypsy has known this for thousands of years. I have known many of them to eat tainted flesh without any bad consequences. It is a well-known fact that gypsies eat foods that would kill any white man, yet when a gypsy is not hungry he cannot be made to eat even a morsel. No gypsies will be urged twice to the table. We wonder that the gypsies can eat such food as would kill us; that they will eagerly throw into the pot chunks of meat of pigs and cows dead of disease. The gypsy wonders that we can eat eve a morsel when we are not hungry; drin when we are not thirsty; and wonde that we should remain alive after doin so.

"The poison," says the gypsy, "is n in the food; it is in the mouth of the eater

I am not prepared to tell whether gypsies do away with physically defecti children immediately after birth or so thereafter, but I do know that Balk gypsies, Russian gypsies, and Spani gypsies have for centuries practiced t elimination of unhealthy children. It quite possible that this practice is sponsible for the healthy condition of t gypsies. Unhealthy children are a h drance and an encumbrance on the ro One must not forget that only what able to move of its own accord, and v little more, is worthy of being tak along. Gypsies don't have to pack a unpack when they make or break can Within fifteen minutes after they ha unhitched their horses or stopped th automobiles, the kettles are over a bu ing fire and the beds are made. The ca looks as if it had been there for wee Defective children and cripples are great an impediment as sad people. S people are perpetually sick. A sad gy tale always begins: "There had b neither song nor dance for two nights Toro's house."

George Borrow, as well as other writ remarked that gypsies will never ente house in which a gypsy has died. Li wise, a gypsy will walk miles aroun churchyard rather than pass it. gypsies consider it a benevolent actio jump three times over the grave o gypsy who died in the open. Some thorities have even maintained that reason gypsies avoid living in house that they fear to die in them, and there is a tradition amongst gypsies the man of their people who died house would return to life as a pig or s other domestic animal in the service white man. But this is not so. The g refuses to enter a house in which anc gypsy has died because he considers gypsy who had lived in it a renegade. renegade gypsies live in houses.

"What is the great enemy of m asks an old gypsy riddle.

"Four walls," is the answer.

"What is an even greater enemy four walls?"

"A roof upon walls."

"And a still greater enemy?"

"A door that closes."

That the door also opens does not cern the gypsy.

ACCORDING to an old gypsy cu when a gypsy dies, his personal be ings are all burned or buried with In the Balkans the gypsies secretly their dead after giving them official I If it happens that the dead gypsy ha his own personal horse, one th had ridden exclusively the last thre of his life, the horse will also be b Why should the belongings of a ma ter up the tent when he is no longe and they are of no more use to him? should the memories of the dead n kept alive in the minds of other when he is no longer there to dan sing? Man is born with nothing should leave nothing behind him.

Gypsies never kill animals for food. They prefer to eat the meat of those naturally dead. They prefer to eat old, buried meat that they dig up, rather than buy the meat of animals killed by the hand of man. Before eating such meat, they first ascertain whether it is eatable. They dip a white onion into the water in which they first rinse the meat. If the onion remains white, the carrion is eaten. If the onion becomes tinged with black, the carrion is thrown away as uneatable.

IN THE eyes of the gypsy there is no greater iniquity than to tell a lie to one's own people. To varnish truth or not to give absolutely exact information is considered so heinous a crime that the guilty gypsy is expelled from his tribe and then branded for shame so that he will be excluded from all the other tribes. The mark of Cain rests eternally upon such a one.

Nothing is more dangerous to traveling people than misinformation. Nothing is more dangerous on the road than to give people about upon whom one cannot rely. And yet the gypsies tell the most fantastic lies to the *gajo*, the white man, and are not in the least abashed when caught and faced with their lies.

It is taken for granted that all gypsies have fortune-telling abilities; that they have what is commonly known as second sight. For some reason or other the world has decided that this mysterious people has also mysterious powers. Gypsy women have forever encouraged this belief and frequently taken shameless advantage of the credibility of people. Past masters of psychology, the gypsy women know that anyone who wants his or her fortune told is either hoping for better times or doubting whether the happy condition will continue. A single expert glance at the face of the client tells the gypsy fortune teller to which class he or she belongs. Apparently, the gypsy reads the hand or the cards. In reality, the sharp eyes fixed upon the face of the client and the sensitive fingers upon the pulse of the emotional woman, tell her the reaction to every word, to every insinuation. The face of an emotional individual is easier to read than a *patteran*. The pulse of an emotional woman is more sensitive than a mirror.

If it is a blond young girl and the pulse has begun to beat faster when the gypsy has mentioned a dark-eyed, tall man, she will continue to tell of the enemy that stands between the two; and the enemy is always of a complexion different from that of the client. The sharp eyes of the gypsy can always detect the trace of tears or of sadness upon the face of a man or woman, and forthwith she speaks of the great sorrows of the past which are going to dissolve into the happiness of the future.

"There has been a great sorrow in your family," and if the pulse responds she continues: "Someone you loved very dearly died"; and so fine are the receptive sensibilities of the gypsy woman that she knows exactly when to say: "Someone has gone on a long voyage; someone you love very much. But he will come back." She talks rapidly, knowing that of the many things she says only those that approach the truth will be remembered, while the other things will be forgotten.

How many great events can be read from a pack of well-shuffled cards? How many things can be seen in the changing shadows of the moon? And if the subject seems anxious to hear many more things, the gypsy says it can only be done privately and under certain conditions, after prayers to the moon or to Beelzebub.

An expert gypsy fortune teller can get away with the gold and jewels of a widow long before the woman realizes that she has been "gypped."

THEN there is the fetish worker: the gypsy woman who demands a few hairs or the handkerchief of the woman who has come to see her. For this kind of *dukkering* special talents are required; special talents and special appearance; a face such as has been portrayed and become fixed in the minds of people by hundreds of years of imagery in books and magazines and newspapers.

Many are the popular beliefs which the gypsy has fostered, as that of the second-sight abilities of the seventh son of a mother who has no daughters; of the effect upon love of the wane of the moon; the terrible consequences following the breaking of a mirror. Yet no gypsy believes any of these things. Should it happen, however, that a gypsy woman should delve so long into that pseudo-witchcraft that she should begin actually to believe in her own supernatural powers, the tribe will lose no time in excluding her, or in marking her as a *polyipi*, as insane, impure. Woe to the gypsy woman who has recourse to the polyipi to obtain a love potion or a prophecy of the future.

Among the gypsies in the Balkans the elders of the tribe sit in judgment to find out whether the woman is a liar or a polyipi. Should she be pronounced a liar, she is driven from the tribe. Should she be found polyipi, insane or sick, she is made to tent forty feet away from the tribe and to cook (*Continued on page 116*)

The Trail Eater

A Story of Love and the Reckless Hardihood of Youth

By BARRETT WILLOUGHBY

NOME—gay, reckless, fascinating Nome—was seething with excitement. The time for the running of the Sweepstakes Trail was at hand—and all the rest of the year Nome lived in anticipation of this greatest of all sporting events.

The winter before, Kerry Wayne had been the only member of the Malamute Racing Club to run his own team—and he had checked in three weeks after the race was over! Nome had laughed and named him the "Trail Eater," even while it loved his nerve in making the great race with a team from the refuge he had set up for outcast dogs. Kerry had had to seek health in the Alaska wilds, while his friend, Rance Herrington, was finding the richest mine in all that country. And now Kerry had returned from a summer's prospecting, to fall in love with little Barbee Neilan, just home from her education in the States—and engaged to Rance Herrington. But Kerry found more even than this to trouble him. Rance was flirting openly with Kitty, Dr. Kramer's wife; he was showing the effects of drink and high living; and he had taken in Luce Barton, the trickiest lawyer in Nome, to help him form a Racing Syndicate that was to buy up the best dogs and control the betting.

Stung by Kerry's refusal to go in with them, Rance swore he would drive one of the teams himself, using as leader Tokon, the greatest husky in Alaska and the wildest.

In a towering rage, after a fight with Tokon, he challenged Kerry to drive the dog, Kerry to own him if he succeeded. That was the greatest fight Nome had ever seen between man and dog, but Kerry won and Tokon became a part of his team. With the help of "Doorknob" Balsh and "Tolovana Belle," Kerry settled down to training, with Rance's spies watching his every move and Kitty Kramer unsuccessfully using all her wits to involve him in a flirtation with her.

And then—six weeks before the race—disaster! Kerry's younger dogs sick with distemper, and neither time nor money to get more. But he did have friends. Tolovana Belle offered him the best of the team with which Wally, her husband, was on his way back to Nome from the States, and they decided to intercept Wally ten days later at Solomon Roadhouse, so that no one in Nome would know their plan.

But Lim Phayden, carrier of water and gossip for Nome, had overheard. In loyalty to Kerry, who had befriended him, he pledged himself to secrecy—but his good intentions failed under Kitty Kramer's persistence. She knew his weakness for liquor and plied him with it until she wormed the secret out of him—and then she tipped off the Syndicate.

So it came about that Wally was lured off the road before he reached Solomon Roadhouse, where Kerry and Belle waited; and Rance and Luce met him at the Golden Sands saloon with a bill of sale already drawn up for his team. But in the meantime, Lim, realizing his betrayal of his best friend, had gone on a remorseful spree. At the moment when Wally was about to sign the contract—which would mean that Kerry was out of the race—a commotion in the main saloon brought them all to the door in time to see Lim dancing in front of the stove, with a stick of dynamite in each hand and screaming that he would blow the whole place up.

He made a swift movement, as if to toss one of his sticks into the roaring stove. People scattered through windows as well as doors. Wally and his two companions leaped across the empty saloon and sprinted for the front door, the bill of sale blotted out of their minds and Lim's war cry ringing in their ears: "Siwash me, will you? Siwash me. . . ."

Illustrated by GEORGE GIGUÈRE

PART IV

THAN being siwashed no more humiliating disgrace could befall an Alaskan in pre-prohibition days. It meant placing a white man on the level of an Indian in the matter of obtaining liquor. Doorknob, true to his word, had rushed off in a fervor of disgust at Lim's irresponsible condition, and brought about Lim's siwashing.

On Saturday morning, behind every bar in town, was posted a notice in which the Court warned all individuals that anyone furnishing Phelim Phayden with intoxicants would be liable to fine and imprisonment, and in case of saloon keepers the cancellation of liquor licenses.

Lim, unconscious of his disgrace, had awakened at noon in Hogan's Alley in the cabin of a friend who had taken him home the night before. He was alone, except for Crooger. A careful search of his pockets revealed less than five dollars—all that remained of his savings during four months of sobriety. He held the coins in his hand and eyed them, with shaking head. Then, summoning his dog, he wavered forth to the Golden Sands.

He arrived during a slack hour. Kelly, the bartender, stood behind the bar polishing glasses.

"Sure, Kelly dear," Lim groaned, "I'm as jumpy as a hen after her first egg, this mornin'. Give me a jolt of your rotgut, like a good lad."

Mr. Kelly raked him with a disapproving eye, and continued polishing. "

un I will! You're siwashed, you stiff! 'an't you read?" He waggled an im-atient thumb at the notice pasted on he mirror back of the bar.

Lim squinted up, slowly spelling ut the words. "Siwashed!" he said, lmost under his breath. "Crooger—e're siwashed! Come on, Crooger!" His rounds of the other saloons met ith the same result. There wasn't a ul in town who dared give him a rink. When the full import of this ruck Lim, he paused in Barracks quare and, leaning against a tele-aph pole, began to brood on his rongs. They'd kicked him out like *siwash* . . . made him an outcast . . an outlaw . . . a criminal, by e powers! By the beard of St. ichael, he'd go and get Kerry's .45 d fill 'em full of holes. He'd blow n sky-high, that's what he'd do. Lim started down the snow-covered eet in quest of the revolver. "Blow n sky-high, Crooger!" he kept re-ating.

ASSING the North Pole Meat Market, he turned, his eye caught a window display of meats newly ivéd from the States by dog-team ight—salami, summer sausage, rwurst. The latter was cut into rt, frozen lengths. Lim paused. e *slim*, grayish cylinders reminded of something—ah, now he had it, n the days of his hard-rock mining! tamite! If he only had some dyna-e now, he could command a drink *ny bar in* town. He started to k away, then turned and looked he window again.

alf an hour later he was seated re a table in the cabin in Hogan's y *busy with* a dozen lengths of wurst, some heavy wrapping paper, a wax candle. He carefully trimmed length, tossed the surplus to the gulp-Crooger, and then rolled the liverwurst e *waxed paper*. Into each cylinder he ted a short piece of fuse, splitting the uding end meticulously.

was shortly after Wally had been ted into the Dog Room that Lim ed *the Golden* Sands and edged his through the crowd toward the large that stood near the end of the bar. rew open the door, ostensibly to ob-nore heat on his shivering body.

elly, *for the love of hivin*, give me a !" he pleaded.

lothing doing!" snapped the busy nder. "Beat it, now. I've no time to r with you."

he hell ye haven't!" retorted Lim, ing from his pocket two fuse-tipped ers.

ly's yell focused every eye upon the Irishman brandishing his weapons the open door of the stove. "Hold!" nmanded. "If one of you moves a ll blow you all to kingdom come! and gints—I'm armed wid two of Number One Dynamite, each nine-inch fuse. Wan minute from e she lights, she explodes. When I *ne—two—three*,' I light one of thim. eans *go!* All of you beat it, except P. A. of a Kelly. He stays to serve last drink. Thin I take him wid me the gates of Purgatory! . . . . . *two* . . . THREE!" A swift

Kitty's voice broke in hysterical relief. "Kerry! Come and get me! I'm freezing! I'm dying!"

move toward the mouth of the stove, and the room shook to a wild stampede. "Mush! Or I'll blow you to—" Lim didn't stop yelling until the leaping figures of Luce and his two companions had disappeared in the wake of the speeding Kelly.

The saloon was empty now; but through the broken doors and windows the mob regarded him in fascinated horror. He went behind the bar, put out a bottle and glass, came around in front and solemnly poured himself a drink. Then, thrusting a bottle of cognac under his arm, he drew a mug of beer, took a handful of pretzels from the free lunch, and placing them with several fuse-tipped cylinders on a chair in front of the stove, he took his seat before them. Crooger, with his forepaws on his master's knee, wagged and licked his chops.

With immense leisure Lim drank his beer and ate his pretzels. Presently he unwrapped a fuse-tipped stick and began to eat with a great show of relish.

THUS it was that Kerry and Tolovana, driving into Barracks Square, were greeted with the news that the marshal was out of town and Lim Phayden had gone crazy and was eating dynamite in the Golden Sands. Kerry followed the crowd and halted his team on the edge of it, just as Doorknob came running from a back street in response to a telephoned message.

When the two worked their way into the saloon, Lim was sitting before the glowing fire stuffed to repletion, his head nodding, Crooger at his feet. He was snoring gently. Beside him stood the chair holding his empty mug, the empty cognac bottle, and some of the ammunition with which he had terrorized Nome. The crowd saw Kerry catch up a stick of this, tear off the paper, and smell it.

Then, as he and Doorknob bent together over the unwrapped cylinder, the gathering was horrified anew to see both men break into roars of laughter.

"Boys!" Doorknob yelled, wiping tears of mirth from his eyes, "it's one on us—Lim's held up the whole town with a mess of—frozen sausage!"

When Lim was awakened, he found himself for the first time in his life a person of importance. He had played on Nome the greatest joke in the history of the town, and the majority of the fun-loving populace rushed upon him, laughing, clapping him on the back, telling him what a clever fellow he was. They wanted to celebrate the occasion in an appropriate manner; but Kerry hustled the reluctant Lim to his sled. Wally and Tolovana, having met in the crowd, came teaming along behind in the dark.

Arrived at Lim's cabin, Kerry put the protesting old fellow into his bunk fully dressed, and tucked the fur robes about him. Almost before Crooger had settled himself in his accustomed place at his master's feet, the siwashed one was sunk in slumber. Convinced that he would sleep until morning, Kerry went back to the Kashim to talk dog with Wally and Tolovana, who awaited him there.

UNIVERSITY OF IOWA

Several hours later Lim woke and sat up in his bunk. Despite the fact that Crooger came snuggling against his chest, he was conscious of loneliness. He felt the need for joviality, for the glorious, intoxicating hours in the Golden Sands.

He got deliberately out of his bunk in the dark. Everything about him swam gently; he too swam, enveloped in that warming magic haze. "We'll go down to the Golden Sands, Crooger, an' show 'em. Me an' you'll show 'em, me lad!" he kept repeating as he fumbled for the door.

BUT Crooger didn't want to leave the cabin. He whined piteously and tugged at his master's mukluk, trying to hold him back. Lim found the door and lurched out into the darkness. With a roar the blizzard was upon him, slapping him against the side of the cabin, blowing the breath from his body.

"Hurroo!" Lim leaned against the wall and broke into the quavering wildness of an Irish song. In a lull he spread out his arms and, like some grotesque dancer, wavered forth, his liquor-warmed body numb, his spirits soaring with the shouting wind. Arrah, what a merry monster was the wind—catching him up in its arms, tossing him into immensity, calling to him like a playfellow, shoving him along through the thick-whirling snow, shoving him along over the tundra to the glow of the Golden Sands—the light and music and laughter of the Golden Sands! . . . But was he going in the right direction? For a moment a flicker of doubt stirred in his mind. Then—what matter? For Lim Phayden all ways must lead to the Golden Sands. . . . "Hurroo! Crooger, c'm on, li'l dog. . . ."

But—where was Crooger? Where was the wee fella? He must wait for him. He would wait for the little dog, here in the lee of a snowdrift. How warm it was against the drift; and how tired he was. . . . Drowsy . . . drowsy as he'd been in the Golden Sands. . . . He'd just sleep a bit till Crooger caught up with him. . . . "C'm on, Crooger. . . . C'm on . . . li'l . . . dog . . ."

Far behind came Crooger battling with the blizzard that beat him down, toppled him over, flung him into the drifts. Each time he'd paw his way out and struggle on.

When he came at last to where his master waited, sunk against the slope of a drift, he leaped upon him in a transport of gladness, licking his face, snuggling against his chest. But for once Lim had nothing to say to Crooger. He was asleep. His arms were flung out against the drift, stiff, like the arms of a cross. Crooger couldn't wake him.

He tugged frantically at his shirt . . . sat up and looked at him . . . whimpered . . . waited—a snowy little dog with frosted bangs over his eyes. Then he pointed his muzzle into the storm and in a fervor of anguish that shook a last forlorn tinkle from his collar bell, he sent his cries for help keening through the blizzard.

The next day when Kerry found them, far out on the bleak tundra, Crooger was asleep too, his gallant little body spread protectingly over his master's still heart. . . .

The next four weeks were the busiest of Kerry's winter. He had selected seven dogs from the Ballinger team, and had begun an intensive course of training to develop speed. In the short time left him before the race, this would have been an impossible task but for Duna. The bob-tailed husky, working as a loose leader, managed his recruits like a canine general. And when he ran free ahead of the team the new dogs were lured into a pace that made Wally Ballinger wonder if these were the same careless animals he had driven in from Valdez.

But there was one he had no trouble recognizing as his own. Cultas, faster than any other dog in the Ballinger team, was as quarrelsome and vindictive as a drunken siwash.

The first time Kerry tried him out, he hooked Duna on the end of the towline and placed Cultas directly behind. The team had hardly started when Cultas tried to pull out to the side. Duna looked back, his lips lifting in a warning growl.

"Line him up, Duna!" directed Kerry. "Make him be good!"

The husky leader whirled, grabbed the dog by the throat and gave him such a trouncing that a few moments later his yips for mercy pierced the air. It took two of these drubbings before Cultas realized he had met a leader that he couldn't bully. Then he jogged along well enough in the team; but the moment the dogs were turned loose in the Kashim yard, Cultas jumped Duna—and got the whipping of his life. After that, Duna had only to growl at Cultas over the partition between their stalls, to reduce him to instant order.

Kerry had troubles to contend with outside of his kennels. His opponents were trying in every possible way to get his time with his new dogs. But on all his workouts he used his weighted sled; and in order to throw his watchers off farther, he never trained two days in succession with the same dogs hitched at the head of the towline.

ABOUT the middle of March the Sweepstakes Carnival opened with a great fanfare of bugles, the music of the Fort band and of the Arctic Brotherhood orchestra, and the attendance of every man, woman, and child in the vicinity. The affair had been going for five lively days and nights before Kerry realized that the last night had come and he'd been too busy to go down to see the spectacle of the year. Accordingly, he got into his best parka, a light-weight garment of white fur trimmed with a border of black-and-white triangles, and, winding a gay-colored sash about his waist, he swung his skates over his shoulder and set out for the skating rink.

The carnival was in the full, noisy swing of its final night. Everyone was dressed in his finest furs and fluttering the racing colors of his favorite team. In that half of the rink roped off for skating, fur-clad couples, singing, swung to the rhythm of a popular song.

The crowd was thickest and loudest about the balloting booth. Voting for the Sweepstakes Queen had reached that crucial point where all other contestants had dropped out, leaving the race to Kitty Kramer and Nina Bernard. At intervals when there was an intermission in the music program, the ballyhoo man announced the numbers he kept changing on the small blackboard outside the booth.

"*Mrs. Nina Bernard* . . . . . *5,232!*"
"*Mrs. Kitty Kramer* . . . . . *4,538!*"

It was clearly Nina's night. Kitty, being no skater, was wise enough to realize her awkwardness. She mingled with the crowd about the voting booth, exercising her charms as best she might at close range. But Nina was at her best on skates. Tonight she was in white, a veritable frost creature in a short, full, velvet costume trimmed with white fox and crystal beads. Like a wind-blown snowflake she darted and swirled about the ice, calling and laughing to her cheering friends behind the ropes.

Rance Herrington was skating rather solemnly with Barbee, who looked like some vivid little girl of the woods. She had on ivory-toned buckskin, fringed and trimmed with bands of fine beadwork in crimson, gold, and dull blue. Her loosened dark hair was bound Indian fashion across her forehead with a band of the same colors.

Luce Barton claimed Barbee next. With evident reluctance she swung off with him. Kerry lost sight of her for a time, because a group of young girls, espying him leaning over the balcony, beckoned and called him so insistently that he was obliged to descend the narrow stairway to the ice-floor.

IT WAS after eleven o'clock, and Rance Herrington and Luce Barton had gone to a balcony box, from which they were looking down at the seething, colorful crowd. Nearly all the skaters had abandoned the rink for the voting booth; but among those who still circled the ice were Kerry and Barbee Neilan. Rance knew exactly how many times Kerry had skated with Barbee. His black eyes smoldered.

"Oh, Rance! . . . Rance!" It was Kitty's voice. The curtains at the back of the box were jerked aside, and she stumbled in. "Rance!" she wailed, "I can't stand it! I want to die—to die! Listen"—she caught his hands. "Hear them!"

"*Mrs. Nina Bernard* *8,2*
"*Mrs. Kitty Kramer* *5,7*

"Do you hear, Rance?" She raised a tearful face with its quivering red mouth. "She's ahead of me. She'll be Qu You mustn't let her! You've got to something, Rance! You've got to!" covered her face with her hands and into sobs.

"Good—heavens!" Herrington gl at her shaking shoulders. There were pity and annoyance in the look. "W your pride, Kitty?"

"Oh, Rance, I'll do anything—any for you, if you'll buy me enough vo beat her." Looking up through her she caught at his arms. "Oh, see fifteen minutes left before the ballot Rance—Rance—"

"Do you mean that, Kitty, about anything for Rance?" Luce Barto beside her, patting her arm.

Rance brought his fist down table. "Look here, Luce, you'll m bargains for me!"

"Sit still, old man. Let me handl

Barbee stared at him as if she could not believe his words

he Kashim—and that's not the way to him. I'll come to see you tomorrow tell you what you're to do. Is it a bar-? . . . All right." He released her, stepping quickly to the back of the parted the curtains. "Watch me," he . "In a quarter of an hour you'll be Queen, Kitty. But remember this, lady—I'm buying the votes tonight; you're paying for them later!" . . . s the day of the Sweepstakes drew er, excitement in the town increased. n up and down the coast men began ng in, filling the hotels, the saloons, streets. Everywhere was the buzz of dog talk—the "deep dog dope" of racing Nome.

Kerry, having studied a map of the Trail, had already selected his temporary resting and feed camps along the way, and Doorknob had prepared the dog feed to be cached at these stations. The other racers had sent their feed on; but Kerry, wishing to attend to this personally, had delayed in order that he might be present at the drawing for position, which meant so much to a driver. But for one reason or another, the officers of the Malamute Club had put off the drawing from day to day, until now he could wait no longer; Doorknob would have to take his place should the drawing be held during his absence.

A few days after the carnival, he loaded up his sled, the lithe racing model he had built so carefully, and the following morning, before Nome was awake, he and Wally Ballinger were swinging along the Sweepstakes Trail. This was the first time he had used the sled, and the first time he had taken his dogs out on the racing route.

The weather was perfect—clear, cold, invigorating—and the Trail itself under these conditions not difficult to travel. He cached his food in trees and in small tents, which he erected (*Continued on page 65*)

From *the* Ground Up

By MARY B. MULLETT

Drawings by
CLAYTON KNIGHT

DAZZLING blue sky overhead. A few fat, lazy little clouds parked along the western horizon. And, winging their way through the sunlit air, half a dozen airplanes, their motors droning like gigantic bees.

It was a Saturday afternoon at Curtiss Field, half an hour's train ride out of New York. Below the little white clouds, along the edge of the field itself, was a broad, black curving band—the tops of hundreds of motor cars. Some of them had been there for hours. Many of their occupants had brought picnic lunches with them. For whole families, a day spent on the flying field was an almost weekly event. And on this Saturday easily fifteen thousand people were grubbing about the field, moving in and out of the dust spouts stirred up by industrious propellers, pausing at the refreshment stands, and always groping back to the mysterious flight activities at the starting line.

At intervals, a plane would descend and discharge its passengers. Climbing awkwardly out of the machine, they would pause to give the plane a long look of mingled relief and triumph! It was perfectly evident that they thought they had been risking their lives. Yet they had paid five dollars apiece for the chance to do it; and on the same afternoon, at other flying fields, hundreds of other people were paying their own good money for what seemed the same breathless chance.

How much of a chance were they really taking? How many people want to fly? How many people do fly? Where do they go? Why do they choose to go by air? How much does it cost them?

I was sitting on a bench at one end of the field with H. C. Ferguson, operations officer of the Curtiss Flying Service, and as we watched the scene, which, twenty years ago, would have seemed like a crazy dream, I asked him to give me some of the little-known facts about up-to-date air travel—not in regard to spectacular flights by famous aviators; but the things that you and I would like to know before we take a chance in the air.

Ferguson has several thousands of hours of flight prosaically recorded in his log book. He was a skilled flyer when Colonel Lindbergh was in short pants. But the terse sentences in his log hide a lifetime of thrills. A captain in the air service, he became, in France, instructor of American pilots assigned to combat service, a hero to war birds, the crack cavalrymen of the skies. The war over, he devoted himself to commercial aviation. He has flown hundreds of thousands of miles, carried hundreds of passengers under all sorts of conditions. So, when H. C. Ferguson talks, you listen to a man who knows his subject *from the ground up*.

"The Curtiss Flying Service," he explained, "is devoted entirely to commercial aviation. In return for regular fees, we either teach people to fly or fly them to given destinations. We make a business of flight.

"We take up thousands of people, for instance, for short hops—ten miles in the air at five dollars a passenger. We rent our machines, with our pilots, to customers. We serve the newspapers, the movies, the business man, and even the dowager. It is a straight business of selling air service of all kinds over-the-counter.

"During 1926 our planes turned in more than two thousand and sixty hours of paid flying. We taught ninety-five students and carried more than four thousand passengers. In 1928, our planes flew a total of forty-five thousand hours, equivalent to nearly five hundred thousand miles of flight, and carried more than twelve thousand passengers. This year we expect an even greater proportionate increase.

"AIR service is just what the name implies. You can hire a plane, or you can pay for a seat in one that carries other passengers. It is not a bit different from buying a seat in a bus or engaging a taxi.

"Last year we carried thousands of people on what are known as 'joy-hops'—a turn around the field, lasting about fifteen minutes—at a charge of five dollars a head. But the real thrills come under the head of 'cross-country' flying." Captain Ferguson thumbed the big log book. "In our report for 1927, for example, you will note this item:

"'Cross-Country—731 hours.'

"Doesn't sound very exciting, does it, and yet those seven hundred and thirty-one hours were simply packed with human interest.

"Let me tell you what happened, under that heading, in a single day of the previous year.

"Perhap you remember that in July, 1926, there was a terrific explosion in the Naval Arsenal at Dover, New Jersey. Practically the whole plant blew up, one building after another. Houses outside were shattered; the place was like a battlefield, with fire, death, and destruction on every side. Shells were exploding and slithering across the ground, and reporters couldn't get within three miles of the actual scene.

"Not on the ground! But the air above was free and clear! So the news agencies telephoned us; reporters and photographers hustled out here to the field, where planes and pilots were ready for them.

"WE WERE seventy-five miles from the scene of the explosion, but we made eight round trips that day. The reporters got their eye-witness stories, the camera-men got their pictures, and the public got the news!

"All this happened on a Sunday, and Sundays are our busiest days. It is the day that we carry most of our 'joy-hop' customers and do most of our instructing. But we always have a number of reserve pilots whom we can summon when we need additional crews; these men handle the regular Sunday business.

"Altogether, our planes flew thirty-five hundred miles that day; and every flight was completed on schedule, without any hitch whatever. It was simply a case of meeting an emergency, and that is where the airplane is peculiarly valuable.

"Here is another example of what is included under 'cross-country' flying: Remember when the Junkers transatlantic plane was forced down at Greenly Island off the coast of Labrador, early in the spring of 1928? Well, that was one of the most exciting cross-country enterprises that I know of.

"There were the two Germans and an Irishman, with one of the greatest newspaper stories of the year, marooned on one of the loneliest spots of the globe. True, they were only eight hundred miles from Quebec. But what miles! No trail

oats, for the St. Lawrence was frozen and a dog-team journey over those ble mountains would take months. ors went crazy and grabbed the tele- e. Within five hours after word that the Bremen was down, every of our planes was chartered, and we have leased half a dozen more if we had them.

EVEN of these planes took off the next day, carrying reporters and photog- ers, for St. Agnes Lake, the little lake ng in the woods outside Quebec. took off from here in the sunshine, green grass under their wheels, and d amid a snowstorm on a frozen lake. of them carried sets of skis in the ge, to be exchanged for the regular ng wheels when they arrived at the

uring the seven exciting days before yers were carried out, our planes always on the job, keeping reporters hotographers abreast of the news. lane, piloted by Bill Winston, our pilot, pushed all the way through to ly Island, carrying a photographer, recorded the rescue operations.

Winston had only an old hydrographic map to guide him, but he hit the little island right on the nose! He and his passenger landed there, in freezing weather, with nothing more than rubbers and ordinary street clothing to protect them from the bitter cold.

"They actually flew the entire distance back to St. Agnes Lake non-stop, landing with less than half an hour's supply of gas left in the tanks. It took them just six hours, and the newspaper reporters would not believe their story. They had, however, been rushed along by a blustering tail-wind. On the next morning the photographer was so anxious to get back that Bill decided not to take time to change from skis to wheels. He hopped off and headed for Curtiss Field.

"You can imagine our surprise when we saw the monoplane circling over the field and observed the slender skis against the sky. Not a bit of snow on Curtiss Field! Well, it wasn't a happy thing to contemplate. Figure out for yourself the difference between rolling to a stop from fifty miles an hour on nicely greased wheels, and hitting the ground with a flat board!

"But Bill just throttled down a bit—just on the last thin edge of a stall—picked out a nice, soft, slippery stretch of grass and landed as nicely as you please. Still, not everyone can do that. After all, Lindbergh says that Bill Winston is the man who taught him how to fly.

"At the time of the Florida hurricane several of our machines carried reporters and photographers from Curtiss Field to Miami and back. One pilot was back within twenty-six hours. During that time he was eighteen hours in the air, for a number of them flying 'blind' at night, with none of the beacons which now guide night pilots over regular airways, to help him. But he picked up the lights of cities here and there and hit his objective unerringly.

"Dozens of stories like these are hidden under the item 'Cross-Country.' Reporters always speak of 'covering' a story. They cover it, literally, when they go in an airplane. We took them to the spot where the S-51 was being raised. We flew them out to sea to observe Lindbergh start his flight to Paris, and we carried a dozen of them over New York, to photograph and observe the city's magnificent greeting to him on his return. A strange day that was. Two thousand feet above the skyscrapers, we ran into great clouds of ticker tape, confetti, and shredded telephone books rising in the air currents. For a time we were afraid they might cause damage to the propellers.

"But to get back. . . . Practically every great outdoor event is now reported and photographed from the air as well as from the ground. Reporters and photographers have flown with us to 'cover' boat races, horse races, football games, and prize fights.

"BUT there are other cross-country flights that have even greater human interest than these. There is, for example, the constantly growing list of people who have flown hundreds of miles, trying to win a race with death.

"A man telephoned us from Greenwich, Connecticut, that he wanted to fly at once to Atlantic City, where a member of his family was desperately ill. Greenwich lies just across Long Island Sound from Curtiss Field—a matter of twenty-five minutes by air, but at least three hours by train and automobile. So, to save time, we sent an amphibian—a plane that can land with equal facility on land and water—to Greenwich, picked up the man at a yacht club mooring, and brought

Digitized by Google
Original from UNIVERSITY OF IOWA

him here. He transferred to a faster plane, and in a few minutes was on his way to Atlantic City. The whole job was completed within two hours."

But an incident of a different sort lies behind a single item in the log book, which tells only that on one summer's day a cabin plane carried a single passenger to Syracuse. It is the untold story of a chagrined Lochinvar, whose bride rode off without him and he, poor wretch, was compelled to fly into the West to overtake her, with just enough melodrama and wit to save his face and his bride.

They were married in New York City and he, witless youth, sent her to the Grand Central Station, with their railroad tickets, while he tarried a moment to be honored appropriately by his bachelor friends. The wines were excellent, and flowed more readily than his consciousness of time; for, when the train pulled out for the West it carried a bewildered bride—but no groom.

NOR did the horrid realization of what he had done break upon him until dawn. He paused neither to shave nor to repent. He grabbed a telephone and told us to have a plane ready—hang the cost! A plane was ready, motor idling, when he spun up to the operations office in a motor car. He overtook the train at Syracuse and, so far as the Curtiss records show, the honeymoon was saved, for the pilot came back alone.

"How much did his race cost him?" I asked.

"The regular fixed rates," declared Ferguson; "fifty cents a mile for one passenger and ten per cent additional for each passenger up to four. Generally, the cost of a special trip is figured on the basis of a dollar a mile, for a passenger is charged for the round trip, whether he flies both ways or not. This charge includes petrol and oil, the pilot's salary, and any other flying expenses. Even so, there is no hard and fast rule about this, and we are now planning to cut the cost in half.

"By this fall, we hope to have about thirty new flying schools operating in key cities in the United States, with operating headquarters at each. Suppose we get a rush call to fly a man to Miami, as happened recently. Well, we immediately wire our man at Miami and tell him to dig up a passenger for the return trip. The cost to each man, therefore, is halved. We intend to do this regularly.

"The salaries of pilots regularly employed by commercial operators average about five thousand dollars a year. Usually, they are paid a bonus for cross-country flights, although this is not the practice in the air mail, where cross-country flying is the job for which they are hired. Night flyers generally average double the usual rates because of the greater risk and skill required.

"When one of our pilots who does regular work here at the field is sent out on a long cross-country trip, he is allowed an expense account for hotels, meals, and incidentals such as tooth brushes, shaving cream, and the like. Bill Winston could you, a pilot never tell whether he'll here tonight or sleep on the window ledge an old lighthouse Labrador.

"If a passenger tends to keep a p for much more the actual flying the cost is calcul upon an hourly b as well as on the age covered. For stance, a salesman national house dec to make a coun wide tour, to last a two weeks. That m that the plane w be idle over cons able periods of So we distributed the costs, and he satisfied.

"Business men are using airplanes more and more frequency. About a ago, we had a customer who paid us a thousand dollars for a flight to Fl but to him the trip was worth much in actual cash profit, than it cost hi

"He called us up just before noon, New York, and asked us whethe could get him to Tampa, Florida, l four o'clock the next afternoon, so t could close a business deal which bring him a commission of eighteen sand dollars. We agreed to do it.

"WHILE he was on his way h automobile, we got the pla Curtiss Oriole—out of the hangar, it, and checked the motors. The was in the cockpit, with the engin ning, when the man arrived. H flung his brief case into the rear c hopped aboard, and they were c twenty minutes to four, th afternoon, the ship came to at the flying field in Tampa man made his commission.

"Often we're willing to r gamble—although we regard business, for the odds are wl our favor—with a customer. known New York banker fo about an arrangement he ha to address a convention at Sa cisco until thirty-three hour it was scheduled to open. Th running time for the regular eighty-one hours. His secret gested that he fly, and he calle

Lost Your Pep?

You May Be Anemic

By

WILLIAM S. SADLER

M. D.

PALE, pepless, easily tired, captious appetite, under weight, headaches, poor elimination?—Well, that sounds as if you might be suffering from anemia. It is a pretty common complaint, especially among people who do not get sufficient outdoor life and exercise. But, fortunately, it is a complaint which, halted in time, can be readily cured by very simple methods.

However, before going into the subject of anemia, its prevention, and its cure, it might be well to say a few words about the physiology of the blood, for in the blood, if it becomes impoverished, will be found the cause of anemia.

The blood, in addition to the chemicals and the digested foodstuffs which it may carry—not to mention waste material in the process of elimination—contains red and white cells, or corpuscles.

The white cells constitute our standing army (or swimming army) of the interior. They are important factors in defending the body against microbic invaders. But as the white cells are not concerned to any considerable extent with anemia, we shall have to leave them out of the picture. It is the red blood cells with which we have a deal.

These microscopic living creatures which in a normal person should be found in the ratio of 666 to every white cell, are saturated with an iron compound called hemoglobin. It is the presence of this compound that gives them their bright red color in contradistinction to their pale, white cousins.

Now, hemoglobin is mighty useful stuff to have around in the blood stream. It has the power, when blood is circulating through the lungs, to grab oxygen and carry it off to remote parts of the body. And then very kindly liberates this oxygen, thus enabling millions and millions of living cells to carry on their life work efficiently. But, not content with this vital function, it undertakes another: Immediately upon liberating the oxygen, the saturated red cells gather up the carbon dioxide—a product of our bodily combustion which needs to be promptly eliminated—and find their way back to the lungs, and, in the process of respiration, the gas is breathed out of the body.

Seeing what an important part the red cells play in keeping us fit, it is certainly up to us to look after them properly—give them the right kind of nourishment so that they can keep their hemoglobin content up near the hundred per cent mark. But, being what we are, frail human beings, we all allow ourselves to get into anemic state at some time or other. And, human like, knowing that ordinary or secondary anemia isn't, in itself, a condition to cause alarm, we neglect it. And that's where the first big mistake is made. Anemia isn't a condition to be neglected, unless you want to feel pepless and ailing for the rest of your life.

There are two classes of anemia, primary and secondary. Primary anemia signifies that there is something radically wrong with the blood-making mechanism of the body, and it is a very dangerous condition. A common example of this is pernicious anemia, which I shall discuss briefly toward the end of this article.

In the secondary anemias there is nothing radically wrong with the blood-making processes. The indication is that either blood has been lost, as in hemorrhage, or that the red cells are being eaten up in the liver, spleen, and other internal organs by, as some authorities on the subject suspect, certain cannibalistic white cell cousins. But the most common form of secondary anemia, and the one with which we are mostly concerned, has to do with the iron content of the red blood cells, and not the cell itself. In fact, it is possible to have the normal number of good, healthy red cells and to have insufficient hemoglobin.

If the hemoglobin in the red cells is around ninety-five, there is nothing to worry about, especially if the individual is above thirty years of age. But when it gets down to eighty-five, that's a warning. And when it falls to seventy-five—well, that is more than a warning. It is then that we begin to make a thorough search for the cause.

When the iron in the blood is low, you are bound to feel run-down and pepless. Your appetite will possibly be captious and your elimination poor. In short, as the old ladies used to say when I was a lad, you will be "enjoying poor health."

SOME time ago a mother brought her daughter to me—a sickly girl of nineteen, who had been ailing for two or three years. I had only to look at her to see that she was suffering from chlorosis, or "green sickness."

Fifteen or twenty years ago we used to see a great many more cases of this form of anemia than we do today. It comes soon after adolescence, particularly among young girls who work indoors. This girl—let's call her Mary—was listless and had a capricious appetite; she also had peculiar and abnormal cravings. She would eat a dozen sour pickles at a time and she craved chalk and magnesia. (I have heard of young people suffering from this form of anemia who will resort to the eating of clay and ordinary plaster.)

Mary's facial appearance was of that peculiar greenish or lemon tint which gives this disorder its common name of green sickness. She had poor circulation and a heart murmur. She was also nauseated at times and suffered from severe headaches.

Fortunately, Mary came to me in the midsummer, so that there were several months ahead favorable for an outdoor life. Outside of giving her a little iron temporarily, nothing was done for her in the medical way. But by planning her diet so that she ate generously of iron-containing foods, and seeing that she exercised moderately and was outdoors nearly all day long, taking in the air and sunshine, Mary was cured by Thanksgiving.

I am recounting this brief history of Mary so that you can see for yourselves how simple a matter it is to cure secondary anemia if you will only resort to natural methods.

POOR nutrition, failure to eat sufficient iron-containing food, chronic appendicitis, infectious diseases with their associated toxins, and hemorrhage are some of the common causes of anemia. But the commonest cause of all is the lack of sunshine and too much indoor living.

Naturally, I cannot diagnose the cause of *your* anemic condition. That is something for your own physician to do. I can only describe in a general way what my experience with anemia has taught me.

Outdoor life is the sheet anchor when it comes to curing anemia. Except in very cold weather, anemic people would do well to sleep out of doors, or on a modern sleeping porch. And, by the way, don't let anyone tell you that sitting in the sun, behind a window, is going to do you any good, unless the glass in the window is the type that allows the ultra-violet rays of the sun to come through.

Get out and get the real rays. Let them soak into you.

That's all right, you say, but what am I to do in the winter if I live in the city?

It is generally conceded by health departments of big cities that the health-giving ultra-violet rays are filtered out of the atmosphere to a great extent by smoke and fog. This, I admit, is a great handicap.

If you can afford it, I should advise you to resort to exposure to some form of the modern quartz light. If you cannot do this, then get out of doors all you can, and try to make occasional trips to the outskirts of your city—on Saturday afternoons and Sundays, for instance, and go in search of the sun. How a Great Scholar Brings *up his* Child

A Confession By WILL DURANT

I WISH to write very frankly and intimately about that most ancient and arduous task, the bringing up of children—the transformation of baby animals and savages into ladies and gentlemen, philosophers and citizens. I ask permission to be personal in this essay, and to use the favorite pronoun freely, because the methods and conclusions which I would suggest are the result of a very limited experience, and I should like to present them for just what they are—the adventure of two parents with one child. I admit at the outset that I am intensely interested in these three persons, far beyond anything which a total perspective would allow. Nature fills us with egotism that we may consent to live; who could bear to see himself in the light of eternity?

I am absurdly enthusiastic about my one youngster, and find it difficult to conceive of any child surpassing her in health or intelligence, in rosy cheeks or abounding hair. When I walk with her to school, and after the last crossing bid her good-by, and see with what heavenly *élan* she dances off to join her class, I consider the worries and troubles of this world as trivial; this leaping girl explains all mysteries and heals all tribulation. As I march back to my study a strange parental ecstasy envelops me, and all things seem forgivable—pain and grief and death—in a Nature whose impartial cruelty and tenderness bring out of the most unreasonable suffering a perfect child.

It is clear, then, how prejudiced I am, and how unlikely it is that I shall be able to discuss the problems of parentage with objective calm or universal validity. This must be, not a treatise, but a confession; not a textbook of pedagogy, but an admission of conduct conceivably reprehensible and ridiculous; the things I shall say may merely reveal my own ineptitude. I am as uncertain about these matters as about the most abstruse problems of metaphysics. Nevertheless, deep down in my heart, I believe these ideas of mine to be very philosophical and profound, an *open sesame* to resplendent generations; and I dream, as I look over the top of my page, that others may find in these confessions some little light for their own homes and their own parental love.

I think that from the beginning we looked upon Ethel as a creature composed of body and soul. The body was born first, and the soul was born whe Ethel smiled. From that moment w realized that all this pink flesh, the dimpled arms and legs, these blu eyes, red lips, and yellow curls, we but the machinery and instrumen of an intangible Life that would soo begin to love and hate, to desire an dream, to wonder and grow. Som how that Life would be dependen upon this body; it would be a bright flame, we thought, if the body th expressed it should be made sour and strong. We resolved that t Ethel reached ten we would hold h flesh and blood as our supreme car relying on Nature to bring forth fro the perfect body the first flowers kindliness and intelligence. We su pected that behind most misconduc or slow wits some physical ailme lay; and instead of psychoanalyzin Ethel, or preaching morals to her, offered her fresh air and wholeson food.

Show me your Children and I will tell you what you are

"EXAMPLE is so powerful that if it is good, nothing else is necessary," says Dr. Durant. "The best home and the best school, other things equal, are those which govern least. It is remarkable how well-behaved a child can be without punishments and without commands. Where the libertarian method fails it is most often because we parents ourselves violate the rules we would have our children obey. We counsel temperance, and eat and drink to excess; we teach amiability, and quarrel publicly; we ask for gentleness loudly, and we rudely command courtesy; we advise modesty, and pose as infallible gods. But children learn by what they see us do, not by what we tell them. If they misbehave, we owe them an apology; it is very likely that they are imitating our past performances."

IN THE first three months we we guilty of a grave blunder, for we a lowed our child to be used as a lab ratory for a newfangled form of de sicated milk. It is a crime which ma years of parental solicitude cann quite clear from our memories. U deserved luck covered up our m take. Despite wrong food, Et bloomed and expanded marvelous and when we discovered the error our ways, we could only attrib this good fortune to the air wh she had breathed in that first quar of a year—the air of a quiet villag the hills, where just to breathe was be made whole. Ever since, it has b Rule No. 1 with us that air co first, even before that astound miracle, omnipotent milk. Ev night, whatever the season may open windows call in the wind to t the cheeks of Ethel Benvenuta called her Welcome) into roses flame.

Many a bribe of tender words plump arms about the neck has offered us for permission to "stay beyond the year's decreed reti time. But here we have been qu and inconspicuously resolute; would not condescend even to di so absurd a proposal, and we Ethel up to bed every evening a usual early hour. Now, thoug is a great lady of almost ten y she still disappears regularly at fifteen, wishes us "tight sleep pleasant (*Continued on pag*

Will Durant and his daughter Ethel

"The secret of parentage is the ability to be young again," says Dr. Durant; "to throw off all dignity and degrees and play on an honest equality with the child." Which is one principle followed by this great scholar in rearing his daughter. Dr. Durant is author of "The Story of Philosophy," "Transition," and "The Mansions of Philosophy." Besides being a writer, he is a teacher and lecturer of note.

When The American Magazine asked Katharine Cornell, one of our most distinguished young actresses, to put on her newest gown and pose for a photographer, she solemnly assured us that she "hadn't a thing to wear." And forthwith Miss Cornell went shopping while the photographer impatiently twiddled his thumbs. As you will gather from the article beginning on the opposite page, nobody can foretell who or what will start a fashion, but it is generally conceded that if a designer can persuade a popular actress to appear in his creations, the eternal gamble is decidedly in his favor. Katharine Cornell has been starring recently in "The Age of Innocence," a dramatization of Mrs. Wharton's novel of that name.

The Greatest Guessing Game in the World

By
EDWARD F. ROBERTS

Editor of the
"Dry Goods Economist"

WHERE do fashions originate, and why? Who is the goddess who gets such abject devotion alike from queen and slavey, from Mrs. Van der Billions of Park Avenue and Mrs. Smith of Four Corners? Where is her temple and through what priests or priestesses does she issue her decrees?

To all of which questions the answer is: Nobody knows. Fashion is the name of the greatest guessing game on earth—a perennial gamble in which bigger fortunes are won and lost than over the green baize tables of Monte Carlo.

Of course, there are players with systems in which they ardently believe, just as each year optimists start for Monte Carlo with infallible schemes for breaking the bank. There are also events which inevitably will prove to be the parents of new fashions, but as the events are unpredictable, so are their offspring.

The discovery of the mummy of an ancient Pharaoh whose idea of style was a futuristic nightgown and a doormat beard, a World War or a child-sized war, transatlantic flyers, the fact that green particularly suited a famous demimondaine, such are a few of the causes—revealed after the effect was noted—which have brought us from bustles and hoops to knee skirts and bobbed hair, from curves to straight lines.

Fashions, of course, mean a variety of things. They mean those minute changes in line, in decoration, and in detail which are so important to the expert and so invisible to the mere man who knows only that styles have changed but bills have not. Fashions also mean those radical departures from the past which have sent dresses creeping up from ankle to knee, where, let us hope, they will halt; which have sent petticoats and whalebone corsets to in crinolines and transformations; and which, incidentally, have destroyed great industries and erected new ones in their places.

Who cut off Miladi's dress so that her legs are no longer a question of pleasing speculation, but of geometric calculation?

What made her throw away her garters and "roll her own"?

Why has she discarded the big, shady hat that helped to create the illusion of that schoolgirl complexion and, instead, imprisoned her shorn locks in an inverted saucepan?

Why does she wear a straight-line dress in her apparent efforts to look as much like Brother Bill as possible?

Why is it she "just simply must have" a new dress of peacock blue, when a few weeks ago she was happy in the purchase of a beige one?

© LUCIEN LELONG

We can answer some of these questions now, but no seventh son of a seventh son could have predicted the changes before they occurred. Who could have foreseen that the murder of an Austrian archduke in a town, the name of which not one woman in a million had ever heard, would cut a foot or so off the dress of all the women in Christendom, wreck the ancient petticoat business, plunge the great textile industries into despair, and give the young men of twenty nations a knowledge of female anatomy which was, perhaps mercifully, withheld from their fathers until they were safely anchored in matrimony?

If you, like the writer, are unfortunate enough to have your courting days as far behind you as the dim, pre-war era and want to realize how great the change is, just dig up one of those snapshots you must have taken in the good old summertime of 1912 or thereabouts. In spite of derby and pegtop pants, you will have no trouble in recognizing

The BISHOP Murder Case

S. S. VAN DINE'S NEW MYSTERY SERIAL

Illustrated by H. M. STOOPS

LAST INSTALLMENT

XXII—THE HOUSE OF CARDS

(Sunday, April 17th; 9 a. m.)

THE astounding news of Pardee's death had a curiously disturbing effect on Vance. He stared at Markham unbelievingly. Then he rang hastily for Currie and ordered his clothes and a cup of coffee. There was an eager impatience in his movements as he dressed.

"My word, Markham!" he exclaimed. "This is most extr'ordin'ry. . . . How did you hear of it?"

"Professor Dillard 'phoned me at my apartment less than half an hour ago. Pardee killed himself in the archery-room of the Dillard home sometime last night. Pyne discovered the body this morning, and informed the Professor. I relayed the news to Sergeant Heath, and then came here. In the circumstances, I thought we ought to be on hand." Markham paused to light his cigar. "It looks as if the Bishop case was over. . . . Not an entirely satisfactory ending, but perhaps the best for everyone concerned."

Vance made no immediate comment. He sipped his coffee abstractedly, and at length got up and took his hat and stick.

"Suicide . . ." he murmured, as we went down the stairs. "Yes, that would be wholly consistent. But, as you say, unsatisfact'ry—dashed unsatisfact'ry. . . ."

We rode to the Dillard house, and were admitted by Pyne.

Professor Dillard had no more than joined us in the drawing-room when the doorbell rang, and Heath, pugnacious and dynamic, bustled in.

"This'll clean things up, sir," he exulted to Markham, after the usual ritualistic handshake. "Those quiet birds . . . you never can tell. Yet, who'd've thought . . . ?"

"Oh, I say, Sergeant," Vance drawled; "let's not think. Much too wearin'. An open mind—arid like a desert—is indicated."

Professor Dillard led the way to the archery-room. The shades at all the windows were drawn, and the electric lights were still burning. I noticed, too, that the windows were closed.

"I left everything exactly as it was," said the Professor.

Markham walked to the large wicker center-table. Pardee's body was slumped in a chair facing the range door. His head and shoulders had fallen forward over the table; and his rig arm hung at his side, the fingers still clutching an automat pistol. There was an ugly wound in his right temple; and the table beneath his head was a pool of coagulated bloo

Our eyes rested but a moment on the body, for a startli and incongruous thing diverted our attention. The magazin on the table had been pushed aside, leaving an open space front of the body; and in this cleared area rose a tall and beau fully constructed house of playing cards. Four arrows mark the boundaries of the yard, and matches had been laid side side to represent the garden walks. It was a reproduction t would have delighted a child's heart; and I recalled what Va had said about serious minds seeking recreation in childre games. There was something unutterably horrible in

Befo

On the floor, in a limp, silent heap, lay the little girl

ctaposition of this juvenile card structure and violent death. Vance stood looking down at the scene with sad, troubled es.

"*Hic jacet* John Pardee," he murmured, with a sort of verence. "And this is the house that Jack built . . . a house cards. . . ."

He stepped forward as if to inspect it more closely; but as his dy struck the edge of the table there was a slight jar, and the nsy edifice of cards toppled over.

Markham drew himself up and turned to Heath.

"Have you notified the Medical Examiner?"

"Sure." The Sergeant seemed to find it difficult to take his s from the table. "And Burke's coming along, in case we d him." He went to the windows and threw up the shades, letting in the bright daylight. Then he returned to Pardee's body and stood regarding it appraisingly. Suddenly he knelt down and leaned over.

"That looks to me like the .38 that was in the tool chest," he remarked.

"Undoubtedly," nodded Vance, taking out his cigarette-case.

Heath rose and, going to the chest, inspected the contents of its drawer.

"I guess that's it, all right. We'll get Miss Dillard to identify it after the doc has been here."

At this moment Arnesson, clothed in a brilliant red-and-yellow dressing gown, burst excitedly into the room.

"By all the witches!" he exclaimed. "Pyne just told me the news." He came to the table and stared at Pardee's body.

UNIVERSITY OF IOWA

"Suicide, eh? . . . But why didn't he choose his own home for the performance? Damned inconsiderate of him to muss up someone else's house this way. Just like a chess-player." He lifted his eyes to Markham. "Hope this won't involve us in more unpleasantness. We've had enough notoriety. Distracts the mind. When'll you be able to take the beggar's remains away? Don't want Belle to see him."

"The body will be removed as soon as the Medical Examiner has seen it," Markham told him, in a tone of frosty rebuke. "And there will be no necessity to bring Miss Dillard here."

"Good." Arnesson still stood staring at the dead man. Slowly a look of cynical wistfulness came over his face. "Poor devil! Life was too much for him. Hypersensitive—no psychic stamina. Took things too seriously. Brooded over his fate ever since his gambit went up in smoke. Couldn't find any other diversion. The black bishop haunted him, probably tipped his mind from its axis. By gad! Wouldn't be surprised if the idea drove him to self-destruction. Might have imagined he was a chess bishop—trying to get back at the world in the guise of his nemesis."

"Clever idea," returned Vance. "By the bye, there was a house of cards on the table when we first saw the body."

"Ha! I wondered what the cards were doing there. Thought he might have sought solace in solitaire during his last moments. . . . A card house, eh? Sounds foolish. Do you know the answer?"

"Not all of it. 'The house that Jack built' might explain something."

"I see." Arnesson looked owlish. "Playing children's games to the end—even on himself. Queer notion." He yawned cavernously. "Guess I'll get some clothes on." And he went upstairs.

PROFESSOR DILLARD had stood watching Arnesson with a look at once distressed and paternal. Now he turned to Markham with a gesture of annoyance.

"Sigurd's always protecting himself against his emotions. He's ashamed of his feelings. Don't take his callous attitude too seriously."

Before Markham could make a reply, Pyne ushered Detective Burke into the room; and Vance took the opportunity of questioning the butler about his discovery of Pardee.

"How did it happen you entered the archery-room this morning?" he asked.

"It was a bit close in the pantry, sir," the man returned, "and I opened the door at the foot of the stairs to get a little more air. Then I noticed that the shades were down—"

"It's not custom'ry to draw the shades at night, then?"

"No, sir—not in this room."

"How about the windows?"

"I always leave them slightly open from the top at night."

"Were they left open last night?"

"Yes, sir."

"Very good.—And after you opened the door this morning?"

"I started to put out the lights, thinking Miss Dillard had forgotten to turn the switch last night; but just then I saw the poor gentleman there at the table, and went straight up and informed Professor Dillard."

"Does Beedle know about the tragedy?"

"I told her of it right after you gentlemen arrived."

"What time did you and Beedle retire last night?"

"At ten o'clock, sir."

When Pyne had left us Markham addressed Professor Dillard.

"It might be well for you to give us what details you can while we're waiting for Doctor Doremus.—Shall we go upstairs?"

BURKE remained in the archery-room, and the rest of us went to the library.

"I'm afraid there's little I can tell you," the Professor began, settling himself and taking out his pipe. There was a noticeable reserve in his manner—a kind of detached reluctance. "Pardee came here last night after dinner, ostensibly to chat with Arnesson, but actually, I imagine, to see Belle. Belle, however, excused herself early and went to bed—the child had a bad headache—and Pardee remained until about half past eleven. Then he went out; and that was the last I saw of him until Pyne brought me the terrible news this morning. . . ."

"But if," put in Vance, "Mr. Pardee came to see your niece, how do you account for his staying so late after she had retired?"

"I don't account for it." The old man exhibited perplexity. "He gave the impression, though, that there was something on his mind and that he desired a sense of human contact. The fact is, I had to hint rather broadly about being tired before he finally got up to go."

"Where was Mr. Arnesson during the evening?"

"Sigurd remained here talking with us for an hour or so after Belle had retired, and then went to bed. He'd been busy with Drukker's affairs all afternoon, and was played out."

"What time would that have been?"

"About half past ten."

"And you say," continued Vance, "that Mr. Pardee impressed you as being under a mental strain?"

"Not a strain exactly." The Professor drew on his pipe, frowning. "He appeared depressed, almost melancholy."

"Did it strike you that he was in fear of something?"

"No; not in the least. He was more like a man who had suffered a great sorrow and couldn't shake off the effects of it."

"When he went out did you go with him into the hall—that is, did you note which direction he took?"

"No. We alway treated Pardee very in formally here. He sai good-night and left th room. I took it fo granted he went to th front door and let him self out."

"Did you go to you own room at once?"

"In about ten min utes. I stayed up onl long enough to arrang some papers I'd bee working on."

Vance lapsed int silence—he was ol viously puzzled ov some phase of the ep sode; and Markham too up the interrogation.

"I suppose," he sai "that it is useless to a if you heard any sou last night that mig have been a shot."

"Everything in t house was quiet," Pr fessor Dillard replie "And, anyway, no sou of a shot would car from the archery-roo to this floor. There a two flights of stairs, t entire length of the low hall and a passagew and three heavy do between. Moreover, t walls of this old ho are very thick and soli

"And no one," si plemented Vance, "co

"Hope this won't involve us in more unpleasantness," exclaimed Arnesson. "We've had enough notoriety"

ave heard the shot from the street, for the archery-room windows were carefully closed."

The Professor nodded, and gave him a searching look.

"That is true. I see you, too, noticed that peculiar circumstance. I don't quite understand why Pardee should have shut the windows."

"The idiosyncrasies of suicides have never been satisfactorily explained," returned Vance casually. Then, after a short pause, he asked: "What were you and Mr. Pardee talking about during the hour preceding his departure?"

"We talked very little. I was more or less engaged with a new paper of Millikan's in the Physics Review on alkali doublets, and I tried to interest him in it; but his mind, as I've said, was noticeably preoccupied, and he amused himself at the chessboard for the best part of the hour."

"Ah! Did he, now? That's most interestin'."

Vance glanced at the board. A number of pieces were still standing on the squares; and he rose quickly and crossed the room to the little table. After a moment he came back and resumed himself.

"Most curious," he murmured, and deliberately lighted a cigarette. "He was evidently pondering over the end of his game with Rubinstein just before he went downstairs last night. The pieces are set up exactly as they were at the time he resigned the contest—with the inevitable black-bishop-mate only three moves off."

Professor Dillard's gaze moved to the chess table wonderingly.

"The black bishop," he repeated in a low tone. "Could that have been what was preying on his mind last night? It seems incredible that so trivial a thing could affect him so disastrously."

"Don't forget, sir," Vance reminded him, "that the black bishop was the symbol of his failure. It represented the wreckage of his hopes. Less potent factors have driven men to take their own lives."

A FEW minutes later Burke informed us that the Medical Examiner had arrived. Taking leave of the Professor, we descended again to the archery-room, where Doctor Doremus was busy with his examination of Pardee's body.

He looked up as we entered and waved one hand perfunctorily. His usual jovial manner was gone.

"When's this business going to stop?" he grumbled. "I don't like the atmosphere round here. Murders—death from shock—suicides. Enough to give anyone the creeps. I'm going to get a nice uneventful job in a slaughter-house."

"We believe," said Markham, "that this is the end."

Doremus blinked. "So! That's it, is it?—the Bishop suicides after running the town ragged. Sounds reasonable. Hope you're right." He again bent over the body and, unflexing the fingers, tossed the revolver to the table.

"For your armory, Sergeant."

Heath dropped the weapon into his pocket.

"How long's he been dead, Doc?"

"Oh, since midnight, or thereabouts. Maybe earlier, maybe later.—Any other fool questions?"

Heath grinned. "Is there any doubt about it being suicide?"

Doremus glared passionately at the Sergeant.

"What does it look like? A black-hand bombing?" Then he became professional: "The weapon was in his hand. Powder marks on the temple. Hole the right size for the gun, and in the right place. Position of the body natural. Can't see anything suspicious.—Why? Got any doubts?"

It was Markham who answered:

"To the contrary, Doctor. Everything from our angle of the case points to suicide."

"It's suicide all right, then. I'll check up a little further, though.—Here, Sergeant, give me a hand."

WHEN Heath had helped to lift Pardee's body to the divan for a more detailed examination, we went to the drawing-room, where we were joined shortly by Arnesson.

"What's the verdict?" he asked, dropping into the nearest chair. "I suppose there's no question that the chap committed the act himself."

"Why should you raise the point, Mr. Arnesson?" Vance parried.

"No reason. An idle comment. Lots of queer things going on hereabouts."

"Oh, obviously." Vance blew a wreath of smoke upward. "No; the Medical Examiner seems to think there's no doubt in the matter. Did Pardee, by the bye, impress you as bent on self-destruction last night?"

Arnesson considered. "Hard to say," he concluded. "He was never a gay soul. But suicide? . . . I don't know. However, you say there's no question about it; so there you are."

"Quite, quite. And how does this new situation fit into your formula?"

"Dissipates the whole equation, of course. No more need

Digitized by Google
Original from UNIVERSITY OF IOWA

for speculation." Despite his words, he appeared uncertain. "What I can't understand," he added, "is why he should choose the archery-room. Lot of space in his own house for a *felo-de-se*."

"There was a convenient gun in the archery-room," suggested Vance. "And that reminds me: Sergeant Heath would like to have Miss Dillard identify the weapon, as a matter of form."

"That's easy. Where is it?"

Heath handed it to him, and he started from the room.

"Also"—Vance halted him—"you might ask Miss Dillard if she kept playing cards in the archery-room."

Arnesson returned in a few minutes and informed us that the gun was the one which had been in the tool-chest drawer, and that not only were playing cards kept in the table drawer of the archery-room but that Pardee knew of their presence there.

Doctor Doremus appeared soon afterward and iterated his conclusion that Pardee had shot himself.

"That'll be my report," he said. "Can't see any way out of it. To be sure, lots of suicides are fakes—but that's *your* province. Nothing in the least suspicious here."

Markham nodded with undisguised satisfaction.

"We've no reason to question your findings, Doctor. In fact, suicide fits perfectly with what we already know. It brings this whole Bishop orgy to a logical conclusion." He got up like a man from whose shoulders a great burden had been lifted. "Sergeant, I'll leave you to arrange for the removal of the body for the autopsy; but you'd better drop in at the Stuyvesant Club later. Thank Heaven, today is Sunday! It gives us time to turn round."

THAT night at the club Vance and Markham and I sat alone in the lounge-room. Heath had come and gone, and a careful statement had been drawn up for the press announcing Pardee's suicide and intimating that the Bishop case was thereby closed. Vance had said little all day. He had refused to offer any suggestion as to the wording of the official statement, and had appeared reluctant even to discuss the new phase of the case. But now he gave voice to the doubts that had evidently been occupying his mind.

"It's too easy, Markham—much too easy. There's an aroma of speciousness about it. It's perfectly logical, d' ye see, but it's not satisfyin'. I can't exactly picture our Bishop terminating his debauch of humor in any such banal fashion. There's nothing witty in blowin' one's brains out—it's rather commonplace, don't y' know. Shows a woeful lack of originality. It's not worthy of the artificer of the Mother-Goose murders."

Markham was disgruntled.

"You yourself explained how the crimes accorded with the psychological possibilities of Pardee's mentality; and to me it appears highly reasonable that, having perpetrated his gruesome jokes and come to the end of his rope, he should have done away with himself."

"You're probably right," sighed Vance. "I haven't any coruscatin' arguments to combat you with. Only, I'm disappointed. I don't like anti-climaxes, especially when they don't jibe with my idea of the dramatist's talent. Pardee's death at this moment is too deuced neat—it clears things up too tidily. There's too much utility in it, and too little imagination."

Markham felt that he could afford to be tolerant.

"Perhaps his imagination was exhausted on the murders. His suicide might be regarded merely as a lowering of the curtain when the play was over. In any event, it was by no means an incredible act. Defeat and disappointment and discouragement—a thwarting of all one's ambitions—have constituted cause for suicide since time immemorial."

"Exactly. We have a reasonable motive, or explanation, for his suicide, but no motive for the murders."

"Pardee was in love with Belle Dillard," argued Markham, "and he probably knew that Robin was a suitor for her hand. Also, he was intensely jealous of Drukker."

"And Sprigg's murder?"

"We have no data on that point."

Vance shook his head.

"We can't separate the crimes as to motive. They all sprang from one underlying impulse; they were actuated by a single urgent passion."

Markham sighed impatiently.

"Even if Pardee's suicide is unrelated to the murders, we're at a dead end, figuratively and literally."

"Yes, yes. A dead end. Very distressin'. Consolin' for the police, though. It lets them out—for a while, anyway. But don't misinterpret my vagaries. Pardee's death is unquestionably related to the murders. Rather intimate relationship too, I'd say."

Markham took his cigar slowly from his mouth and scrutinized Vance for several moments.

"Is there any doubt in your mind," he asked, "that Pardee committed suicide?"

Vance hesitated before answering.

"I could bear to know," he drawled, "why that house of cards collapsed so readily when I deliberately leaned against the table—"

"Yes?"

"—and why it didn't topple over when Pardee's head and shoulders fell forward on the table after he'd shot himself."

"Nothing to that," said Markham. "The first jar may have loosened the cards—" Suddenly his eyes narrowed. "Are you implying that the card house was built *after* Pardee was dead?"

"Oh, my dear fellow! I'm not indulgin' in implications. I'm merely givin' tongue to my youthful curiosity, don't y' know."

XXIII

A STARTLING DISCOVERY

(*Monday, April 25th; 8:30 p. m.*)

EIGHT days went by. The Drukker funeral was held in th little house on Seventy-sixth Street, attended only by th Dillards and Arnesson and a few men from the universit who came to pay a last tribute of respect to a scientist for whos work they had a very genuine admiration.

Vance and I were at the house on the morning of the funer when a little girl brought a small cluster of spring flowers sh had picked herself, and asked Arnesson to give them to Drukke I almost expected a cynical response from him, and was su prised when he took the flowers gravely, and said in a tone a most tender:

"I'll give them to him at once, Madeleine. And Humpt Dumpty thanks you for remembering him." When the chi had been led away by her governess, he turned to us. "She w Drukker's favorite. . . . Fun fellow. Never went to t theatre. Detested travel. H only recreation was enterta ing youngsters."

I mention this episode cause, in spite of its seem unimportance, it was to pro one of the most vital links the chain of evidence t eventually cleared up, beyo all question of doubt, the pr lem of the Bishop murders.

The death of Pardee created a situation alm unique in the annals of mod crime. The statement gi out by the District Attorn office had only intimated t there was a possibility of P dee's being guilty of the m ders. Whatever Markham m have personally believed, was far too honorable and to cast any direct doubt another's character with overwhelming proofs. But wave (*Continued on page*

Travel Trails

By ARTHUR EBENHACK and LOREN STOUT

Make Travel Trails and Win Vacation Money

GET comfortable for the evening and go to places, or, if you are on a train or boat, see how much faster you can go via the "Travel Trail."

How to Follow a "Travel Trail"

Each word must have the same number of letters as the spaces allotted, and each word must carry down vertically at least three (more where possible) consecutive letters from the word above, as illustrated by this sample voyage solved:

CANTON	TONNAGE carries down *TON* from CANTON.
TONNAGE	UMBRAGE carries down *AGE* from TONNAGE.
UMBRAGE	COLUMBUS, the destination, carries down *UMB* from UMBRAGE.
COLUMBUS	

The clue sentence beneath or beside each trail shown on this page contains some of the words for the solution of the trail. Use as many words of the clue sentence as possible. Otherwise, use any word from a standard dictionary. Proper names are not allowed unless included in the clue sentence. The solution of these trails will be published in next month's issue of THE AMERICAN MAGAZINE.

Reno to Sacramento: *"The fat man's romance came to an end"*

Prizes THE AMERICAN MAGAZINE offers a prize of ten dollars for every "Travel Trail" accepted for publication. Send the solution with your trail. Art work not essential. "Travel Trails," to be eligible for the contest, must not be shorter than seven words nor longer than twenty-five, including the starting point and destination. Also, it must have the home town of the contestant as its starting point or destination. Send your contribution to "Travel Trails," Editor, American Magazine, 250 Park Avenue, New York City. Manuscripts not accepted for publication will not be returned.

New York to Palm Beach: *"In the land of shore umbrellas and everglades, in a wheelchair she enjoyed the winter sunshine, and the breeze in an airship"*

(Right) Valley Forge to Philadelphia: *"When the feet of his poorly clad soldiers bled, Washington called a halt until the terrible winter was over."*

A confidence man tries his game on the "mossbacks"

"Every Silver Its Cloud

By CLARENCE BU

THE newcomer in Coldriver was by no means what the inhabitants would describe as *slick*. As a matter of fact, he presented a rough, sunburned, hard-bitten personality for their inspection; and his clothes were made by no tailor of note.

He was a chunky person with gray eyes and a big mouth and knobby hands, and he wore laced boots and corduroy pants. Sometimes he omitted the rite of shaving for days at a time, and then he was a hard-looking son of toil indeed. His name was Hank Beemis, and he seemed to know why he was stopping in Coldriver as little as did anybody else. He "kind of took a shine to the place" while he was passing through—that was his explanation; and it was as good as any.

He had been born in the state, he added, and when he caught a breathing spell he ran up to rest and breathe the atmosphere of his childhood. One gathered he had been breathing a different sort of air all his life, many different sorts of air—though he talked very little about it. Indeed, Hank was reticent, though now and then he dropped some slight word which informed the watchful that he was acquainted with Singapore and Assouan and Chihuahua and Rhodesia and the Gobi Desert. All of which made him an interesting personage.

He lived at the hotel, and spent his time sitting on the piazza or tramping alone about the hills smoking a caked corncob pipe. His manner was genial, but not expansive. He responded to advances cordially, but made none himself; and there you were. You might take him or leave him. On the whole, he seemed a substantial citizen who was a better listener than talker, and one who had no fish to fry.

"I hate to get back to the heat," he said one night to Lafe Atwell, of the clothing store. "Seems like nothing is so pleasant as a cool place."

"Goin' back to one of them furrin countries?" Lafe asked, with that everlasting curiosity which was natural to him.

"Uh-huh," said Hank. "Mexico."

"Shootin' and killin' goin' on there, hain't the'?" Lafe inquired.

"Not so much so as a while back," Hank said nonchalantly. He waggled his head. "That Zapata now, he was a hard citizen."

"Ever see him?"

Hank grinned amiably. "I've seen most of them," he said, "more'n I wanted to."

"Kind of an engineer or suthin', wa'n't you?"

"Minin'," said Hank.

That ended his disclosures for that and to that person. But on another ning, in casual conversation with Kittleman—a rainy day when the threatened high water—he spoke on subject briefly.

"Me'n too much water ain't friends," he said.

"For drinkin' purposes?"

"No, minin'."

Mine *Has Got* Linin'—"

GTON KELLAND

ow minin'?" asked Sam after a barren ot flooded out. Zapata. Silver ew tell," said Sam with eager inter-

unnin' a mine, I was, down Chihua-way. Zapata rampagin' around, and borrowin'. Upshot was, he d the works, stole all the copper drove off the crew that he didn't shoot up, and let her flood." He broke off.

"Must 'a' been discouragin'," Sam ventured.

"For the owners," Hank nodded. "Settled their hash. Me, I didn't mind so much. Jobs is plentiful."

It was another day, when he sat on the lawn in front of the post office with Wade Lumley, that he idly jingled in his hand some pieces of money, among which gleamed two gold pieces.

"Funny," he said reflectively, "how gold and silver hangs out together sometimes. Worked in a mine in Mexico once where we got out enough gold, extry-like, to pay runnin' expenses."

"What kind of a mine?"

"Silver."

"And the' was gold mixed in? Must 'a' been rich."

"Was, till Zapata got through with it."

"Steal out the mineral?"

HANK laughed. "Not him. Ore's there yet, tons of it. Zapata let her flood." He leaned back on his elbow. "Good proposition, too. We was gittin' our silver and shippin' it for fifty cents an ounce, and just extry we took out enough gold to pay for that. Kind of made the silver cost nothin' a-tall."

"Gosh!" exclaimed Wade.

"Paid the owners eight hundred thousand one year."

"Jiminy!" Wade said admiringly.

"E-yah! . . . But she's full up with water now."

"Ruin it?"

"Some thinks so. Much obliged to 'em."

"How so?"

"I bought her cheap," Hank said, and there the matter ended, for no more was to be got out of him on that subject.

These conversations, passed around, became common property and, bit by bit, a story was pieced together. Lafe Atwell was able to add to it presently, the subject coming up naturally upon the mention of a railroad tunnel then building down-state.

"Tunnelin' ain't such a chore," said Hank. "I figger on runnin' about two hundred yards when I git to it."

"Railroad?"

"Naw—drainage. Clean out the water from a mine with it."

"That silver mine you was speakin' about?"

"Same one. E-yah. I own her. Figgered this scheme, and bought her for about a cent on the dollar of what she was worth."

"You own it?"

"Uh-huh," said Hank, without visible interest. "When I git through restin' up, I'm goin' down there and git to work again. Country's quiet now, and a feller can go at it without havin' his hat shot off."

Digitized by Google
Original from UNIVERSITY OF IOWA

"How'll you do it?"

"Run a tunnel through to the lower workin's, and let her drain."

"But didn't them other owners think of that?"

"New York folks," said Hank, as if that were adequate explanation. He chuckled. "I bought her for fifty thousand. They thought I was crazy. . . . W-al, mebbe I be."

"Hain't diggin' a tunnel awful costly?"

"Kind of," said Hank. "But I can lay hands onto the money any time. Figgerin' cost of everythin', we'll git that mine for along about a twentieth of what it's wuth. Fust year'll more'n pay for it all."

"Dog-gone!" said Lafe.

"I figger on takin' out a hundred dollars for every one I put in," Hank said. "That's the least. I kin swear to that much."

"Dad burn it!" Lafe said, afire with admiration.

Hank became interested in a cloud shadow moving along the mountainside, and his mind could not be transported again to Mexico, nor made to interest itself in silver mines or tunnels or millions.

IT WAS that night that Lafe stopped, on his way home, to pass the time of day with Scattergood Baines. The old hardware merchant sat in his specially reinforced armchair before the door of his store, amiably waiting for trade to develop, or, if none came of itself, to develop it.

"Evenin', Scattergood," said Lafe.

"How be ye?" Scattergood rejoined. "Clothin' business good? Folks gittin' equipped with Sunday pants?"

"Middlin'. Can't complain. Gittin' my share. . . . Know anythin' about silver, Scattergood?"

"They make dollars of it," said Mr. Baines, "which some folks saves and some folks spends."

"I mean minin'," said Lafe.

"Never give it no consideration. Got any special reason for askin'?"

"Know Hank Beemis?"

"Dark-complected feller with laced boots?"

"That's him. He's a minin' engineer, and he owns a silver mine."

"Um. . . . Kind of wondered about him some. Tryin' to sell it to you?"

"Gosh, no. Owns it himself."

"Talk about it some?"

"'Tain't easy to git him talkin' a-tall. He's goin' to git out a hundred dollars for one."

"Dew tell!" Scattergood scratched his fat cheek reflectively. "I been ponderin' that feller. Couldn't contrive any reason for him bein' here. Um. . . ."

"W-al, I got to be sashayin' along. G'-by, Scattergood."

"G'-by, Lafe. . . . Silver mine, eh?"

He sat silently reflecting, now and then squinting his eyes to cast sidewise glances toward the hotel. One half expected him to reach downward to untie his shoe laces, but his thinking had not reached the point of importance where freedom of the toes was imperative. Without moving he sat until Pliny Pickett, conductor of Scattergood's train, came along with his nightly report. This was made briefly, and to Scattergood's satisfaction.

"Pliny," he asked presently, "acquainted with a feller by the name of Hank Beemis?"

"Seen him around."

"Ever have a brother, Pliny?"

"Nary."

"Then it won't do no harm for him to be dead."

Pliny had formed the habit of keeping his mouth closed tightly when no cue came from Scattergood as to his desires.

"And left you eight thousand dollars," Scattergood went on.

"Sufferin' mackerel!" said Pliny.

"This here Hank Beemis might be an interestin' feller," Scattergood said.

"Mebbe so."

"Um. . . . If you was to meet him tonight what d'ye calc'late you'd do?"

"Talk to him," Pliny said promptly.

"Um. . . . What about? Eh? Wouldn't kind of mention your poor brother that's dead 'n' gone?"

"I might."

"Uh-huh. And the eight thousand dollars?"

"Calc'late I'd mebbe speak about it some."

"Folks does in sich circ'mstances. . . . Now, there's me. Talk about me once in a while, don't ye?"

"Cautious-like," said Pliny.

"To be sure. Allus wondered what's your real opinion of me, Pliny."

"I allus held to the notion you was dog-gone contrivin'."

"Um. . . . Ever hear I was a mite unscrupulous?"

"Folks has hinted it."

"Ever hear I was mixed up in politics for the money the' was into it?"

"More'n once."

Scattergood wriggled his shoulders. "Would you mention me if you met this Hank Beemis?"

"I could."

"Wouldn't find any excuse to kind of go over them evil characteristics of mine?"

"I could."

"Me bein' friendly with Senator Johnny Bones, down to Washin'ton, and all?"

"Everybody knows that."

"Um. . . . G'-by, Pliny."

"G'-by, Scattergood."

So it was that Mr. Beemis acquired a fund of information with respect to Scattergood Baines; saw the old gentleman in a light which prepared his mind to accept devious action and underhanded political scheming as characteristic and in tune with his code of ethics. Pliny Pickett, as Scattergood often said, was a plausible old skeezicks.

IT WAS only a day or two after this that Hank Beemis announced casually to Sam Kittleman that he was taking his departure in a week or two.

"Mexico?" asked Sam.

"New York," said Hank. "Got to pick up a little money."

"For the mine?"

"E-yah. Couple friends of mine stand ready to give me what I need. And it won't do them no harm, neither. Hundred for one, that's what they'll git back."

"Smilax!" said Sam, making use of his favorite expletive. "A hundred thousand for every thousand put in. That's somethin', hain't it?"

"So-so," said Hank negligently.

Sam cleared his throat and worked his mouth. "Er—now, say," he began, finally, "why don't you git some of that money right here? The's money around."

"All arranged with these here friends of mine."

"Seems kind of too bad to hear about sich money bein' made, and not git in on it," Sam said despairingly.

"Can't be done," said Hank.

"But, now, listen; can't you do with a leetle more, or won't them other fellers do with some less?"

Hank considered. "I'll think it over," he said finally, and Kittleman had to content himself with that.

Apparently he thought hard and favorably, for Scattergood Baines, always alert to watch the financial affairs of his neighbors, perceived signs and portents at the bank. He noted that Sam Kittleman withdrew seven thousand dollars from his account, and Wade Lumley, and Penny, and Lafe Atwell, and Deacon Pettybone, and Elder Hooper, and others divested themselves of considerable amounts. Scattergood placed the total at something like seventy-five thousand dollars.

Then he sent a message for Sheriff Ulysses Watts, not in the sheriff's official capacity but in that of an investor.

"Ulysses," he said, "'tain't right you sh'ud keep twenty-five thousand dollars a-lyin' idle."

"I hain't got twenty-five thousand cents."

"There's a feller I want should keep contented here a few days. Name of Hank Beemis. More'n likely the chance of that much money'll tie him to a post. Silver mine. Guess I don't need to go into it further."

"'Tain't necessary," said Ulysses, with a grin.

IN THE midst of these events Johnny Bones, now a senator with a silk hat and a frock coat, returned from Washington big with news, but not changed by his elevation to senatorial dignity. Johnny did not wear his silk hat in Coldriver either actually or mentally. His first call was upon Scattergood Baines.

"Don't want to hear nothin' new, Johnny," Scattergood said. "Let's just kind of waggle our tongues. Mandy will spare me for supper, and I calc'late I'll kin git along 'thout you. We'll eat, style fittin' your high office, over to the hotel."

And so it was. Scattergood selected a table adjoining one occupied by Hank Beemis, and sat with his back toward that gentleman; Johnny sat opposite.

"Senator," Scattergood said, in a voice whose quality was one of caution but whose volume was far from cautious. "I calc'late we kin discuss things here."

"Softly," said Johnny.

"To be sure. Now, how about the there power franchise? I know the Washin'ton crowd's tryin' to git it through state legislature here, and with what we got to offer in the patronage line, it ought to be kind of easy."

"Hush," said Johnny. "It not is easy, but it's done. The thing was slipped through, the date is set and

"Um. . . . And they've started options?"

"Very secretly."

"To be sure. Now, Johnny, kn the inside like we do, and bein' a

head of other folks, we ought to kind of kim the cream, eh?"

"Not so loud," said Johnny.

"Nobody's here to listen," said Scatter-ood. "They got to put a big dam up by e jaws of Checkerberry Rips, and above at'll be the storage reservoir. Now, I on't want to hold nobody up, Johnny, ut I been figgerin' to uy them tracts both des of the Rips. I een talkin' timber. ell, Will Pratt's got is idees up in the air mehow. Calc'late smells a mouse."

"What's he want?" ked Johnny Bones.

"Says he won't take cent less'n a hun-ed thousand dollars r them tracts."

"High," said John-; "but I'll tell you mething. Hines is ming up here this ek, maybe Satur-y. If we can get t piece for a hun-d thousand, we can n it over in three rs to Hines for a hun-d and fifty, any-

He's got to have it—and he'll pay." fty thousand in three days hain't so

know he'll go that high," said y. "You better close with Will tomorrow."

y Pickett came hurrying through the door and up to Scattergood's table. Conversation stopped.

"W-al," said Scattergood, "what's wanted? Can't I even git time to eat my supper?"

"He come up on the train tonight," Pliny said. "I calc'lated you'd ought to know right off, an' so I run right over."

"Who came up?" asked Senator Bones.

"Mr. Hines. He's in this here hotel now. Up to his room."

Scattergood looked at Johnny and Johnny looked at Scattergood.

"Hines!" said (*Continued on page 148*)

My Stock Market Operations

By

H. I. PHILLIPS

FOR the last few weeks I have been shaving at home, snubbing the iceman, dodging the ash collector, ignoring the corner policeman and refusing to be drawn into any conversation with the letter carrier, gas-meter inspector, laundryman, or butcher.

Waiters, bell-hops, hotel doormen, elevator operators, street car motormen, janitors, and drugstore lunch-counter clerks are finding me strangely cold to conversational approaches. "No speak Englese" is my defense against the man who runs the corner newsstand, the fellow who comes to fix the radio, and the boy who calls from the pants presser's. I've got all the *inside information* on the stock market that I want.

I know my weakness. If I listen to them I'm sunk. Of course, I ought to know very well that the pants presser's boy hasn't the inside track on a big bull movement in International Horse Collars, Common, just because he has a distant cousin who is married to a man who is a close friend of the brother of a Wall Street traffic cop who is popular with a broker who is "just like that" with the Fisher Brothers. I should have sense enough to know that the vacant-looking youth who came to tune the piano isn't twenty thousand dollars ahead as the result of some confidential advice on Allied Delicatessen Products from a plumbing inspector whose wife's sister married a clergyman who has in his parish the father of a man who runs a merry-go-round on which J. P. Morgan loves to ride incognito on hot nights in off seaso

It ought to strike me as abs that whenever the Durants the Cuttens play to shoot a st up 150 points, their first step notify all the master barbers North America. Nothing sho impress me as sillier than notion that Mr. Meehan, the operator in the radio pool, n does anything in a market before he has passed the w around to all the corner stores.

BUT I'm human and gullibl like to believe there is a S Claus. Stories of quick r made in Wall Street by outs who, during the past four y acted on a little inside inform fascinate me. Until very rec I yearned to get a thousand s of some stock that would lea or 400 points and not kee waiting.

All my neighbors—if they' boasting—have had General tors through the various spli Montgomery-Ward before th jump, or Radio since it was around $50 a share. That's story, anyway, and they're ing to it, even if they're still ing the 1925 coupé. The ma cuts my grass tells me he has "a nice little pile in the util the man who washes my

Adages of an Amateur Market Operator

The difference between a hitch-hiker and an amateur stock-market player is that the latter will always find it easier to be "taken for a ride."

If more people believed their bankers and fewer believed their barbers there would be less trouble over the family budget.

An outsider trying to beat the market is like a meatball trying to live in companionate marriage with a shark.

The difference between ticker tape and adhesive tape is that the latter has no quotations on it.

The only tips that are dependable are found on asparagus.

What a speculating author draws on his scratch-pad before playing the market

Digitized by Google

confided that he is "way ahead the game" through a plunge in coppers, and I know an office who insists he made a killing airplane stocks. They all have red cuffs and runover heels, I ice, but they talk prosperously. It was my boast for years that ould never fall for the lure of stock market. I regarded it as -and-out gambling, with the phasis on the "out." "Never id what you read about men king fortunes in Wall Street," I n told myself. "It can be done, not by amateurs. Put what ney you can get together into ings banks, preferred stocks in de A corporations, gilt-edged ds. Look for security, not for k profits. And don't weaken!" And I didn't weaken—up to e years ago. Then, with the lidge market coming to a boil, stories of sudden riches featuring every social or business hering, and with a barrage of "straight inside tips" falling all at me, I began to think that I had been wrong all my life. I d stock-market chatter at baseball games, weddings, bridge ies, office conferences, golf matches, christenings, old-home ks, murder trials, corner-stone layings, anniversaries, balls, h parties, and funerals. I was once held up by a town table for an infraction of the motor laws, and when he ted I was on a newspaper, his first question was, "What did market do today?" He let me go on my report that the ustrials" had been strong and that cheaper money was able.

What he draws after playing the market

have seen service station mechanics under an automobile a monkey wrench in one hand and a list of noon prices in the other. I have observed flappers reading financial magazines, sailors studying "Hints to Investors" columns, and peanut venders scanning the market summaries.

Since 1926 life in America has been one tip after another. Nearly everybody has been talking a brilliant financial career. I first began to weaken when I noticed that when a man failed to express any market opinion in a ten-minute conversation with friends or strangers he was regarded as uninformed. I began to feel uneasy at gatherings where I was the only silent party to conversations alive with references to "dividend requirements," "much needed technical reactions," "deductions for operating, maintenance depreciation, and interest on funded debt," etc. I yearned to talk glibly of "unfilled tonnage," "dropping off in the seasonal demand for bar steel," "overproduction in the oil fields," "the Interstate Commerce Commission attitude with regard to the carriers," and all that sort of stuff. It seemed to me everybody else did and that by showing a lack of information on these topics, I was impressing people as a man who had the broad, intellectual background of a bale of hay.

Almost from the day Calvin Coolidge walked up the White House steps and took over the government for better or worse trout fishing, a big percentage of our people have been talking in fractions and decimal points.

Ten years ago Professor Irving Fisher was about the only man in the country who could close both eyes and, with one hand behind his back, dash off one of those complicated charts showing the rise and fall of security prices. Today any bus-boy can do it. And he not only can, but *does*.

Five years ago I would have said Montgomery-Ward were a vaudeville team, that Worthington Pump was a ladies' shoe, and that Indian Refining was a book of etiquette for the noble red man. I used to skip the financial pages except on occasions when a young lady was looking over my shoulder and I thought it a good time to impress her as a man of broad, financial interests. News that call money had risen to 20 per cent would have meant as much to me as the tidings that three hundred new hairs had been found in the beard of the Sultan of Turkey. I thought the discount rate had something to do with time payments on the phonograph and that the "curb" was part of a horse's bit.

TO TELL the truth, it isn't very clear to me even today what it is all about, but I can get along fairly well in a conversation where these terms are used. Up to a point, I mean. When the chatter gets too deep for me I edge over behind the potted palms.

But my downfall began when I tried to become a member of the stock-market group of serious thinkers. As long as I assumed that the market was too intricate for me I was safe. I have led a worried life ever since I got the idea it was a simple game, a bit more difficult than parchesi, but not so involved as button, button, who's got the button.

Of course, I have sometimes bought stocks that have netted me a profit. But my losses have far exceeded my gains. I have listened to too many tips; I've been Gullible Gustave.

Counting my profits before they were snatched has been my pet diversion for three years.

I've played the market by ear. (*Continued on page 182*)

Can You Say "NO"?

The story of a man who couldn't—And what he did about it

By BRUCE BARTON

THIS piece begins with a man who died and came to life again.

I was walking back to the hotel in a strange town about five o'clock in the afternoon, wishing that somebody or something would happen to rescue me from a solitary evening, when a heavy hand descended on my shoulder and a voice that was big enough to go with the hand called out my name.

"Bet you a dollar you don't recognize me," said the voice. "That's the way with you snobbish New Yorkers."

He was the last man in the world whom I should have expected to meet in that town, a man well known to readers whose interest in the newspapers dates back ten years. To younger readers his name would mean nothing, for reasons which will presently appear. Remembering some of our former visits in New York, I clasped him to my heart.

"You're the answer to a poor man's prayers," I exclaimed. "Here I am, walking the streets of this cruel city alone and, presto, you are dropped down from the clouds to have dinner with me."

"All wrong," he answered. "You are having it with me. My family is away, and I leave tomorrow to join them. Tonight you dine at my house."

A taxi picked us up, turned a few corners, and all at once we were out of the rush of the city in a little back street. Through the door of an old-fashioned house we passed into a peace and calm that might have belonged to a country village. It was hard to believe that the city was not at least a hundred miles away.

I emphasize this detail of quietness because it formed such a contrast to my friend's former New York life. There, amid the rumble of street cars, the blare of taxicab horns, the unceasing buzz of conversation, and the patter of nervous feet, he used to sit behind a big desk, dictating, telephoning, making decisions, interviewing two people at once—or riding the social whirlwind like some storm god, apparently enjoying it immensely. I had never pictured him as quiet. In fact, let it be admitted in shame, I had hardly thought of him at all since he had suddenly disappeared.

Such is life in our great metropolis. A man is a figure in the town; you know him; you like him; you see him often. One day he is transferred to some other city, or he has a nervous breakdown, or he inherits money and retires. Nobody stops to ask why or where. He is gone. The city's ranks close up; the band strikes a new and faster march; the parade moves on.

© PIRIE MACDONALD, N. Y.

Bruce Barton, who has won fame as an advertising man, article writer, and author of non-fiction "best sellers"

This is modern living. This is New York.

I was full of questions. How had he happened to leave us, and why should he turn up in this smaller, more leisurely city? How was it he was dining alone tonight instead of in the hoorah of a club? Why was his name never in the newspapers any more?

Half an hour later, with a wood fire and a good cigar, he told me the whole story, with full permission to retell it in any way I might choose.

"Only you must change it enough to protect me," he warned. "Officially and publicly I am dead. I have been publicly dead for almost five years and, believe me, they have been the happiest five years of my life.

"I SUPPOSE you suspect that there is some dark secret in my past," he began, with a chuckle. "I'm sorry to disappoint you. I didn't have to leave New York; things were never better for me than on the day I departed, and I have since had two good opportunities to go back. It was an entirely voluntary exile.

"But let me start at the beginn

"I began to be a public chara when I was about five years old. father was a doctor and a mighty g one. I don't know whether his were any more potent than thos his competitors, but certainly personality was. You just coul have him come into the room wit feeling that you were going to be much better. That was the kin manner and abounding health he —a tremendous asset, if he had s to his pills; but a great liability t all in the end.

"For other people besides his tients discovered his grand pe ality and coveted it. The poli boss of our little city, needing a p lar candidate for alderman, suaded Dad to take the nomina From there he progressed to h commissioner, and thence to m His pill box contained medicines were good for many diseases, there was no pill in it that could one of the worst of maladies habit of public office and the i cation of being cheered by a c From the day Dad won his election until his death he was out of the limelight, and the f was never out of debt.

"I WAS five years old when he his first campaign, which is I mean when I say I became a character at that early age. family of a politician has little p I was photographed on my f knee, riding my pony, in swim tossed on his shoulders at meetings, and hoisted up in the c when he rode in parades. Mothe sister and I were the heart intere appeal to all that is deepest and no the human soul, the symbol of th ling virtues that make and preser American home.

"I could tell you a lot of funny st my friend continued, "but I want to the point, which is that it was natural for me to feel that the lime a normal part of human experie it would be natural for a missi daughter to assume that everybod world says his or her prayers at n took it as a matter of course t Griffin family were born to be se mired, talked about, and voted f be out of public sight would ha unthinkable.

If You Ask Me:

Nature is often careless about her "show windows"

OFTEN I think of a story that George Harding, a great patent attorney, liked to tell in his old age. It has a point which few of us can afford to miss.

In 1856, Mr. Harding, a brilliant beginner in law, went to Cincinnati with Edwin M. Stanton on the McCormick reaper case. Among the McCormick counsel was a tall, gaunt, awkward country lawyer from Illinois. Several of the distinguished men interested in the case, Mr. Harding among them, were discussing it earnestly when the lank countryman was introduced to them. Not only did they pay scant attention to what the stranger had to say, but presently they turned their backs on him.

That man was Abraham Lincoln!

MORE than twenty years later Mr. Harding went up New York State to try another case. It happened that the town was full of people. Hotels were spilling over. A man whom Harding had met casually asked if he couldn't share his room. Being somewhat fastidious, the patent attorney did not take kindly to the idea. He refused, with firm courtesy.

That man was Grover Cleveland!

"After having turned my back on one future President of the United States, and after having refused to sleep in the same room with another future President of the United States, I decided that I couldn't judge people by appearances," Mr. Harding used to say, with a whimsical smile.

GENIUS is often stingy with her show windows. Some of her beneficiaries look the part; many do not. . . . And still other men, who look like geniuses, turn out to be gawks.

Yesterday I presented a friend to one of the brainiest business men in New York.

"Is that the great —— ——?" he asked, as soon as we were out of earshot. "Why, he strikes me like something the cat brought in."

"Maybe," I replied, "but if you knew him as well as I do, you would discover a shrewd, brilliant brain and a warm, courageous heart under that curious covering of flesh and bone."

A few years ago I met a world-famous writer whose work I have always admired extravagantly. He looked to me like the perfect proprietor of a British butcher shop. One of our best writers of lyrical verse—a man of force and vivid fancy—has a squat, dumpy figure, a recessive forehead, and a disappearing chin. I knew a preacher of the most sensitive spiritual qualities who might pass in appearance for a professional pugilist. And I have met many distinguished men of affairs whom, offhand, you would not give a second glance. The late E. H. Harriman, perhaps the greatest railroad genius of our time, used to mingle unnoticed with the crowds on the Erie ferries. There were no surface signs of his genius to hit the eye.

Three of the most futile Presidents of the United States would have been perfect artists' models for Masters of the White House. And a man whose majestic mien and golden voice seemed to fit him preëminently for the rôle was thrice defeated for that great office.

Snap judgments of ability aren't all they are cracked up to be. If you are one of those who jump to conclusions about people after a glance, it might be well for you to remember that—

When Nature is making geniuses she has a habit of paying more attention to the contents than to the container.

Merle Crowell

MILLER Has *Always* Minded *The Other Fellow's* Business

By WILLIAM S. DUTTON

THE little switching engine bustled back forth as importantly as any other in the Joe" yards at Hannibal, Missouri. And yet face of the overalled youngster who watch wore a puzzled expression: only *one* man in the little engine's cab!

The youngster, who was seventeen, waited until the en had come to a stop near by. "Hey, where's your fireman? called to the engineman.

"Ain't got none, Buddy," grinned the switching eng gray-topped driver.

"How come you got no fireman?"

The engineman jerked his head in the direction of the j master's office. "Folks over yonder figure this locomotive need none," he explained. "One man is all they allow for

The youngster's face brightened. "Say, let me fire her you?" he asked. "I'm switchin' nights, you know. I don't a thing to do all day."

"You want to fire her *for nothin'*?" gasped the engine

The boy nodded, eagerly.

"After you've been switchin' all night?"

"It'll give me a chance to learn how to run her," expl the youngster. "I'll never learn that switchin' cars."

The engineman scrutinized the lad in astonishment. "T will you sleep?"

"Honest," the youngster pleaded, "I'll have seven ho sleep. And that doesn't count time to eat and wash up."

"You can fire if you want to," the engineman grant last, "but don't say I didn't tell you you're tacklin' work. in and grab the shovel."

And that evening to a group of fellow railroaders, the o gineman related, still amazed, how "that young Henry had fired like a fool most of that day, without hope of pa

"Says he just wants the experience," he said. "Now h to tend to his own business of switchin' cars all night, a morrow he promises to be back for more coal heavin'!"

"Pshaw, he won't be back tomorrow!" scoffed a listen

The engine driver shook his head. "He ain't gettin' p firin', but just the same he ain't doin' it for nothin'," h "He's aimin' high, or he wouldn't be mindin' my bu That boy is out to get somewhere."

Work, Brains, and Vision are a Happy Combination

"MEN can be divided into three classes," says Mr. Miller. "First, there is the machine type of worker. This man works hard enough with his hands but does no work with his brain and eyes. With him, a job is a job, something to be done over and over again in the same way. At seventy, you'll find him on the pension roll with a record of fifty years of faithfulness behind him. Yet, in a sense, he gets nowhere.

"The second type is the man who has everything that the first one lacks but is without the one quality the first possesses. He has ambition, brains, and vision, but he doesn't like work. The first taste of work dulls his ambition. He has ideas on running the company, the nation, and the households of his fellows, though he can't run himself.

"The third man not only sees and thinks, but he *works*. However, he subordinates the necessity of work to seeing and thinking. You hear men say, 'Work is the big factor in business.' It isn't. Some of the hardest workers I've known are still in overalls. You hear others say, 'Brain-power is the big factor.' I know thinking men who never will get out of the employee class. But I know of no man who has combined work and brains and vision who hasn't gone up to leadership."

And next morning young Miller *was* back; and he was back again on the morning after that! For most of that winter, while he switched cars by night, he fired the boiler of the switching engine by day. He lost sleep, in order to "mind the other fellow's business," which, even in that day, was usually a profitless task.

THAT was forty-eight years ago and Henry Miller is now sixty-five years old. Nevertheless, as president of the Terminal Railroad Association of St. Louis, Mr. Miller is *still* actively engaged in the task of minding other folks' business, and minding it as his regular job! It is a business, however, which represents more than $80,000,000 in invested capital and is said to comprise the largest and most comprehensive system of unified freight and passenger terminals in the world. His is one of the most unique positions in railroading.

If you will look at a map of the United States on which are traced the country's railroads, you will see what looks like a great nerve center of lines radiating out from St. Louis. Twenty-eight railroads, of which eighteen are trunk lines, meet at this point on the Mississippi River. Oil and beets from Texas, grapefruit from California, live stock and grain from the prairies here crisscross with Alabama iron, Detroit automobiles, Virginia coal, and New England factory products. This is one of the great crossroads of the continent. In its railroad yards 650,000 passenger cars are handled in a single year, while the turnover in freight cars is the equivalent, in numbers, of all the freight cars in use in the nation.

No railroad, however powerful and numerous are its locomotives, can carry freight beyond the capacity of its terminal yards; or can it move cars any faster than its yards can make them into trains and pass them through. This fact makes St. Louis one of the vital spots in transportation by rail. A breakdown in the St. Louis yards would be disastrous in its consequences, not alone to carriers, but to industry as well.

It was to obviate this danger and to speed the St. Louis service that the Terminal Railroad Association was formed by fifteen of the great trunk lines entering the city. Pooling their facilities there under a common ownership, the trunk lines provided for their unified operation and development by a single highly skilled management that would keep the gateway open not only for them, but also, at fixed rates, for all other roads in the area. It was in 1920, following the release of the railroads from government control, that Henry Miller was placed at the head of this company.

From a night switchman in the Hannibal yards of the old Hannibal and St. Joseph Railway, Miller had become a figure of consequence in the business of railroading. In 1917 President Wilson had sent him to Russia as vice chairman of the Stevens Commission to rehabilitate Russian railroads. Prior to that, for years, he had been the chief operating officer of the Wabash Railway, with the title of vice president and general manager. He was known as a leading authority on railroad yards and terminals and as an executive who was familiar, through first-hand experience, with every phase of railroad work from the repair shops upward.

And the remarkable fact was that Miller had gained a large portion of this experience entirely apart from his own assigned work, by performing other workmen's jobs, without pay, after he had done his own.

Today, Miller is capable enough as a machinist to build a locomotive, though officially he has never been a machinist. He can fire or drive an engine, though he has been neither fireman nor engineman. He can go into a freight office and find a missing waybill, though he never held a job in a freight office. He can balance a set of books, though he has never been a bookkeeper!

"More than fifty years ago, when I was still a boy in Hannibal," Mr. Miller told me, "I wanted to run a railroad. I believed, even as I believe more fanatically now, that if a man learns how to run a store, a factory, or a railroad, the time will come when somebody will give him a store or a factory or a railroad to run. So I set myself the task of learning how to run a railroad.

"I think that the first and about the only thing of importance I was interested in as a boy was railroading," continued Mr. Miller. "Hannibal, where I was born, was a railroad town. The terminal yards of the Hannibal and St. Joseph Railway were there, and also the road's repair shops. Mornings, evenings, at almost any time of the day, you could see railroad men on the streets going to or returning from work. You saw them in the shops, and in school my buddies were the sons of railroaders. The most envied youngster in the class was the boy whose father drove the fast freight or piloted the 'express.' It was the heyday of railroad romance, when, in the West, the railroad was still new. Every boy with red blood dreamed of becoming a railroader."

And no boy in all Hannibal dreamed more fervently than did the gangling, wiry, dark-faced lad who was the son of "Phil" Miller, Hannibal's street commissioner.

He was a serious, earnest youngster who was all eyes and all ears—an animated question mark. His parents had been Swiss immigrants. Six children were in the family, and Henry, third in line, in consequence was more or less foot-loose. He spent more time over at the railroad yards than he did at home.

"It wasn't the station, with its arriving trains, so much as the mechanical end of railroading which drew me," said Mr. Miller. "I wanted to be around engines and the men who attended them. I liked to puzzle over the maze of tracks and switches."

The names painted on the sides of freight cars were like the thrilling passages from an adventure book.

"New York Central," he would read, and ask, "How's that car goin' to get back to New York?"

A grimy freight driver would tell him.

In a few years everybody around the yards knew his name and had stumbled over him at least once.

THAT young Miller finished high school at sixteen is incidental to the fact that he got a job at that age. Not much of a job, but still a job. They wouldn't take him on at the yards because of his youth, but they told him a boy might find a place in the repair shops as an apprentice.

The foreman to whom he applied was a great brute of a man physically, big-muscled, big-shouldered, big-fisted. A small man could walk under his upraised arm.

"He had a fixed method of hiring his men," Mr. Miller related. "If the man was short, the foreman would hold up his arm horizontally, then tell the applicant to walk under it. He would hire no man who could walk under his arm upright."

Miller was tall enough and husky enough, in the foreman's opinion, to qualify as a boilermaker's apprentice, at one dollar per day. His task was that of heating rivets.

The foreman set the pace for all work, and he could perform double the work in a day of any man in the shop. The men sweated, swore, and sometimes dropped in exhaustion trying to keep the pace of the foreman. The boiler shop was a bedlam of thumping hammers against steel; the din, before long, deafened any man who stayed with it. Young Miller went to bed nights with his ears ringing and his senses swimming; but he was learning, nevertheless. (*Continued on page 123*)

Bernt Balchen, chief air pilot with Commander Byrd's expedition to the Antarctic, was born in Norway. He came to this country two years ago to accompany Byrd on his flight to France

Bernt Balchen, Famous Flyer, Used to be a Prize Fighter

IT IS but a chance that Bernt Balchen, former pride of Norwegian fight fans, is not pushing leather today instead of handling airplane throttles. For Balchen saw an airplane, took a ride, and after that the ring seemed a silly place.

Measured simply in years, Balchen is not a veteran flyer. He did not become a pilot in the Naval Flying School in Norway until 1920. In the eight years following his departure from the Norway prize ring, this flaxen-haired youth, with the shoulders of a stevedore and the waspish waist of a dancer, was always on the spot where airplane motors were singing in most spectacular orchestration.

He was a member of the first two of Amundsen's expeditions which attempted, unsuccessfully, to reach the North Pole by heavier-than-air craft from Spitzbergen. In 1927, he was the mainstay on Commander Byrd's brilliant flight to France. And then, as crack pilot, he accompanied Byrd in his flight to the South Pole, the toughest flying area in the world.

"Flying is the only thing I like," Balchen confessed recently. "And I like cold and snow and mountains. There is nothing in the world so beautiful to me as the Arctic."

As he talked, his head cocked obliquely on his great shoulders, his brow crinkled up toward his blond hair, and his blue eyes and strong mouth contrived a smile that is the wonder of all who behold it.

The world first discovered Balchen at the close of Commander Byrd's flight to France. Perhaps you recall the amazing struggle of the big monoplane against fog; how it tried to cleave the wall of mist above Paris and, failing, turned back to the coast, motors racing against an ebbing supply of gasoline, and how Byrd undertook the most difficult and hazardous maneuver in the manual of flight—the landing of a six-ton land plane in heavy surf at night.

The slightest error in judgment—an error of inches—in the calculation of speeds, distances, and heights relative to a plane dropping fifty miles an hour through darkness, must mean a savage crack-up, and probably death to the four men in the cabins. Yet Byrd, master of the ship, unhesitatingly chose Balchen for the task of bringing the craft down, and the world knows how creditably he performed it.

The names of some of the passengers Balchen has carried would read like a list of the most distinguished people mentioned in the news, and they have provided him with amusing recollections. Frightened girls have flung their arms about his neck; an irritated gentleman, who couldn't understand why the plane should bump so, demanded authoritatively that he land right in the middle of a big city; while an airsick passenger tried to hurl himself from the plane.

"Flying," he told his father in 1920, "is my business. I don't like books. I can think in the air. I believe," he concluded, "that I'll just keep on flying." And Dr. Balchen, well known as a surgeon in Norway, knew that Bernt, his only son, had made a permanent decision.

Shortly after he returned to New York Byrd got Balchen a position with Anthony Fokker, the Dutch airplane genius, as a test pilot. Not long afterwards—in March, 1927—the little builder asked him if he wanted to do a bit of flying around Hudson Bay. The Canadian Government was conducting an aërial survey of the great lobe of barely explored territory projecting almost to the rim of the Arctic Circle, and engineers were eager to use airplanes because of the saving of time.

That "bit of flying" consisted largely of flying loads of dynamite over country that was wilderness and where a crash of any sort with dynamite aboard meant unpleasant complications, to say the least.

Bernt made twenty six different trips in Hudson Bay, without a single mishap. Flying a Fokker Universal over Norway House, on the northern end of Lake Winnipeg, the last outpost, he nosed into a bad snowstorm. Rather than risk a forced landing on the inhospitable slope of some mountain, Balchen decided to descend.

So he curved down into the driving storm at one hundred miles an hour, the bottom dynamite thrashing in the fuselage. A wall of trees leaped up out of the ch and then miraculously Bernt discovered an open space just ahead of him, and landed safely.

I saw Balchen in action when the first plane flew from Detroit to relieve the distressed German flyers at Greenly Island. We had picked up Major Fitzmaurice at Lake St. Agnes, and stopped overnight at Seven Islands, two hundred and miles away, to refuel.

The big three-engined Ford was loaded with fuel and supplies. The fuselage

acked high with equipment for the Bre-
en, and with cases of delicacies—caviar
d broiled chickens.

The runway from which Balchen must
this weight was a snow-covered lake.
its foot, and uncomfortably close, were
o high mountains.

"We'll make it," spoke up Balchen.
We'll get this wagon over, if we have to
sh it over."

He gave the motors full throttle, and
plane moved across the frozen lake,
skis slamming against the ice with
concerting violence. Balchen sat in
high, steel-backed chair, tinkering with the throttles. Then he pushed them hard, and sat back.

Oil and gasoline cans and the box of delicacies clanked and rattled as the Ford bounced from twenty to forty miles an hour. Fitzmaurice glanced back apprehensively. Then he turned to greet the mountains which were rushing forward—so it seemed—to slap us on the nose.

But Balchen sat as unconcernedly as if we were all on a lounge in a hotel lobby. He even picked his teeth. Then, when it seemed evident that the lives of four men had run their courses two seconds too long, Balchen's shoulders drew together and the strength of them flowed into the hands clasping the control. There was a moment of ghastly suspense, and the Ford was off, swinging about on one wing from the mountain rim not forty feet away.

Truly, the nerves in Balchen are no more fragile than the stuff in the motors he flies. And for all his modesty, he has acquired a world-wide reputation among flying men for steadiness and courage.

Which is what Commander Byrd must have realized when he met Balchen at Spitzbergen and invited him to come over to the U. S. A. and become a good citizen.

CHARLES J. V. MURPHY

Mabel Kittredge Started Something When She Hung Out Her Latchstring

PHOTOGRAPH BY W. A. SPRINKLE, N. Y.

Teaching girls to be good housekeepers is Mabel Kittredge's life work

ISS MABEL HYDE KITTREDGE started ig ball rolling n, a little more than nty years ago, she ed a small apart- t at No. 226 Henry et, in New York, announced that e, in the very midst e din and squalor e Lower East Side, planned to keep n house."

was not only her wn friends who d find the latch- g out, but more cially her new ds-to-be—the East children and their ers. For Miss Kittredge had an idea, this apartment was to be the locus of her unique experiment. She planned quiet, neighborly way to teach house- ng to the children of the tenements. llowing her graduation from Miss r's School in Farmington, Con- tut, something tempted Miss Kitt- to go and live in the Henry Street borhood. She thinks it was pri- y a desire to see "life." Henry Street ve her some surprising glimpses of much that was picturesque, but that was pitiful and even tragic. She to realize that a good deal of the ng and hardship among the poorer resulted from ignorance rather poverty.

had seen women of the tenements new next to nothing about caring eir babies. Tiny tots were given children were given pennies and ought pickles and ice-cream cones he ubiquitous pushcart men. Their rs knew nothing of what good food d how to buy it, and were even norant of how to cook it. Sickness, d unsanitary conditions all seemed ccepted as part of the great cosmic

Miss Kittredge knew she might not be able to change the mothers much, but she had high hopes of the children, who would soon become the next generation of homemakers. And so, with this in mind, she launched her quiet crusade and went as a lone pioneer to live and work in the city wilderness.

The financial part of this great adventure was taken care of by friends, one of them writing to others of what Miss Kittredge wanted to do, and suggesting a contribution of $20 or more a year to help along the good idea. As the work grew, the friends increased in number and increased their offerings; and by and by a regular society, christened "The Association of Housekeeping Centers," was chartered and entered upon the archives in Albany.

Years passed, and day by day Miss Kittredge worked her way deeper and deeper into the community life. Hundreds of eager children came regularly to "play at house," and many times their mothers came; and what they saw was a flat, practically a twin of what most of them lived in, but kept very simple in all its furnishings.

The lessons learned were always practical; the little girl learned to set a table by setting it, and then her comrades criticized as they ate the simple meal.

"What we have tried to do," Miss Kittredge said, "is to capture the 'playhouse' instinct in children and turn it to account. There isn't a thing that goes into the making and keeping up of a home that these children don't get a chance to do in these little apartments.

"All the children learn to keep a house in perfect order by dusting, sweeping, scrubbing, and disinfecting. Then they learn to cook—and we try to keep everything on a plane that is within the reach of the average tenement income."

I listened eagerly, but my eyes kept roving toward the nursery.

"Yes," Miss Kittredge said, "that's a sure-enough baby all right. Although the public school housekeeping apartments don't go quite so far as this, we feel that here we can be just a wee bit more informal. We encourage the children to bring their baby brothers and sisters, for we feel that learning to care for a real, live

Digitized by Google Original from UNIVERSITY OF IOWA

baby is just about the most important thing these girls can learn. They bathe it, dress it, and learn just what, and when, and how to feed it."

Miss Kittredge's idea spread, until, instead of one apartment, there were four in various congested sections of the city. Then all of a sudden these little home-making apartments became one of the most talked of things in all New York. People came from all over the country to have a glimpse of them.

The principal of a public school, realizing the value of such training, asked Miss Kittredge if she could send small classes hourly to the nearby Housekeeping Center, where one of Miss Kittredge's associates could give them lessons in housekeeping. Then another principal followed her lead; and finally the Board of Education adopted the idea.

"It has been twenty glorious years for all of us," Miss Kittredge said, as we watched the children at their work. "But the thing that has pleased and touched me most has been when our first little girls grew up and married, and invited me to their homes. Most of these have been little replicas of our own pioneer apartment. And when I think that once upon a time we were lone adventurers in the city wilderness, and that now there are one hundred and eleven such apartments in the schools of New York City—well, it certainly gives me faith in the public school system."

DOROTHY WORTHINGTON

Even *the* Giraffes Look *for* Him At Mealtime!

PHOTO BY HONEYVILLE, LIBERTYVILLE

As head of the commissary department of Ringling Brothers' and Barnum and Bailey's Combined Shows, Alfred Webb has served more than 50,000,000 circus meals

ALFRED L. WEBB runs a traveling restaurant for giraffes, fat ladies, canvas men, lions, sword-swallowers, wild men, and seals. And during the thirty years in which he has headed the commissary department of Ringling Brothers' and Barnum and Bailey's Combined Shows, he has served the big circus family of sixteen hundred members with something like fifty million meals. Good square ones, too—with "seconds"!

He buys daily, and the quantities on his market list would make a thrifty housewife gasp. Two hundred pounds of coffee and eight pounds of tea are drunk every day. If lettuce is on the menu, Mr. Webb shops for about twelve crates. The circus sweet tooth must be gratified with seven hundred pounds of sugar each day. Five thousand pounds of meat are carved up in the butcher-shop wagons each morning.

Eighty per cent of the towns the circus makes are "one-day stands," and keeping such a large family adequately fed under these conditions requires foresight, ingenuity, and sound business judgment. Mr. Webb has to be familiar with local buying conditions and shortages and to know prices in every portion of the map.

The Big Show travels in four sections to save time and confusion. Mr. Webb's division, with all its equipment and canvas, is the first to move, and for that reason it is called the "Flying Squadron." His commissary equipment consists of big ranges, grocery wagons, steam-boiler wagons, ice-box wagons, the dining tent canvas, seats, jacks, and poles. The dishes, glassware, and cutlery are stowed away in wooden chests designed to carry them without breakage. Plates, for example, fit into grooves and racks, and drinking glasses into holes just the right size, so that everything carries without a rattle.

Mr. Webb must see that "spotting" the Flying Squadron cars on the siding in a new town is done before daybreak. Everything must be trucked to the "lot" and rolled into place, and preparations must be well under way for the day's cooking before the stars have faded out. Circus life is necessarily bounded by the strictest routine, and the commissary organization has been studied by armies in many European countries for its economy of effort and material and its never-failing efficiency.

"Is breakfast ready?" doesn't mean a thing in the circus. It's "Is the flag up?" instead, for as long as the square, white commissary banner floats from the cook-house ridgepole, it means that the long tables are neatly spread with their red-and-white tablecloths and a meal is in progress.

At the beginning of each season, Mr. Webb assigns each member of the circus company to a seat at one of the tables, which must be kept as long as the show is on tour. The side of the dining tent called the "long end" seats the workingmen and their bosses, and the other side, the "short end," is for the "art" and the staff. But in spite of this division in seating, everyone has the same amount and quality of food.

A great deal of money is spent yearly to make sure that the water for man and beast is pure. It is a feather in Mr. Webb's cap that there has never been an epidemic in the circus from bad water or food.

While one meal is being eaten another is in preparation. The breakfast flag comes down about nine o'clock and, still, dinner at eleven-thirty is never late. Dinner and supper are eaten, as a rule, in the town in which they are bought, but breakfast is packed in the grocery and ice-box wagons to be eaten on the next location. Probably fewer complaints are registered with the head of Webb's boarding-house than with any other in the country!

When the show travels through where the mileage stretches out long, townless runs, canned goods tables are packed in the grocery wagons instead of the fresh food usually used. And if a big jump is anticipated and Mr. Webb knows a "set-up" for cooking purposes is out of the question, he orders his "g" to put up sixteen hundred lunch b Sometimes two boxed meals are e These packages of food are called "dun by circus folk.

Supplying the menagerie with food comes under cookhouse management. "cat" animals and the dogs get the r cuts of meat and are dosed periodi with liver. Although all the hay and are arranged for by the advance agent boss of this queer boarding-house h cater to amazing foibles.

The monkeys must be kept cont with their well-ripened fruit, bananas ferred. The giraffes are fond of a r varied bill of fare—oats, crackers, onions. And they insist upon strong tea with their mash. Even Fatima, philosophic old hippo, is inordinately of chopped apples and carrots to giv hay a piquant flavor!

Four strictly vegetable soups

Lent-Fridays-All year

NO MEAT in any form is contained in Campbell's Celery, Pea, Tomato and Asparagus Soups. Instead their wholesome, delicious vegetable foods are made more nourishing still by fine creamery butter. Here are four soups that give richness and glow to the Lenten menus, to the Friday meals, to the strict vegetarian diet, and to the general family table any day in the year!

CAMPBELL'S CELERY SOUP

ll the famous tonic oodness of the choicest elery, enriched with reamery butter and easoned with the delicacy f the trained soup-maker. nd like all the other ampbell's Soups on this age, it makes the most elicious Cream Soup with e addition of milk instead water. (See label.)

CAMPBELL'S PEA SOUP

Here's a soup rich in body-building nourishment and the most enticing flavor. Vegetable goodness never was made more appealing to the appetite. Dainty, sweet little peas are blended with creamery butter and seasoned to make them taste their charming best.

CAMPBELL'S TOMATO SOUP

The exceptional healthfulness of tomatoes is now so well-known that Campbell's Tomato Soup has become even more popular than ever. Always welcome, this soup also brings the famous benefits of red-ripe luscious tomatoes.

Vary the soups you serve

Variety is the life of a good table. Here are four Campbell's Soups that everybody enjoys—awaiting your selection for the daily meals—constant helps to you in giving "newness" and brightness to your menus. They enable you to give a fresh note—a happy invitation to the appetite—and with so little trouble. 12 cents a can.

CAMPBELL'S ASPARAGUS SOUP

Tender young asparagus shoots in a soup made richer still by golden butter! Garnished with dainty asparagus tips and seasoned to bring out the most delicious flavor! A soup to tempt you always. Enjoy it often!

The COACH $595 f.o.b. Flint, Mich.

The Outstanding Achievement of Chevrolet History

-a Six in the price range of the four!

By every standard of comparison, The Outstanding Chevrolet of Chevrolet History is entitled to rank as one of the greatest automotive achievements of all time—for General Motors, Chevrolet and Fisher Body have here combined their resources to produce a truly remarkable automobile.

The new six-cylinder valve-in-head engine offers greater speed, faster acceleration, remarkable smoothness and fuel-economy of *better than 20 miles to the gallon.* The full ball-bearing steering mechanism, adjustable driver's seat in all closed models and new quiet four-wheel brakes assure remarkable ease of control; and these notable qualities of performance are matched by the surpassing beauty and comfort, and the inherent value of marvelous new bodies by Fisher!

These beautiful cars are now on display at all Chevrolet dealers—and we urge you to see them today. For the more carefully you examine the new Chevrolet Six, the more clearly you will realize that it introduces an order of luxury that was never before thought possible to achieve in the price range of the four!

The Roadster, $525; The Phaeton, $525; The Coach, $595; The Coupe, $595; The Sedan, $675; The Sport Cabriolet, $695; The Convertible Landau, $725. All prices f. o. b. Flint, Mich.

The Trail Eater

(*Continued from page 35*)

n places well hidden. In a few instances ie used the cabins along the way. He llowed himself ten days for the trip to Candle and back.

The night before he reached Candle, he And Wally were bedding down the dogs in ne corner of a rest cabin, when the tele- hone, installed there especially for the ace, began to ring. There was a grating, a puttering—then the voice of Doorknob oaring over a hundred and forty miles of vire.

"Kerry! There's something rotten bout this drawing!" he began, with no reliminaries. "They drew for position esterday, and juggled you into first place! hose crooked"—a snapping interference n the line cut him off for a moment, then is heated voice came again—"double- rossed, I tell you. They announced the rawing for noon, and I was there right on e spot in the Dog Room with the rest of m. Then Luce Barton wanted it post- ned until seven in the evening—said he uldn't get there at noon. Old Doc ramer agreed. But at a quarter to seven, hen I went back to the Dog Room, there sn't an entrant in the place. Kelly told the drawing had come off at four in the noon!

Get that? Four o'clock instead of n! Luce said I'd misunderstood. Said one was there but me, and that d tried to find me all over town and n't. A lie, Kerry. A low-down lie, I ou! That shyster drew for you—that limy, pink-faced—" There was a ing sound—then silence.

TH a queer sinking of the heart Kerry turned away from the tele- to break the news to Wally. It was news—for Kerry. In the All-Alaska stakes the teams left the post five es apart. He who went first was apped in the worst possible way. ually paced the teams behind him, ere was always trail breaking to do, mes with the driver himself going of his dogs on snowshoes. Other leaving later, had only to keep up e starter to win.

Luce Barton drawing for him— idn't look good. Kerry knew the had formed and widened the breach n him and Rance. . . . In the g, Luce, had he wished, could have and used to his own advantage one e fateful numbered balls which de- ositions in the race. And no one ould have been the wiser.

ll, Kerr, what are you going to do he bally thing?" Wally's question t him back to his surroundings. He nt a moment longer before he said ely: "Nothing. Someone had to of course. It's up to me to make ink I like it."

ext day Kerry left Wally at Candle t him when he should arrive there ig race. Alone he started to Nome. n had been working perfectly, with and Tokon in the lead. Even Cul- s at his best. The new sled was a of lightness and strength, and he onfident that with Duna leading nothing could outdistance him. *That is, if Tokon didn't quit on the home stretch.*

The rebel husky had given no trouble for weeks, yet, as Kerry neared the place near the edge of Death Valley, where he had always lain down, he watched the dog anxiously.

The team swung safely by the cabin at Haven; then, for no reason known to man, Tokon calmly and deliberately dropped to the snow.

It was a blow to Kerry. Should he unhitch him and carry him back on the sled, as drivers had done before, or should he try to force him past this place? While he pondered on his course of action, every dog, except Duna, flopped in the trail. The leader, half turned in his traces, stood a moment looking at his master for instructions. None forthcoming, he too flattened out.

But Duna was a leader, and, as such, he must get this dog to go on. For all his appearance of resting he betrayed uneasiness. He ran his tongue over his upper lip, snapped his jaws a time or two, and suddenly raised his head, muzzle up, ears pricked forward, bright eyes intent on something ahead. Whining eagerly, he got up and stood—body tense and quivering, every line of him proclaiming that he saw something down the trail.

Though not a living thing was visible, his excitement was contagious. The other dogs followed his gaze . . . came alertly to their feet.

Tokon, still prone, looked too, ears forward, nose twitching.

"Go get 'em, boys! Go after 'em!"

Tokon sprang to his feet. Yelps, a tug, a plunge, and they were off, Duna and Tokon leading full speed across the quiet width of Death Valley.

Kerry shouted his relief. He was sure of his team now, sure of every dog in it—so long as Duna was in the lead. Trail-wise Duna! God love the little fellow, with his husky smile, his soft, shining eyes, his stubby, wagging tail! Duna had beguiled Tokon and the whole team into thinking he saw something to chase—when Kerry knew there was nothing!

Snow began to fall, thin, quiet. As he traveled along, the fall thickened until he was going through a cloud of large, gently zigzagging flakes. He neared the Fifty-mile Roadhouse, owned by Luce Barton. He would pass it, and eat his late lunch at Solomon, fifteen miles nearer Nome. He didn't want Bart Pelkie to have a chance to size up his dogs or examine his sled.

AS HE swung down the hill to pass the roadhouse, a figure darted suddenly from the cabin door and stood, waving arms, in the middle of the trail.

"Stop! Stop!" He was surprised to see Miak, Bart Pelkie's squaw.

"You look see Doctor's *vaheenie?* She all gone! She go trail! *Allapah*, plenty cold! Maybe *muckie*—all same dead!" She kept yelling as Kerry brought his dogs to a halt. "You look see up trail?"

"Doctor's *vaheenie?*" repeated Kerry, mystified for a moment. "Oh—you can't mean Mrs. Kramer?"

"Uh-huh! All same! You look see in snow?" She pointed the way Kerry had come. When he told her he had met no one, her distress was so genuine that he began to fear something serious might have happened to the doctor's wife. It was incredible that Kitty Kramer should be here alone at the Fifty-mile House, yet, after much questioning, he was convinced that the Eskimo was telling the truth. About an hour previous, just before it began to snow, she said, Mrs. Kramer had wandered off up the trail. Kerry could learn no more from her, and Bart Pelkie had gone to town earlier in the day.

There was nothing to do but go back and look for her. It was several miles from the cabin, in a gulch leading off from the trail, that he found footprints filled with fresh snow, but still faintly discernible. And it was far up the gulch that he came in sight of a cache made of odds and ends of lumber—a small hut placed on posts that held it ten feet above the ground. He drew up in front of it.

"Mrs. Kramer! . . . Kitty! . . . Oh, I say, K-i-t-t-y!"

There was a silence. Then he saw the low door shake. It inched open and revealed Kitty Kramer on her knees peering out. She was dressed in her best cloak of mink. Her face was stained with tears, her eyes wide with terror.

AT THE sight of Kerry she flung out her arms in a gesture of appeal that nearly overbalanced her. "Oh, oh, oh!" Her voice broke in hysterical relief. "Kerry! Come and get me! I'm freezing! I'm dying! Oh, oh, oh! Kerry, quick! Help me down! Catch me—"

Fear had demoralized the woman, and though he kept calling to reassure her, he reached her barely in time to keep her from flinging herself from the cache.

When he got her down he bundled her into his sleeping bag. She lay shivering and moaning while he drove as fast as the rough trail permitted back to Fifty-mile. Miak, overjoyed at the rescue, took charge of the wanderer, seating her beside the roaring stove, pulling off her mukluks, wrapping her in hot blankets, and plying her with hot tea until her shivering and sobs subsided.

Kerry waited long enough to see that there was nothing seriously amiss with Kitty. Then he rolled up his sleeping bag, and with it under his arm approached the chair where she sat.

"Well, Kitty," he said kindly, "now that you're better, I'll be getting on. Do you want me to deliver any message in town? Perhaps . . ." he hesitated, not knowing what intrigue had brought her to Fifty-mile. "Perhaps the doctor—"

"Oh, no, no!" From her blanket cocoon Kitty lifted hazel eyes. He saw in their depths something swift and furtive. Her voice, though weak, held a genuine note of alarm. "Wait—wait a minute, Kerry—" A groan cut off her words. She stiffened in her chair, her head fell back, convulsions shook her, and from her lips came heart-rending moans.

"Doctor! Doctor!" shouted the Eskimo

woman, and Kerry involuntarily sprang to the telephone. "No, no! Phone *peluk!* Broke!" she jabbered despairingly.

Kitty opened her heavy eyes. "Take me home, Kerry . . . quick!" she gasped, and went off into another convulsion.

After a few minutes of swift preparation, Kerry was off, speeding through the fast-gathering twilight toward Nome. The sick woman lay moaning in the bottom of his basket sled wrapped in furs, bolstered with pillows. As he rode the runners, Kerry watched her with anxious eyes. Her tortured face, her shuddering body, the sharp little cries of pain that escaped her made him forgetful of everything but her need of a doctor. The nearest physician was at the Fort, forty-seven miles away. What if Kitty died on his sled before he got there!

He shouted to his team, urging them to racing speed, and the miles fell behind. But as he neared Port Safety, he noticed that the sick woman had become very quiet.

Alarmed at her stillness, he stopped the team and ran to the side of the sled. "Kitty, are you all right?"

There was no answer.

In sudden trepidation, he knelt beside the sled and, pulling the robes down from about her face, pressed his ear over her heart. . . . Its steady, strong beat reassured him. He covered her again and lifted the scarf from her head. While he looked, she stirred and opened her eyes. They were dark, unfathomable in the night.

"Thank heaven, you're better!" he exclaimed. "You gave me an awful scare!" Still on his knees, he tucked the scarf about her and patted her arm as if she had been a child. "Snuggle down now, like a good little girl, and go to sleep. We'll soon be home."

She closed her eyes obediently, sighed, and asked listlessly: "Are we—? How many miles have we come, Kerry?"

"Oh, about twenty-six."

"Only twenty-six?" she repeated wearily. She drew her hands from beneath the robe and turned down the cuff of her mitten to glance at the luminous-faced watch on her wrist. "Oh—it's stopped. But only twenty-six miles—"

"Yes. The Port Safety Roadhouse is just ahead, Kitty. If you like I'll leave you there, and send the doctor out after you."

"Oh, no," she nestled back contentedly; "I'm much better now, Kerry. Tuck me up again and let's go straight through." She smiled up at him. "I like your ambulance, Trail Eater."

IT WAS past midnight when he drew up before the Kramer door and assisted Kitty from the sled. Stiff and cold, she stood clinging to him for a moment.

"I'll help you into the house, Kitty."

Her dark eyes considered him until he grew faintly embarrassed. "No," she said finally. "I'll be all right. I—I can't let you come in tonight, Kerry. And—and about finding me at the Roadhouse—you'll never tell anyone, will you? It will be a secret between us?"

Kitty slept the clock around and woke the next afternoon feeling marvelously fit, despite her harrowing experience at Fifty-mile. She lay in bed, stretching luxuriously and flinging her ivory-white arms in a very ecstasy of animal contentment. She was glad to be alone. The doctor was still away at the Hot Springs, where he had been called two days before by a friend of Luce Barton.

When Nallah brought a generous tray breakfast, she ate it, then lay back on her pillows thinking over her adventure. She thrilled to the romance of it. Of course she hadn't followed Luce's instructions exactly; she realized now she shouldn't have gone out from the roadhouse to meet Kerry. But how was she to know that it would begin to snow so suddenly? And how could she tell that she'd turn from the main trail and get lost up that terrible gulch? She must see how she looked this morning after her hard trip.

SPRINGING out of bed, she threw about her a quilted robe of pale green satin and crossed to the mirror. With her hands on her dressing table she leaned forward to look at her reflection. Her eyes widened in astonishment and distress. Her nose had been frost-bitten! Unmistakably pink and scaling, it stood out against the exquisite matt ivory of her face. A frozen nose—and the Sweepstakes only four days away—and she the Queen!

She examined herself again minutely, tears of bafflement and rage running down her cheeks. She picked up a jar of cold cream and began rubbing it on, just as a discreet knocking sounded on the bedroom door. The voice of Nallah announced, "Mista Lance Hellington, Mista Luce Balton, want to see Miss Klamer in living-loom."

She wiped the cold cream from her face, furiously wadded her hair on the nape of her neck, girdled her satin robe about her, and flung herself from the room.

When she burst into the presence of her callers both of them came to their feet and greeted her. Luce was all genial eagerness:

"Ah, there, Kitty! Did you—"

"Don't you 'ah-there' me! Look at my nose!" she cried tragically. "Look at it, I tell you—"

"G-o-o-d L-o-r-d. . . ." Luce and Rance exchanged glances of utter bewilderment.

"What's wrong with your nose?" demanded the lawyer. "I don't see anything the matter with it."

She threw up her hands and stamped her foot. "Oh, you brutes! You roughnecks! You—you—"

"Look here, Kitty, this has gone far enough!" Barton's voice was suddenly stern. "Did you get the time—that's what we want to know."

"Yes," she railed. "That's all you two care about—*did I get the time!* Of course I got it! But why didn't you tell me I'd freeze my nose, ruin my looks so I'll be a sight on the day of the Sweepstakes!" She turned to the gold king, who was pacing up and down like a man at the limit of his patience. "You've got to get me that ermine wrap now. I've earned it. I've—"

"So that's what you're making a play for now? Oh, my lord—" he threw up his hands—"I'm sick of this. I'm going to clear out."

Luce overtook him in the storm-shed entrance. "For the Lord's sake, be reasonable!" he pleaded. "She's got his time—didn't you hear her say—"

"Yes," admitted Herrington bitterly. "I heard her, all right. I wish to heaven I'd never got mixed up in this shady business. I'm going down to the kennels. If I hear her mention ermine wrap again I'll—I'll choke her. Ermine wrap. She *earning* it. She makes me sick! Why, for a pair of silk stockings that woman would—"

"Shut up, for the love of Mike!" Genuinely alarmed at Herrington's vehemence he shoved him out the door. "Perhaps, after all, I'd better deal with her alone. Run along, old man. Leave it to me. I'll see you in an hour or so."

He went back into the living-room alone. Kitty was calmer now, and under Barton's adroit questioning she told of her wanderings in the snowstorm and her refuge in the cache.

It was the lawyer's turn to throw up his hands. "*Great—Scott!* Of all the asinine— Why, you might have been frozen to death! Well, luck perched on your banner anyway. It was probably the best thing that could have happened, since it was the Trail Eater himself who found you. By Jove!" He chuckled and slapped his knee. "You're all right, little girl. I knew you could put it over. But tell me—did you have him scared enough? Was he getting everything he could out of the pups?"

"Scared! You should have seen him Luce!" Kitty's eyes glowed. "He came like the wind!"

"Yes? And you got his time on that first twenty-six miles? What was it, Kitty? What did you clock him?"

Kitty looked at him out of half-veiled speculative eyes and giggled at his eagerness. "Well, he made it in—in— She stopped and laughed tantalizingly. "He made it in . . . two hours and thirty three minutes."

"What? With new snow, a bunch of hills, and you on the sled?"

She nodded. Barton looked perturbed and thoughtful. A line of worry came between his brows. As soon as he could get away, he took leave of her and went to call Pelkie on the telephone.

KITTY went back to her dressing table to renew her scrutiny of her nose. She viewed it from every angle, applying various liquid powders and noting their effect. She succeeded in consoling herself somewhat. She turned her head to one side and with her eyes still on her reflection her finger down the bridge of her nose.

A silent laugh shook her shoulders. How excited Luce had been when she told him Kerry had done that twenty-six miles in two hours and thirty-three minutes. What a joke! What a ripping joke she had played on those two—Luce and Rance. They'd be wild, absolutely wild, if they ever found out that Kerry had really made that twenty-six miles in *two hours flat.*

Barbee Neilan paused a moment in front of the "Prospector" building, buttoned up the collar of her white fur coat. Then she stepped out into the tumultuous Front Street.

It was the day before the Sweepstakes, the event toward which Nome had been working for five months, and the town was in the throes of its preparations. Across the rolling white land from every direction men were hastening in on foot and by dog or reindeer teams, each with the savings of a year to bet on his favorite.

Barbee, making her way along, felt the lawless intoxication of the hour. But now she was most interested in the dr

We win 85 times out of 100

Men find this new shaving creation so exactly what they seek, that 85% who try it buy it regularly thereafter.

Make this 1-Week's Test—FREE

ENTLEMEN:

From a scratch beginning a few years ago, to top place one of the highly competitive fields that men know, is e record of Palmolive Shaving Cream.

It was a hard job. Most of its users had to be won away m the habits of years in using rival preparations.

That is why we send 7-day tubes for free trial. 85% of se who try this creation, keep on using it. We believe , no matter how firmly you hold to another preparation, l, after a trial, adopt it.

Will you not, in fairness to us both, accept a tube to ? 60 years of soap study stand behind its creation. 129 mulas were developed and discarded in perfecting it. It lifferent in five major ways from any other preparation have ever used.

These 5 advantages

Multiplies itself in lather 250 times.

Softens the beard in one minute.

Maintains its creamy fullness for 10 minutes on the face.

Strong bubbles hold the airs erect for cutting.

Fine after-effects due to alm and olive oil content.

Just send the coupon

Our present method may you well. But still there be a better way. This may mean much to you omfort. Send the coupon re you forget.

4278

PALMOLIVE RADIO HOUR—Broadcast every Wednesday night —from 9:30 to 10:30 p. m., eastern time; 8:30 to 9:30 p. m., central time; 7:30 to 8:30 p. m., mountain time; 6:30 to 7:30 p. m., Pacific Coast time—over station WEAF and 39 stations associated with The National Broadcasting Company.

To add the final touch to shaving luxury, we have created Palmolive After Shaving Talc—especially for men. Try the sample we are sending free with the tube of Shaving Cream.

She was interviewing each one on the eve of the race for a story that would flash over the wires to every newspaper in Alaska, even to the Associated Press of the States itself. It was the biggest assignment her father had given her, and she was tingling with pride.

She turned down the side street that led to the Syndicate kennels. She had left her interviews with Kerry Wayne and Rance until the last. She felt that from them she could get more of the spirit of the Sweepstakes, and she was eager to talk with Rance on the eve of his great undertaking. His picturesque appeal was strong again—Rance, the richest man in Nome, a true sportsman driving his own team in the Sweepstakes, not for gain but for the glory of the battle. Her heartaches, her doubts of him were for the moment swept aside, and she felt a tenderness for him, a mounting pride.

She neared the wire netting about the Syndicate yard and entered the gate. Slim Carvey was just leaving to go downtown, but the other drivers, Harry Dunn and Jake Minton, were busy, one polishing the runners of the racing sleds, the other going over towlines and harnesses. The drivers exchanged uncertain glances. Slim made a hasty movement as if to stop her; then, reconsidering, shrugged responsibility from his lean shoulders and went on his way to town.

UNCONSCIOUS of this byplay, Barbee stepped quickly down the rough hall of the kennel-house. She was smiling to herself. Rance didn't know she was coming this afternoon. Anticipating his delighted surprise, she tapped on the closed door of the harness-room and immediately pushed it open, with a gay, "What ho, Trailsman! I—" She broke off, stunned into silence.

Kitty Kramer and Rance Herrington had sprung from a seat in the same chair.

The two stared guiltily at the girl in the doorway—at her white, stricken face, her wide young eyes, in which disbelief struggled with a certain sick knowledge.

Barbee made a movement as if she would withdraw, but Herrington started toward her, one hand outstretched, a wavering, apologetic smile on his face: "Why—why, hello, Barbee! Come in—come in, dear. I want to—I want to— You see, Kitty and I were just talking over—" His stammering efforts to collect himself ceased, and suddenly all pretense fell from him. "Barbee . . ." His voice broke on a desperate note of entreaty, his eyes pleaded. "Don't go! Speak to me! Say something, Barbee."

Pride came to the girl's aid. Her little figure straightened gallantly, and she came back into the room. Her hands fumbled in her pockets and finally brought forth copy paper and pencil. "I'm—I'm interviewing all the racing drivers. . . ."

Herrington threw up his hand as if to ward off a blow. "Don't—Barbee! Haven't you heard—didn't they tell you? I'm—I'm not driving in the Sweepstakes. I—I—"

"Not driving . . . ?" Her pencil struck the floor with a small thud. Her copy paper slipped sheet by sheet from her nerveless hand. She stared at him as if she could not believe his words. "Not driving? Why?"

He checked the glib excuses that rose naturally to his lips, and in a moment of honesty told her the truth: "I can't go out. I'm not in shape to stand the trip. I couldn't go through. I tried to train, but—"

Barbee's eyes moved to Kitty Kramer's voluptuous back outlined against the window where she had taken her stand, then returned to Herrington. Understanding, anger, and contempt succeeded one another in her young face. She looked down at her left hand, where a diamond and emerald ring sparkled on the third finger. Then slowly she drew it off and placed it on the table near him.

"Good-by . . . Rance," she said.

A moment later the door had closed behind her.

With the click of the lock Herrington was roused from his apathetic misery. He started forward, stopped, flung his arms in a gesture of hopelessness, and, throwing himself into a chair beside the table, leaned his brow on his upturned hands.

Kitty turned from the window and walked toward him. She stood in waiting silence beside his slumped, despondent figure. When he did not raise his head, she reached out and playfully flicked a lock of his dark hair, giggling like a naughty child caught in a misdemeanor.

Herrington leaped to his feet, his jaw set. "Yes," he gritted, "you'd laugh, you would. To one of your caliber it's funny to see a man stripped of his honor, his love, everything that makes life worth while. Oh, get away!" He shoved aside her outstretched hands, her suddenly beseeching red mouth. "Get out! I told you never to come here! Get away, and stay away. I'm through with you—"

"Through with me, indeed!" Kitty stepped back from him, her hands on her hips. A sudden grinding hardness came into her voice. Her "aitches" fled. "Oh, no, Rance 'Errington, you're not through with me yet, old thing! And don't get rough until you 'ear what I've got to say. I came 'ere to get something—you know what it is. And I'm going to 'ave it before I leave. If you 'adn't been so blasted tight I'd 'ave been on my way before that fool girl came breezin' in—No! I'll not shut up!"

ENGROSSED in their quarrel, neither of them saw Luce Barton enter the room. He stood quietly listening.

"You know what I'm 'ere for—I want that ermine wrap to wear tomorrow. You're coming through right now with the price— If I don't get it— Well, 'Orton 'appens to be president of the Malamute Club. You know what I can tell 'im. And you know 'e'll believe me!"

"Go ahead. Tell him and be—"

"And I'm the girl who can let 'im know a few other things too. For instance, what's the gang in this town going to do when they find out 'ow you and Luce got poor Kerry Wayne's time?" She laughed at the expression on Herrington's face "Ha, ha! When that dope gets out this afternoon, old dear, your three entries will be scratched—disbarred—done—"

"Now, now, what's all this fuss about?" Luce forced an easy smile and came forward in the manner of one who would make peace between two quarreling children.

Kitty flung herself on the lawyer, her chin quivering. "Luce, he's blaming me because he can't drive in the Sweepstakes!" she whimpered. "After all the chances I took for him. I've risked my life for *both* of you, and he won't even give me that ermine—"

"Come now, little girl. You misunderstand Rance. Come here to me." Luce drew her gently to one side. He leaned forward and placed his lips close to her pink ear. "I know you need that ermine wrap." Kitty's face cleared. She looked at him with rapt eyes. "*I* know you need that ermine wrap. But—why depend on Rance? Why not let your old friend Luce get it for you?"

"Oooooo, Luce!" She threw her arms about him and landed a resounding kiss on his cheek. "Oooooo, you darling!" Radiant, triumphant, she turned to Herrington. "You see—Luce appreciates what I've done if *you* don't. . . . Come, Luce, dear. Let's hurry before the bank closes!"

MEANWHILE, Barbee, heedless of direction, was stumbling along the frozen road. Disillusionment had numbed her like a narcotic. She was conscious only that she must get away; she must put far behind her those two who had stripped her world of beauty, honor, love, happiness. There was no beauty, no honor, no love, no happiness anywhere.

She trudged on in a daze of suffering. Behind her came the faint carillon of harness bells. She stepped aside to permit the passage of the approaching dog team. But it did not pass. Instead, she found herself looking into the snow-tanned face of Kerry Wayne.

She glanced about her in bewilderment, realizing for the first time that she was far out on a little-traveled tundra road that led toward Anvil Rock. Her hands were stiff with cold. She had forgotten to put on her mittens. When she reached clumsily for them, her fingers were like little sticks. They would not bend.

The Trail Eater was noticing that too. He seemed to be indignant about something not clear to her; all the time he was alternately swearing under his breath about someone and calling someone else darling, poor, brave little girl. He took her frost-nipped hands and rubbed them with snow. When the blood came stinging back into them, he pulled on her mittens for her, as if she had been a little child, and buttoned the collar of her jacket about her throat.

She straightened her shoulders. She must not permit Kerry or anyone to know how she had been hurt, humiliated, disillusioned today. She remembered now she had come to get a story for her father's paper. She had come out to interview Sweepstakes drivers, and Kerry Wayne was the last on her list. She looked up and met his eyes. They were very blue, very kind, with a softness in their depths that she had never noticed before. "I was on my way to see you," she said.

It was a brave little lie, absurdly obvious, considering where he had found her, but she never thought of that until later.

"And I'm just on my way home," he assured her. "Let me take you there."

She permitted him to tuck her into the wolf robes on his sled. She was beginning to feel the cold now. She was shivering, and there was a warming sense of both spiritual and physical comfort in his administrations, in his near presence as he ran the runners back of her.

She had ridden behind many teams, splendid teams carefully matched as to coloring, size, and kind, yet in this mixed string of crossbreeds and huskies she felt something different, something that had to do with joyousness in service, unity with their master. Even in her suffering, she paid a fleeting tribute to the man who had trained them so perfectly. If Rance—

Recollection was suddenly upon her again. She bit her lip to quell the intolerable longing that swept her for her lost ideal of Rance. Yet something was almost imperceptibly dulling the edge of her heartache. She became conscious of Kerry riding the runners back of her. He was crooning a little trail song to his dogs. It was a comforting, human sound that gave her a sense of his near friendliness, of his protection. He leaned over and tucked the robe more securely about her shoulders. The action made her feel as if every moment he was aware of her—taking care of her. Nor did this feeling grow less when later at the Kashim, he turned his dogs over to Doorknob and took her inside.

A fire was roaring in the big oil-tank stove, but just as he placed a chair for her, the door leading to the living quarters opened and Tolovana Belle appeared.

"I'm getting supper at this joint tonight, Kerry," she drawled. "Oh, hello, little Barbee Neilan! Why, you poor child, you look like a frozen tom-cod! Come right in here with me." She put an arm about the girl's shoulders and drew her along to the living-room. "Here's a footstool for those little feet. Hey, Kerry! Rustle a cushion or two for her back. . . . Thanks. T-h-e-r-e, my dear. Just thaw out until I can bring on a little refreshment."

Through the kitchen door she kept up a volley of remarks until she reappeared with a tray, which Kerry took from her and placed on a low stand near the shivering Barbee. An hour ago Barbee had thought nothing could take her mind off her own troubles; but the tea, the warmth, the homely cheerful talk began to have their effect.

WHILE she listened, she even began to take note of the bachelor comfort of the room where she sat—of the shelves that held books, worn volumes of Kipling, London, translations from Scandinavian writers, heaps of magazines, and some shabby volumes of Blackstone. She recalled that Kerry intended before the year was ended to take the examinations for the bar in Alaska; that he had plans for helping in the future to make the laws for this newly developed land, which would soon have a legislature of its own.

"Well," Tolovana said, when they had finished their tea, "I'm going to leave you two to talk over your own affairs. Got to compose a reindeer ragout that will put speed into this fellow for tomorrow. You see, I'm betting three thousand on him for first place."

"I've saved up ninety dollars," Barbee confessed. "And tomorrow, after the racers get away from the post, I'm going to bet too."

"Well, be it far from me to encourage youth to play the dog races," observed Tolovana, with an air of virtue. "But if you must bet, Barbee, I'm here to tell you Kerry's got the race in his pocket—so long as Duna leads."

Just then there came a scratching on the other side of the door that led to the Kashim. Kerry laughed.

"All right, old man! Be there in a minute," he called, as he crossed to the door. He turned the knob, and Duna bounded in, with his beguiling husky smile. He lifted his forepaws carefully to Kerry's chest, and, nuzzling his nose under the young man's chin, began to express his love and gladness in rumbling canine talk.

Kerry reached into the pocket of his leather jacket and took out a lump of sugar.

"Now watch him, Miss Neilan!" His face wore an engaging boyish look of pride as he glanced up at Barbee.

DUNA had dropped to the floor and was sitting on his haunches, his bright eyes intent on his master. With elaborate precision Kerry placed the white lump on the dog's nose. The husky, aquiver with eagerness, cocked his eyes and pricked up his ears in a tense, listening attitude, while Kerry's absurdly solemn voice intoned:

"'Tis the voice of the lobster, I heard him declare,
You have baked me too brown, I must sugar—"

A lightning movement at the word "sugar," and Duna had flipped the cube into the air and gobbled it. Barbee couldn't help laughing. The husky, wagging and crunching, looked eagerly for more.

"No, party's over now, boy." Kerry patted the sleek, gray head dismissingly and turned toward the Kashim door. Duna's team-mate was standing there triangular ears erect, topaz eyes on his master.

"Come in, Tokon!" The tawny creature sidled in with a wolf-walk that set the light rippling over his shining coat. Barbee felt suddenly that a presence had entered the room, a power, an intelligence. "You'll get your sugar without the Alice in Wonderland accompaniment, Tokon." Kerry extended the lump on the palm of his hand.

Barbee watched, genuinely interested now. She recalled the scene in Barracks Square when Kerry had fought the outlaw racer with his bare hands. Here now was the same killer whose saber-fangs had sought to slit the throats of a dozen men; yet he approached the man who had fought him, and with fastidious care tilted his lean, beautiful head sideways and took the sugar into his mouth. He backed away to eat it; then, running his tongue over his lips, he resumed his aloof regard of his master.

"Look at him, Miss Neilan. A king among dogs! He'd do anything I ask of him now, I think; but he has never once shown any affection for me. Never once come to me unless I called him." There was a wistful note in Kerry's voice. He came over and sat down on a hassock near Barbee's chair, looking up at her with earnest blue eyes. "You know I'd—I'd give anything to have him come to me of his own accord and lay his head on my knee."

Barbee liked him the better for wanting the love and friendship of his dogs, as well as their obedience. That he had the utter devotion of Duna was evident. The gray husky was already on his haunches, both paws on his master's knee. He squatted there blinking, absurdly unstable until Kerry gathered him to his side. He kept his arm about the leader and began telling her of the coming race.

Barbee, listening, became increasingly conscious of the quality of his voice, a deep, golden voice that kept shoving her own tragedy into the background of her mind by making her feel the lure and challenge of the Sweepstakes Trail. He got out a map and placed it on the tea table between them, tracing for her the course of the four-hundred-mile race that wound along the hummocks of Bering Sea, that skirted ice-glazed bluffs, that zigzagged across glaciers and through valleys that siphoned furious winds down from the Pole.

Forgetting herself, she listened to him and became aware of other things—he wa one of those men who always look well groomed, even in rough trail clothes. H was the kind who would shave ever morning, even if he were a hundred mile from another human being. She liked tha about him; but, best of all, she liked hi tenderness with animals, with all cripple and weaklings. He would be a loy friend, this lithe young man with the deep set eyes and the one-sided smile. And he loved a woman—

She looked shyly at him, sitting the talking and rubbing his dog's ears. The suddenly she found herself concerned f him on the morrow. She wished he had larger and better team to take out on t trail; wished he stood a better chance winning—he who had been so whimsic so gallant, so courageous in the face of t many obstacles that had beset him duri the winter. If only Rance—but she mu put Rance out of her mind forever.

She remembered all at once that had a story to write when she got ho that night. Tolovana took Barbee to yard and tucked her into the fur robes the basket sled. Then, standing with feet apart, she scanned the landscape w a trailsman's eye.

"A blizzard in the offing, Kerry," observed.

"Let her whistle!" dared Kerry, f his place behind the handlebars. "D will head into it. . . . Are you comf able, Miss Neilan? . . . Fine! . . . T vana, I'll be home in half an hour."

They were off in a tinkle of b Through the deepening twilight D proud, lean, and swift, ran loose, lea his team across the pallid stretch of dra, toward the town where lights already twinkling.

THAT night Kerry gave a final loo his racing sled and equipment, an the last time made the rounds of racers' stalls where team-mates chained two in a compartment.

After he had made sure that the door was locked, some indefinable im drew him back to Duna. He knelt beside the dog and gathered him int arms. Outside he could hear the rising . . . prophetic of a blizzard. Tomorrow he and Duna would be out racing on the Sweepstakes Trail. . . old fear touched him for a moment thing that was rather a fear of fear t fear of the trail. But he flung it reso from him. "We'll go through this Duna!"

He rose to go. The husky broug

CHRYSLER BEAUTY IS NO CHANCE CREATION

Chrysler's classic style and beauty have won the admiration and enthusiasm of thousands of motorists the country over—New Chrysler "75" Royal Sedan, illustrated.

FOR the first time *n the history of motor car design an authentic system has een devised, based upon the canons of ancient classic art.*

hrysler designers realize fully that beauty is an elusive ling and that the pursuit of it in motor car design ust not be hampered by too rigid adherence to laws d conventions.

t Chrysler has also found that there are so many orious precedents and inspirations in art, architecture d design, that the search for authentic and harmoni- s symmetry can actually be reduced to something e a scientific system in which results are certain.

rysler has left nothing to chance . . . Chrysler has not ied alone upon the inspiration of individual designers.

rysler has sought instead to do something never done ore in motor car design—to search out *authentic* forms beauty which have come down the centuries unsurpassed and unchallenged and has *translated* them in terms of motor car beauty and motor car utility.

The lengths to which Chrysler designers have gone in this patient pursuit of beauty will doubtless prove a revelation to those who have probably accepted Chrysler symmetry and charm as fortunate but more or less accidental conceptions.

The Chrysler process goes far deeper than any charming but accidental conception

Chrysler's matching of the exclusive slender profile radiator with the cowl bar moulding has its inspiration in the repetition of motif in the historic frieze of the ancient Parthenon.

New Chrysler "65"—*Six body styles priced from $1040 to $1145* New Chrysler "75"—*Nine body styles priced from $1535 to $2345* New Chrysler Imperial—*Five custom styles priced from $2675 to $3475. All prices f. o. b. Detroit*

forepaws to his master's chest and stood on his hind legs, looking into his face. Beneath his pointed ears his great, intelligent eyes spoke his love.

"Good night, old pal. Good night!"

Later, Kerry lay on his couch tossing and staring wide-eyed into the dark. Usually, slumber overtook him as soon as his head touched the pillow. But tonight he was restless. Every event of the long day came crowding into his consciousness: Again he was back in the hubbub of the Golden Sands, hearing that Rance Herrington had turned his team over to a hired driver. . . . Listening to that whisper started by Slim Carvey: Little Barbee Neilan had gone to the Syndicate kennel-house and found Rance and Kitty Kramer. . . . Again he was seething with indignation, with pity, with a fierce, protective tenderness for the motherless Barbee.

He couldn't banish the memory of the stricken look on her white face when he had finally overtaken her, the feel of her little hands, blue and unmittened in the cold. He had nearly lost his head then, but she, poor child, hadn't been aware of it.

With a deep sigh, Kerry turned over and burrowed his face in the pillow. This would be his last rest until the race was over; he must stop thinking and try to go to sleep. . . . How the wind moaned tonight. There would surely be a blizzard tomorrow . . . a blizzard on the trail . . . and he, blinded with it, stumbling along behind his snow-caked dogs.

He grew tense at the thought. He was flying down the glazed, white slope of a mountain—he was slipping on a glacier—the wind had caught his dogs and was whirling them over and over—the wind had caught Duna running loose ahead! It was shoving the little fellow inch by inch over the edge of an icy cliff—Duna looking back at him with despairing eyes, calling him, yelping for help And he couldn't go to save him. He couldn't move.

"Duna!"

KERRY woke with his own voice ringing in his ears. He was standing in the middle of the floor dripping with sweat, shaking, listening with painful intensity. Had he heard Duna's husky woofing? Or was it but a nightmare delusion?

He plunged into his trousers and parka, and with a lighted lantern hastened out into the dark Kashim. Back in the racers' quarters dogs were moving restlessly, and something in the atmosphere of the dim place swept him with an unreasoning fear. With the lantern held before him, he hurried back to the partition and swung the light about the stalls.

The dogs were all awake. They looked up at him, their eyes shining like glass. But in their soft whines of welcome there was an alien note—something not right. Kerry went into each stall, talking quietly to them. Mukluk and Queenie, Karluk and Red—nothing wrong there. Perhaps Cultas had been up to his old tricks again.

He shafted his light down into the trouble-maker's stall. Cultas stood as far forward as his chain permitted. He was looking up quietly, yet curiously disturbing in his wary stillness.

"Cul—" Kerry stopped.

Back in the shadows something was dangling over the top of the stall wall . . . something hanging—

He flung the lantern hoop over a peg and with an agonized cry leaped into the compartment. Frantically his fingers worked to unsnap the horribly tightened collar on the dog that hung there, one small hind foot pitifully reaching for the floor that was too far away to support his weight.

Kerry caught the gray body in his arms, staggered out of the stall, and dropped with it to the floor. "Duna—Duna!" His shaking hands felt for the heart. . . "Duna, come back, old man! You can't leave me, little fella! God, you can't leave me now! . . . Duna, my little pal . . Oh, Duna. . . ."

How a Great Scholar Brings up His Child

(Continued from page 40)

dreams," and is all tucked in by half past eight. The law has been broken now and then, as when some genius of the piano was honoring our home; but for the most part it has been with us a sacred, monastic rule, a trifle of surpassing moment in our philosophy.

After air, food. We found that Ethel flourished on a vegetarian diet helped out with plenty of milk and whole wheat bread; she grew tall and strong, athletic and alert; and it seemed to us that she was getting every element needed for full development. But the vegetarians will be scandalized to hear that very soon in Ethel's history we added chicken to her menu once or twice a week.

Ethel's health-record is not perfect; she encountered German measles in her infancy, but outlaughed it in a week; at four she caught whooping cough from a playmate, and beat it down with the help of the new serum; at eight she developed swollen tonsils, whereupon they were removed. These are the blots on her escutcheon; otherwise she is a stranger to doctors and disease. "How does it feel to have a stomach-ache?" she wants to know.

PLAY comes next, and, taking all these growing muscles, senses, and limbs, teaches them coördination, precision, unity. The perfect parent would have, as an element in his artistry, a knowledge of just what toys to buy to encourage the development of every organ and every power. Surely, the first principle here is that the toys should be such as to require accurate perception, agile manipulation, and, above all, movement in the open air. Roller skates, archery sets, quoits, jumping ropes, baseball and tennis equipment: these are first aids to a Nature that wisely counsels play in order that every capacity may be practiced to perfection.

Best of all are swimming and skating. Summer and winter were invented for them; every muscle is called into harmonious use, the breath comes fast and deep, the blood surges rapidly, and the heart leaps with joy. Let me confess with shame that I cannot skate. But I swear that when Ethel learns, I too shall take my falls and try.

The body comes first, and the fresh beauty of its growth is a perpetual delight. But once that firm basis has been laid, once digestion has found a healthy regularity and has allowed itself to be forgotten, then the problems of character, of "bringing-up," stand before us in pell-mell multitude. The child is greedy at table, stingy with toys, quarrelsome in play, conceited in bearing, loudly loquacious, dishonest, moody, secretive, and unattracted by water and soap. What shall we do about it?

First, don't *don't*. *Don'ts* are necessary, but every parent should be restricted to a limited number of them, like a doctor with alcoholic prescriptions; and perhaps, like the doctor, he should exhaust his year's supply on January first, and leave himself a clean slate for the rest of the year. I think we should say "Yes" whenever it is possible. Many parents, having been crossed in lucre or in love, revenge themselves on life by forever setting up prohibitions and objections in the way of the child. Parental authority is the last refuge of a scoundrel; weak people love to dominate, and the right to nag is one of the consolations of matrimony. Let the child be happy, and let us not deceive ourselves with too much sacrifice of the present t the future.

To command a child is to arouse pu nacity and resistance; this rule is almo as certain as Newton's laws of motion, a likelier to survive Einstein. Be fair to t child, earn its love and trust, and your quests and suggestions will be more effe tive than commands.

I walk to school with Ethel, and expr my envy of her happy school days; I wo der does it not help her to absorb the j of these childhood years to see that anot values them? When she comes home noon we ply her with questions as to l luck in class; she is glad that we are c cerned, and catches by contagion our terest in history, geography, spelling, e arithmetic.

SO WITH the piano. This is a prob that agitates every home—"Go and your practice!" It is a silly phrase, fo suggests, most unmistakably, "Piano bore, practicing is torture; go and suff you deserve it." We tried another p with Ethel; we merely offered her the portunity to learn the piano if she wish we left it to her choice. But for weeks fore putting the question we spoke of glory of music and of the high privileg performing or composing it. Then looked about for a teacher who would gin, not with sleepy scales and terrif finger exercises, but with simple, ear-ca ing melodies that would set the w household humming them. We found teacher, and soon our home rang with t played laboriously by chubby fingers. older ones went about our work sin the melodies that Ethel evoked; she pleased to note our delight.

FREE: A week's better shaves. Just mail the coupon below.

Small-bubble lather speeds up shaving

Vastly superior to ordinary lather

WHAT softens a beard? Air? Plain reasoning will answer "No." Then reason further. Big-bubble lather contains more air than small-bubble lather. Small-bubble lather is vastly more moist than ordinary lather and soaks and softens the beard more thoroughly. Colgate scientists produced the small-bubble lather — millions of men have confirmed its superiority.

Just plain reasoning

Results—they'll tell the story better than words.

The minute you lather up with Colgate's, two things happen: 1. The soap in the lather breaks up the oil film that covers each hair. 2. Billions of tiny, moisture-laden bubbles seep down through your beard . . . crowd around each whisker . . . soak it soft with water.

Instantly your beard gets moist and pliable . . . easier to cut . . . scientifically softened right down at the base . . . ready for your razor.

A comparative test is easy—just mail the coupon, *now*. We will send also, a sample of After-Shave, a new lotion . . . refreshing, delightful . . . the perfect shave finale.

COLGATE LATHER

Colgate's lather (greatly magnified) showing moisture contact with beard and minimum air. A common-sense principle scientifically authenticated and proved out practically by millions of men.

ORDINARY LATHER

Ordinary, big-bubble lather (greatly magnified). Note air-filled bubbles which can't soften the beard efficiently. Only water can do the job. Only small bubbles permit sufficient water.

COLGATE, Dept. B-1709, 595 Fifth Avenue, New York

Please send me, FREE, the seven-day trial tube of Colgate's Rapid Shave Cream; also a sample bottle of "After Shave."

Name.....

Address.....

Later a pause came in her progress; sh did not want to practice any more; and w had to gird our loins and fight the demon of custom that bade us command and com pel. Instead, I sat down at the piano an practiced the lesson myself; it was withi the measure of my ability. Then I invite Ethel to join me and make it a program fo four hands. She came, and for a week practiced with her; when she did not ca to come I played her pieces alone. Th teacher provided us with simple duets, an we learned them together.

Rapidly her pleasure in the piano r turned. Soon she was playing simplifie selections from Beethoven, Mozart, Schu mann, Schubert, Handel, Haydn, an Bach; we sang these famous strains wit gusto and made her know how grateful w were that she was filling our hearts wit song. She came to feel that music was great boon, worth all the trouble that involved.

I pass for further illustration from th piano to the swimming-pool, though the is little dignity in the transition. Have yo watched mothers or fathers teaching child how to love the water? They coa it for a while, then scold it, then take it u forcibly and baptize it with total imme sion. Half the time the plan works; ha the time it frightens the child into suc horror of the water as may prevent it fro ever learning to swim at all.

Ethel was no more anxious to go in the water than any other child; her fe was a natural and wholesome thing, roote in generations of perilous history. W merely put her into a bathing suit and l her play on the edge, while we splashe about and swam and gave every sugge tion that the water was fine. She gre envious, and soon of her own accord too to wading. We bought her a life be bound it about her with disarming laug ter, and showed her that with its help s could paddle about in deep water witho so much as wetting her hair. She watch the boys and girls, imitated their motio and was soon able to navigate in any desi direction.
